FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1899, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JULY 1, 1899.

VOL. LIII.—No. 1. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

Consider but the rudiment of a tall and umbrageous tree, from so minute a seed as may be borne away by every blast.
Evelyn, True Religion, I., 29.

THIS number, which is the first of the fifty-third volume, gives occasion to remark anew on our weekly issues, with their never-failing supply of material which is notable for quantity and quality. When the FOREST AND STREAM was established in 1873, it was with the first number pledged to a cause. "The object of this journal," wrote Mr. Hallock, "will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects." This purpose has ever since been held in view. The FOREST AND STREAM has been the representative organ of the field sportsmanship of the country. It has constituted a medium for expression of the sentiment of sportsmen; an advocate of their rights, privileges and interests. What better adjunct may be wished for in the make-up of one equipped for securing success in the various pursuits of life than that he should have the sportsman's taste for the outdoor life of the forest and the stream? and for one thus endowed how haply shall he supplement his outing experiences more profitably and enjoyably than to have the FOREST AND STREAM for his home companion?

SAIL, SEA AND SKY.

THE condition of the sport of yachting, as known to the world at large at the present time, is fitly described by the term *fin de siecle*. Wherever one reads of yachting, and it is just now impossible to pick up a paper or a magazine without finding some allusion to it, but one story is told, that of reckless extravagance in the wild chase for extreme speed. The side of the sport which is brought into exclusive prominence in the public prints is hardly an ideal one—two men of vast wealth are striving to outdo each other in a contest in which neither takes a personal part except to the extent of paying the bills, while the great body of yachtsmen look on from the outside as mere casual spectators. Such details as are deemed worthy of publication set forth how much larger each of the competitors is than any previous yacht, how much more sail she carries, how much faster she is expected to be, how much more she has cost and how each rival owner is outdoing the other in incidental extravagance, such as the buying or building of steam yachts and the chartering of ocean steamers. It is impossible to read anything relating to the one great event about which the yachting of the year is centered without coming to the conclusion that it is money first and sport a long, long way afterward.

The beautiful picture which forms our supplement this week bears silent but effective testimony to another side of the sport, which fortunately exists, though obscured for the time both to the general and the yachting public. The photograph here engraved speaks eloquently of the peace, the freedom and the content which are the natural accompaniments of the noble sport of yachting. The sail—that silent servant that transports man, not like the shuttle, thrown noisily and rapidly back and forth in one fixed track, but with an uncertainty of speed and course which are of themselves fascinating and restful. The sea—the free and open pathway to all parts, the rest and refuge of tired man from the earliest days, but never so much so as now, when the whole face of the earth is girdled and gridironed by the express train and the clanging, whirring electric "trolley." The sky—hidden from the unfortunate dweller in the cities, or seen but as a narrow ribbon of blue between the deep and narrow walls of a great stone chasm, but to the yachtsman a vast hemisphere bounded only by the level sea, both of them free to him in every quarter.

With every new convenience and luxury of modern invention comes an increasing complication of life which ties man more closely to a beaten track as long as he bears a foot on the shore, and makes still more welcome and grateful to him the very different life that is opened to him through the sport of yachting.

Among the many attractive features of the sport, that of racing must always hold a prominent place; it is after a day of hard work with brain and hand against a keen adversary that the dinner on board tastes best and a narrow berth seems a bed of down; or after a week of racing that one comes back with renewed zest to the quieter pleasures of cruising. The tendency of the day, however, is to exalt racing from its true position as a useful auxiliary of yachting life, to the sole end and aim of all yachting; and to establish the racing machine as the one ideal yacht, to the exclusion of the cruising craft. The racing is no longer a question of relative speed between evenly matched yachts and skippers of equal skill, but the one end in view is the production of a single yacht which shall attain a speed hitherto unknown. To this end all other interests of yachting are sacrificed, until the actual harm to the sport at large is even greater than the phenomenal advances in speed within the past five years. The sight of a modern 90-footer, at anchor or under way, is one that inspires a feeling of wonder and admiration at the perfection of finish and of mechanical detail, as well as the marvelous speed. At the same time the feeling is inevitable that the yachting which these craft are capable of is a very different sort of sport from that of a dozen years ago, when yachts were slower and less elaborate and costly, but the racing was equally as keen and much more general. The whole future of the sailing yacht hinges on the question that after five years or more is apparently as far from a solution as ever: shall yachts be built solely for racing, or shall they be built for yachting and used for racing within moderate and reasonable limitations?

THE BALTIMORE GAME CASES.

THE decisions handed down by the Maryland Court of Appeals last week in the Baltimore game selling cases were precisely what were to have been looked for by all persons familiar with the points at issue. The game commission men were simply threshing over old straw. They had set up claims to privileges which had been repeatedly denied by the highest courts of several States, and thus they offered a new opportunity for establishing only more firmly the principles involved.

It was the old question of the right to sell in close season game imported from another State, when such traffic is specifically forbidden by the statutes. The particular provision involved was one secured by the Maryland Game and Fish Protective Association, in the law of 1898, reading as follows:

15 F. No person shall have in possession, expose for sale, sell or buy any of the aforesaid birds or game animals alive or dead, in said city of Baltimore, or in any of the aforesaid respective counties, during the aforesaid respective closed seasons, or dates, between which, in said city or counties, it is made unlawful, by the preceding sections of this Act, to shoot or have the same in possession, whether such birds or game animals so had in possession, exposed for sale, sold or bought, shall have been shot, or in any manner caught or killed in that county, or in any other county of this State, or in any other State, Territory or country, under a penalty for the having in possession, exposing for sale, selling or buying of each such bird or game animal, similar in amount, respectively, to that hereinbefore made and provided for the illegal shooting or having in possession of the same; but nothing in this section or the preceding sections contained shall be so construed as to prevent any person or corporation from having in his or its possession, at any time, any live birds or game animals, for the purpose of stocking lands in this State.

The dealers resented this restriction; they held a mass meeting to denounce it; formed an association to fight it, and carried to the Court of Appeals the test cases of State of Maryland vs. Stevens, and State of Maryland vs. Rice, in both of which the main issue was as to the constitutionality of the law. The familiar contention was made that restriction of traffic in game imported from another State is an interference with interstate commerce, the regulation of which is by the Constitution of the United States intrusted exclusively to the control of Congress.

To make the test more perfect and to take advantage of the original package decisions, in one of the cases the game had been sold in the original package as received from another State.

The Court sustained the findings of the lower courts as to the unrestricted authority of the State to adopt whatever measures might be deemed necessary for the regulation of the taking and traffic in game, to conserve the native supply within its borders. It was held that the interstate commerce clause did not apply.

As we have said, these decisions are but the formulating in Maryland of principles which have been enunciated repeatedly by the courts of last resort elsewhere. One case notable because one of the earliest of the kind, and because it has had a marked effect upon legislation ever since, was that of Phelps vs. Racey, in New York, in the early seventies. J. H. Racey was a game dealer in New York City who had in possession several hundred quail in cold storage in the close season, and in violation of the statute. The New York Society for the Protection of Game, through its President, Royal Phelps, brought suit to recover the penalty and did recover it. The case then went on appeal to the highest court, which found in favor of the Association, and established the principle which has held from that day to this, that a law forbidding the sale of game in close time, whether the game was killed in the State or outside of it, is not in conflict with the constitutional provision that Congress alone shall regulate interstate commerce. The full text of the decision is contained in the July number of *Woodcraft*, as one of the series of "Game Law Test Cases" which is in course of publication in that magazine.

In fact the precedents were all against the Baltimore market men. A review of the game legislation of the last quarter-century and of the judicial interpretations of that legislation and of the principles governing it for the same period will convince any student of the subject of these two facts:

(1) That there is a growing tendency on the part of the legislative branch to assert the State's full control of game and fish and to embody in legislation a more and more strict exercise of such control; and

(2) That the courts will uphold the constitutionality of such regulations. This is manifest in the repeated rulings of different States, and if one shall look to the Supreme Court of the United States it will be found there that the ruling principles have had full enunciation in the well-known case of Geer vs. State of Connecticut, the decision in which is reported in full in the April number of the *Woodcraft Magazine*.

The basic principle is this, that the game of the State belongs to the State, that is to say, to the entire people of the State; and it is for them to say when, how and for what purposes the game may be taken by the individual. The State may further regulate the sale of game, without regard to its origin, in any way essential to the conservation of its own native supply. It is said that the Baltimore dealers will appeal to the Supreme Court of the United States. We have been for some years looking for some public spirited dealers in game who would take this question to Washington. There can be but one outcome of such a proceeding; it will re-establish and confirm the rulings of the State courts.

The prosecutions out of which these cases grew were instituted by the Maryland Game and Fish Protection Association, through its President, Mr. Geo. Dobbin Penniman, who argued the cases with Attorney-General Gaither and State's Attorney Duffy. We congratulate the Association upon the outcome.

It is a pleasure to record that Rhode Island now has a game commission, and that the Governor has named a board of commissioners who have the confidence of the sportsmen. We look for a new order of things in the grouse districts. The measure was introduced by Senator Reiner. Another excellent amendment made by the General Assembly was one forbidding the sale of squirrels and rabbits in close season. This was the unlooked for outcome of an endeavor by the market men to have legalized the sale of all game in close season. Mr. Chas. D. Kimball, a member of the House, deserves much credit for his activity in opposing the dealers' bill.

The annual meeting of the American Fisheries Society was held at Niagara Falls this week on Wednesday and Thursday.

The Sportsman Tourist.

The Trapper's Shack.

THEY are not palatial residences by any means, but they serve as a home just the same, and I have seen them when they were beheld with something like the joy a traveler feels who greets an oasis on the Sahara.

I had a little experience once in the swamps of Missouri, on Little River. It was in the early '70s a party of us were on a camp hunt; we had been in camp several days and were having a jolly time. Deer were plentiful and the fishing was all that we could ask. One morning I concluded I would do a little prospecting on foot and alone; so I left camp bright and early and plunged into the swamp. After walking several hours without seeing any game, I sat down on a log and ate my lunch, then lit my pipe for a good smoke. Presently I saw a large fox squirrel frisking on a limb directly over me, and I soon had him in the bag. That put me in mind that as I had no game to my credit, I would bag a few of them. After an hour or so had been spent after them and I had a pretty good bag, I began to think of returning to camp. I struck off in the supposed direction, and after walking, as I thought, long enough to reach camp, began to be apprehensive that I was not going right. I could see no familiar landmarks. It had been cloudy all the afternoon, and I had forgotten my compass, so I was lost as to direction. I fired my gun several times, but heard no response save its echo. Then I knew I was lost.

I tried another direction, and walked till I was getting very tired, for a lost man walks very fast. I was hungry too, and had given my belt an extra hitch to compress the void. The 7lb. gun felt as heavy as a Queen Anne musket. My watch told me that I did not have much more daylight to spend. I thought of everything I had ever read about telling the points of the compass—the knife blade, thumb nail, the watch face, the moss on the trees, the rough and smooth side of the trees. I tried them all, and each one seemed to lead me deeper in the swamp. I came to the conclusion that I was in for a night of it, and began to cast my eyes about for a suitable place for a lean-to. I had a supply of matches and could dress and broil one of my squirrels for supper.

With these thoughts in my head and still walking, I suddenly came upon a little shack nestled deep in the woods. One would hardly see it till almost right upon it. My spirits went up a dozen points as I hastened my steps toward it. It was built of logs, with a stick and dirt chimney. There was no fence around; the heavy woods came almost to the door. Hanging on some bushes was an old seine and some fishnets that had been freshly tarred. In the corner of the chimney were a few weather-beaten cane fishing poles. On a large nail driven in one of the trees was a trout-line. A few old rusty game traps were lying around; coon, deer and bear skins stretched on canes were hanging here and there. All these proclaimed the avocation of the owner. In the only window of the little shack, which was a square hole, closed by a sliding board, were one or two tomato cans, in which were a few morning glories trying to climb some strings. A clothesline stretched from tree to tree with a few articles of wearing apparel, a large iron kettle on some blackened chunks, a tub and washboard, showed that there was a woman around; and the little grape-vine swing and the mud pies neatly arranged on a board gave plain evidence of children's presence. All these were taken in at a glance as I hastened my steps. I knew I would be welcome to such as they had, and after being refreshed and rested would be directed back to camp.

On my near approach an old hound set up a dismal howl that brought a woman to the door. In a few words I made her acquainted with my situation. The good woman invited me in and one of the children was sent to the spring for cool water. While the busy housewife is preparing a frugal meal, I take in the interior. The floor is roughly covered with slabs; a large goods box answers for a cupboard; there are a plain homemade table covered with oilcloth, a few plain chairs, one or two pictures of Presidential candidates on the walls. Over the low door are a pair of deer horns that serve as a rack for the long Kentucky rifle, game bag, bullet pouch and a highly decorated powder horn. On a small table I see a few old books and a large Bible. In one corner stands a bed covered with homemade quilts of bright but uncertain pattern, but all spotlessly clean. The old cedar churn and the shining milk vessels prove that the owner believes in cleanliness.

While my hostess was out of the room I raised the lid of the old family Bible. It opened to where the record of births and marriages and deaths are recorded, and then I soon had the history of the family. I had replaced the Bible before she came in, and began to make friends with the children. When she came in I called the youngest to me, and called it by name. The woman looked a little surprised that I should know it. I asked the little one its age. It did not know. I then told it how old it was, giving its birthday. Then I gave all the children their full names and date of birth. The woman by this time had left the fireplace where she was cooking and asked me who told me their ages. I told her no one, and that I had never been in that part of the country before in my life and had never heard of them before.

"How can you tell these things, if no one has told you?" she asked.

"Oh, that is easy, if you know how," said I. I then gave her her own age, and date of birth and marriage; also her maiden name. By this time I could see she was getting quite uneasy, so I picked up the Bible and opened at the record. "There, madam, is how I found out so much."

I think she felt as much relieved as I did when I had spied the shack. She laughed heartily when the trick was exposed. Pretty soon the hound again gave tongue to one of those dismal howls, and the children flew to meet their father, who they knew was coming. He, too, was made acquainted with my situation and gave me a hearty welcome to his humble fare. Supper was announced. Such a supper I did not expect to find in that shack—good coffee, with sugar and cream, too; big, fat, white biscuits, venison steak, fresh fish, a jug of milk and plate of yellow butter, cold from the spring, wild honey—and it tasted all right, too. We gathered around the table, the old hunter offered up thanks to Him above for all that he enjoyed, his family and stranger under his roof-tree. It was an impressive scene—one that you don't find in every hunter's shack.

It goes without saying that I did full justice to that meal; I loosened my belt so as not to be hampered. After supper I told the the hunter where we were camped on Little River. "Well, I can have you in camp in a very few hours," said he. "My shack is within a short distance of Little River, and I am going out in my boat tonight with my headlight after ducks and can take you just as well as not;" which he did, and landed me safe in camp by bedtime.

Years have passed, but I have never forgotten that day nor the trapper and his family, and I don't let Santa Claus forget them, either. C. L. BRADLEY.

CLARKSVILLE, Tenn.

"The Man who Visits Spiker."

Editor Forest and Stream:

One evening after supper Jim sat smoking on the step of his front porch, admiring the beauty of the wide expanse of rolling valley that lay between him and a distant hazy mountain. His dog lay at charge near by, apparently in the same degree of meditation as his master. The sun had settled behind a large cloud bank, whose top and sides were trimmed in brilliant gold and silver sunshine, while from beneath broad bands slanted sharply in the direction of his gaze.

A step in his neighbor's yard and the pattering gallop of his setters, as they bounded around the corner of the house, caused Jim's dog to prick up his ears and tap the walk with his tail, then bound forward to meet his play-fellows. After Jim had invited his neighbor over to enjoy the view with him, and the inevitable pipes were well a-going, Jim said:

"I was thinking of what a happy hunting ground the Indian had when he occupied the country we see before us. Then, wild and uncultivated, it must have been a good place to hunt in."

"Yes, and I can say that it has been so long since the Indian departed, for I have hunted over all that territory myself. Years ago, before the march of improvement was so progressive, I have brought to bag many a quail in the lower country and grouse on yonder hill. There is an old man in this neighborhood who will tell you of the time when deer, turkey and bear were quite plenty. To-day there is nothing but a few hares in the thickets and an occasional grouse on the bluffs of the mountain, which would not be even there now if the hunters could get at them. But thoughts of the past bring vain regrets, and from a sportsman's standpoint, what little of life I have left I want to devote to comforts of the present and anticipations of the future."

"I like your sentiment," said Jim, "and as to present comfort, if we have been good and true sportsmen, the knowledge of that fact is satisfying. The future is dependent. To me it looks a little gloomy, and in that I disturb my comfort; but, judging from the past and the present outlook, our sons will see the day when their guns will be useless. Already our own territory is nearly depopulated of game, and if we go far we encroach upon some one's else territory, who will in time, by laws, deprive us of the privilege of hunting upon it. States are making non-resident laws; rich clubs are establishing extensive preserves, and the overflow from them are protected by trespass laws. What shall we do?"

"Get rich and join a club," said the neighbor. "Probably the best thing to do is to make the best of what we have while we can, be law-abiding, moderate in our indulgence, and let the future take care of itself. If game is scarcer the finding of any will be all the more gratifying."

"That's a philosophic view, at any rate. As to getting rich, if you will show me the way, I will follow it."

"I believe the man who is even with the world, who envies his neighbor nothing, has all the comforts he needs and who is contented, is rich enough. Wealth can only bring luxury, and luxury breeds discontent. The hardest part of it all is to be contented."

"Your philosophy reminds me of an old toll collector on the road to one of the places we shall visit next fall. Once, when driving over, I stopped to pay toll, which was 4 cents. I handed him a nickel and told him to keep the change. 'No,' said he; 'every man should keep his own. If I should keep the penny I would feel as though I had something that did not belong to me.' In speaking to my host of the occurrence, he said: 'That old man is as conscientious and honest as it is possible for any man to be. His income is so small that he can hardly make both ends meet, yet he is happy and contented.' It does me good to go among such people, and in the country where I visit I find the majority of the people that way. No strife, no selfishness and possessing a neighborly kindness that city people do not feel."

"That is one of the good influences that a sportsman comes in contact with and accounts for a good deal of his better nature. When I return from a visit to such people I always feel more charitable toward my fellow man, and the desire to repeat the visit is stronger every time. I make new acquaintances, acquire new hunting territory, and am glad to believe that my return is always welcome. The farmer, and country people generally, are among my best friends."

"There is an inseparable relation between the sportsman and the farmer that may be strained or strengthened according to its abuse or respect. I look upon the farmer as the sportsman's best and indispensable friend, for it is he who furnishes the land and through whose courtesy the sportsman is permitted to hunt upon it. I have always found the farmer willing to meet a gentleman more than half way. Rowdies he will not tolerate. Nearly all farmers like to hunt, and they possess a keen sense of its enjoyment, although they may, to some extent, be lacking in appreciation of some of its minor details, that go to make the city man's outing enjoyable, because an every-day association with his surroundings makes them less noticeable to him than to his city brother, who comes in contact with them only when enjoying the farmer's hospitality. Just so is the case with the city man who sees much less at home than does his country friend when visiting the city. My friends from the country often point out things to me that I have never seen before, and which are equally interesting to me after I have found them. Most farmers are naturalists in a general way, if not scientific. The seasons of vegetation are of necessity well learned by them, and the habits of common animals and game are generally well understood. From boyhood they have associated with these things, so that they are as able to judge of what is good for one and another as average humanity. And contact with the rapidly increasing army of sportsmen adds greatly to their knowledge of human nature."

"When you spoke of the farmer meeting the sportsman half way I was reminded of an incident in my own experience," said the neighbor. "Adjoining the farm of my host was one belonging to a man who was considered in the communty as a hard man to deal with, in that he was severely strict in his business transactions with his neighbors, even to the minutest detail, yet obliging and charitable when occasion required. His farm was posted, and I was cautioned against encroaching upon it. One morning, while covering a field on my friend's land, a bevy of quail went over into the forbidden territory. I marked them down in a small brier patch, where the shooting would be easy, and after studying a while, I determined to take chances and go over. My dogs soon pointed, and I got a brace of birds. Then I heard a shout and saw a man coming toward me. Resolved to face the situation like a man, I went to meet him. His face was stern, but there was no sign of anger, and I considered that a point in my favor.

"'Didn't you see that notice?' he said. 'Yes, sir, I did, but those birds flew over here and I couldn't resist the temptation to follow them,' I replied; 'but if you insist upon my going out I will do so, but I would like to have another chance at them.'

"'I have kept even my neighbors from shooting here and you couldn't expect me to break the rule in favor of a stranger,' he said.

"'No, sir; I don't ask you to, and I am sorry I intruded.'

"He scanned me closely without a word as I started for the line fence, but had not gone far when he called: 'Say!' As I stopped he came up and continued, 'Ain't you the man who visits Spiker?' I said I was. 'I thought so,' said. 'I've seen those dogs over there, and I have heard of you. Spiker is a good neighbor, and I don't want to offend him or his guest. You can hunt here, but don't shoot near the house; my daughter is sick and nervous.'

"I thanked him, and sent the dogs after the scattered bevy. He followed me around, and seemed delighted with watching the dogs work, and when I made a double shot he was captivated. After I had killed half a dozen of the birds I engaged with him in conversation, complimented him on the order in which his place was kept, and finally offered him the birds I had shot, of which he would accept only a couple for his daughter, and as I left he gave me a cordial invitation to hunt there again."

"You cast your bread upon the waters," said Jim, as his neighbor arose to go.

The evening was well spent, and he went into the house to refill his pipe and think of the future.

Pioneer Days.—V.

Unwelcome Visitors.

BY ROWLAND E. ROBINSON.

DURING the season of sugar-making Josiah became intimate with the Canada jays, impertinent thieves that they were; they were company, and so were the friendly chickadees and nuthatches, and woodpeckers that bored the logs of the house for grubs and drummed on the resonant stick chimney, and he made friends with a solitary old crow, though they were likely to fall out after corn-planting. Bluebirds brought the color and song of heaven down to the clearing, and robins came, and blackbirds thronged the border of the marsh, where open pools began to form, into which returning water fowl dropped to rest and feed. Stumps, logs and winter-green-clad cradle knolls began to show above the snow. Partridges drummed far and near in the purpling woods. There the snow and ice disappeared magically, the black mould of the clearing was laid bare, and the blue water of the creek shimmered in the sunlight down to the slumpy ice of the bay, and there were the sounds of running brooks, the crackling croak of frogs and trill of toads, and lo! the miracle of spring had wrought its magic transformation.

The luxury they won from the maples made a most acceptable addition to their monotonous fare. Josiah even attempted the manufacture of a pie from their precious stock of flour, with bear's grease for shortening, wild strawberries, sweetened with maple sugar, for filling, and was so far successful that they ate the interior with considerable relish, and had the crust left over to fill again.

Summer was upon them, with no end of work to do, and when they could least afford it they both fell ill with fever and ague. One day they were burning with a consuming fire, the next shaking with chills that froze the marrow of their bones, and during both were barely able to crowl about to the most necessary tasks, though fortunately their ague fits came on alternate days.

During one June day when Kenelm lay shivering in all the blankets before a roasting fire, and Josiah was administering hot drinks of herbs and hemlock twigs, a figure darkened the door, and looking up they saw a tall Indian silently regarding them. He asked for food, and Josiah set cold johnny-cake and dried venison before him, whereof he partook and departed as silently as he came.

Next day he returned, accompanied by an old squaw, and bringing a large salmon. The woman produced a package of dried red berries, giving out an aromatic odor like lemon peel. She called for liquor of some sort, and they brought out a quart bottle of hoarded New England rum. The Indian and squaw each took a drink from it to make room for the berries, which were then added, with the result of producing a mixture which was liquid fire. When Josiah, whose ague fit was on, took a mouthful of it, it burned its way into his interior with such effect that the ague was banished from his

body, and a few doses made him well again, and with Kenelm the effect was the same, though at first he swore the Indians had poisoned him out of revenge for his share in the Rogers' raid. The Indian told them that a party of their people were salmon fishing at the Lower Falls of Sun-gah-nee-took, or Lewis Creek. Next day the pioneers went over to see the sport. Many women and children were all busy, some with bark nets at the weirs, others with curious wooden spears; others cleaning the fish, and others drying them on racks over smoking fires.

Next day half the Indians returned the visit, and were royally entertained, each with a spoonful of the prickly-ash berry mixture, and a burned stomachful of moose meat and johnny-cake, and so became fast friends of the two white men, an alliance which soon proved most fortunate.

One day when the pioneers were hoeing their corn under the vigilant eye of Josiah's late friend, the crow, descried two boats entering the creek from the bay, and the crews being attracted by the new clearing came to the landing and accosted the settlers. It was the party of a New York surveyor, engaged in locating New York grants. The official at once set up his Jacobstaff and proceeded to allot this pitch to a New York land speculator, and warned the present occupants off the premises, without compensation for their time, labors and betterments.

The party swaggered up from the landing, and made as free with the house and its contents as if all belonged to them. One ransacked the loft and brought down dried venison to cook for the company. Another demanded flour, Indian meal not being good enough for such gentry. Old Kenelm fumed mightily, but discreetly withheld his hand from laying a cudgel about their shoulders.

"You fellows would best get out of this at once," the surveyor said, "for Capt. Williams will be wanting to occupy his claim at once."

"Maybe the Green Mountain boys will have a word to say about that," said Josiah.

"To the devil with Allen and his scoundrels!" the other scoffed. "We'll have the whole crew hanged in a month. There is a reward out for the leaders."

"Ketchin' on 'em 's another story," said Josiah, and asked: "Haow big is your captain's claim?"

"A thousand acres, running north, your stealings being nigh the south line."

"That'll run int' the Gov'nor's right o' five hundred acres."

"D— your Governor's right! He's got no right in this province!"

"Seein' the Cap'n 's got so much he might leave us alone on this leetle patch.'

"No; off you go, and that's all there is about it," quoth the inexorable official.

The pioneers were at their wits' end, and drew apart for a little consultation while the usurpers were busy with their cooking. The result was that Josiah slipped away, and was presently making his best speed toward the Indian camp. The unbidden guests took leisurely time with the meal furnished, in part from their own stores and in part from such things as they chose of the settlers' provisions, every mouthful of which was begrudged them by old Kenelm, as he sat apart watching them out of the corners of his eyes in sullen silence.

Suddenly, as if they had stepped out of the gray shells of the tree trunks, a score of armed fantastic figures appeared on every side, and simultaneously announced their presence by a horrid discord of yells.

"What the devil!" exclaimed the surveyor, springing to his feet and dropping a choice tidbit of stolen moose tongue, while his party cowered in the corners and sought shelter behind the great jambs of the fireplace. "Who the devil are these Indians, and what do they want?" the surveyor asked of Kenelm when he recovered a little from his surprise.

"Injins!" the old ranger repeated in derision. "Why, man alive, they hain't nothin' but Green Mountain boys dressed up for business. They've got their faces daubed red an' black tu hide their features, bein' the's a baounty sot on 'em. If that big feller's ol' Ethan, which I don't say he is or haint, it wouldn't be pleasant for him tu hev you reco'nize him, and kerry him off tu Albany."

"D— him, we're not hunting outlaws, but only peaceably surveying!" said the surveyor.

"Sart'inly, but a hundred paound would come handy tu most anybody," Kenelm answered. "And' what they want, an' what we want, is for you an' your peaceable crew tu git aout o' these woods—an' that almighty sudden, tew!" he added, with startling emphasis. "Come, be makin' tracks, quick! and fur apart!" and he made a menacing movement.

The surveyor, with his attendants, got speedily out of doors, and made toward their boats, their huddled rank flanked and closely followed by the Indians, yelling and threatening, while Kenelm and Josiah could scarcely restrain from roughly handling the chopfallen Yorkers.

The boats were shoved off, and they were hustled into them, when Kenelm warned them to depart and return no more, under pain of chastisement with the twigs of the wilderness, all of which was emphasized by whoops and screeches of the Indians and discharge of guns, the bullets whistling threateningly over the heads of the retreating enemy.

After watching them out of sight behind the first headland in the direction of the Forts, the allies returned to the cabin. Here they celebrated their bloodless victory in libations of fiery ague cure, a great spoonful to each exhausting the stock to the red dregs, which were eked out to a milder potation by a replenishment of water, and the Waubanakees departed, after renewed vows of eternal friendship.

Digging Out Foxes.

SHERBROOKE, P. Q.—B., of Barre, Vt., can come and hunt foxes with me whenever he likes. If I can't go myself, he may take my hound, my gun and anything that is mine.

B., of Barre, is the good sportsman who penned a few lines a week or so ago in condemnation of the digging out of holed foxes. I was surprised to learn that it was practiced among clubs anywhere.

JOS. G. WALTON.

Yukon Notes.

Travelers on the Ice Trail.

ALL through December a long procession of men passed Fort Selkirk bound for God's country. All classes of life were represented, from the Jew peddler to the millionaire mine owner, and it is only fair to the Jew to say that for grit and endurance no one surpassed him. Some trudged and tugged at heavy sleds and were their own dogs, as the saying went, and others trotted along behind well-broken dog teams and had their hired men to attend to the animals and do the work of making and breaking camp.

It was a gayly caparisoned procession and not at all suggestive of the desperate race with famine and cold. The men who knew to a certainty that their provisions would not last them to the coast and who had no idea what they would do when the food gave out, wore carnival-colored packies of yellow and white, or blue and white, or tawny fox skins, and the richer and darker furs. Even the face masks and projecting heads when seen at a little distance carried out the masquerade idea suggested by the domino-like packies, but a closer inspection of the deep set faces behind their fringe of ice showed hard lines and little suggestion of mirth.

And yet the men were not conquered and despondent. Once in a while it is true some maimed, frozen creature would come along half-crazed with fear and pain, but with the majority the hardships and care brought uppermost the masterful spirit that is characteristic of the born pioneer, and difficulties and danger were taken banteringly and with disdain.

"You Americans have wonderful constitutions," said John Peché, the Canadian Government messenger, who late in December, was the first man in from the outside world. "Coming down the river I met over 300 men on their way out, and most of them were from the States and knew nothing of the cold that is cold, or how to take care of themselves right, yet they acted as if they were on a picnic, and as if the devil were really dead, and they didn't seem to mind little inconveniences like frozen cheeks and feet and hands with the nails coming off and blistered with the frost. They're reckless devils, and a more cheeky set I never met. With the pants burnt off their legs and the faces on them like brown parchment they had the gall to give me advice about the country—to tell me how many pairs of moccasins I'll need for the trip and the like, when I was born on a snowdrift and got my growth under the midnight sun. You Americans would storm hell if you thought the heat had melted out any gold down there, and you'd put up so good a bluff and be so hard to kill, I'll be bound you'd get some of the stuff if there was any there."

The restless energy of the '97 Klondiker was an insoluble enigma to the hardy voyageur. He did not recognize it as the outward and visible sign of the virile spirit that gained the country its independence and afterward extended its frontiers in the face of opposition by native and savage foes. Many of the argonauts of '97 were descended from the men who went to California in '49 and settled on the Pacific coast. These men will settle in Alaska, and their sons will push on further—perhaps to the mountains of the moon.

The Adventures of Peche.

I have already mentioned our meeting with John Peché at Fort Selkirk. Peché was originally from Haleyburg, Ontario, and was at one time a fish and game constable in Ontario. His most recent address was Fort Arthur, and his father and mother are both living at a very advanced age (they are said to be over 100 years old) on the shore of Lake Temiscoming.

Peché had been in to Hudson Bay fraternizing with the Eskimo, and he had followed most of the old voyageurs' routes from Mistassini to the plains. At the last sportsmen's show in New York, Farr, Paulson and Latour all knew Peché, and were interested to hear of him. They had a vague idea he was up north somewhere near the Arctic Circle, but whether it was in the Yukon or the Mackenzie, or in the musk ox country further east, didn't matter much to them. Things do not change with longitude as they do with latitude. Moose Factory and Chesterfield Inlet and Lake Abitibi are more suggestive for comparison, taken in connection with game ranges and the kind of fish.

I told these men that Peché had made a trip to Dawson previous to that in December, and that he had come out over the Dalton trail to the coast in twenty-two days. He poled up the Yukon to Fort Selkirk in a native canoe, and after that, with 100lbs. of grub and blankets on his back, struck out on foot for salt water in company with five other men. The first two days they traveled without a trail, and they had no guide till the last hundred miles of the journey, when they secured an Indian to pilot them over the coast range, the trail being obliterated by the early fall snows. Then I showed them a Vancouver press dispatch of recent date which stated that Peché, after two years in the far north, had returned to civilization with a regular dime novel story of gold and adventure.

He had discovered a mysterious gold land somewhere in the Barrow Archipelago, in the Arctic Ocean, where the natives use gold for bullets, as being more easily obtainable than lead, and as proof had a slug of gold taken from the shoulder of a wounded Indian, as well as other nuggets. He wanted a grub stake to go back into this weird land and locate the Indians' "shot mill," and this was the reason of his journey out. The Hudson Bay men heard the story stolidly and without comment. They said it might be a true story, and that they had never known Peché to fabricate or to invent imaginary gold finds. Further than this no one of the three would commit himself. It is possible that their local pride prevented them giving an old associate a reputation for romancing, or the Barrow Archipelago is a good long way off from the Upper Ottawa, and perhaps it was just a case of not worrying about things which didn't concern them. The gold may be there; but one thing is certain: Neither Farr nor Latour nor Paulson will go search of it.

J. B. BURNHAM.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Down the Brook.

"ED SHIELDS has just been up to Clayton, and says that the trout are larger and more numerous than ever." Thus ran an extract from Will's letter, and it was the last straw in deciding me to let less important matters slide and take a few days off with the trout.

On a hot day early in June I joined forces with Will and we journeyed on the next day to Clayton (which is not its name, but will serve), where we arrived by mid-afternoon, and found John and his wife at the old stand. John, be it known, is our friend who lives by the brook and purveys food and lodging to the casual angler. So near the brook does he live that you can cast a fly into it from the side yard of the house, and John, who is himself an angler, as he needs must be in such a situation, has taken many a fine trout from that same vantage ground.

A stroll down the brook before supper was our plan, and we had soon donned those delightfully comfortable articles of preserved clothing which fit the fisherman's ease-loving frame so well, our rods were jointed, and our casts of flies rigged. By 5 o'clock we were casting industriously upon the transparent pools of a splendid trout stream. For, although so constantly fished that there is a well defined path along its banks, it contains so much perfect water, clear and cold, and so many deep and inaccessible holes, that it is always full of large trout for him who knows how to lure them forth. After fishing the brook for four days and meeting several brother anglers upon it, we saw more large fish the morning of our return than we had seen at any previous time—and this in a brook lying in a long-settled part of the State, running through well-cultivated farms, and easily reached by two railroads. Of course the trout are wary, but therein lies one of the charms of the brook. They do not rise at every cast, or at any time of day, but the fisherman must call into play the finer points of his craft if he would secure a good creel. Even the veriest duffer will admit, after casting a pool in vain, that the fish are there, for if he stealthily approach so that he gains a good view into the pool he will discern, with outstarting eyes, a dozen or more of large trout fanning lazily in the current.

Our luck on the first evening was fully up to our expectations, for we returned to the house about 9 o'clock with seventeen nice fish, running from 1lb. down to ¼lb. in weight. Few smaller fish are taken with the fly on this stream. The time of our return may strike some as overlate, but experience has taught us that the best success, on this brook at least, is to be expected during the hour which marks the fall of night. This is especially true when the day has been hot. Our first evening was no exception to the rule, for some of our best fish were taken when it was so dark that we could not see our flies, and had to strike at the sound of the fish's splash as he leaped for the fly. How do they see it? Perhaps because from their vantage ground in the dark depths of the pool they look up against the brighter sky, and an object agitating the gossamer surface is easily visible to them, while the angler, gazing into blackness, sees naught except perhaps the flash of the leaping fish or the reflection of a star dancing on the ripples.

And there is a charm about this evening fishing unknown to him who plies the gentle art entirely by daylight. The meadows are alight with fire flies; the brook purls blackly past with a mysterious murmur unnoticed by day; a heron swoops close overhead with silent wings; an owl discovers the angler's figure and hovers above it with unearthly chatterings. And after the fish have ceased to rise he wends his way through the dewy meadow grass toward the beacon light of his hostelry, where dry garments and good cheer await him, followed by the ever comforting pipe and then by sleep, broken only by a dream of "that big fellow" in the hole by the willow stub, who is at last brought to net. And this first evening of ours was four times repeated, for we enjoyed perfect weather and no deluges came to roil the brook and interfere with the alluring fly.

Morning saw us down to breakfast at about 7:30, for we were in the country to rest quite as much as to fish, and so we did not rise with the sun.

"You'll have to gag that old rooster of yours, John." said Will. "He started in under my window at 4 o'clock and crowed once a minute for half an hour.'

John smiles, for we all know that nothing can wake Will at 4 on the second morning as soon as he becomes a trifle accustomed to the unusual sounds of the country. Had John been our guest in the city, would he have appealed to us to gag the trolley cars?

A bountiful breakfast, whose chief features were trout and buckwheat cakes, with strained honey, gave us stored energy for the morning, and we were off once more down the brook. The meadows were brilliant with the dew, and melodious with the whistle of Bob White and the flight-song of countless bobolinks, as we reached the first good pool. I paused to watch Will as he skillfully whipped the water, reaching every spot likely to afford a lurking place for a speckled beauty. As he stands there rod in hand and creel at hip, his old felt hat drooping about his head like a mushroom over its stem, his slouchy hunting coat with bulging pockets and many a stain, telling of victories by flood and field, his oozing woolen stockings and pervious shoes, he forms a picture dear to the eye of every angler. His figure is wholly in harmony, too, with the background of trees fringing the winding stream, the waving meadow grass, the clear water swirling against its gravelly bank. Truly an angler is a part of nature.

But I cannot stop all the morning to watch Will, for just below in a deep pool, where the stream makes a sudden turn, lies the monarch of the brook. Will had hooked his majesty on the previous evening, but a friendly snag had saved him just as he was nearing the net. To Will's assertion that he was a plump two-pounder I had lent a rather incredulous ear. Now he urges me to try my hand, albeit so much less skillful than his own. Perhaps I may have a duffer's luck. Stealthily I approach his lair and cast the coachman and the cow-dung as deftly as I can, but there comes no responsive rise. The sky has clouded over a little; perhaps the flies are too small. I withdraw some paces

to a conevniently shaded gravel bar and replace my light tackle with a heavier leader and larger flies. Then, after letting pass the time requisiet to smoke a pipe, so as to allay any suspicions my movements near the pool may have caused, I approach once more. A short cast brings no results; a little more line, and a cast just beyond the point where the ripple smooths out over the deeper water, and—flop! I strike instinctively. He is hooked! What gymnastics! But only for a moment. Suddenly, with that sickening sag, back comes my empty line. He is off—not well hooked. But it was heart-thumping work for the few seconds it lasted. No use to try him again at present, so I move off dejectedly down the brook in search of other prizes. A good two-pounder he was, and I might have had him! Smile not, ye fishers on Maine lakes or Canadian rivers, for a two-pounder from so civilized a stream will match a fish of twice the weight from your wilderness waters. Four times during our stay did we hook that same fish, but each time his own cunning or the friendly snags saved him. We even made a special expedition for him on the day we came away, but he would not be cajoled, though approaching close to the pool we had clear sight of him lying in the cool depths in safety. Would the plebeian worm have tempted him? Many a royal scion has been ruined by vulgar tastes. We know not, for we disdained to try. May he avoid all lures for a year to come! May he gain another pound in weight, until we can make another visit to his crystal palace!

"Will," said I,, while we were at breakfast on the third day, "let's try the gorge this morning just for the sake of variety."

To this he assented, with an elder brother's indulgent spirit, and John went to harness the little colt that we might drive to our destination, for the gorge, where our brook bursts through the mountain wall, is three or four miles away, and we are lazy. John carries us well up into the favine, and we are speedily at work. Here the crystal clearness of the stream is accentuated by the light gray rocks forming its bed. The water is perfectly transparent. Perhaps this may explain the fact that the trout do not rise as well as they do below in the meadows. But the beauty of our surroundings makes ample recompense for our light creels. What fish we do capture are of surprising plumpness and size. Once, while standing on a huge boulder, a dozen feet above the brook and casting far down the stream, I hook the largest fish of the day. Fearing to lift him, I call Will and his net. The roar of the brook drowns my words, and Will only infers from my tone and expression that I have seen something exciting. He gazes back up the brook or up the steep wooded side of the ravine, expecting to see a bear or a wildcat loom on his view. Then the word net catches his ear, and brings him back to things piscatorial. Dropping his rod, he slides rapidly down the boulder and skillfully nets my fish, a fine fellow, nearly 1lb. in weight. A little further down the brook a nice fish drops from the hook just as he reaches the edge of the water. Simultaneously I make a dive, and succeed in stunning both the fish and my nose, for I ran my face into a boulder by the brookside. Fifteen fish were all we captured that morning; fifteen fish and an enormous appetite, which did full justice to the bountiful table of good things ready for us on our return.

But our four days draw rapidly to a close, each in general outline like its predecessor, but infinitely varied in details. Our schedule would read somewhat after this fashion: A comparatively late breakfast, down the brook for three or four hours, a dinner eaten with all the angler's gusto, followed necessarily by a siesta of an hour or two, and then in the late afternoon and evening a second stroll down the brook. Never did we return with very heavy creels, but we enjoyed good sport and were content. Were there then no drawbacks, no frayed leaders parting with a good fish? No broken rods, no snags? Yes, for the angler's temper, gentle though his art be, is oft sorely tried. Once I climbed 15ft. up a scraggy elm to secure a new cast of flies I had securely lodged there, and lo! after some minutes of heart-breaking work the flies were not there. The recoil of the limb had doubtless snapped them to some unknown hiding place. Once I caught my flies in a backward cast upon a sturdy thistle, and the result was a broken rod. But it mattered little. The angler never hurries, and as I sat beneath an alder's shade and temporarily repaired the rod, a veery from a neighboring thicket made me ample consolation with his mysterious, circling song. And to repay my industry a good trout seized my fly at the first cast with the mended rod. Mosquitoes there were none during the day; as night fell and they became troublesome a single application of a potent ointment protected us from their attacks.

Sunday brought us a day of veritable rest. We ate, we smoked, we talked—like Cæsar's famous message, three words sum up our day. Monday found us once more and for the last time in our fishing gear. On Tuesday our time was up, and we returned to the city with many fat trout in our baskets and less substantial but more lasting than these, rich stores of memories to last us until some other time when it may be our fortune to stray together down the brook.

A. L. W.

NEW HAVEN, CONN.

One of the most sensible fishing regulations adopted in New York State is one enacted by the last Legislature which limits the transportation of trout of any kind, salmon, or landlocked salmon to carriage when accompanied by the actual owner, and forbids transporting more than twelve pounds of brook, brown or rainbow trout at one time. This law will not be so easy of enforcement as is the one limiting the transportation of venison, but if it shall be honestly observed it will effectually cut off the marketing of brook trout, and will therefore be one of the best protective expedients we could have.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Old Age in Sport.

IT is considered a fine thing to "grow old gracefully." A finer thing, to me, is the sight of one growing old vigorously and heartily. It is as beautiful and cheering as the sight of a veteran apple tree, gnarled and knotted, and perhaps twisted and bowed, putting forth in the spring a glory of pink and white blossoms, a wonderful cloak of promise, trailing from its old shoulders like the ermine mantle of a king. I love to see an old man or woman clinging bravely and successfully to the heart and the strength of youth, zestful and sprightly and happy and hopeful up to the end, only setting down the cup of life after a last, deep, satisfying draught, like one whose thirst is quenched and whose soul is satisfied. Thank God that the physical shelving of old age is a thing of the past! What an emancipation we have had in that respect! It is a glorious thing to see gray-haired men and women still sharing the activities and recreations of youth. How they seem to rejoice in their new-found freedom, their escape from the shackles of a false and heartless conventionalism! Fifty years ago an old man taking any sort of recreation would have been viewed with amazement. The whole community would have been shocked and scandalized. Those who considered themselves responsible for him would have been on pins and needles until they had coerced the poor old boy back to his easy chair, and compelled him to resume the process of wasting away by physical inaction. Why, if middle-aged men, or even youths, had been subjected to the same process of physical shelving that old age had to bear in the days of our foolish forefathers, they would have rusted out in their prime, and sunk into their graves by a kind of physical oxidation. Poor old men, who used to have to steal away for a furtive chance to "play boy" for a little while, and so renew their still unspent youth and strength! What a pity they could not have lived to see this day, when an old man on a bicycle, spinning along with the swiftness of the wind, is as common a sight as a child with a toy cart. How these old boys would have started up, with trembling eagerness and delight, at the sight of the hale, firm-stepping, bright-eyed, elastic-muscled veterans of today, in their golfing suits and bicycle costumes and shooting rigs! If the century had done nothing more than emancipate old age from the pitiful bondage of a false prejudice and conventionalism, it would have been a hundred years well spent for mankind.

The zest and vigor and improved physical condition of old age, since it was permitted to share the healthful recreations of youth and middle-life, are proof positive that the joy and stimulus of outdoor sport are what the "failing half" of humanity has needed for generations. To this, more than to anything else, no doubt, is due the constantly increasing longevity of the race. Up to the present time, we have been killing off our old people by a perfectly evident process—a lack of use or function for them. We have been slowly wiping them out, as nature wipes out organs that have ceased to have any part in the conservation or development of life. By retiring our grandfathers and grandmothers at sixty-five, and limiting their range of interest and activity to the path between the cushioned chair and the dining table, we have been actually putting them out of the way by a kind of protracted and unconscious fratricide. No man can live long without the stimulus of interest and activity —least of all an old man, whose life was formerly vigorous and energetic. It is an actual cruelty to deprive the old of work, if that is all that is left to them—but how much more of a cruelty to deprive them of that which they have fairly earned by a long life of patient toil, the joy of congenial, recuperative recreation, such as conserves and preserves failing physical powers, without overtaxing them, and makes pleasant and healthful the down-hill path of life.

Yes, thank God, that the old prejudice which pronounced it unseemly for age to refresh and recuperate itself by outdoor sport, is gone forever. Thank God that second childhood—if you will call it such—is no longer deprived of first childhood's happy privileges. No gray-haired man or woman need any longer wear the chains of a false and discarded social fetishism. God's outdoor world, with all its joyful invitations, with all the methods man has contrived for using it and getting good out of it, are as free now to the septuagenarian as to the youth of twenty. No social ban will be placed upon the veteran, if he leads out his shining wheel and mounts it for a twenty-mile spin, or launches his trim canoe for a paddle on the river, or takes his golf stick and goes away with springy step to the links, or in any way proves himself still possessor of the heart and the strength to enjoy the blessings possible to the lover of outdoor life.

And in how many ways old age, hale, well-preserved old age, is even fitted to take the lead in outdoor sport, and derive the richest share of enjoyment from it! What the veteran lacks in physical elasticity and sprightliness, he often makes up in staying power and wise conservation and expenditure of physical strength. His muscles, if stiffer, are more tempered and seasoned and wiry than the youth's. He has the advantage of what is called "the established constitution." Then consider the skill and knowledge and practical wisdom which his longer experience has brought him. He sees more in nature than younger men do, and gets more out of her. He thoroughly understands the technique of sport; he controls the practiced eye and hand. No novice can cast a fly or shoot a gun like an "old stager." Skill, practice, knowledge, trained perception, an equipment of experience that insures against hot-headedness, mistakes, disappointments—these are some of the advantages that age possesses over youth, in the pursuit and enjoyment of outdoor sport.

Is there a sportsman or angler who cannot recall the picture of some gray-haired companion afield, some grizzled old guide, perhaps, tough as a knot, keen as a hawk, and knowing as a fox, who seemed to have attained the ideal physical and mental condition for successful woodcraft, only after passing the seventieth milestone of life? Was there any youth or middle-aged man in the woods who could hunt and fish and paddle and tramp and tell stories, and understand how to do things, and enjoy himself, and make you enjoy yourself, like that past master in the secrets of nature and the secret of perennial youth? Was there not something in his deep, quiet enjoyment, and his triumphant mastery of the whole science of sport, that put to shame even the buoyancy and exhilaration of boys? That man, living far from conventionalities, was an example of the possibilities of old age in sport, when unforbidden and untrammeled. Talk about shelving a veteran of that sort! It would take any two of us to get him on the shelf, and then he would make a raft of it, and go paddling away before we could catch our breath! Verily, there is nothing in old age *per se* that should retire it from the pursuit of wholesome outdoor sport.

All honor and all hail to whomsoever keeps the sap of life fresh in his veins, and refuses to wither until death's hand touches him! Shall not age henceforth have its rightful place in sport, since it has proved its fitness for it? Yea! And if any sour-faced Philistine says no, let him be condemned to an easy chair and forty naps a day, until he shrinks up like a mummy and dies of total inanition.

JAMES BUCKHAM.

Through South Sea Reefs.

IN Samoa one takes a boat. Elsewhere there are plenty of facilities for assisted locomotion, the horse, the counless variety of things on wheels run by animal power, by electricity, by steam. But this vexed and lonely group of infinitesimal islands out in the heart of the South Pacific is devoid of all traveling facilities. To be sure, there are horses, just a few, and they are half-starved for lack of succulent grass. They are disheartened little rats of ponies from the neighboring kingdom of Tonga; they can carry little, and that not for long, which is just as well, for there are no roads except in the little town of Apia and the great German plantations which lie at the town boundary, and these roads lead nowhere. Even walking counts for little. Where there are jungle trails they are so beset with jagged rocks as to cut to ribbons any foot gear less tough than the sole of the ordinary Samoan foot.

The only practicable way to travel in and about the islands is the open boat, just a plain wooden boat, wet and sloppy, crowded and most uncomfortable. Writing now of past Samoan experiences with the steady hum of steam and electric cars in the ears, and constantly reminded of easy methods of transport, it seems almost impossible that it could ever have been a natural thing to order out the boat to pay a call on the other side of Apia harbor or to make a trip to another island across miles of open ocean. Such a thing as taking a rowboat at the Battery in New York for a trip to Long Branch would be so unusual that it would be hard to keep it from becoming a newspaper sensation, yet that would be nothing at all in the South Sea. This point must be prefaced in order that it may be clear that these experiences in open boats and in jumping over and wriggling through coral reefs were not undertaken in any spirit of adventure. In Samoa they were no more than ordinary features of local travel, such things as might happen in other lands in the street cars. It is only when they are viewed in retrospect from the safe lands of the cab and the trolley that they are seen to be risks and hazards.

The boat is the thing, it replaced the horse and the car entirely. The boat in which these hundreds of miles of sea trips were made was the best of its class in the South Sea. It was built expressly at the Mare Island navy yard in California for this work, and was a marvel of strength and lightness. It was only 22ft. over all, carvel built, four-oared, and had scanty space in the stern sheets for four passengers. Besides the oars, it had a very small jib and mainsail, which could be used in running before the wind. The crew had been carefuly selected from the whole of a village, and was well matched in every particular, even including their voices, so that they might sing agreeably as they rowed. That they were the best crew in the best boat was not only their own opinion, but they were willing to test it by a race with any one who was willing to contest their supremacy, but there were no takers. Nothing can make a sea trip in such a small boat comfortable, but a good boat and a good crew can do much to make it tolerable.

For much of the north shore of the island of Upolu there is a coral reef which makes an extensive lagoon of still water between the coral and the beach sands. There are more than thirty miles of this easy waterway west of Apia, east of that port there are but five or six. Bound eastward, therefore, the voyager soon passes out from under the shelter of the coral bulwark and puts right out to sea. That has its own set of trials, but none at all comparable with the varied problems of making landings. There are just three kinds of places at which to land, and each kind calls for different management in beaching the boat without getting the occupants too wet or damaging the timbers.

The simplest of all such landings is where the sea runs right on an open beach, either of sand or pebbles. Unless the sea is too high there is very little difficulty about making such a landing even on the darkest night. There is such a landing at Laulii, a native town some six miles from Apia. There is a small bay, Letongo Mountain makes the western boundary, the sea rolls magnificently in with the whole sweep of the northward Pacific Ocean behind it, the beach is a sharp shelf of black pebbles and chips of the coral broken from the branches in the submarine groves and cast up by the waves. There is a great fuss of foam and noise where the waves roll in, it is more than a little terrifying to one whose practical experience in making boat landings is restricted to obedience of the admonition to keep hands off the gates. It is quite a different thing to hold the yoke lines and assume the responsibility of beaching the boat in an unbroken line of surf. But the Samoan boys know what to do. They come dashing in with the rush of the rollers until the bow of the boat is almost in the combers. In come all the oars with a rattle, numbers two and three attend composedly to stowing the white ash, stroke reaches over and takes the yoke lines with the air of a man who knows just what he is about, and steers by the look of the following sea. Bow stands by, at the right moment and just in the right place he heaves the anchor, the boat swings in on the next wave, perched on its very crest in a swirl of spume, and seemingly resting on foam; before one can separate the details of this style of landing the stern is just clear of the black beach pebbles which the wave is

rolling back and forth, bow oar in some mysterious fashion is standing firmly right in the thickest swirl of the waters ready to carry the passenger ashore. Bow oar always enjoyed that duty when the passenger was a lady whom he regarded as of sufficient rank and station for him to honor with the little attentions which are among the accomplishments of a Samoan dandy. If the weather were fine the captain of the boat hauled out beyond the rows of combers and left the boat there anchored, the last man having to swim ashore through the surf, no hardship to a race so practically amphibious as the Samoans. Such is the landing at Laulii, really very simple when one is used to the method, and applicable to a great many spots on the Samoan coast line.

But if one has to land at the next town, Luatuanu'u, the affair is discovered to be very much complicated by a fringing reef of coral. The barrier reefs present difficulties of one sort, but when the boatman has passed in or out the difficulty ceases either in the steady sweep of the long seas outside, or the placid surface of the lagoon. But the fringing reef is different, it is a part of the beach itself, there is no such thing as getting within it and claiming protection. Luatuanu'u is only a mile away from the Laulii landing, but the two are so different that it is hard to believe that the two are within sight one of the other. The same seas come racing in at Luatuanu'u, but they are prevented from sliding up the beach, which here is in marked contrast to the black lava pebbles of Laulii, being a dazzling heap of glistening coral twigs. About 200yds. off shore the waves break in an almost continuous line, showing the outer margin of the reef. Between that line and the solid ground there is a pavement of coral under water in every jagged form adapted to tear the planks of any boat which may touch the sharp corners, and will rip up the stoutest work of boat carpenters as though it were paper. Closer view of the outer line of breakers shows a narrow gap where the water pours in as though drawn to a sluiceway, but no matter how fast it may rush the smooth green folds of its swiftly-speeding surface show that for a narrow space the coral has not yet grown up to the dangerous level which would make the reef continuous. This is the gap into which to steer the boat, and it is not the place for any amateur exhibitions of the use of the rudder. Whoever is going to take a boat into such a place must assume all the responsibility for the direction, he must have a keen eye combined with a light touch, and be absolutely removed from the possibility of losing his head. In all this class of work bow oar has a position of great responsibility, he runs the boat to avoid the dangers on which it seems to be rushing headlong, and to pick out every little advantage of current which may assist the passage; above all, he stands at his post with a brass-shod staff of the stoutest wood, and more than once averts an accident by shoving the boat away from some menacing pinnacle of the coral. It is not necessary to qualify an accident in such reef work, all accidents are the same thing, as soon as they have begun to happen to a boat in the race of a reef pass, they are a complete smash-up. That is the duty of bow oar to prevent. At Luatuanu'u there is about 200yds. of fringing reef, the passage through it by reason of its twists and turns is all of 300yds. There is not a stretch in all this distance which is devoid of great danger for as much as the length of the boat. There is but one way to negotiate such a pass, take every advantage of the trend of the sea which fills the narrow channel with a furious swirl of water, pull for all there is in the crew, have the best man at the rudder and a reliable man at the bow, and for the rest trust in Providence. The native population of Luatuanu'u always comes down to watch the passage of a boat along the tortuous alleys of their fringing reef. This may seem like a flattering attention on the part of the savage residents, in reality there is a cherished custom of their town like that with which old Cornwall has been credited, that all the wreck stuff floating or washed up on the beach is theirs by right. Accordingly the sighting of a strange boat will bring the people down to the beach; if the newcomer hits the pass without accident the villagers will make him welcome, but if an accident should happen it is just as well to be on the spot and pick up whatever good things are going to waste.

Off-shore dangers are rare along the Samoan coasts, but here and there a few may be found, two are particularly notable on the Upolu coast, for the reason that they lie in the way of all boat travel, and sometimes cause disaster.

The nearest of these to Apia lies some distance east of Luatuanu'u at a distance of a mile from shore, or rather from the fringing reef. This reef reaches well out seaward and is so paralleled with uncertain and dangerous currents that prudent boatmen seek to give it a wide berth, even though the common custom of the Samoans is to keep right at the line of breakers in the most terrifying way. Somewhere off the coast of Solosolo, between the promontory of Utumau and the German anchorage at Saluafata, there is the Fale Aitu, the House of Gods, or devils, according as one is disposed to regard the pagan divinities. There is nothing in sight to show the signal of any danger, for the sea rolls there as majestically as all over its expanse. There is no identifying the place by cross bearings, for the danger seldom has been known twice in the same place, although always in the same general region of sea. It is a sudden and a noiseless danger. It gives no warning, it leaves no trace, it does its work throughout with precision that is fatal, and there is no proof except when some one has happened to see it from shore. Many boats may cross the danger field of the Fale Aitu without harm, but it may chance to any one that the old gods wake to anger at the new style of faith which robs them of the offerings which passing boats never neglected in old heathen days. Suddenly a great wave rears its head seaward, another wave collects shoreward and starts racing out, the boat which is caught between them when they meet is never seen again, for after the commotion is over there are spirals of foam which show that there has been a great whirlpool in the House of Gods, and the victims have been sucked down below and never come to the surface again.

The other off-shore danger is still further eastward on the north coast of Upolu. From Saluafata there is a barrier reef enclosing the long sands of Lufilufi, and around the point as far as Naneiva. Here the barrier stops, the coast is precipitous and iron-bound, the sea breaks against the cliffs without even the bare protection of a fringing reef, for mile after mile the spouting caverns show how inhospitable is that coast. Just before reaching the bay of Fangaloa, where the British have their dormant right to a naval station, there is a blind point. For some reason there is a confusion just here of wild cross seas. It would be idle to hunt for the reason; the fact is enough for the traveler by boat. It is a very unpleasant part of marine geography to deal with, but by no means as dangerous as the Fale Aitu, for the boatman can see what he has to contend with, and the loss of a part of the cargo and the filling of the boat with water are much more frequent than graver accidents. This area of cross seas stretches several miles out to sea without losing its characteristic appearance. Samoan boatmen pass it by keeping so close to the shore that it is no unusual thing to have to change the uses of the oar from rowing to shoving the boat off from the crag on which it is just about to be dashed. In Samoan geography this place is known as Lafongamasi, the Jettison of Biscuit. Native canoes have to be loaded carefully; the bulky articles which can stand a wetting go at the bottom, lighter wares, which must be kept dry, go at the top. That would bring the staple preparation of native food, the cake of baked fermented taro, on the very summit of the deck-load. More often than not the load was carried away in these wild seas, and the place got its name from the great likelihood that at least the biscuit would have to go by the board.

Where there are barrier reefs there may be all sorts of ways of getting in and out; the passage at Apia is wide enough for even so large a vessel as the Philadelphia. Other places are completely bottled up within their reefs; between these limits are all sorts of passages.

To get within the reef at Samusu, which gives entrance to the placid lagoon of Aleipata, where the turtle consort to lay their eggs, is a task that calls for boating skill. The boys are rowing the boat as usual perilously near the outer line of rollers. Looking over the rollers one may count three monster waves rushing along to succor the wave that has just dashed itself in foam on the wall of coral beyond which lies the expanse of still water and the white beach under the feathery cocoanuts. No amount of anxious looking will show the stranger where the way in lies among these rollers. They seem to extend without a break for mile after mile as far as the eye can reach in either direction. But the Samoans know the way in. Just at the edge of a projecting rock there is a narrow space on which there are moments when the high wave does not seem to break. Taking advantage of the place and of an interval of still water the boat is bravely threaded inside the first line of rollers. Some distance further along there is a gap through the second roller. Returning almost opposite the spot where the first roller was flanked, the opening through the coral barrier is found. It is narrow, it is tortuous, it is beset with coral slabs and nag's heads, and there are all sorts of difficulties in the way. Even when the reef itself is passed the trouble is not by any mans over. There is a dangerous tide rip which may drive the boat stern on and back into the narrow way. It is small wonder after all these dangers are passed the Samoan boatmen devoutly exclaim "Fa'afetai!" an expression of gratitude for their preservation in time of peril which long antedates the teachings of the missionaries.

At Lotofanga there is another danger. The pass is straight and clear of all obstructions, but all this is found when once the traveler is within the pass. The difficulty comes in getting into the pass. Just outside its entrance there is a whirlpool forever gyrating. There is only one way to use the pass; that is to plunge boldly into the whirlpool and trust to luck. The closer the boat can be urged to the center or vortex the better the prospect of getting through and into the pass, which lies invitingly open beyond. A boat caught in the outer whirl will be spun down into the shallow depression and then spun out at the point of entrance. This must be repeated over and over until the crew have been able to urge the boat to the right spot. Then, when the sweep of the waters carries it out it will be found to be on the shoreward side and headed for the pass, through which it is shot with the speed of steam. Now, just one word about reefs where there are no passes. It is a trifle annoying to meet such a reef, but it does not seriously interfere with the arrival of the traveler. It looks hard; it seems an impossibility to cross a sea reef on which great waves are breaking heavily. But it is done; the reef is jumped, and accidents are of rare occurrence. Selecting the most favorable spot, the Samoan captain urges his boat directly for it, timing himself so that he may come in just behind the crest of a great wave. When the wave combs and breaks ahead of him the crew leap out into the smother with their hands upon the gunwales, and as the wave ebbs they hold the boat up and ease it down on the coral. With the first flood of the next wave they leap in once more, only to leap out again at the right moment to secure the advantage thus gained. In this way they win over into the peaceful water within.

All these picturesque annoyances of boat navigation are directly chargeable to the coral, which has a way of getting into the way of traffic. Coral has its good points. It is a pleasure to take a boat and float idly over the coral groves in the placid lagoon waters, to watch the rich colors with which every twig is tipped, to study the wide range of shapes in which these stone flowers grow. Coral is not an insect, nor is there any good basis for continuing its employment to point a moral. But when a man in a boat finds a rampart of coral to lie between the place where he is and the place where he would be, then he may be forgiven for thinking that the coral would be all the better if it did not have so many points, for experience shows that one of the points of coral in a sea way will go through the skin of a boat as though it were tissue.

Natural History.

Some Olympic Mammals.

FROM Mr. O. G. Elliot's "Catalogue of Mammals from the Olympic Mountains," obtained in the expedition noted in our last issue, we take these paragraphs relating to some of the most interesting species. The Catalogue forms Publication 32 of the Field Columbian Museum.

The "Whistler" (Arctomys olympus).

This marmot is found in the higher altitudes of the Olympics, and was first seen by us between 4,000 and 5,000ft. above the sea. It is especially plentiful in Mount Angeles, and is met with in small colonies throughout the range traversed by us. As soon as any intruder is sighted, the loud, shrill whistle of some sentinel perched upon a commanding rock is heard startling the lively echoes, and if in summer his yellow body discloses his whereabouts, as he sits upon his haunches watching the unwelcome visitor. The sound this species utters is exceedingly shrill and piercing, and gives to it the common name of "whistler," and it often misleads one wandering among the cliffs, who imagines that some companion is calling to him, rather than that so powerful a whistle should be emitted by any small mammal.

The Farmer (Haplodontia olympica).

This peculiar little rodent is known to the settlers as the gehalis, mountain beaver and farmer, the last name being the one most commonly employed. Few have seen it, as it has secretive habits, and the fact that it rarely moves about much during the days gives but few opportunities for observing its ways and mode of life. It keeps to wet and swampy places and near to small streams and mountain brooks, and makes its burrows in the banks. Sometimes, however, these are dug in the ground, in the midst of tall grasses growing densely together, and paths are trodden down connecting the various entrances to their underground homes. The muscles of the neck and jaws are very large and powerful, and they can bite with great force. The hinder part of the body is comparatively weak, and the hind feet are much more slender than the hands. The ribs also are slight and rather delicate, and the skeleton has the appearance of being rather too feeble to carry the large skull. While in the bushes or grass the movements of this animal appear to be exceedingly quick, as it would immediately disappear from view, yet those that I have seen in the open did not move with unusual rapidity, the heavy body and exceedingly short legs being apparently decidedly opposed to any celerity of action. The most peculiar habit to which they are addicted, and which gives them their commonly accepted name of "farmer," is that of making "hay." They usually dig their burrows in the vicinity of a water plant, apparently a kind of low-growing lily, and this they cut down in quantities and carry it near the mouths of their burorws, and spreading it out leave it to be dried by the sun, and when sufficiently cured it is drawn into the holes to serve either for food or bedding, perhaps both. Near our camp, in the vicinity of Happy Lake, was the resort of quite a colony of "farmers," most of whom returned to the East with me.

This animal has a most peculiar hand, admirably adapted for grasping. Near to an opposable thumb is a prominent, somewhat lengthened basal tubercle, and any object placed between this and the thumb is held very firmly.

Wapiti (Cervus canadensis occidentalis).

As much as we might wish that this fine animal should bear the name of the present Governor of New York, yet there can be no doubt that Smith described it more than seventy years ago (l. c.) under the name of *occidentalis*. There is a slight confusion where he speaks of the "tail long and dark," but as he was describing the species from a drawing, this was most likely an error of the artist. The description of the horns, however, prove very conclusively that it was a wapiti, and not a black-tailed deer (*O. hermionus, Rafin*), that he had portrayed before him, and the sketch he gives of the horn in the British Museum, pl. p. 94, with which those of the drawing were compared, and which he stated "corresponds perfectly," shows that it was a species of wapiti and nothing else that he was describing.

The antlers of this wapiti vary in size, shape, number of prongs, and the prescence of "cups" and palmation of the horn, in an extraordinary degree. The typical style, or what may be called such, of well-formed antlers cannot be distinguished from those of the Rocky Mountain wapiti, and this is the normal style. But there appears to be an inclination to wander from the type, so it is not uncommon to find antlers of most bizarre forms. These, however, are no indication that their bearers represent distinct species, and one would be very unwise who should attempt to create one upon such an insecure foundation. Five bulls were killed by my party, all but one, old inhabitants of the Olympics, but the antlers of no one of them bore much resemblance to any of the others. Two of them, while belonging to very large bulls, had but five points on each horn, but these differed widely in their general shape and extent of spread. The third pair were evenly branched, with a decided cup at the crown, surrounded by higher points. The brow tines, however, project almost directly forward, and were without the graceful upward curve seen in the typical style. These antlers had seventeen points. The fourth was a very extraordinary pair, being palmated from the burr for nearly the entire length of the beam. The antlers are heavy and massive, the tines being very long, and they also possessed seventeen points. I have seen palmated antlers of wapiti in the Rocky Mountains, as greatly developed as the majority of those found in the Olympics, but out of a very large number examined by myself, procured in all sections of our country inhabited by wapiti, I have never seen any at all approaching the flattened spreading beams of this pair. The bull that carried them was a very old animal, and evidently of great pugnacity, for he was covered with wounds received in battle, some of which would probably have caused his death ultimately.

Failing to find any specific or subspecific character on

the antlers, for any deviation from the typical style (which is that of the Rocky Mountain wapiti) must be considered accidental, we must turn to the animal itself, and what do we find. In nearly all seasons of the year, except winter, the color of the coat is apparentlpy indistinguishable from that of the Rocky Mountain species, and I have seen a number of heads, killed in winter, that resembled precisely the Eastern animal, being in nowise any darker. But as a rule I believe in winter the head and neck of the Olympic wapiti, together with the legs, reaching to groin and rump, is black, varying in intensity and in a mixture of brown, among different individuals. This peculiar coloration I have never seen in the Eastern wapiti, and when in this pelage the Olympic animal could be always readily recognizable. It is to be expected that all the animals inhabiting a country subjected to such an annual rainfall as is northwest Washington would be very dark in appearance, and this is almost universally the case, all colors being intensified, and it is not surprising that the wapiti should prove to be no exception to the rule, but assumes at certain seasons a partly black pelage. This coloring is practically the only character there is by which the wapiti of the Olympics and Rocky Mountains can be separated, and when it is absent the animals are indistinguishable from each other.

Black-tail Deer (Odocoileus herminous).

The true black-tail deer was the only species represented in the mountains. Although signs were seen every day, the animals themselves did not appear to be very plentiful, considering the amount of ground we passed over, and even during the rutting season in September and October the bucks were not often seen. The summer coat of this deer is of quite a different color from any Eastern species, being of a more fiery hue, and looks very handsome when seen in the thickets, which, however, is not often, for in spite of the brilliancy of its coat the animal is not readily observed. Red and green being complementary colors assimilate and prevent the bright one from becoming too conspicuous. The black-tail has all the action of the Virginian deer, and never jumps with the rubber-ball motion of the mule deer, and in flight carries its tail well up. Its short legs do not permit it to stand high, and the body is chunky, and I imagine would weigh more than the average Virginia deer of the same size and age. About the settlements it is persistently hunted and its numbers have been much reduced in late years.

Wildcat (Felis rufa fasciata).

The wildcat is very numerous in the Olympics, and all that I saw were remarkable for the rich chestnut red color of their coat. Some specimens, notably the one I brought back with me, resembled mahogany in their coloring. It is a large animal for this form of lynx, and like all its tribe exceedingly savage.

Black Bear (Ursus americanus).

Black bear were very numerous in the mountains, and we met with them, or evidence of their presence, continually. We, however, only obtained two specimens, an old male and a cub. The animals were very shy, unusually so, and cowardly, and would go off on a full run the moment any of us was sighted. They visit the streams when the salmon are running and become very fat on the fish they catch. There are no grizzlies in the Olympics, and only occasionally, as I was informed, is a cinnamon bear seen. It would be interesting to compare a series of the black bear of these mountains with one of their Eastern relatives and ascertain if there is any character for separating them. If the Louisiana and Florida bears are separable it would seem not unlikely that these animals, living in this remote corner of the United States, might also possess claims for distinctness. Mindful of the often wonderful individual variation there is seen in the skulls of nearly all species of mammals, it would not be safe to form an opinion on the specific status of the Olympic bear without having a number of specimens available to judge from.

The Fisher (Mustela penanti pacifica).

In certain parts of the mountains the fisher is not infrequently met with. Two specimens were obtained—a male and female. The first was shot out of a tree, among the branches of which he had taken refuge; the other was caught in a trap. The female is much the darker of the two. The male is much more grizzled gray on the head and neck than the ordinary Eastern fisher, though I have a specimen in the museum from Wisconsin that is also rather remarkable for the extent of this same coloring that it exhibits. This animal is exceedingly quick in all its movements. Although in the recesses of the Olympics, individuals are occasionally seen and sometimes shot or trapped, yet the fisher must be regarded as a rare animal everywhere.

Its fur is long, thick and glossy, and it is a beautiful creature. Sometimes an individual is taken nearly jet black, and such a specimen is regarded as a great prize. The tail is very long and bushy and adds much to the graceful appearance of the animal. Martins are not uncommon in certain parts of the mountains, but we did not get any.

The Red Squirrel.

THE red squirrel is no Ishmael. He is not a wanderer, for he loves his home, stays there and fights for and defends it. After the snows came I could always find him in the same big hemlock that was his hiding place through the fall. How often have I watched him—when the snow was deep in the forest and all other wild creatures, with the exception of the chickadees, under the cold and frosty hand of winter, silent—daintily picking his dinner of hemlock cones; then, as he found himself observed, "sassing," snickering and making faces at me with motions so full of pent-up energy. The whiteness of the snow, the dark green of the hemlock, the brown of the little cones on which he feeds, the bright winter sunshine and his own red coat shining amid it all, make up a picture that I for one would like to see once more. Truly I hope his shadow will never be less nor his numbers fewer.

PINE TREE.

Game Bag and Gun.

A Deer and Turkey Hunt in Mississippi.

JACKSON COUNTY, Miss., June 9.—B. F. Pickett, G. H. Howze, S. D. Denny, O. H. Broun, L. M. Morris and the writer, of Jackson county, on the Gulf Coast of Mississippi, and Geo. E. Sage, from Mobile, have hunted in October and November of each year for deer and turkeys in the swamps on the headwaters of Pascagoula River, since 1882. We have a club house furnished with all the conveniences and comforts that are needed. During the summer of 1898 the Mobile, Jackson & Kansas City Railroad had been built through our grounds, and a considerable town built around our camp. As this meant the ruin of our game preserve, we were anxious that all of the members of the club should be present at our last hunt. The quarantine and yellow fever scare had prevented all of us from joining in the hunt in the fall of 1897. Again the scare of fever placed a quarantine by Alabama against Mississippi on Oct. 1, 1898.

The writer being the originator of the hunts, and having more leisure time than the others, it devolved on him to make all arrangements of the hunt. Contrary to past experiences the month of October was cool for this latitude.

I left my home on Monday, Oct. 17, with my wife, who was to stay at a friend's, some two miles from our camp. We reached our destination about 9 o'clock that night. Tuesday morning broke clear with a trace of frost, which added greatly to our comfort. I spent the day in getting our provisions in camp and arranging everything for the hunt. That night Pickett, Howze, Broun, Denny and Morris came in; also Haywood, our colored cook; Henry, our driver, and Pomp, our handy man.

I had found a flock of turkeys going to roost that evening, and we were to go there before daylight the next morning. Sage did not come, as quarantine prevented. At 10 o'clock we turned in with the alarm set at 4 o'clock.

The next morning promptly the alarm went off and soon all were dressed, and after taking a cup of good coffee I took Pickett, Denny and Morris where I had seen the turkeys the evening before, while Broun took Howze to where he had seen a flock of turkeys go to roost. After I had placed my party around the pond where I had located the turkeys, I went to where I knew turkeys were usually found. Just as the birds were greeting the morning with their songs, I heard Pickett's big gun go off, and soon a fine young gobbler flew down near me and a soft, low yeep brought him nearer me, and the first turkey was credited to my score, and going back where I had left the others, I found Pickett with a large four-point buck, which he explained walked by him as he was sitting down by a tree waiting for turkeys to fly down. We were jubilant over our success, and soon had our game in camp, where we found Broun and Howze, who failed to get any game. After breakfast we sent a telegram to Sage, giving our success and urging him to come. The remainder of the morning was spent in an unsuccessful drive for deer. That evening we crossed the river and hunted in a big swamp. Morris and Henry each got a turkey, with two flocks located to return to early next morning. On returning to camp we found a telegram from Sage saying he would be with us next day.

We retired at 10 o'clock that night with the alarm set for 4 o'clock next morning. At the appointed time we were up, and after getting our coffee we crossed the river and went to the place where the two flocks of turkeys were located, and with the coming of day the boom of guns was wafted out on the still frosty morning that told game was found. At 8 o'clock we were back in camp with the following score on turkeys: Denny 2, Morris 2, Broun 1; Pomp 2 and the writer 1. We sent our game to friends in Mobile, and wired Sage the result, with an earnest wish for him to join us, which was answered the quarantine officers would not permit him to come, but would let him come to-morrow. We hunted for deer the balance of the morning, but failed to get any, although we started four. That evening we failed on turkeys. Friday morning we got a fine buck, credited to Broun, and were back in camp by 10 o'clock, where we found Sage, to the joy of all. While we were waiting for dinner, Pomp came in and reported that he had just seen a large buck run into a thick swamp near camp, and we decided while waiting for dinner we would try and get that deer. After directing our party where to stand, Broun and the writer took the dogs and carried them to where the deer was seen, and put them on his tracks, and we just then discovered the deer coming out, who, seeing us, turned back, but the dogs were in hot pursuit, and soon I saw him coming toward me, and a lucky shot with my 25-20 Marlin on the run laid the old fellow out.

Denny left for home Saturday. We hunted for deer, and Broun killed a very large old buck, while Pomp killed three turkeys with my little Marlin while on a stand waiting for deer.

Howze left us on Sunday, and we sent our turkeys and the hams of the venison home, except enough for our Sunday's dinner.

We spent Sunday in camp resting.

Monday the following score was made on turkeys: Sage 3, and Broun, Pickett and the writer 1 each. Monday night Gaillard, of Mobile, Ala., and a former companion in some of our hunts, joined us. The writer had killed a turkey just at night Monday, and saw another gobbler go to roost in the swamp some two miles from camp. As Tuesday was to be the last day we were to hunt, and Gaillard had just come, it was the wish of all that he be given a chance to kill a turkey, and the surest chance was to go where the writer had seen the gobbler go to roost. Tuesday morning the alarm went off at 4 o'clock, and the writer was up with the indomitable Pickett, although sixty-two years old, with him; but the balance of the boys were slow in arising, as we had company until 11 o'clock, and when coffee was announced, none were ready. After hurrying them a little, we got across the river, where we separated, the writer taking Gaillard, and as we parted from the others Pickett gave Gaillard his hand, saying: "Good-by, old fellow; it is nearly daylight and you are a mile and a half from where you have to go; and that long-legged fellow [the writer] will make you run all the way, and as you are soft he will kill you."

The morning was cool and frosty, and we had to hurry to make the place where I had left the gobbler, but we got there just as the day was making its appearance, and not knowing the exact place where the turkey was, I took G. to a tree where I thought the turkey was and sat down to wait for more light, but on looking up over our heads I saw our turkey in the topmost branches of a tall cypress tree. I showed it to G., who fired one barrel at it sitting, and snapped the other at it flew off. The turkey was apparently untouched, but I listened, and heard it light heavily in a tree some 400yds. away, and soon a dull thud was heard. I knew the turkey was dead, but G. had not heard its fall, and was crestfallen at his failure to kill at such a fair chance, and was loath to believe the bird was dead. After hunting in the cane for some time, I found the turkey stone dead. Pickett's, Morris' and Broun's guns were heard, and when we returned to camp the morning's hunt stood: Morris 2, Pickett 1 and Gaillard 1. That evening Sage got one and the writer two turkeys. This ended our hunt. Squirrels and quail were not counted.

C. H. WOOD.

Nova Scotia Game.

IN his latest report as Secretary of the Game and Inland Fishery Protection Society, Mr. George Piers says:

Moose and its Sale.

Moose, our noblest game, are not diminishing, but, although there are numbers of these fine animals in Nova Scotia, it will require all the energy of the Society, as well as more funds, to keep them from the like fate of the tens of thousands of buffalo that were to be found but a few years ago on the western prairies, where now all that remains of them is a few bleached bones. If the sale of moose meat is not soon prohibited, this will be the case in Nova Scotia also. We must remember that hunters are increasing at the rate of two to one of moose. Formerly the sport of moose hunting was confined to the military with a few exceptions. Now it is quite different, as almost every man who is fond of an outing, and who gets a week or two's holiday during the fall or winter, goes off for a moose hunt. Then there are increasing numbers of American sportsmen who come here annually for the above sport. Last, but not least, are the Indian and white poachers, who kill during the open season for the market and before and after that time slaughter to supply the lumber and gold mining camps with fresh meat at 5 cents per pound. This is robbing the farmer, he not being able to sell a quarter of fresh beef to these camps, which he would undoubtedly do if the sale of moose and caribou were prohibited. I verily believe there are as many of these fine animals killed out of season as during the open period. Of course, people in general know nothing of this as it is kept very quiet; and when the proprietors of the camps are prosecuted they swear that it was ox beef that they purchased. No doubt the poachers sell it as such, but Mr. Lumberman knows better, and it is only his way of cheating the devil. The Game Society has had positive proof of this having been done.

I received a letter a few days ago from the mayor of Truro, asking the Society to use its influence in securing a law prohibiting the sale of moose and caribou meat. He stated that one butcher in Truro had sold twenty-one carcasses of moose last fall and in the early part of the winter, besides what others had disposed of. I continually receive letters such as the above from different parts of the Province. I have to answer that it would be useless for the Game Society to ask the Legislature to pass such an act, as I am aware that a number of the members are of the opinion that the game laws are only made for the convenience of a few city sportsmen. If the sale of moose and caribou meat were stopped, every poor settler could kill a moose when hard pressed for fresh meat, and would not have to leave his home for a week in order to do so; because, as soon as the poachers found that they could not sell the meat, they would cease from their unlawful work; and the moose, not being continually harassed, would become comparatively tame, and would yard within a mile or two of the farms, as they used to half a century ago. Then sportsmen did not have to go long distances to kill all the moose they desired, as there were plenty in the vicinity of Nine Mile River, Hammonds Plains, Guysboro Road, Mount Uniacke, etc. The same could be said of other counties also, as well as of Halifax. If this game were not marketable, they would in a very few years, again become as plentiful as of old. Not many years ago, at Walton, Hants county, there were only four or five moose in the whole district, owing to rope, dogs, and the gun, used at all times of the year. An agent was appointed, and as a result of his first search for snares he sent me nineteen, and before the season closed I received ten more. I have not heard of a snare having been set there since that time. Our agent reported ten moose having been shot during the year 1898.

Caribou and Deer.

I do not know whether the caribou are moving this way or not, but there have been more seen this year than for many previous years. A small herd was seen near the Guysboro Road, about twenty-five miles from Dartmouth, where they had not been observed for fifty years. They were also reported as having put in an appearance in other sections of the Province.

Judging from the reports that I have received, the red deer are doing well, considering the small number put out. One of the two that were set at large at Harrietsfield last year was shot at French Village. The three men who took part in the killing of it were prosecuted and fined $50 each and costs.

Imported Birds.

I cannot say much about the pheasants, as I was not shooting last autumn near the places where they were put down. However, I saw a fine cock not far from our exhibition grounds in October, and often hear of them from the country people. Mr. R. Bishop, of Beechville, Halifax county, tells me that there are a good many about his farm and that there are two cocks to every hen. He does not think that they increase as fast as they should do. Mr. H. N. Wallace purchased a trio in 1897. He raised thirty

chicks, some of which he set at large, and others he kept inclosed. In 1898 he had two fine broods, both of which, however, were accidentally killed. Mr. Wallace continually hears of farmers, living in the neighborhood where the pheasants were put out, having seen them, and he has every reason to believe that the birds are doing well.

The sharp-tailed grouse imported by Mr. E. Longard have increased wonderfully. Now that it has been satisfactorily proved that these birds are well adapted to our climate, and that they feed on precisely the same food as our ruffed grouse, the Game Society should lose no time in procuring a number to be put out early next spring. If the Society cannot import them, let the sportsmen do so by subscription.

Native Birds.

The three years' close season for partridges has been generally welcomed, and has been well observed in the city and throughout the Province. I have not heard of any birds having been offered for sale in the city. Several of the leading victualers told me they had not seen a single partridge this season. There have been a few violations of the law in different parts of the country, but in most cases the guilty parties have had to pay dearly for their sport, as well as those who purchased the birds. No doubt numbers have been killed in snares, but that will be the case as long as rabbit snaring is allowed, the wire being much more destructive to the partridges than the gun is. Owing to the close season, the birds have had opportunity to multiply, and they have done so notwithstanding the unprecedentedly wet spring and summer. I have had several complaints from different parts of the country, to the effect that the partridges injure the apple trees by feeding on the buds. I am aware that they feed largely in the apple leaves late in the fall, but cannot understand how it is that they injure the bearing of the trees, as it is a well-known fact that apple trees growing near the woods and in coverts, where they are never pruned or otherwise cared for, are always well laden with fruit; and these are the trees, if any, that would be most injured by the partridges. I am, therefore, inclined to think that the birds have been blamed undeservedly.

There was good promise of woodcock in the early spring and summer, but before the season opened for shooting them the majority had taken their departure, and so the bags made were very small.

Snipe were scattered in numbers all over the country, and were to be found on the high grounds, as well as in the low, owing to the very wet weather that prevailed from spring to fall.

In the Rockies.—V.

"A poor sequestered stag,
That from the hunter's aim had ta'en a hurt,
Did come to languish."

—As You Like It.

ONE such night sufficed to dishearten Dan, and when I set out the following evening upon another nocturnal vigil, he characterized my persistency as pure "cussedness." Again I spent the night upon the lake in vain, although I found in the morning that the moose had again visited its shores.

I know that some sportsmen would never have wasted so much time looking for their game, but with birch-bark horn would have decoyed him to his fate and long ere this have dipped their facile pens in his blood. But somehow I never found in the Rockies a man who had mastered the idioms of the moose tongue. I am constrained to believe that the moose of the North Woods possesses a guileless and confiding dispositiion entirely foreign to his brother of the Rockies, who seems to have such a sensitive regard for the solecisms of grammar and the errors of pronunciation committed by the most accomplished caller as to turn a deaf ear to the voice of the charmer, charm he never so wisely.

Another favorite method of killing the moose in print, and which has been graphically portrayed by Frost in one of his inimitable hunting scenes, is to cruise down upon him in a canoe, while he is feeding on a dark night, and dash the jack light upon him and kill him while he accommodatingly stands in the glare of the lantern. At last, that is my information. My experience is that he retires with precipitate haste, night or day, at the approach of the enemy. The insuperable objection to this ingenious method is that the Rocky Mountain moose can see a great deal better at night than a man, and with a perversity that is discouraging refuses to wait while you paddle down within the very short range essential to kill him by lamp-light. I imagine an electric searchlight such as our war ships use would alone be adequate for this task. I was denied the pleasure of bagging my moose in any such romantic manner, but only did so by pure accident, after abandoning the attempt in defeat.

The moose possesses in a measure the homing instinct. Unlike that cervine tramp, the caribou, whose comings and goings are a mystery, where all signs and prophets fail, and who, with no guide but the caprice of the moment, is on the mountains to-day, in the valley to-morrow, the moose shows a fondness for a fixed locality. In this respect the hunter has a decided advantage. Locating pretty accurately by the sign the general direction in which he came and went, I determined at last to hunt him where, high on the mountain side, he dozed away the day, and for the first time in several nights I went to sleep in camp.

The great Dipper had turned its circle in the northern sky and the morning star glittered blue above the snowy summits when I awoke. The great log heap that burned so fiercely when I went to sleep was now reduced to a pile of smoldering embers, and the haunch of venison that hung over it had slowly cooked through the night, basted brown in its own oozing juices. I was the first awake, and put the coffee pot on the coals, and when I came back from the lake after performing my ablutions it was boiling. With the fragrant mocha I washed down great chunks of juicy venison slashed off the haunch, which, as usual, was barbecued to satisfy any taste, from being burned black on one side, through all the degrees of rareness to blood raw on the other. I started before day while the others were still asleep. Pushing out upon the black water, I wielded the paddle, and soon the camp-fire was reduced to a tiny point of flame in the darkness behind me. Somewhere in the blackness before me there was a sudden splash, and then the hiss of wings whose tips touched the surface as a flock of wildfowl skittered along the water before me.

The paleness of the dawn was slowly spreading as the prow ran rustlingly into the reeds and beached at the flat. It grew rapidly lighter as I paced the shore, and at last found what I was searching for—the fresh trail of the big moose. It led away in the same general direction, but an Indian could not have carried it after it struck up the mountain side, leaving no trace on the hard ground and over the rocks.

Carefully and cautiously I hunted all that mountain side, pausing to sweep all within range with my glasses at frequent intervals, and working my way upward, gradually higher and higher, hour after hour. At last I came out upon the open meadow above the timber line. Above that were the bare rocks and snow fields. It was after noon, and tired, hungry and thoroughly discouraged, I sat down and ate my lunch. The way in which that moose usurped the prerogative of ghosts was discouraging. He had vanished as if by magic. I was ready to give up the hunt.

I rested and ate my lunch, and afterward felt refreshed but thirsty. I could not recall having lately passed a spring, and with my glasses I swept the mountain side in vain for the shimmer of water. My glasses rested idly upon a short, bare ridge, or hog-back, that put out laterally from the mountain side like a bastion. I remembered that just beyond it was a little basin scooped out of the mountain side, and shut in between it and the ridge. In the basin there was a little copse of aspens perhaps 100yds. across. I had not gone through the copse, but skirted around it to avoid climbing the steep ridge: but I was satisfied there must be a spring somewhere to support the growth of aspens. The ridge and mountain side about it were rocky and nude of vegetation.

I walked over to the abutting ridge and looked down into the little cove below me. The rocky sides, in their cold grayness, offered a marked contrast to the verdure of the copse at the bottom of the basin. Peering into its recesses, I finally discovered its central well spring, fed from the melting snows on the summits above, clear and cold, with watercresses about its margin, and the blue of the sky mirrored within.

I took one step toward it, and stopped. I thought I detected a movement in the edge of the aspens beside the spring. It was probably a porcupine or a fool-hen, or something else equally insignificant, but in the mountains every movement excites the suspicion of the hunter, and I focused my glasses upon it. Under their magnifying power I could see the rough carnelian, and jasper pebbles which surrounded the margin of the spring, and just within the edge of the brush one broad, palmated antler was clearly visible, while through the concealing aspens I descried an indistinguishable bulk, so closely assimilating the color of the yellow foliage above and the bunch grass about it that the outlines were indeterminate.

The moose had allowed me to pass within 100yds. as I came up the mountain, and although I am now satisfied he saw me again upon my first reappearance, he lay all the closer, hugging equally tight the ground and the delusion that he was undiscovered.

I started back in the surprise of this discovery, and dropped behind the ridge. Running quickly along its side to a point about opposite, and closer to the game, I slowly and cautiously peered over the bare ridge. Through the concealing brush I saw vaguely that his head was lifted, striving for sight or scent, and knew then that he had seen me. The next moment, before I could bring the rifle to bear, he sprang up and plunged into the engulfing aspens. I had but a fleeting, disconcerting glimpse of a great, yellowish body and a pair of immense, palmated antlers. Oh! for another glimpse. I sprang to my feet, and started to fire into the swaying bushes which betrayed his progress, my anxiety almost amounting to buck ague. But I had sense enough left to see that in my excitement I was about to lose my nerve, and that the moose could not leave that copse without giving me a fair shot in the open, and I deliberately dropped on one knee to steady myself.

The next moment the big bull broke cover at the head of the copse, and bounded lightly up the declivity, his head held high, looking sidewise at me, and his huge antlers balanced back over his hips. The spectacle steeled my nerves. The rifle came to my shoulder, the sight through the buck-horn notch showed fine on his shoulder, and I touched the trigger.

At the crack of the rifle he performed a very strange and disconcerting evolution, and quick as I was at working the lever, I was unable to give him another shot. He reared up with his front feet, and whirling completely around on his hind legs, dived sidewise head foremost back into the aspens, with a peculiar grunting bark, not unlike that of a dog, the only sound I ever heard from a moose, and a most singular one for such a large animal. Very foolishly I sprang up in the excitement of the moment, and started down the steep slope, satisfied that he was down, but the next instant I stopped as suddenly as if stricken with paralysis, as I saw the bull again break from the brush and again strike up the hill, but this time straight toward me. It was an unexpected movement, and for a moment rattled me, and I fired off-hand. He stopped at the shot, and stood with his head down, his broad, shovel-like antlers sweeping back and completely covering the neck and shoulders, the long hair on his spine erect and bristling. It was an uncouth attitude for the most uncouth beast in the world, and resembled nothing I had ever seen or imagined. I paused, irresolute, and it was well, for the big antlers protected the body, and the great, bladder-like nose protected the brain.

I am satisfied that the bull never designed charging me, but was completely staggered by the first shot, which, instead of striking the shoulder, as I intended, was placed too far back for a vital point. Had the bullet been a solid ball instead of the express, with its terrible shocking power, it would never have stopped him. There are few animals that can stand up before that fearful shock of the express, and it had completely staggered the bull, who, upon plunging to his feet again, sprang forward the way he was headed, straight toward me. My second shot missed him, but it stopped him as I have said, and for a moment he stood as dazed. I had dropped and rested my elbow on my knee, and now as he wheeled I fired again at his shoulder, the most deadly shot for any species of big game. This time the bullet found its mark, and his long brown legs, shapely and strong as steel, shook, and for the first time failed to sustain the great weight they had so lightly carried over mountain and vale, through deepest snow and most treacherous bog, and slowly the big moose sank to the earth. For a few moments I stood with the rifle at ready, but this time the monarch of the mountains had gone down never to rise again.

FRANCIS J. HAGAN.

[TO BE CONCLUDED.]

A Memory of Scouting Days.

WE were camped on the South Saskatchewan, and had been eating canned corned beef, pork and very hard biscuit for much too long a period, when one fine morning the adjutant announced that last night's pickets had seen a herd of antelope feeding below the bluffs at the west end of the long valley which marks the river's course. The scouts attached to my little force had frequently assured me that we were in the enemy's country, and that officers and men who prized their scalps should avoid straggling; but as the country on our side of the river was flat as a pancake, and the enemy being apparently of a very retiring character, I was not much disturbed by these warnings, although I had all along taken the usual precautions incidental to Indian warfare.

Two things were always apparent to me, when I talked to the natives of that healthy country, the first being that they lied naturally and without effort, and for the rest regarded infantry soldiers as being little more useful to wipe out Indians than a Sunday-school picnic.

However, mentally I was already feasting on antelope steak, and I noticed that my servant, who had got no orders, was busy oiling my Winchester, having evidently made up his mind as to the proper course of action.

After the usual uninviting breakfast, I was soon astride of my stanch little Indian pony and riding rapidly up the valley to a point a little over three miles from the camp. From here I swept the curve beyond with my field glasses, and presently made out three antelope close to the bluff and feeding up wind toward me. By making a detour along the bank of the river, I was able to advance half a mile under cover, and soon was within less than that distance from my graceful little friends. Here I halted, unslung my rifle, dismounted, and carefully took in the situation. Behind me was the swift-flowing stream; 900yds. in front rose the bluff, presenting in most places an insurmountable barrier, while for many miles east and west stretched a prairie of short grass, smooth and firm as a racecourse. My time had come; and as I tightened Billy's girths that good little beast seemed to say, "Come on, master; I'll help you all I can." I rode for the first 200yds. at a sharp gallop, heading obliquely for the antelope, which did not see me until I was within rather less than 500yds. As they started up wind their first bolt brought them rather nearer to me, and the bluff barred all chances of flight to the southward. I was now advancing at a break-neck pace, and soon I would reach the nearest point I could hope for. Already I was within long range; but the sights were set at 200yds, and Billy's pace was rapidly bearing me to that crested range. It was an anxious time, and I was not unmindful of the possibility of badger holes, though so far the ground had been perfect.

Dashing through some light sage brush, I halted and fired my first shot out of the saddle. That time I think I hit the bluff, for neither Billy nor his rider was quite at his steadiest.

Then I dismounted, and my second bullet seemed to have no other effect than to increase the already frantic speed of the antelope.

Almost as I pressed the trigger for the third time I was keenly conscious that only two antelope were forging madly ahead, and my next sensation was the uncomfortable one of trying to explode an empty cartridge at the fast diminishing form of the one healthy animal remaining. I had exhausted my magazine. At this stage I patted Billy and lit my pipe. The first antelope was dead, shot just behind the heart. The second, with a broken shoulder, was rather feebly making a painful journey up a dry watercourse forming a slight ravine in the bluff. Even here the path was nearly perpendicular; but reloading, I leisurely made my way to where the poor beast had disappeared, knowing well that its wound and the discouraging geography of the country would render its journey a short one. It was the work of a moment to cut the dead antelope's throat, and then began such a climb that even at this date I recall it with something like a shudder. Some scrub helped me a bit, and in about twenty minutes I found I had climbed at least 10yds. A few steps further brought me in sight of the wounded antelope's head and neck rising just above some boulders, and here, for all purposes of ascent, the ravine ended. The animal was not more than 15yds. from me, and a bullet through its head mercifully placed it beyond sensation. For some time I despaired of getting its body back to the plain, but after more than an hour's tedious exertion this task was at last accomplished.

The gentle readers of FOREST AND STREAM will no doubt regard me as inordinately bloodthirsty and greedy when I say that my first reflection on reaching my horse was that with a little better management that third antelope might also have been harvested; but perhaps this thought will be tempered by the fact that far down the valley there waited for me nearly a hundred hungry men, to whom fresh meat was fast becoming only a memory.

RIDEAU.

OTTAWA, Canada, June 19.

The Teton Guides.

JACKSON, Wyoming, June 20.—*Editor Forest and Stream:* At the last meeting of the Teton Guides' Association Mr. William Wells, of Wells P. O., Wyoming, was unanimously selected a vice-president therein.

W. L. SIMPSON

"Exterminatory Peregrinations."

NEW YORK, June 24.—*Editor Forest and Stream:* Just a word to Didymus in response to his elongated if not symmetrical letter in the last issue of FOREST AND STREAM. If vituperaton were sound argument Didymus would have the best of it, and his chaste simile of the mud geyser would suggest an application which he never intended.

In a certain book, with which Didymus may or may not be familiar, these terse words occur: "Let him who is without sin among you cast the first stone." For the benefit of those who have listened to the virtuous howls of Didymus over the slaughter of game, let me quote from a letter of the anonymous gentleman himself which appeared in FOREST AND STREAM June 10, entitled, "The Wild Pigeon." Mark the consistency of this man who sheds crocodile tears over a dead alligator and whom the smoking out of a possum throws into convulsions: "The pigeons were flying over in such vast numbers that people got so tired of them that it was difficult to give them away, so my friend and I stopped shooting them. They flew very low, and on the glorious Fourth we thought we'd make our powder do double duty; so we took our chairs out under a tree and shot single ones out of the flocks as they passed over. By noon we had dropped about 100, and as we found it difficult to give them away we quit the business."

Virtuous Didymus! O rare and sportsmanlike Didymus! You dip your pen in gall to write of a man who took shots at coots and cormorants with a rifle from a boat going fifteen miles an hour; but your gentle and sensitive spirit suffered you to kill pigeons by the hundred when "they flew very low" over your back yard; and with a scatter gun at that! Verily, Didymus, we could not spare you. There is in you a vein of humor entirely unsuspected by yourself. Write more and oftener, Didymus, of "the attitude we have taken in Florida toward game butchers." Tell us again, in your classic and inimitable way, of "the killing of plumed birds" (when they fly very low)! Let your fervid imagination run riot, and quote again, as only you have the right to quote: "We shot a few of them merely for pastime." Didymus, life can never be dull and insipid so long as we have you with us, and if only you would write a book our cup of joy would be full. You are entitled to the first prize. O, Didymus, as the most unique of game protectors, and I hope the L. A. S. will recognize your merits and, through its president, send you that prize in the form of a "pigeon-blood ruby."

ARTHUR F. RICE.

[We print Mr. Rice's rejoinder, in conformity with our rule to give both sides; but it would not profit to have this correspondence prolonged by a discussion of the new issue he introduces, as to wild pigeon shooting. In the wild pigeon notes referred to, our correspondent, Didymus, related that in the days of the birds' abundance he and a friend had shot 100 (or 50 each) on a Fourth of July morning, and then had stopped because they could not make use of any more of the game. This was in every way proper; in fact the spirit of temperance and good sportsmanship which controlled these shooters was, if anything, in advance of their day. Had all those who pursued the wild pigeon then and afterward been controlled by a like rule we should possibly have had the bird with us still. But to discuss the killing of game birds when the game which is taken is used for food, would have no bearing on the subject which has been under discussion, namely, the indiscriminate shooting of wild creatures to gratify a morbid satisfaction in wounding, maiming or killing them, without regard to whether they are game or not, or whether they are utilized or wasted. We may as well straighten this out once for all. The shooting of wild pigeons for food is one thing; the shooting of "blue herons, white egrets, blue and white ibeses, ducks, cormorants, coot, etc.," from a moving steamer and leaving them to rot, is quite another thing. To confound them is to befog the issue. Mr. Rice evidently does not perceive the distinction which exists here; but his concluding paragraph is not for that reason any the less illogical and irrelevant.

The FOREST AND STREAM does not make itself a vehicle for vituperation. That the letters of our Florida correspondent in our issues of June 10 and 24 had to do with what he termed the "exterminatory peregrinations" of Mr. Geo. O. Shields in Florida, was, as he explained, due to the circumstances that Mr. Shields had left in his book "Hunting in the Great West" a disgusting account of his Florida butchery; the letters did thus have a personal application; but no candid reader can find in them anything of "vituperation" nor anything suggestive of a "pen dipped in gall," to warrant Mr. Rice's use of these terms. On the contrary, a review of what our St. Augustine correspondent wrote will show that in handling an unpleasant theme he neither compromised his own dignity nor sacrificed that good taste which should always characterize a sportsmen's discussion.]

Rhode Island Game Commission.

PROVIDENCE, R. I., June 24.—*Editor Forest and Stream:* Our Legislature enacted Senator Reiner's game commission bill, which reads:

"Section 1. The Governor shall, in the month of June, 1899, and every three years thereafter, appoint five Commissioners to serve without compensation, one from each county in the State, to be known as Commissioners of Birds, who shall hold office for three years, or until their successors are appointed.

"Sec. 2. The Commissioners of Birds shall protect birds throughout the State, and shall prosecute every person that shall violate any of the laws of this State relating to birds. Whenever complaint is made by said Commissioners, or either of them, or by their deputies, of any violation of any of the laws of this State relating to birds, they shall not be required, either by themselves or by their deputies, to furnish surety for costs, or be liable for costs on such complaint.

"Sec. 3. Said Commissioners in their discretion may appoint deputies not to exceed five in number in any county, and shall issue commissions under their hands to said deputies empowering them to execute the duties of such office, and shall record the names of said deputies with the Secretary of State. It shall be the duty of every Commissioner and deputy to enforce the laws of this State relating to birds, and they shall have power to arrest, without warrant, every person whom they shall find pursuing with intent to kill, taking or killing birds, or who shall have birds in his possession contrary to the laws of this State relating to birds. Provided, that any person so arrested without warrant shall not be detained longer than twelve hours.

"Sec. 4. Any Commissioner or deputy may seize, without warrant, any bird found in the possession of any person, at any time when the killing of such birds is prohibited by law."

The Governor has named as Commissioners under the act: For Providence county, Dr. Fenner H. Peckham, Jr., of this city; Kent county, Thomas W. Penney; Washington county, Dr. E. R. Lewis; Bristol county, William H. Thayer; Newport county, A. O'D. Taylor.

The National Park.

MAMMOTH HOT SPRINGS, Yellowstone National Park, June 21.—*Editor Forest and Stream:* We had several warm days, and now everything is afloat in parts of the Park. The Yellowstone had reached high water mark at Gardiner without much assistance from the Upper River. The Yellowstone Lake is not full yet, although it is pretty clear of ice. There is ice in the bays and sheltered coves. Mr. M. W. Pettigrew, U. S. Commissioner in Jackson's Hole, who has resided there for six years, informs me that the past has been a very easy winter in that section. At no time was the snow deep; from 1 to 2ft. was the average. A horse could be used all winter in traveling about the Hole. He says there was so little snow that the elk remained well back in the hills and mountains, very few coming down to the valley; and that very few died, none from starvation. He came up as far as he could horseback, a mile or so north of Crawfish Creek, then took it afoot over the snow, which he found from 5 to 6ft. deep through the timber, until he got to the crossing of Lewis Creek below Aster Creek. From there on there was but little snow, except in drifts. Lewis Lake was frozen over yet; this was on the 18th day of June.

The soldiers at the Snake River Station report having seen several moose, two cows with two calves each; and the two buffalo bulls were often seen. The past has been the mildest winter known in the Hole for years. Some of the 300 settlers there think the mild weather is caused by the settlement of the country. The Union Pass has been open to travel for three weeks. Teton Pass has been used all winter, not having been closed once to travel. Mr. Pettigrew estimates the number of elk in that country (south of the Park) as close to 20,000. All the antelope go out of the Hole early in the season (in October) and come back every spring as soon as the snow will hold them up. Every year less come back than go out. This year Mr. Fettigrew thinks possibly 5,000 may return. I have my doubts about that number getting back. Deer remain in the Hole and did very well the past winter.

The high water in the Yellowstone is carrying off some of the dead elk from the Park. Now and then the carcass of an elk or other animal has been seen floating down the river past Gardiner.

To-day the baggage of the two troops of the Fourth Cavalry was sent to Cinnabar, where the troop are to take a train for San Francisco by Friday or Saturday for Manila. Travel commenced on the 14th inst.

E. HOFER.

CHICAGO AND THE WEST.

Death of G. M. Holt.

CHICAGO, Ill., June 21.—A very sad affair ocurred last night in this city, which leaves vacant the place of one of the most popular and best-known figures in the sporting goods trade of the West. Mr. Granville M. Holt, for many years the manager of the sporting goods department of Montgomery Ward & Co., died by his own hand at his residence, 5316 Lexington avenue, this city, under the final stress of an attack of insanity which had been impending for months, perhaps years. For a long time Mr. Holt had been in bad health, and his employers and business associates had noticed increasing mental aberration. Most faithful to his duty, he declined the vacation offered and indeed urged upon him by his house and held to his work. A bluff, big, gruff-spoken, kind-hearted man,, there are few department managers who have a better reputation or who had a wider circle of friends.

Illinois Birds.

The new Illinois game law goes into effect July 1, and the State legal department has ruled that it is not in any sense retroactive, and hence will not affect the property rights in song birds taken or purchased legally prior to that date. Local birds dealers have been somewhat disturbed over a rumor that they would be brought into trouble over birds bought in the course of trade hitherto. The war on our native birds will, however, have to be stopped after date of July 1.

From Chicago.

Chicago business men are known all over the world for energy and progressive methods, and this city has furnished hustlers for a great many big concerns East and West. Our former Chicago shooter, Mr. C. E. Willard, was called East for a connection of some years with the Colt's Patent Firearms Manufacturing Company, and only recently severed his relations with that large house to form others in the city of New York. Mr. Willard's card shows him to be now general sales agent of the International Smokeless Powder and Dynamite Company, of New York city. The powder people have secured a good man. As Mr. Willard is to make an early trip West, I presume he will tell his Western friends all about what he is doing in the matter of popularizing a new article.

Bass.

It seems likely that the bass fishing season this summer will be very short. The spring was very slow and backward, and now hot weather has come with a rush. It will not be long before the bass quit feeding in the shallow water and retire to the deep water, where it is hard to induce them to bite. Seeing that the sport is now about as good as it is apt to be, the Chicago anglers are improving the shining hours of late June in bait-casting for the big-mouths. Nothing very startling transpires as yet this week in the way of weights, but I learn there has been very generally good success in the Fox Lake chain and waters of lower Wisconsin.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Mongolian Pheasants in Ohio.

MANSFIELD, O., June 14.—*Editor Forest and Stream:* I have seen many articles in FOREST AND STREAM that gave me the impression that Mongolian pheasants are hard to raise. On the contrary, my short experience with them has been very satisfactory. We were presented with eight birds from the State hatchery last fall, and succeeded in keeping them through the winter, with the loss of only one. This spring, as soon as the four hens commenced to lay, I secured domestic hens and set four with from twelve to sixteen eggs apiece. I have twenty-five chicks now. Half of them are a month old and are almost as large as quail. Eight got out through the wire netting around the cage, but the rest have never shown the least sign of sickness, and are as active and pretty as can be.

The State turned out a great number of pheasants throughout the different counties last fall, but I cannot say for my part how they stood the hard winter. I should think they ought to be kept shut up the first winter, and then turned out the following spring. Then they would have the summer before them to learn to hustle for themselves. I hope the time will come that I can bring home a mixed bag of quail and pheasants. I know they will get along together in my coat pocket without quarreling after they are dead; but the question is will they do as well in life. They have more good points in their favor than the carp or English sparrow, so I guess there is nothing to fear and lots to be thankful for if the State is successful in introducing them.

H. S.

Pheasants in Tennessee.

THE CEDARS, Shelby County, Tenn., June 20.—*Editor Forest and Stream:* You will probably recollect my calling on you in February last and our talking over old times and the discussion we had on English pheasants and skylarks. That conversation induced me to make arrangements for taking a hand at the pheasants, and I had sent to me fifty eggs, forty-six of which reached me in good condition. I placed them under two hens—one a game and the other a common fowl. These eggs came over a thousand miles, and I was perfectly astonished to have forty-one strong, healthy young pheasants hatched, forty of which are still living. They are over two weeks old and are commencing to fly a little. I am now making my arrangements for breeding and preserving them on my 1,300-acre farm, which is well adapted for the purpose, having a few small coverts of several acres each, close to the house, that stands in about the center of my estate.

EDMUND ORGILL.

Eastern Massachusetts.

DANVERS, Mass., June 23.—*Editor Forest and Stream:* We had a social shoot at our gun club range on the 17th, and the genial Dr. Niles was high man, with 18 out of 25. When he gets after them with his Remington we have to look out for our scalps. The foxes have been living high on the Middleton poultry, and the farmers have been going for them tooth and nail, tracking the old ones to their dens and digging out the young ones and killing them. It is causing dismay with our fox hunters. Capt. Martin, a fox hunter and poultry raiser, says he would not dig one out if they were to eat up all his hens. He may be overstating himself, but he is enthusiastic over his only sport.

Mr. John Wallace it is reported killed an opossum yesterday with a stone, the first one I have heard of in the vicinity. Think a person with a good coon dog could get animals up in Middleton and adjoining Andover wood this fall. We don't have any dogs trained to trail and tree them in this country.

They are catching more pickerel in Ipswich River than for many years. One fisherman had an otter come out on the bank where he was sitting within 15ft. of him. By the way, where is our old friend Fred Mather? Has the earth or sea swallowed him up? He has many hosts of friends through the FOREST AND STREAM, and it seems as if half of the paper were missing with him out. Stir him up in his wild West home and tell him we want to hear from him.

JOHN W. BABBITT.

Baltimore Game Sale Cases.

THE Maryland Court of Appeals has rendered its decision in the Baltimore game selling cases. The Baltimore Sun correspondent summarizes them, writing from Annapolis, June 22:

Judge Schmucker filed the opinion of the court in the case of Robert N. Stevens against the State of Maryland, affirming the Criminal Court of Baltimore, which found Stevens guilty of violating the game law. The appellant was indicted for having in his possession and exposing for sale in Baltimore city during the closed season certain dead rabbits, contrary to the provisions of Section 15, Article of Chapter 206, Acts of 1898. He first filed a demurrer which was overruled. At the trial he offered to prove that the rabbits had been lawfully killed in another State and had been shipped to him from that State in an original package, and that he had received and exposed them for sale in that condition without breaking the package. The State objected to this evidence and the court sustained the objection, and the verdict being against the appellant, he appealed.

Judge Schmucker said in delivering the opinion: "The right of the State to regulate and control the killing, possession and sale of game within its borders is held to rest upon its police power, and, if the provisions of the laws by which such regulation is made are reasonable for the accomplishment of the end sought to be obtained, the

law will be held to be a valid exercise of that power. We think the indictment was not defective. The offense was one created by statute, and the indictment described it in the words used in the statute. This has repeatedly been held by this court to be sufficient." The judgment appealed from will be affirmed, with costs.

A similar decision was given in the case against Samuel A. Rice. He had been indicted for selling partridges, woodcocks, one flicker and five rabbits. The facts are identical, Judge Schmucker said in his opinion, with those appearing in the Stevens case, except that the appellant did not offer the game for sale in the original package in which it was shipped to him from another State, but broke the package and offered its contents for sale in separate parcels.

Wyoming Timber Depredations.

WELLS P. O., Uinta County, Wyo., June 12.—*Editor Forest and Stream:* Concerning the timber cutting operations of the Rock Springs Lumber Company, the present state of affairs is this:

At their main camp what ties and saw logs they have barked are being put in the water. Their sawmill up here is idle, I understand, the reason being that they have cleaned up all the timber within reach and must move the mill to find more.

The company has parties out surveying timber lands along the Green River and tributaries. Tie-choppers and timber men are coming into the country, who tell me that they are here to cut timber by contract for the R. S. L. Co. as soon as the spring is far enough advanced to permit work to begin.

So far as I know, no United States timber inspector has ever looked over their work.

The land on which the company is cutting is timber land pure and simple, though I understand that the company claims that it is agricultural land, and has located it as such with scrip at the Lander land office.

The cutting is being done on T. 38 and 39, N. R. 109 and 110 W. I cannot tell the exact subdivisions.

WM. WELLS.

P. S.—Employees of the company claim 500,000 ties and 5,000,000ft. of saw logs for this winter's (1898-99) work.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

ANGLING NOTES.

Eels.

DR. QUACKENBOS, who received the following letter, sent it to me with some comments of his own, and I copy both. The letter is dated Rahway, New Jersey, and reads as follows:

"The papers you sent me make me think of the time when we were boys fishing on the Rahway River on River street, shaded by large willows, water beeches, oaks and grapevines with plenty of fish and clear sparkling water.

"I was skating last week from Gibbs' Island up to Bondley's on River street, and had lots of fun, but the water is so black from the dye factories above that we could not drink it, and all the fish die off, and the willows and other large shade trees are gone. Do you know anything about eels? I was told by a friend that there is a man on Staten Island who raises eels for market and does well with them, as he will not dress and sell them until 2lbs. in weight, and he sells only when there is a demand for them and they command a high price. This is the way he came to raise eels: There is a salt water creek on his farm, and he thought he could rear ducks at a profit, and hatched out a large number and kept them on and in the creek, and fed them cracker dust and oatmeal, which he threw on the water at feeding time. After a time he noticed that eels came to the surface of the water to eat the food thrown for the ducks, and he assumed that they must have run up from the river below. He disposed of his ducks and made a screen across the creek at the bottom of his land, arranging an opening by which the eels could enter but could not return. In the winter he covers the creek with flooring so that the water will not freeze, and now at feeding time when the eels hear his footsteps they will come to the surface of the water in the creek for their meals. I could make an eel pond if I knew how long it takes to grow them to 2lbs. weight, so if you know please tell me, for this is no fish story, but an eel story that is true."

Comments.

My friend commenting on this letter says: "The writer of the inclosed letter lives in Jersey, and describes the decadence of my earliest hunting and stamping ground. I began with him as a small boy with pin hook and for 'sunnies,' and a bow-gun for blackbirds, and rose through the successive stages of penny hook and 18-cent pistol, dollar jointed pole and $3 16-bore, purchased at a junk shop with carefully saved dimes, to Leonard 5oz. and Scott hammerless. Alas! the pellucid stream that heads in the Orange Mountains and used to yield the speckled starred! (Oh, how I remember a ½lb. *fontinalis* we kept for more than a year in the well!) That stream now runs black dye stuffs to the kills. But the memory of those days will never die—and the boy who fished and hunted with me seems to love me still—loves me because I loved nature with him. He may be poor, he may be unlearned, but, as Emerson says, we have something in common.

"He has within himself a god (as Pasteur calls it), a high ideal. His life is gentle. He cultivates Marie Louise violets for a living. Give us something about eels in FOREST AND STREAM. Eels, rapid growers, prolific to a fault. Centuries ago they got a lot of money out of them at Comacchio lagoons near Venice. Your friend Theodatus of patronymic says they are well suited to culture.

"And would you believe it, old Rondeletius (I have a printed copy, Lyons, 1554) says every eel is born in fresh water—*Anguilla omnis nascitur in aqua dulci*—and adds they go to sea or salt water lagoons. His chapter on crustacean fish food is a marvel. I don't know whether Pinchon, who raised fish artificially in the century of Columbus, tried eels on. I am sure the Romans did, for Pliny tells how Pollio, the ass who cut his arteries when his fortune was reduced to $500,000, to save himself from starvation, used to pitch live negroes to his eels to give them a fine flavor. So tell us something about eels."

Dom Pinchon.

Before saying anything about eels, a word about Dom Pinchon, the French monk that my friend, the doctor, refers to. It has been claimed that he hatched fish artificially in 1420, but it is believed from the best evidence obtainable that he simply gathered and transplanted fish ova naturally fertilized, and that he knew nothing about artificial fish propagation as practiced to-day. Vrasski, the Russian fishculturist, who discovered the dry method of impregnating fish eggs, did try to cultivate the eel artificially, but how he succeeded history does not tell us; but we can guess pretty accurately from what we now know about eels.

The doctor says tell us something about eels in FOREST AND STREAM, but the last time I told about eels at any length it was under oath as a witness in the Supreme Court in Brooklyn, and other witnesses had been testifying about fresh-water eels, and salt-water eels, and silver eels, and when an attorney asked me how many species of eels we had, and I said one, the presiding justice turned to the witness box and said, "What's that?" in such a surprised tone of voice that I did not know but we had other species that I did not know about, and if I write much about the eel in this column I expect some FOREST AND STREAM reader may ask, "What's that?"

Eels Have Scales.

"True eels are characterized by their scaly skin in association with a conical head and a general resemblance to the congers."—Jordan and Evermann. It is true that the scales are imbedded, but the eel has them, and we have but one species, called American eel, or fresh-water eel, though when taken in salt water it is called salt-water eel or silver eel, but I have known species of trout to be called silver trout when they have been in salt water, or for a season on white sand in fresh water, which gives a silvery coating both to the brook and lake trout; but that is not the reason that eels have a silvery appearance. It may be as well to say here that the literature of the eel would fill several issues of FOREST AND STREAM, as there has been much speculation about this fish, its habits, reproduction and even its origin, and the scientists of the Old World have written elaborate papers on the subject of the eel within the past 100 or more years to show what they did or did not know about it, but I shall be as brief as possible and boil down what is now known into as small space as possible.

Beliefs as to Origin of the Eels.

It is not necessary to dwell upon the early beliefs that the eel was generated from horsehairs, from dew, from slime, from the females of another fish; that the eel produced its young alive; that both turf and mud produced them, and that they were hermaphrodites, for to-day men may be found having just as strange ideas concerning the generation of the eel. It was not, however, until 1850 that Rathke definitely discovered the ovary of a female, and not not until 1873 that Dr. Syrski discovered the male organs, and Dr. Jacoby completed the discovery in all its details in 1877; but even this discovery left a big gap in the life history of the eel. Adult eels leave the fresh water and go down to the sea and rivers, 3 to 5in. long, return in vast numbers from the sea to fresh water, the migration being called eel-fairs, from the Saxon term fare, to travel, but where they were hatched and how old they were and what became of the parent eels was unknown until 1894, when Prof. Grassi and Prof. Calandruccio, of Rome, cleared up some of these points by discovering the larvæ of the eel in the Mediterranean. To put the matter briefly, it is now maintained, in the light of the discoveries mentioned, that female eels only go into fresh water, while the male eels remain in the sea. Some females do not go to salt water to breed, because they are barren, and they remain permanently, it is assumed, in fresh water ponds or lakes. What becomes of the adult eels after spawning is not positively known, but the females do not return to fresh water, and it is believed that they die, and possibly both sexes die.

Silver Eels.

Of the silver eels Prof. Grassi says: "As a result of the observations of Peterson, we know now that the common eel develops a bridal coloration or 'mating habit,' which is chiefly characterized by the silver pigment without trace of yellow, and by the more or less black color of the pectoral fin, and finally by the large eyes."

Peterson's inference that this was bridal coloration was derived from the largely developed state of the reproductive organs and by their ceasing to take nourishment. Dr. Bean records five eels from Great South Bay, which are described as having "large eyes, short snout, and long pectoral fins as compared with the common form, silvery gray above with a clear satiny white abdomen, separated from the color above by the lateral bill." They were found "to be males with the generative glands so well developed as to leave no doubt concerning the sex."

Dr. Grassi Sums Up.

Dr. Grassi says further: "To sum up, *Anguilla vulgaris*, the common eel" [Dr. Meek, Bulletin U. S. Fish Commission, 1883, after a careful comparison of American (*Anguilla chrysypa*) and European eels, concludes 'in American specimens the dorsal fin is proportionately further from the end of snout, making the distance between front of dorsal and front of anal a little shorter than in European specimens; otherwise no permanent difference seems to exist. We should not, therefore, in my opinion, consider the two as distinct species, but rather as geographical varieties of the same species'] "matures in the depths of the sea, where it acquires larger eyes than are ever observed in individuals which have not yet migrated to deep water. * * * The abysses of the sea are the spawning places of the common eel. * * * Its eggs float in the sea water. In developing from the egg it undergoes a metamorphosis—that is it passes through a larval form. What length of time this development requires is very difficult to establish. So far we have only the following data:

"First—*A. vulgaris* migrates to the sea from the month of October to the month of January; second, the currents, such as those of Messena, throw up from the abysses of the sea specimens which, from the commencement of November to the end of July, are observed to be more advanced in development than at other times, but not yet arrived at total maturity; third, eggs, which according to every probability belong to the common eel, are found in the sea from the month of August to that of January, inclusive; fourth, the *Septocephalus brevirostris*" (the specific name of the larval form) "abounds from February to September; as to the other months, we are in some uncertainty; fifth, I am inclined to believe that the elvers ascending our rivers are already one year old."

Elvers.

The tales that are told about young eels running up rivers from the sea are nothing short of marvelous, but the fact that a single eel produces 9,000,000 eggs will help us accept the number of elvers that go up a single stream in a body, not that the number is to be given here in figures, but rather in a blanket statement, for the only estimate I have seen in figures is 1,800 passing a given point in one minute, but the proximity of the point to the sea is not given, nor the width of the school. For years I have been gathering all sorts of information, and misinformation, about the common eel, chiefly because I think the eel works greater injury to our trout, both lake and brook, by eating the fry and spawn than can be estimated, or than we realize, and I have clipped everything my eyes have rested upon regarding the eel. I do not propose to give one hundredth part of it here. One clipping, which from the type I judge to be from the New York Sun, with the date line Milford, Pa., says: "Here is a story told me by Wm. Wallace, a man of unquestioned veracity: Last spring he was informed by his wife, who had gone to the Big Bushkill for a pail of water, that there was a mass of eels ascending the creek. Mr. Wallace went to the creek and for a while watched a procession such as he had never seen before, although he had lived his lifetime in the same house on the bank of this stream. The eels were small, averaging, possibly, 4in. in length, and were formed in a dense column about 2½ to 3ft. wide, and were rapidly making their way up stream. Mr. Wallace went about his work, but returned to the creek nearly an hour afterward and found the school still in line and still going. How long these eels had been running neither he nor anyone else knew, and it was impossible to estimate the numbers, which must have been enormous. All who saw this procession said they fully believed that eels were largely responsible for the decrease of the trout in our streams." The Christian World makes this contribution on the subject of elvers: "The eels which descend to the sea never return, but young eels or elvers come up from the sea in the spring millions at a time. The elvers have been seen to travel along the bank of a river in a continuous band, or eel rope, which has been known to glide upward for fifteen days together."

Next to the Christian World clipping I find one alleged to be a reprint from a scientific paper, giving what Grassi discovered, only it does not give what Grassi said. I mention this simply to show that clippings are not always reliable.

It is scarcely necessary to say more about the elvers running up streams. The sight is not unfamiliar to many anglers and others, and what I have quoted describes the ascent as accurately as needs be, when there are no obstructions in the water to overcome. When they come to falls or dams they pass above them or around them if there is the least moisture, although thousands, perhaps millions, perish in the attempt.

Eels on Land.

Günther says of elvers ascending streams: "In the course of the summer young individuals ascend rivers in incredible numbers, overcoming all obstacles, ascending vertical walls and floodgates, entering every large and swollen tributary, and making their way even over terra firma to waters shut off from all communication with rivers." An unknown German writer says: "The small size of the gill opening makes it possible for the eel to live a long time out of the water, and it is possible that in their wanderings over moist meadows they may find places in which there are snails and other desirable food."

From time to time the newspapers publish items concerning the finding of eels in the grass a considerable distance from water, and I have called attention to some of these in this column. In May I was leaving New York for Albany on the fast mail, and going into the smoking compartment found Col. W. C. Sanger, of Sangerfield, in this State, who said he had a friend with him whom he would like me to meet. The friend (Mr. Georges A. Glaenzer, a French artist) and I talked fish over our cigars until he said: "I will tell you something which I never tell until I know that the person I am to tell it to understands much about fish, their habits and peculiarities, for it really seems improbable on the face of it." What he told me was that on his family estate, near Paris, was a pond containing fish for the family table. As the city of Paris began to take up streams and ponds in the vicinity for a city water supply, this pond was drawn down until it was decided to let out all the water and cement the bottom and sides. When this was done and the pond filled, it was again stocked with fish—"carp, pike to keep the carp active and from getting too fat, and some thousands of young eels."

When it was believed that the eels were large enough for the table, none could be found, and the pond was drawn, and not an eel was left in it. This was strange enough, for no one had fished or netted the pond, which for years before it was cemented had contained eels, and another large supply of young eels was turned in, only to disappear as mysteriously as the first lot, and a third attempt was made to stock the pond with the elusive fish. One morning after a heavy rain the gardener appeared at the house with a basket of eels, which he had found in the wet grass, all headed in the direction of the nearest

stream which led to the sea, and then it was discovered that the eels had left the pond in a body.

A gunner in England was attracted to the nest of a polecat by the action of his dog, and in it was found a fresh eel with its head bitten off. The keeper explained that the polecat had caught it "as the eel was taking an evening stroll amongst the grass."

In "Natural History of Worcester" Dr. Hastings relates: "A relative of the late Mr. Perrott was out in his park with his keeper, near a large piece of water on a beautiful evening, when the keeper drew his attention to a fine eel ascending the bank of the pool, and with an undulating motion making its way through the long grass; on further observation he perceived a considerable number of eels quietly proceeding in the same manner, to a range of stews nearly a quarter of a mile distant from the large piece of water whence they started. The stews were supplied by a rapid brook, and in all probability the instinct of the fish led them in that direction as a means of finding their way to some large river, where their ultimate destination, the sea, might be obtained." This circumstance took place in Sandford Park, near Enstone.

Pennell says: "The mode in which eels effect their escape from a basin or other similar place of confinement is peculiar. They commence tail, instead of head, first, throwing the former over the edge of the vessel, and by this means gradually lifting themselves out." He also says eels mature in three years, but does not explain how he knows this to be so. No other writer, so far as I can find, pretends to state with accuracy how long it takes for the eel to mature or arrive at breeding stage. From the same authority, and the last "exhibit" on the subject of eels on land: "If eels are kept in confinement and not closely covered up or shut in with smooth, steep sides, they will almost certainly make their escape, generally in the night time, and travel overland to any water which may be in their neighborhood. The same thing occurs on a stream or pond being dried up in summer, when the eels will quit it and wind through the wet grass in search of water."

Barren Eels.

A writer in Land and Water gave an account in 1893 of a quantity of eels found in a pond with no outlet. The eels were all of large size and all barren; but he did not say how he knew they were barren. Another writer in the same journal doubted that all eels found in fresh water were barren. Mr. Thomas Southwell replied to him, and I quote from his reply in part as follows: "Far be it from me to attempt to prove a negative; but this much I can say: No statement of a gravid eel having been detected in a pond of fresh water has, so far as I can learn, hitherto borne investigation. Many times I have been told by the eel catchers that they frequently met with gravid eels, but the oft-renewed offer of a sovereign for one in such a condition has hitherto been fruitless, and of the many examples from such localities which I have dissected, not one has indicated an approach to breeding. The only eels showing even a partial development of the ova which I have obtained were from a tidal water, where they were on their way to the sea. I do not think Dr. Grassi attempted to account for the continued presence of eels in apparently isolated ponds; that was beyond the scope of his inquiry; but it seems likely that in such cases the reproductive instinct is arrested; but if eventually developed it would probably lead them to attempt to escape; and the marvelous situations in which full-grown eels have been found lead one to infer that they frequently do so. The ascending elvers, whose instinct leads them to go on and on, irrespective of barriers, I can believe would penetrate almost anywhere, and there are few ponds so isolated as to have no outlet or overflow whatever, and their numbers are so immense that a very large proportion might perish without being missed I se no insuperable difficulty in their gaining access even to localities which appear to be cut off from all access to river or stream."

Eels and Pollution.

Interesting evidence was given in an English court when the Hematite Iron and Steel Company was summoned, at the instance of the West Cumberland Fishery oBard, for allowing a certain substance to flow into the River Eheu and its tributaries to such an extent as to kill trout and salmon. The evidence was conclusive that the defendant company, for sanitary reasons, did let off the sediment from a pond and the sediment did flow into the stream and large quantities of trout and salmon were destroyed.

The water bailiff, one Sanderson, testified that eels from the polluted stream were "found in hundreds making their way overland to holes and to any place they could get to escape the pollution, and it seemed a pity that the trout could not have done likewise." An English writer, commenting on the case, said: "Although eels bear the reputation of being dirty feeders and are fond of being buried in the mud, my experience of them is that they are terribly susceptible to pollution of actually a poisonous character, and their testimony bears out my opinion. A river I know abounding with eels has, since pollution has nearly ruined it, ceased almost to hold an eel at all; at any rate they are so few that they are not worth fishing for."

Abundance of Eels.

Nearly every year some mills on a stream within fifty miles from where I live are obliged to shut down and kill eels. The eels get into the mill wheels and block their motion, and so interfere with the machinery that a shutdown and eel killing is in order. As to the number of eels that cause this trouble, no one can estimate it. Mr. Pinkerton, an English writer, says: "It is about this time of year that the annual migration commences, the eels moving in the night, and always choosing a dark night for the purpose. A change of wind, a clap of thunder, a cloudy night becoming clear and starry, will at once stop the movement. I have frequently visited the great eel fishery at Toome, on the lower Bann, where from fifty to sixty tons of eels are annually caught in the migrating season. As many as 70,000 eels have been taken at this place in one night."

Ely, in England, is said to be named from ng been formerly paid in eels, the lords of the manor being entitled to upward of 100,000 eels annually.

In one lake that I am very familiar with, when the lake trout gather on the spawning beds in the autumn, the eels also gather, and the sight under a flaming torch at night is one to vex the soul of the trout fisherman. There are usually a far greater number of eels on the shoals than trout, and the lake is full of trout, and well stocked annually, and they scarcely wait for the trout to deposit their eggs before they devour them, and the law will not permit the taking of eels from this lake in eel pots because there are trout in it. Eels are rarely taken in this lake with hook and line, but they grow fat on the trout spawning beds and would make good eating if eel pots were permitted to take them out, and save the trout eggs in a degree. The New York Sun had this news item in 1897: "The Fisheries, Game and Forest Commission of this State was the first to recognize the destructive qualities of eels, and in its report for 1896 says: 'Fish of all kinds are spawn eaters to a greater or less extent, but the eel is more destructive of spawn than any other fish, as it does not spawn in fresh water and is ready to prey upon both the fall and spring spawning fishes. * * * We would ask that the Commission have power to use or authorize the use of eel pots in all waters, whether inhabited by trout or not, for it is in trout waters particularly that eels are proving destructive of young fish.'"

The Commissions made the same recommendation in their report for 1895, but the law has not been changed to give them the discretion in the matter which they should have, for it is in waters inhabited by trout that eels are doing the greatest damage. Eel pots would not take trout in any event, and so far as possible the eels should be removed from trout waters.

The Eel Commercially.

It is a most difficult matter to obtain complete statistics in regard to the number, weight and value of fish taken in internal waters. From men engaged in commercial fisheries it is possible to secure figures upon which to base the value of the catch; but of the thousands of individual fishermen who fish only for home consumption, their catch never finds it way, either in pounds or dollars and cents, into a statistical report of State fisheries. One has only to look along the banks of our rivers and canals to see that a great number of men are daily engaged fishing for eels, not for market, but for the home pot. While visiting the shad nets in the upper Hudson I one day counted twenty-three men and boys on the docks fishing for eels, and every dock had its quota of eel fishermen. Only a few days ago I counted seven men on one pier of the railroad bridge at Albany as I crossed on a railroad train. Their lines showed that they were fishing on the bottom, and for eels. Statistics gathered by the United States Fish Commission of fisheries of the interior lakes of New York show that 17,000lbs. of eels were taken in each of the two years during which the investigation was conducted, and that part of Lake Ontario touched by counties of New York furnished 66,000lbs. in addition. It is scarcely necessary to tabulate returns from the Hudson or waters adjacent to the sea to show that many eels are taken in the waters of the State annually, and I think it is not pretended that the most accurate statistics on the subject of the eel fisheries show anything like the number caught. Here is a fish considered an excellent food fish that does not breed in fresh water, but simply comes into fresh water for development and returns to the sea, probably to perish after spawning. While in fresh water it is a notorious spawn eater, and it has no fasting season, like fishes that spawn in our lakes, ponds and streams; and all that can be caught add to the food supply; so why is it not best to use every legitimate means to catch eels while in our fresh waters and thereby rescue the spawn of what many consider better fishes?

A. N. CHENEY.

Up Duluth-Way.

DULUTH, Minn.—*Editor Forest and Stream:* I had my first outing with the bass last week. Accompanied by my wife, I made the trip to Deerwood, Minn., which is situated a hundred miles from Duluth, on a beautiful chain of lakes; and, although the waters are fished constantly, as a great many Duluth people have made their summer homes there, I succeeded in catching thirty-three, and among them some beauties.

There are so many pretty lakes where one may go from here, and our cool, delightful summers, that it is surprising that more Eastern people do not make the trip. One place that a friend of mine found when out last for cheapness and good sport, caps them all—three lakes, with plenty of small-mouth bass, the gamiest fish in the world; two trout streams, in which two boys caught 209 fish, ranging from 8in. to 16in., in ten hours; and the landlord meets you at the depot, drives three miles to his hotel, furnishes bait, boat and good fare, cleans and ices your fish and drives you back to the depot all for the sum of $1.25. Isn't he an angel?

Wisconsin has become the banner State in game and fish protection, for even the elements combine to frustrate the well-laid plans of the law-breakers. You have all read of the terrible havoc the wind made at New Richmond, and the destruction and death caused by it. A friend of mine who travels for a wholesale drug house in St. Paul and was driving across country to New Richmond got caught in the path of the storm, and had his buggy lifted from behind, over the horses, stripping the harness clean from the horses and not a spoke of the buggy left together; and, odd to tell, he was not injured in the least. But he had under his seat a box of trout nicely iced, and when he went looking for his satchel a farmer who had taken refuge in the ditch at the side of the road and offered his assistance to help find his effects, picked up a chunk of the ice, with the remark, "Well, gol, darn it; did you ever see a hailstone the size of that?"

Reverting again to game protection in Minnesota: Fullerton, who has done more good, solid, fearless work than all his predecessors, is out. Just at this time he had got everything working smooth and nice, and the law-breakers had learned that if Samuel got after them it meant to a bitter finish. But the appointment is of course a political one, and he had to go. When you take into consideration that from Duluth north and east clear to Canada is a trackless wilderness, only penetrated by the land-looker and lumberman; and as soon as navigation closes on Lake Superior all the north shore is cut off from civilization, and the few small hamlets that exist must be supplied with meat, and the deer and moose at their doors, they will certainly not buy Armour's army beef. And can you blame them? But they kill only what they need. But the other class that can be got are the men running lumber camps. They feed their men partly on moose and venison, killed by contract price per pound by men hired for that purpose, and do more to exterminate the game, as they kill at all seasons, than all the hunters put together. But what can we do? There is no way to stop it. The States would have to appoint a dozen where it now has one to prevent it; and if the game can only hold out as long as the lumber, which they say will only be a few years more, Minnesota will have a game park that will be second to none in America. As there will be no incentive to build railroads and the soil is too rough to till and there is no mineral, so they can roam practically undisturbed.

DR. MCN.

The Dangers of Pass Fishing in Florida.

Editor Forest and Stream:

Last year I wrote you a letter giving an account of some very good tarpon fishing at Boca Grande, wishing to call the attention of anglers to that pass, which is a most convenient one for anglers to reach.

When I went down in May of this year I found that most of this year's tarpon fishing had been done at Boca Grande. Several large steam yachts and a good many sailing yachts were anchored inside Boca Grande during April and May, enjoying its magnificent fishing.

I was surprised to find what poor rowboats were used for tarpon and other large fishing in Boca Grande. Even the steam yachts that came in did not seem to be fitted with proper fishing boats, and had to hire what they could get there; generally heavy flat-bottom boats that would not stand very much sea. Now, there is considerable danger in fishing for tarpon or other large fish in any of the Florida passes, and especially in a large pass like Boca Grande. The tide runs out very strong, and in the excitement of playing a tarpon men do not notice how far they are drifting, and may drift a considerable distance out into the Gulf, into rough water or the breakers. Again, it is customary, when a tarpon is hooked some distance from the shore, to gaff it from the boat rather than tow it away in to the shore. Here again is another reason for a stiff, seaworthy boat.

Sportsmen going down tarpon fishing seem also to be very careless as to what sort of guides they employ; almost any man who can row is thought to be good enough. There is enough danger connected with fishing for tarpon for a man to be sure that his guide is at least a good boatman. It is my opinion that the best guides come from Myers or its neighborhood. I would advise intending anglers to write direct to some well-known guide in Myers, who, if already engaged, will see that some good man is secured. A man who starts out tarpon fishing at Boca Grande, or any other large pass, with an incompetent boatman, is needlessly risking his life. The tides run strong, sudden and strong winds are apt to come up, and lastly, although not leastly, Boca Grande teems with large fish. Most of these fish jump and splash about playing or feeding. The tarpon, a fish running from 100 to 200lbs., is continually jumping; mackerel shark, a fish running from 100 to 300lbs. and over, is also given to jumping; kingfish and whip-rays jump; porpoise, weighing from 500 to 800lbs and over, and the big flat rays, which they call devil fish down there, which run up to over a ton in weight, also jump. Now, although the pass is large, and there are square miles of water for these fish to jump in, it is only a question of time when they must every now and then either hit a boat, land in a boat or hit a person in a boat. The last is the least likely accident to happen, but it is not at all unlikely. If a large fish jumps in the boat he is apt to do considerable damage. What with rushing tides, rough water and big fish splashing about, it is evident that an angler should feel that he has a good, reliable, experienced man in the boat to depend on. My own experience at Boca Grande this winter may serve as an example and warning to anglers to exercise some care in the choice of the boats they use and the men they employ.

One afternoon about 3:30 o'clock, while fishing for tarpon, I received a terrible blow in the back of the head which threw me out of the boat into the water and almost stunned me. I was pulled back by my guide into the boat, which was floating full of water, and found, lying full length in it, a porpoise about 9ft. long, which probably weighed over 500lbs. Of course this fish never struck me, or he would have broken me to pieces. What happened was: He jumped high in the air, as they frequently do, and landed head first at my feet in the stern of the boat, knocking a hole through the ceiling and bottom of the boat, and stunning himself. The blow I received was caused by his body falling upon me. The nearest rowboat was several hundred yards off, and as we feared the porpoise might recover at any moment and smash the boat to pieces with his tail, my guide, Santi Armeda, tried to push the porpoise over the edge of the boat, but was unable to do so, owing to the fish's weight. Rather than take the consequences of what might happen if the porpoise came to before we were taken out of the boat, we slipped into the water and rolled the boat over, losing everything in the boat, but glad to do so, as it included the porpoise. We then turned the boat right side up and crawled into its inside, which, although full of water, floated and supported us, and especially protected us from the possibility of being bitten by sharks, of which there are a great many large ones in the pass. I have heard that these sharks will not tackle a man; but it is my opinion that a shark which can tackle and swallow a tarpon, would not hesitate much at a man. I did not intend taking any risks, and was very glad to find myself inside the boat again. Very

soon afterward a rowboat came to our help, taking us on board and rowing us ashore. Of course I got no more fishing that trip; my neck felt almost broken, and all the muscles of the neck and back were terribly strained and sore.

I have some right to assert that pass fishing is not exactly a safe sport. Of course, it is not likely that a porpoise is going to jump on another man very soon again, but still there are so many fish jumping down there, and as anglers increase, the chances of accidents increase so much that I think it is just as well to take a few precautions. My advice to all anglers doing pass fishing is: Use a good, strong, round-bottom boat about 13ft. long by 4ft. 4in. wide; be sure and have an experienced guide, and never fish in the pass when there is not at least one other boat out fishing. Personally, I have fished many times alone in the pass, both by day and by night, but the unusual accident which happened this year has impressed on me the fact that it is not safe to do so. If an oar breaks, or if the boat is swamped or capsized, either in trying to gaff a fish or through any carelessness, or if any accident occurs which disables the boat, with the tide running out, there is absolutely nothing which could prevent the boat and its occupants from being carried out into the Gulf.

To return to Charlotte Harbor as a harbor, it is most surprising to me that this place should have remained so many years without exciting the attention of the Florida railroad magnates. One hundred miles north the town of Tampa has been built up. The town itself is twenty minutes by railroad from Tampa Bay, the port, which itself is many miles up a crooked channel from the entrance to the pass. Now, Boca Grande, the entrance to Charlotte Harbor, is an absolutely straight line from the Gulf right into the harbor. As matters now stand, without any dredging or any improvements whatever a steamer of 20ft. draft can be taken over the bar at low water. Inside there are several square miles of good anchorage for the largest yacht. On the east coast of Florida we find a railroad which, running from Jacksonville, comes down the whole Atlantic Coast line to Miami without passing one really good harbor into which any fair-sized yacht could be taken.

It is remarkable, therefore, that Charlotte Harbor, with its splendid straight deep entrance, its large anchoring ground, and with deep water right up along the shore, should be neglected for so many years and still be almost an unknown quantity. There is no finer place in Florida to put up a large hotel than on Gasparilla Island, which forms the northern side of Boca Grande Pass, and there is no better terminus to run a railroad to than Charlotte Harbor. Whether a hotel is built there or a railroad run there is, however, immaterial to yachtsmen. As the place now is, it forms the best rendezvous for yachts of all sizes spending the winter in Florida wanting to get the best sort of fishing, both large and small.

As regards tarpon fishing, Boca Grande can hold its own against any other pass on the Gulf or Atlantic. Mr. Wm. Littauer caught fifty-four tarpon in eight days' fishing, and Mr. W. H. Grenfell, who came over from England especially to do some tarpon fishing, was rewarded by catching exactly 100 in about twenty days' fishing.

It must not be imagined that tarpon are the only fish to be caught in this pass. Every other sort of fish that frequent Florida waters are to be had here in abundance.

Ice, water and fresh provisions can be had from Punta Gorda, only twenty miles off. Yachts having their own steam launches can send them up to Punta Gorda for supplies. It is not necessary, however, to do this, as up to May 1 a steamer runs daily from Punta Gorda to Myers, passing within five miles of Boca Grande. Provisions and ice can be ordered by letter, and a rowboat or launch can meet the steamer, which will stop and deliver any stuff that is sent. I dare say that next year, if Boca Grande is patronized as much as or more than it was this year, there may be some sort of regular service between Boca Grande and Punta Gorda direct. In fact, I was told that next year during April and May the steamer running from Punta Gorda to Myers would make the Pass one of its regulpr stopping places on the way.

O. A. Mygatt.

Landlocked Salmon of Sebago Lake.

A Washington correspondent, B. A. B., sends us these extracts from a letter from North Windham, Me., under date of June 14, and telling of Sebago Lake fishing:

Since I am here I have been on the go, going a-fishing. I put in long hours, from 3 and 4 A. M. until dark, and get the fish, and don't you forget it. Have caught salmon from 5 or 6in. in length, up to 4lbs. weight in the river, and have waded for hours in water up to my waist to get them. But for fun just sit in the stern of a boat and have a guide do the rowing, while you do the fishing. This is what I did on the 12th and 13th, and as a result there was a genuine smash of the record for fly-fishing. Using a No. 2 sproat hook, a thunder-and-lightning fly (which proved to be a gee-whizzer), a single gut leader and a 4oz. split-bamboo fly-rod, we took two salmon in Sebago Lake. A coincidence it was, too, for about 7:30 A. M. on June 12 a fish struck and fought hard and steadily for forty minutes, when it yielded to gentle suasion and came to net; it weighed just 13lbs. The coincidence part of it is that in almost the same place, at about the same hour of the day, on the same rig, another fish was caught June 13, which fought nobly for forty-five minutes, and five hours after capture weighed just 10¾lbs. They now grace the collection, calmly reposing in my landlady's wash-boiler. I hope they will keep well, but it is nearly a tropical heat here, 90 degrees in the shade this 3 P. M. We are going to try them again to-morrow, starting at 4 A. M.

I hope that one of the two fish above mentioned will be deposited in the museum; one, at least, for you have never had a fish like them. They are "rippers"; both hook-jawed males.

It is supposed that fishing for salmon is closed now, owing to the fish not biting, but all that one has to do to get a salmon is to go where they are and fish in the right way, and they will bite even though their stomachs are full. The stomach of the 10¾lbs. fish contained fourteen smelt. The most important thing is to have a good guide, as the fish have to be hunted for, and Sabago is not a small pond. Fishing is followed here while the smelt are running, but is generally given up as soon as the salmon leave their haunts of that season. At this time there are certain signs to tell where the fish are to be found, and a well-informed guide knows these signs, and by reason of their experience can put you in reach of the fish, and as fine sport as one could wish for. Mr. Herbert Maines, of North Windham, is my guide, and he is all right.

W. C. K.

New England Fishermen.

Boston, June 24.—Mr. William. G. Harding, foreman of the Boston Herald composing room, is a lover of the rod and reel, as well as the rifle and shotgun. He has recently returned from a fishing trip to Lake Cobbosseecontee, in Maine, where he was accompanied by Mr. Theodore Ripley, of the Herald press room, and a couple of Boston Globe men. They had very little success with trout, but at last got on to some excellent bass fishing and had great sport off the rocks. They took about all the bass they cared for, and also thought that it would be a good idea to take some home to show their friends. They had them nicely dressed and packed in ice, and then in a case. They hired a countryman to take them over to the railway station with his wagon. The case with the bass in it was stowed in the back part of the wagon. On the way they stopped at a saloon to get some refreshments. They invited the countryman to stop with them. The team was left standing at the door while the men went in. Coming out, there was no team to be seen. Horse, wagon, bass and all were gone. A few days after the team was found in another town. The case had been broken open. Maine is a prohibition State, but it was very plain that the thieves had thought that the case of fish was a case of liquor. The boys were considerably "cut up" about the loss of their fish, and are still unable to fully convince their friends that they actually caught any.

Indeed, bass fising in Maine is giving good satisfaction this year. The Belgrade ponds are certainly becoming celebrated with Boston bass fishermen. Mr. E. J. Brown and Preston Lewis, both well known in shoe and leather circles, have just returned from a most enjoyable outing at Belgrade Mills. They caught all the bass they wanted, and are much pleased with the locality, this being their first fishing trip to that part of the country. They found a number of other shoe and leather merchants at the same resort, each having good luck to report. From the Sebattus ponds there come good reports of bass fishing. It seems that the pools below the dams have been unfairly fished, and that the Commissioners have been petitioned to close these pools altogether. A hearing has been had and the pols have been closed to all fishing. Now only fishing in the ponds is allowed, where good results are to be had, according to all reports.

Newspaper reports say that an Attleboro, Mass., sportsman made a very queer catch at Northwest Carry last week. He was fishing from the apron of the dam at Wilson's. He noticed a barrel in several feet of water. He could just see the bunghole, and out of curiosity he sunk his bait through the hole, when immediately it was seized by a fish. The fish was played till exhausted, but was too large to come through the bunghole, nearly 3in. in diameter. His curiosity prompted him to have the barrel raised, and with a saw the hole was enlarged till the fish could be got out, when, behold, a handsome trout of nearly 3lbs. weight. The theory is that the trout went into the barrel to feed when smaller, but growing all the time, had gone in once too many times and the last time could not get out. Since that time, doubtless, the imprisoned fish had made considerable growth.

Boston, June 26.—Trout and salmon fishing is getting to be rather uncertain in Maine waters, as it always does after hot weather. Still, if one reads the papers devoted to booming hotels and railroads, one would get the impression that every angler was getting all the fish he desired, when quite the reverse is the truth. Anglers are reported to be having excellent luck, but when they return they tell me that they found the fishing positively poor. The trouble with these papers is that they mention only the success, while concerning the failures—the many days' fishing without a strike—they have nothing to say.

Mr. M. H. Curley and Mr. Eugene Lynch, of Boston, are back from their annual trip to the Upper Dam. Mr. Curley says that the fishing was very poor, his catch being small and unsatisfactory. One of the papers says that he had great success. Mr. L. O. Crane also writes from the Upper Dam that the fishing is poor. D. E. Adams and Charles E. Guild, of Boston, had fair success the other day on Mooselucmaguntic Lake. They took eight trout in a short time in the morning, the largest weighing 2½lbs. Trout are rising to the fly well in some localities, though there has been a good deal of cold weather, with one severe hailstorm. Walter B. Farmer, of Arlington Heights, has taken a salmon of 6½lbs., and a trout of 3lbs. Dr. Heber Bishop and Dr. John L. Stetson, of Boston, have returned from a successful fly-fishing trip to the Megantic preserve. They mention good fly-fishing, with often a trout on every fly in the cast. Dr. Al. Watts, E. P. Stone and Charles A. Shaw, of Boston, have also fished at the Megantic preserve for a couple of days with good success. Mr. Stone took a trout of 2½lbs., one of the largest for the season. Great fishing is mentioned at Carry Pond camps, a few miles above Bingham, Me. Report has it that in thirty-one days of the present season exactly 5,285 trout have been taken there. Good fishing is also reported from the Seven Ponds region. The season of black flies is mainly over, and mosquitoes have ceased being very troublesome.

The Maine Sportsmen's Fish and Game Association has just held its summer meeting at Rangeley. The meeting was honored by the presence of the Governor and his wife. E. C. Farrington and P. O. Vickery, prominent fish and game workers, were there, as well as the Fish and Game Commissioners. The meeting was very much in the nature of a summer outing and a good time, at low rates of fare on both transportation lines and at the hotels. But after all, such a gathering is fraught with influence in Maine, since it brings prominent gentlemen more in touch with the fish and game interests. Speeches were indulged in, of course, with considerable congratulation concerning the successes of the fish and game interests in that State. Commissioner Carleton spoke of the difficulties of enforcing the fish and game laws, and again advocated the subject of forcing all non-residents to procure licenses before being allowed to fish or hunt in Maine. Mr. E. C. Farrington also advocated the same thing, but the hotel and transportation men were evidently not in favor of any such measure. Many of the members of the Association and guests scattered through the various fishing resorts to try the angling for a few days.

That the landlocked salmon is a fighter for the sake of dislodging the hook seems to be certain, and that he frequently leaps from the water for that purpose seems to be well established. Still, there is a good deal of question as to whether the hook really causes him much pain or inconvenience. A fisherman at the Rangeleys says that he hooked a big salmon the other day, but the leader parted just below the line before the fish was brought into the net. Immediately he commenced jumping out of water, evidently trying to shake out the book, actually appearing six or eight times in this manner. But it seems that he could not get rid of the hook, for two days afterward another angler hooked a salmon more than a mile from the same point, and after considerable leaping it was landed. Behold, there was a second hook and leader attached; identically the same hook and leader the other angler lost a day or two before. That the landlocked salmon always leaps out of water is not established, however. I have seen two salmon landed this season at Sebago, and one at Richardson Lake, neither of which came out of water at all till brought up in the net by the guide. One of the salmon at Sebago weighed 10lbs. and the other over 9lbs., and both were stubborn fighters, requiring nearly half an hour to land them.

Special.

Detour as a Fishing Point.

Detour, Mich., June 18.—*Editor Forest and Stream:* Noting the query of Mr. J. E. Smith, of Caldwell, O., in Forest and Stream of 17th inst., I take pleasure in giving some information that may be of interest and value to others, as well as the querist. While hunting relief from hay fever last season I found it here, after failing at Petoskey, Mackinac Island, St. Ignace and both the Soos—American and Canadian. Of course I had my fishing outfit with me, trying it at all lake points where I stopped over. I found fishing but indifferent at points named, making but poor catches, except at the Snows, and if there are either bass or trout in those much-vaunted waters I failed to find them or to see any one who did. But I struck it fine here on my very first trial; also got immediate and absolute relief from hay fever, asthma.

In this immediate vicinity bass of several varieties abound, and I have yet to go for them in vain, except when a heavy wind comes up, as it frequently does, before we get to our mark. There are ten or twelve trout streams within a radius of ten miles, all of them literally alive with those gems of the waters. I caught none last fall, as I had no facilities for either getting about or trout tackle. This year I am back early, to remain till October, to fish, cruise and rebuild broken health; have a handsome new launch, 25ft. in length, 65in. beam, 4 h.-p. motor, all working to perfection, and a strong, light clinker-built 14ft. tender. These, together with a complete outfit, give me fair equipment, and I anticipate a most enjoyable summer. I will be very glad to meet and greet Mr. Smith or any other good fellow-fisherman, and join in making it pleasant for each other. Bass, muscalonge, perch, "big" sunfish, I have already caught in my few days here, and the trout campaign opens with me in a few days. The season here is from May to September.

Detour is an incorporated village of 1,000 inhabitants, its only industries being fishing and lumber shipping. The people are most hospitable. It having never been a tourist resort they are not developed into the regulation piracy obtaining at the established resorts. There are two country hotels here, with excellent service; the rates being only $5 a week. Mr. Hitchcock, president of a lumber company and of village council also, believes this a great coming hay-fever and tourist resort, and by July 15 will have a number of neat cottages to rent very cheap, and where meals will be served if desired. The location is at the very head of Lake Huron, mouth of St. Mary's River, the latter twenty-four miles wide here, and studded with innumerable islands, large and small. It is just half-way between Mackinac Island and the Soo, and twenty-six miles above the Snows. We have daily mail and telegraphic communication, and three passenger boats stop here each day. Still, twenty-minutes' run of my launch, or thirty minutes' walk inland, either, will take one into wilds as pristine as they were a thousand years ago. There are plenty of "Injuns" in the vicinity, but if their forbears were "noble red men" the existing remnants are sadly degenerate.

As, except when fishing or cruising, I have no occupation or cares, only to get health, it will afford me pleasure to reply to any letters of seekers of fish or relief from that curse of my past twenty-six summers, hay fever. It will not reach me, nor any one else, here, for there is practically no vegetation, the very soil being limestone, and hay fever cannot thrive on stone, spruce, cedar, with three sides ice-cold water.

Thomp Burton.

P. S.—Georgian Bay is but a brief run for my launch from here, and I expect to make frequent trips there, investigating the fishing waters between the points. Good company always acceptable.

B.

NOTICE.

The New York Clearing House has adopted new regulations governing the collection of checks and drafts on banks outside of the city. This entails a collection expense on those who receive such checks. Our patrons are requested, therefore, in making their remittances to send postal or express money order, postage stamps, or check or draft on a New York city bank or other New York current funds.

Fishing Waters of Northern Iowa.

IT may not be known to the general reader that up in the northwestern portion of Iowa, in Dickinson county, is to be found one of the prettiest clusters of lakes an angler could wish to cast a line in. Most of our trap-shooting readers are aware that there is such a place as Spirit Lake, Ia., due to the fact that this is the home of the famous shot, Fred Gilbert, and no doubt all surmise that there must also be a lake of this same name from which the town derives its name. In addition to Spirit Lake there are also a number of others in the immediate vicinity of the town, all of which just at present afford the finest of fishing. While the fishing has always been good on these lakes during the spring and early summer, it has never been quite so good as at present, I am told. Catches of 100lbs. a day are regular occurrences, and even the veriest novice finds it an easy matter to catch big strings every day. When I inquired of the natives to what they attribute this change of conditions, they told me that it was due to the increased amount of water now in the lakes. For three or four years past the water in the lakes had receded in a marked degree, so much so, in fact, that a number of the smaller lakes went dry, it being unusually dry in this section of the country during this period. However, during the past six months considerably more rain fell, and this has restored the water to something like its former stage, though there is yet much room for improvement in this respect, I am told. Notwithstanding this, however, the fishing was never better than at present, and this is what will interest not a few of the readers most.

Those who are contemplating a trip could hardly go anywhere else and improve on the sport. True, it might be possible for them to improve on the size, as most of the fish caught in these lakes range from ¾ to 2lbs., though not a few are caught that will weigh 4 and 5lbs.

The fish consist of pike, pickerel, bass, black and silver, crappie and perch, also bullhead, or what is commonly known in the South as catfish. The principal lakes are Spirit, East and West Okoboji, and Center Lake, while there are also a number of smaller ones, such as the Gar Lakes and several others. Spirit Lake is the largest, being about five miles long and at the broadest part four and a half miles wide. As a rule the fish caught in this lake run larger than in the others.

West Okoboji is the prettiest, and the water is much clearer, being of a greenish cast, and so clear that the bottom can be seen to the depth of 10 or 12ft. This lake is also very deep, at some places 150ft. Owing to its great depth the fish are not biting very good in this lake yet, as the weather is still very cool, but on the other hand I am informed that the fishing is good here even during the hottest weather, though one must of necessity fish much deeper. The lake is five miles long, and its greatest breadth two miles. This is the most beautiful lake of all the cluster, as a great part of the bank is fringed with trees, which impart a romantic appearance to it, while there are also stretches of sandy beach so desirable for bathing. East Okoboji is really a part of the same lake, though connected only by a very narrow strait. The water is not so clear, and the surroundings are not so pretty. These lakes lie in the shape of a horseshoe, and are connected at about the center by a very narrow strait. Their aggregate length is nearly seventeen miles. There are not many black bass in these lakes, though the fishing for these should be good in Center Lake, and many have been caught there recently. Persistent efforts are being made to stock all these lakes with bass, and for several springs past the Fish and Game Warden, Mr. Geo. E. Delavan, has planted a large number of fry in all of them, which must in due course give some result.

The State of Iowa owns a fish car which the railroads transport from place to place free of charge. The black bass fry are taken from the bayous that empty into the Mississippi River, most of them in the vicinity of Sabula, Iowa county. Iowa is particularly fortunate in having a warden who is energetic and zealous and keenly alive to the fish interest of his State. A practical demonstration of this occurred early this spring, when he was notified that the fish had begun running in Gar Lakes, and prompt action was necessary for their protection, but a sudden drop in the temperature drove them back to deep water, and it was not until the first week of April that they again showed signs of activity. Then the game fish attempted to pass to the larger lakes, but were prevented from doing so by the ice and lack of water. This resulted in them packing in the channel by the thousands, and it at once became evident that unless immediate steps were taken to relieve them most of them would perish. Deputy Warden Henry Miguel, of Okoboji, was notified of the situation and set at work to save the fish. The method he pursued consisted in taking the fish with a seine, and placing them in barrels containing water and transporting them in wagons a distance of a mile and a quarter, and liberating them in West Okoboji. My informant tells me that in all twenty wagonloads were taken from this one lake and that each load consisted of five barrels. The fish were from 12 to 18in. long, and the number thus saved is estimated by thousands. What is all the more remarkable about this is that all these fish were taken from one of the smaller lakes. The transfer was only possible through the combined efforts of nearly a dozen people, and several teams. Not a few who assisted in this work absolutely refused to accept any compensation for either their own services or the use of their teams. When first discovered the fish were packed so closely in the opening as to enable hundreds of them to be caught with the naked hand. In the light of such reports it is not at all surprising that the fishing is good in these lakes now.

Two lines of railroad run into Spirit Lake—the Burlington and the Chicago, Milwaukee & St. Paul; these, I believe, are at present making excursion rates to this point. It is only a night's ride from Chicago, and about the same time from Des Moines, Omaha and Sioux City Accommodation is to be had at any of the lakes, while boats and bait can also be procured at a very reasonable price. The customary charge for the use of a boat is 50 cents a day, which includes the use of two lines and rods. Minnows sell at 10 cents a dozen, though if one has a net enough of these can be caught in a few casts to last all day. Should one desire the service of a guide and a man to row the boat, these can be procured at 25 cents per hour, which includes boat and bait. There are steam launches on all the large lakes, and their charges are nominal. Live minnows are the principal bait used, though spoons and spinners are good.

In addition to being good fishing water, these lakes are a great resort for waterfowl in season, while at present more blue-winged teal are nesting on these lakes than for years past. Then, too, this is a fairly good chicken country. The prospects are encouraging for good shooting here this fall.

PAUL R. LITZKE.

Fishing Up and Down the Potomac.

Opening the Season.

"JUNE had crossed the borders. * * * In the depths of the woods, where no man's eye could see, the elder was waving her creamy banners in honor of June's coming, and where no man's ear could hear the pink and white bells of the azalea rang out melodies of welcome." Craddock saw them in her mind's eye and their sweetness was not wasted.

Life is not all beer and skittles, not all salmon and sunshine, and half its pleasures are in the long hours of the waiting dark, when memory and anticipation have their frolics. The flowers that blush unseen are those which come to us in dreams, and the angler who waits with ill-concealed impatience the coming of the open season, and his opportunity, crowds the flowers of the year into his landscapes. His trees are all a-bud and bloom and in fruit at once like the fabled orange.

In the pictures of his waking trance are the beauties of all the seasons, of all the lands he has visited or created. Along his favorite walk the arbutus and the sanguinaria peep from the deep shadows and the goldenrod and daisies riot in the open.

The hopeless loves of the palm tree and the pine find only here their just reward, and the mingle their sighs with every passing breeze. Above a grove of maples, all gold and red, a eucalyptus rears its flaunting crest, fit spire for so grand a temple, from whose domes there comes a "concord of sweet sounds." The linnet and the nightingale are there, the grosbeak and the whippoorwill, and all the other songsters of the woodland. The hour and the place are nothing. It may be noonday on the asphalt, but "him who in the love of nature holds communion with her visible forms" she woos when she wills. One may not hold a coal "by thinking on frosty Caucasus," but one may and does enjoy many a happy moment in unlikely places, in the contemplation of the has-been and the will-be.

But June is here. The May fly about the electric lights waves her dying signal to the angler that there is rare sport afield; to hie him hence if he would not be too late.

That deadly earnestness with which the angler makes his preparations, the fantic haste to be by the waterside, is all pretense. To watch him, without sympathy, conveys the impression that if he should be an hour late not a fish would be left in the wide, wide world; but if he can just get there in time, the next fellow will have little left to fish for. There's nothing in it. At least, it is not fish that's in it. It is nostalgia. It is the craving to be again at the breast of Mother Earth. The fable of Antæus is repeated with us with every springtide, and thousands die every year (and no one knows the why) that a fishing trip would save.

But it must not be forgotten that angling, like every other good thing, is used as a cloak for excesses and sins that have no sort of relation to the real good. One may go fishing on salt water—and catch some fish—with a steamboat and a brass band. One may go to a stream or lake with a limited mob and shout by day and hold two pair by night, and call it fishing, and yet reap more tares and injuries to health than if he had pursued the even tenor of his way between hot walls.

But none of these are anglers, except they be caught by accident, or the design of learning how the other half live.

The deilght of angling is the call of the wild turkey from the distant hillside pines, to surprise a brood of summer ducks and watch them scurry to the shelter of the grass—to see the jealous perch hovering over its nest of pebbles, or the wild flowers, dew-spangled, opening wider to the rising sun, and incidentally to catch a fish. The last is least, yet stands for all. Just as two bits of wood at right angles stand for all that is good and pure in the present—all we have of hope hereafter.

Come with us for our first day's outing. We are two, for company's sake; more is a crowd, as on some other occasions, but the reader shall be our honored guest today. Not many fish are to be expected, for the water and the fish are to be learned over. New pools, new logs, new moss-beds, new fish, and it will take a trip or two to find where the big ones hide and feed, and that is half the sport and half the science, too, of taking fish.

The Weather Bureau has phophesied rain for our day on the pool, but as we take our early morning way through the path on the edge of the forest, every leaf is covered with a dew so heavy that the tiny globules on the hairs of the leaves stand out thick and white as a hoar frost, and this means no rain. Better still, the dewy nets of the spiders are set all about, fresh and celan, spun over night, and these little signal service peoples do not waste their labors, and fresh webs in the morning will keep the rain away till nightfall. Then, as the boat makes its first round close to the edge of the pool, to find in the grass some great pike or bass lying in wait for an early breakfast, the cat-tail and the sedge in serried ranks lift their green blades straight in air, jeweled with crystal drops that sparkle in the level sun like new-cut diamonds, and we know that another glorious day is before us, and that not even a shower will drive us from the lake or interrupt our holiday.

As a rule, in the lake the very early morning fishing is not profitable to the man with a fly; the bass and pike seem to do little surface feeding before 10 o'clock. It may be that the cool weather has retarded the hatching of the flies, and that the fish are not attracted to the surface until the noonday sun has warmed the flies to life and sent them dancing over the water.

With minnow fishing it is different, and our first trip for the pike this year was an unusually warm day in April. We took a dozen or so in the early morning while the sky was overcast. Then the sun came out bright and hot and the pike disappeared as if by magic, apparently retiring to the shades of the moss beds and weed patches, from which we could do nothing to entice them.

With the fly our best hours in this pool have been from noon to 2 o'clock, and from 5 to dark. This has been true of the pool bass for three years, though favorable hours with wind and warmth and fleecy clouds just right have given us good sport at times, outside of these regular periods.

In the stream fishing, where the bass are hunted in their rocky haunts, lying in wait for what the winds and currents may bring them, the feeding hours have not been so marked for us, and we can hope for some response at any time when we can drop the lure before the nose of a hungry bass from dawn to dusk.

There is a railroad drawbridge here over a channel some 20ft. deep. When the tide is half in or out, and the current swift, the white perch gather here in schools, lurking in the shadows and hiding under the scum caught by the cross timbers, and shoot out from cover to catch insects and other food on the approaching surface before it strikes the foam and is lost.

Dropping No. 10 flies in front of this has always been an easy way to secure all the small perch we wanted, but when we were here ten days since, though the perch were more numerous than ever, and feeding as busily, we could do nothing with them. Instead of feeding above the scum, they were in plain sight in the clear water below in constant commotion, snapping and sucking with a noise that one could hear rods away, apparently feeding on invisible midges on the surface.

Again we tried the 10 flies, but they seemed only to frighten the fish to deep water. The only small flies we had were a half dozen red ibis, usually one of the best for sunfish or perch, though of little use for bass. For this trip we have brought some midge flies tied to No. 16 hooks. Watch how eagerly they take the yellow and the gray, but refuse the black.

Now notice the water closely; it is fairly alive with tiny fry that we have not seen before. Little fellows about 1in. long, almost transparent, with an abdomen like a silver thread, invisible from above. The dip-net, thrust down among them, brings up dozens clinging like threads to the coarse meshes. We are too poorly equipped scientifically to determine the species, but from their general appearance, the great run this year, and their numbers, they are probably herring, coming down out of the spawn beds in the creek. When the sun strikes among the shadows of the bridge, where they hide, the light resolves the nebulous swarm into countless points, and millions only will express the impression, without conveying much idea of the actual conditions. But, feeding as they are, on the fry, it is some satisfaction to have proven these perch will take the artificial bait, by catching a couple of dozen in a few minutes, and it is evident, if one desired, that thousands could be secured, as three can be taken almost as easily as one, and there seems to be no limit to their number. Of course they are small and not attractive when anything better is within reach.

The great black and green dragon fly is very busy on the pool, flying all about the surface, trying to find suitable places to deposit its eggs. It is not easy, as usual, today. The moss beds have grown up pretty solid, and the islands of moss make a safe resting place for the dragon, where she can rest for a moment while she places the egg on a twig of moss just under the surface of the water, but two or three high tides have raised the water in the pool 10 or 12 in., the solid banks are submerged, and only floating fronds and extra long plumes of the feathery moss come to the surface, and when the dragon hovers too closely or too long there is a rush and a snap of a hungry bass, and if Mr. Fly does not go up quickly, he goes down. This is going on all over the moss beds, but those we watch, mostly get away. One, however, not 6ft. from the boat, was fluttering above a single spray of moss, with the ovipositor bent down dipping and hitting the twig with its single white blossom, when out of the depths, straight up, shot a bass at the dragon; he caught it fairly and bit it in two, and the trunk, with its four wings almost large enough to cover a playing card, was left rudderless to flutter on the water. It clung to the oar blade, but we could do nothing for it and it is dropped back. We have hardly gone 3 or 4yds. when there is another splash, announcing its untimely end, and there is no more to mark its having been than we can find of those which lived before the flood.

The wind is blowing a moderately stiff breeze, but under the lee of a grass patch an attempt is made to cast against it.

With rather coarse tackle, a 9oz. rod and a D line, it was not hard to get out fairly well, and the ripple was heavy enough to obviate the necessity of extraordinary casts. A bit of moss catches the dropper, checks the retrieve, makes the back cast low, and though an extra effort does get the line out, both flies fall in a heap. As they touch the water a 1lb. bass rises and seizes both. He is brought close enough to the boat to see he has the dropper in his upper lip and the stretcher in his mouth. Suddenly the hold of the fly broke and he started away with a rush, and the rod flew back; but the stretcher caught on, and again he was checked, but only for a moment or two, for at his first leap from the water he shakes himself free. The wonder is, not that he is lost, but that he ever rose to the flies in a bunch.

We hear the plash of a large fish not far from the boat, and as we turn see a great carp rise in the air, flounder awkwardly forward, half turning, and showing the red on his under side, and fall broadside with a noise out of proportion to his 20lbs. This is a new leap for the carp, which usually jumps almost perpendicularly upward and drops back tail first.

When evening comes our basket is not filled to overflowing, but we are satisfied, and as we trudge homeward in the gloaming, tired and happy, there is not much talk, for the mind is busy in the dark room developing and fixing the many pictures we have secured in the long, perfect June day.

HENRY TALBOTT.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Bastigan Brook.

WERE you ever up in northern Maine?
There winds a road to Calais town;
A friendly guide you need retain—
You'd best inquire for William Brown.
He knows the woods from road to lake,
Where yards the deer or hides the trout—
Can lure the partridge from the brake,
Or pull the lively salmon out.

A jolly fellow's Brown! His guest
Can find no better! Square—no blow—
He's knocked around, has herded West,
Is "honest Injun" top to toe.
Where is his farm? On yonder hill,
The finest in the Carroll range;
Why, every farmer 'bout Lakeville
Can point out Brown's this side the grange.

Dropped in on Brown one day in June,
And kissed his wife—we're cousins, see?
"You're right in time for grub—it's noon;
Fall in around the board," said he.
At this command each seized a chair,
While jokes and stories reigned supreme;
We trained like kids at county fair,
And Brown—he was a two-horse team.

"Suppose we try Bastigan Brook?"
Said Brown. "Can you endure the tramp?"
He asked me, with a quizzing look;
"If legs should fail you, we can camp."
"Agreed!" I laughed. He did not know
That once a rougher road I trod—
A road that led to Jericho—
But then I had no fishing rod.

Well said. Next morn, at rise of sun,
Equipped with lunch and lines and bait,
We steered for where the brook begun,
Drawn by Brown's mare of nimble gait.
We rode as far as Jones' farm,
There left our rig and sallied out,
To seek the brook—that sylvan charm—
That held for us the speckled trout.

We filed along a logging road,
And reached a lumber camp at last—
In winter time the rude abode
Of hardy men whose lives are passed
In toil among those solitudes.
Right welcome is the stranger there,
Where discontentment seldom broods,
While aught they have they gladly share.

But lonesome was the camp that day;
A solitary porcupine
We startled from his rest; away
We turned, through bush and tangled vine,
And hastened on, until the brook,
'Mid forest, winding in and out,
Before us lay, then cast the hook,
And caught the finest speckled trout.

But flies, mosquitoes! Why, the air
Was black—they covered every spot—
Hands, face and neck, wherever bare,
Till Brown observed, "'Tis pretty hot!"
(The cuss-word here I'll not repeat.)
Lo! dangling from uplifted hook,
A mammoth trout dropped at his feet,
Then, swish! into Bastigan Brook.

So, on for miles, we fished and tramped,
Till Brown remarked, "We have enough
For breakfast, sure" and then he camped,
Pulled out the lunch and said: "You're tough."
In spite of flies, we ate and laughed,
Then gathered up our traps and trout;
A drink from Bastigan we quaffed,
And wearily we plodded out.

But home at last! The sun just down;
Then bed—such sleep! till breakfast call.
The feast was spread. "It's done up brown!"
I laughed. "But you can't have it all,"
Said Brown, as 'gain he passed the dish.
We joked, we ate, we praised the cook.
Friend, would you take that tramp for fish?
For trout? Then try Bastigan Brook.

WALTER ALLEN RICE.

New Jersey Surf Fishing.

ASBURY PARK, N. J., June 24.—The last week has brought many improvements in surf fishing. While bass are not plentiful, still some are taken nearly every day, at the different favorite points. The sluiceway at the foot of Deal Lake is at present the most productive point. The larger fish are not yet in evidence, 5 to 12lbs. being the run of size. A good northeast blow would undoubtedly improve matters greatly and give us a run of the big fellows.

Kingfish are fairly abundant, but not as plentiful as at a corresponding period last year, but never have I taken larger or finer conditioned fish. Weakfish have run in the surf and are beginning to take the hook, twelve being the number of the best day as yet from our pier. The water is literally alive with bait fish, and that argues much for future sport. Bluefish are holding closer in shore than my last letter expressed, and a few have been taken on the squid.

Barnegat Bay is fairly alive with fish of all kinds—even the blues are very abundant in the inlets. So much for protection in those waters. I inclose a letter from my friend, Mr. L. P. Streeter, which explains what is being done in the surf further down the coast. All the old-timers are now with us, and the sport is being pursued without much relaxation. The indications all along are of the most promising character, both as regards river and bay, as well as the open sea. LEONARD HULIT.

My Dear Mr. Hulit:

The following report is the result of four days' fishing in the surf at Barnegat City. The fish were taken with rod and reel by the following gentlemen: C. A. Atkins and J. F. Hawkins, Asbury Park; G. E. Kirsten, Hoboken; H. K. Boyer, Philadelphia, and L. P. Streeter, East Orange, N. J.

June 13.—C. A. Atkins, two channel bass, 23 and 21lbs.; G. E. Kirsten, two channel bass, 22 and 16lbs.; L. P. Streeter, two channel bass, 23 and 19lbs.

June 14.—C. A. Atkins, three channel bass, 28, 25 and 20lbs.; G. E. Kirsten, two channel bass, 36 and 20lbs.; J. F. Hawkins, one channel bass, 20lbs.; L. P. Streeter, three channel bass, 25, 20 and 20lbs.

June 16.—H. K. Boyer, one striped bass, 9lbs.; L. P. Streeter, one striped bass, 20lbs.; L. P. Streeter, one channel bass, 20lbs.

Recapitulation.—C. A. Atkins, five channel bass, 117lbs.; G. E. Kirsten, four channel bass, 94lbs.; J. F. Hawkins, one channel bass, 20lbs.; H. K. Boyer, one striped bass, 9lbs.; L. P. Streeter, one striped bass, 20lbs.; L. P. Streeter, six chanel bass, 127lbs. For a party of five persons fishing four days, sixteen channel bass weighing 358lbs. and two striped bass weighing 29lbs. is a very creditable score. Kindly have this inserted in the next issue of FOREST AND STREAM. L. P. STREETER.

The Salt-Water League.

Fellow Fishermen:

The Protective League of Salt Water Fishermen was organized to obtain legislation looking to the enactment of beneficial laws for the protection of salt-water fish, the co-operation of fishermen at large in conforming to and enforcing the same, and generally in furthering and aiding all lawful methods looking to prompt action in all violations of law appertaining thereto.

There never was a time when the fishermen grumbled more than just before this League was formed. They would go here and there grumbling, and what good did

THE SIZE OF HIM.

that do for the time being? Ten thousand acting the same way would never accomplish anything. The only thing left to do was to organize, which they did. But are those same grumblers coming into the League? That is the question. I can safely say they are not. And why not? They seem to reason, "What is the use of my joining? There are others enough, and I am only one in a thousand, and I do not need to belong to the League; they will get along without my little say."

Those are the very men we want. Just think of how everything with organized effort is fought and won. We who belong to this League mean to win; and we must have the co-operation of every fisherman. Let every fisherman, no matter how young or old, send his name and address to our office, No. 20 Bond street, and I assure him that it will be a benefit for him to join, and that at the end of the year he will find that he has done a useful thing in joining this League. For they not only help to accomplish the objects of the League, but will find their resources grow.

We know that fish must be caught for market; but we do object to two-thirds of fish caught in nets going to waste, by making manure. We have positive proofs of this, and we know of what we say to be true, and we mean to say that this work (or slaughter of fish), illegal fishing, must cease in the near future. What are you going to do about it? Are you going to stand idly by and see this thing continue, or are you willing to join us to abolish it? It only costs $1 to join—not 10 cents per week. Arrangements are being made whereby fishermen can save 10 per cent. of what they usually spend at fishing stations by showing their membership cards. That in itself means their membership free at the end of the year. Besides, instructions are given to members as to where, when and how to rig tackle and what bait to use to catch fish. Is that not a benefit? But do not forget the objects of the League. Send in your name and address and it will be referred to the branch delegate of your respective district, who will explain all to you and enlighten you on the subject. Do not fail in this matter, worthy fishermen. THEODORE BIEDINGER, Pres.

No 20 BOND STREET, New York.

The following committees of the League were appointed at the regular meeting, June 14. President Biedinger is ex-officio a member of each committee:

Press.—Robert Cook, Sam Howard and Daniel A. Nesbitt.

Grievance.—Albert Baywood, Chas. Lorch, Sam Howard, Edward Schott and John Lefferts.

Excursion.—Wm. Roeber, Col. Jas. F. Milliken, Edward Schott, Chas Lorch and Albert Baywood.

Law.—Robert Cook, Col. Jas. F. Milliken and Joseph Steiner.

By-Law Revision.—Col. Jas. F. Milliken, Eugene Fliedner, Charles Lorch, Dr. Isaac Snyder and Edward Schott.

A Michigan Fisherwoman.

Editor Forest and Stream:

I recently referred to the fact that FOREST AND STREAM doctrines are pervasive, and quoted a few incidents in evidence. I now have to note that other FOREST AND STREAM principles are likewise pervasive. Of course you have long advocated rational recreation for all persons, regardles of age, sex or condition. Of course, the utmost liberty in the matter of outfit, equipment and dress has ever been maintained, and equally the liberty of remark concerning same. A person is at liberty to load himself up with "store toggery" to any extent, and likewise those of us who have been in the woods enough to appreciate a pair of strong wool pants with 8oz. canvas seat and knees, or have learned to boil coffee for dinner without firing a brush pile, or the woods themselves, feel equally free to pass remarks liberally on the above mentioned toggery. Most any of the children of the wilds are qualified to do that intelligently. They know the difference between live and dead fish, and preferring them alive, they bring theirs in that way, whenever practicable, whether it is by toggery of the stores or of their own invention. The real children of the wilds are also full of resources, devices and inventions galore.

But to my proofs. I will prove all three things at once. Recreation pervades, spreads, extends more and more. Also the right to wear any kind of a sporting dress. Also my right to remark the same. It comes about in this wise. Twice, lately, I have seen, fishing, at about in this wise: Twice, lately, I have seen, fishing, at form of light yellow and black, her headdress streaming out in the wind. I did not see her take any fish, but I hope she did, for she is a diligent fisherwoman, apparently, in her way, and according to her lights. May her number increase. The priests are good fishermen often, but I have never known of a fishing nun before.

J. B. DAVIS.

Potomac Notes.

WASHINGTON, D. C., June 26.—The last few days have found many of our anglers enjoying fine bass fishing in the Potomac from Washington to Harper's Ferry and beyond. Several carloads of Sir Izaak's followers have passed over the Metropolitan Branch of the B. & O., and good strings of fish have been brought into the city. The number of anglers out was large, owing to the fact that there had been a long wait for favorable conditions. Among those we have chanced to run against are: Charley Laird, who fished at Tuscarora and caught nineteen bass, including two beauties—a 4 and 5-pounder. Simons and Minnix, fishing up Point of Rocks way, caught forty. Crandall, Whiting and Umbraugh captured twenty-eight at Dickerson's. Kent and Strasburger, fourteen at Point of Rocks; and Gunard and Keys, five bass at Sycamore Island.

Henry Talbott reports good fishing for black bass at Occoquan, where he took sixteen on Saturday. The fish were caught on a fly in about a half-hour. One weighing about 2lbs. was struck at the foot of the falls. He proved a lively chap, leaping out of the water and breaking the rod near the middle.

Two or three thunderstorms visited the river on one of the days, and several wet-throughs were experienced. The water will probably be unfavorable for the next few days, but should clear up and be in excellent condition by the end of the week. B.

A Good Plan.

BOSTON, Mass.—*Editor Forest and Stream:* Mr. Isaac Wharmly, secretary Fall River Fish and Game Club, in a letter just received says that five men were caught taking black bass illegally at South Watuppa Lake on Decoration Day. Two appeared in court and were fined $2 each. The others were defaulted. As it is not lawful to take black bass less than 8in. long, the Fall River sportsmen propose to supply crude rulers 8in. long to boats, with the law inscribed thereon, that he who rows or fishes may read. He also writes that an attempt is being made to stock their lakes with lake trout or with landlocked salmon. H. H. K.

Cobbosseecontee.

PORTLAND, Me., June 19.—I like to finish the spring fishing at Cobbosseecontee Lake. Small-mouth bass are always on tap after June 15. Bob D. says: "When yer hook one, fust thing he'll du er'l be ter try and climb a tree." But Bob said he was "Dry as er cork leg" when he was thirsty. They have shut off fishing in the streams and have a hatchery there now. How are these for one day and one-boat scores: No. 1—3¾, 3¾, 3½, 3½, 2½, 1. No. 2.—4¼, 3½, 4¼, 3½, 4¾. These are genuine brook trout scores. Watch that lake. It's a good one. Go to Monmouth, Me., and drive to Chas. Brown's, three miles.

PINK EDGE.

The Size of Him.

THE muscalonge picture illustrates a big fish; also the fact that the camera never deceives. The fish was taken by Rev. J. Phillip de Bevers Kaye, rector of St. James' Episcopal Church of Ironwood, Mich., in Round Lake, Ontonagon county, Mich. It measured 42in.; weight, 41½lbs. So it was a big one after all; but had it been as gigantic in comparison with its captor as here idicated, Mr. Kaye would have been taken into the lake instead of having taken the fish out.

Staten Island Fishing.

PRINCESS BAY, S. I., N. Y., June 20.—Yesterday I landed fourteen weakfish, the majority weighing about 2lbs. each. The fishing has been good here, and the season bids fare to be a successful one.

ISAAC SMITH.

HUGUENOT, S. I., N. Y., June 19.—Weakfishing has commenced here, catches of five and six to a boat being reported frequently. To-day I got three in a short while, and other parties now coming in report fair luck.

CHAS. F. NEWMAN.

ANNADALE, S. I., N. Y., June 19.—The first weakfish of the season was landed here yesterday. To-day several more were caught. Several parties are expected here to-night, and in a few days the fishing season will be on in full blast.

CHAS. GELLER.

PRINCESS BAY, Staten Island, N. Y., June 24.—Last evening Henry Shultz caught eight as fine weakfish as have been brought ashore this season; the eight fish weighed a trifle over 25lbs. They were caught with shrimp at high tide at a place called "the flats" in Princess Bay Cove, in about 6ft. of water. They were certainly beauties. Everyone told Mr. Shultz he was crazy for going out last night, as we had a strong southeast wind, and the old combers were just doing their best; so we took a large oyster skiff and rode the waves as safely as could be, and never in my life have I hooked a weakfish that put up as good a fight as they did. Shallow water and a heavy sea account for the gaminess, I think.

If any of your inquiring readers want to know where to go weakfishing, you can recommend the south side of Staten Island, at present, any way from Petler's, at New Dorp, to Ward's Point, Tottenville. We have not had as early fishing here in a good many years, and the fish are running very large. Parties this morning have come in with fine catches. * * *

Long Island Fishing.

WRECK LEAD, L. I., June 26.—Fishing during the past week has been good. The usual variety of fish have been caught. Weakfish, which were scarce for a week or two, have returned, and are being taken in large numbers. Ely Rosenkranz, a resident of the Borough of Manhattan, was drowned here on Sunday. He was a well-known fisherman.

QUEENSWATER, L. I., June 26.—The fishing during the past week has been all that could be desired. The average catch for parties who have gone out to the fishing banks has probably been over 100 fish. Some, of course, have caught more, some less. All sorts of fish have been caught, but fluke, bass and weakfish have made up the bulk of the catch. Great preparations are being made for the snipe shooting, which begins next week and lasts until Dec. 31.

QUAHAUG.

Chicago Fly-Casting Club.

CHICAGO, Ill., June 23.—*Editor Forest and Stream:* The fourth competition of the season was held to-day, and the records made were as follows:

	Long Distance Fly, Feet.	Distance and Accuracy, Per Cent.	Accuracy and Delicacy, Per Cent.	Bait Casting, Per Cent.
J. D. Belasco	...	.....	.....	87 2-5
I. H. Bellows	113	93 2-3	97	94 4-15
C. Chadwick	80	85	.....	79 2-5
H. Greenwood	89	88	93 1-2	87 8-15
H. G. Hascall	103	92 2-3	97 1-6	97 8-15
N. C. Heston	...	90	92 1-3	95 8-15
E. Letterman	...	.....	.....	95 13-15
C. Lippincott	...	92 1-3	96 1-2	87 13-15
H. A. Newkirk	...	87	97	94 11-15
F. N. Peet	104	88 2-3	96 5-6	97 4-15
H. W. Perce	...	92	92	91 1-3
A. C. Smith	97	89	96 2-3	90 4-5

Holders of Medals: Long distance fly, I. H. Bellows; distance and accuracy, I. H. Bellows; accuracy and delicacy, H. G. Hascall; bait casting, H. G. Hascall.

Dogs on Lake Steamers.

They are Better than Barometers.

MASTERS of steamers and tow barges on the lakes have a fondness for dogs, and on dozens of the boats running between Lake Erie ports and upper lake ports dogs are carried. Sailors generally show an inclination for pets, but the dog is something more than a pet on the lakes. He is a valuable member of the crew. He is considered as trustworthy as a barometer in giving notice of an approaching storm. Most of these dogs are cowards in storms. Occasionally a captain finds a dog that is not afraid of heavy weather and seems to enjoy the rolling or pitching of the obat, but as a rule dogs are as afraid of a gale as a woman passenger, and at the first sign of a storm hunt for a hiding place.

"I had a dog that was as much like a woman as it was possible for an animal to be," said a captain who has carried a dog with him for nearly a quarter of a century. "He could tell a storm that was coming long before I could notice it, and often before the barometer would change. He would come to me whining and crying, and I couldn't keep him away from my heels. He seemed to be asking me to put him ashore or to find a comfortable place for him. I used to feel sorry for him, he'd carry on so. When the storm would strike us he would be out of sight, and we often found him hiding under the bunks and in corners where he could not see anything and could not be easily seen. I believe that if he could have done it he would have jumped into bed and pulled the covers over his head.

"We were always very careful that he didn't get hurt in loading or unloading, for he was worth a good deal of money to us. Many a time, when we had a thick fog, I'd hunt for that dog and keep him near me. He was better than a chart. He could smell land further away than a man could see it in fair weather, and all of us kept a close watch on him during a fog. If he jumped up and down as though something pleased him very much, you could be certain that we were getting close to land.

I remember one time we were coming down Lake Superior from Duluth in a heavy fog. We had had fog all the way up, and Jackson—that was his name—was pretty tired of sailing when we reached Duluth and tried to jump up, but we couldn't spare him, and he stayed with us. We didn't have as many lights in those days as we do now, and it was no easy thing to take a boat from the upper end of Lake Superior to Sault Ste. Marie in a fog that was with you all the time.

"Jackson was so disgusted that he lost all interest in the boat and spent the time sleeping on deck. When we were about abreast Whitefish Point, I was figuring that we were outside far enough to be safe, and was not the least bit nervous. Suddenly, Jackson jumped up and ran to the rail and put his paws up as though he expected to look right over to a dock.

"I saw him and at once gave the engineer the signal to check, and Jackson barked as though he was immensely pleased. I signaled to stop and yelled to the first mate to get out the lead. Just then I saw a lumber schooner loom up in the fog, and I'll tell you we were so close together when she passed that I could almost touch her booms. That dog had smelled that boat, sure as you're born, and if I hadn't checked there would have been a collision and then a suit, and I would have had hard work to explain why I was not sounding a fog signal."—Buffalo Letter in New York Sun.

Dogs as Property.

THE Supreme Court of South Carolina holds that a dog has value and can be stolen, and that the old common law is out of date and the modern dog is entitled to legal protection, and if you steal a dog you can be sent to prison. The case was started in Newberry, where a negro named Langford was charged with stealing a dog, dog-house, etc. The Circuit judge held, according to the common law, that a dog was not the subject of larceny, and quashed the indictment. Now the Supreme Court unanimously holds that the common law does not apply here; that it is wrong not to value a dog simply because he is not edible, and that it is not a whim or caprice to keep a dog. The court defends the dog for devotion and attachment, and contends that it is entirely a punishable crime to steal a dog, and that the stealing of a dog may be punished if the facts warrant and the indictment be properly drawn. The Circuit Court is reversed on the dog demurrer.—Charleston News and Courier, June 18.

Canoeing.

Canoes and Canoe-Yawls.

APROPOS of our remarks in a recent issue, the Field of June 17 discusses the question of canoe and canoe-yawl as follows. Of course we are aware that Crayfish is not a canoe, but the question still remains as to why there were no canoes at a canoe meet.

As a general rule, when reading sporting articles, reports of races, or criticisms of details connected with sport, Englishmen of experience in that branch of sport are apt to take little or no notice of wrong or incorrect use of names, either as applied to type of craft or to model or to fitment; but there are occasions when the sport may be harmed by allowing misstatement or the improper absorption of title to pass out to the world undisputed and not corrected.

In this connection the improper use of the title of "canoe," when used in relation to the canoe-yawls, canoe-yachts and even to raters, has done an immense amount of harm to the genuine sport of canoeing; that is, to single-handed canoe sailing, whether racing or cruising. No doubt large-sized craft are sometimes formed of canoe nature, but more often they are only of canoe form, without any of the real qualities of a canoe, and, indeed, falling far below the canoe in the quality of sailing and of speed under sail, in which a sailing boat ought to excel over a restricted canoe. Taking an instance which may very easily be wrongly accepted by our American cousins as descriptive of the present state of canoe sailing in England, we find the lines of the canoe-yawl Crayfish publishel in the American FOREST AND STREAM under the title "A Modern English Canoe." Of course, we know that the very practical editor of the FOREST AND STREAM and other American canoe experts will not be misled by the title and description given, but will judge by the lines and measurements comparatively with those of the modern sailing canoes so frequently described of late. But the rank and file will probably give no further thought than that Crayfish is a typical English canoe of latest pattern, and that the canoe proper has died.

The description of the drawings of the Crayfish, under the heading of "A Modern English Canoe," appears to be from the pen of her owner and designer, Mr. Clayton, and he gives her ballast as 7cwt., and loaded centerplate 185lbs., or a total of 969lbs. ballast. To this should be added the weight of two men balancing on weather deck, say 10 stone each at least, making a total of 1,249lbs. Her sail area is given at 145 sq. ft.; so she has to carry 8.6lbs. of ballast per square foot of sail, and that on a waterline of 16ft. 4in. and a beam of 4ft. 8in.

Now, the modern canoe, leaving the sliding seat class out of the question, carries a sail area of 140 sq. ft. on a ballasting (taking the heaviest) of 140lbs., plus man of 140lbs.; that is a total of 280lbs.; so she carries 2lbs. ballast per foot of sail, instead of the above named 8.6lbs. per foot, and her waterline is only 13ft. and her beam is 3ft. 6in.

The FOREST AND STREAM refrains from criticising the design, but winds up a very weighty remark thus: "The important point is that such a craft, with 1,000lbs. of ballast and less sail than a 30in. unballasted canoe, should prove herself in a measure the representative boat at a so-called canoe meet. If this is canoeing, what is the sport formerly known by that name?" That is just the question which must strike all who are not aware of some leading details which do not appear in the description of the craft.

In the first place, the race for the Lough Erne cup, which was won by Crayfish, was a handicap race. There were no modern canoes, rigged and sailed in modern form, competing against her. The nearest approach thereto was the Solitaire, she sailing, however, under 75ft. of sail, whereas any of the modern-type canoes would have had 100ft. to 120ft. in such a breeze, if not whole sail.

It has always been a difficult matter to clearly define what is a "canoe." Modern ideas generally associate the word with a small one-man craft, which can be paddled and can be lifted and handled on shore by two men. Probably the following crude definition would go far enough and conserve the title to genuine canoes, if it were generally adopted; but where men persist in calling yachts canoes simply because the stern of the yacht is built sharp and the body shallow, there is a bank of falsity which every canoe man should do his best to dredge away. Therefore, a canoe is a sharp-ended shallow-draft craft, which can be efficiently paddled by her crew, and can be carried over land by two men, or on wheels by her skipper, or be dragged out of water by her skipper sufficiently for camping purposes.

The main feature of canoe nature is ability to be propelable by paddle, and to be easily transportable. Now, a canoe-yawl has neither of these qualities; she can only be propelled, manually, by oars, and very inefficiently at that; and, practically, she cannot be carried except she be entirely gutted, and even then a strong force of men is required. She must remain afloat, or be beached with risk, and a considerable amount of help in addition to her crew will be absolutely necessary for beaching. The essential feature of canoe cruising is independence; that is, possibility of the crew, unaided, doing all that is or may be necessary with the canoe and her gear on a cruise. Of course, it will generally be better to employ assistance in transporting or beaching, but the ability should exist, often one man doing it alone when it becomes necessary and when no assistance is at hand. Such difficulty seldom arises except in cruising along a sea coast, but the absence of ability to drag up clear of water, unaided, may mean the wreck of the canoe, especially when caught in a freshening on-shore breeze and sea.

We do not maintain that canoe-yawls have no place properly in canoeing; on the contrary, they are a very useful type or class of craft for cruising and camping on estuaries and large lakes, provided they are not too heavily constructed and ballasted or excessively rigged. When a craft is given a fixed cabin-top, a fixed metal keel and a deep draft of fixed keel, she can no longer justly claim to be of canoe type; and it plainly is the duty of all canoe clubs to so define or classify canoe-yawls that the small yacht or rater may not invade the class. The Royal Canoe Club rule for canoe-yawls requires that all ballast, metal keel or centerplate shall be detachable from the yawl; and without such a provision in the rules there would certainly be an influx of fin and bulb-keeled craft whenever valuable prizes were put on to be raced for.

The mixed racing between canoes and canoe-yawls is never satisfactory. If the canoe-yawl is well designed, rigged and handled she ought, by her size and power, always to beat the canoe; and even the Y. R. A. time allowance, which is roughly a minute a mile between them, should barely put them on a level. But the up to date experience in the R. C. C. is that the canoes can beat the yawls without time allowance in nearly all winds. Probably this is attributable to the inferiority of design and fitment of the existing yawls. But, none the less, the racing of the two classes should be kept distinct. Arbitrary time allowance, based on size or power, can only be correct in one condition of wind and water, and at all other times one or the other class will have an undue advantage. This would still further be the case in the B. C. A. cup race, when the competitors have to carry a complete camp kit and stores; the yawl would be carrying a mere featherweight for her size, while the canoe would be sailing deep-laden.

Red Dragon C. C.

THE Red Dragon C. C. held its annual regatta on June 24 at the club house, near Wissinoming. A strong wind roughened up the Delaware River and made paddling very difficult. The events were:

Tandem, Double Blades.—M. D. Wilt and L. R. Titus first, E. D. Crittenden and A. S. Fennimore second, H. M. Kraemer and J. E. Murray third. Crittenden and Fennimore claimed a foul.

Single, Double Blades.—M. D. Wilt first, E. W. Crittenden second.

Tandem, Double Blades, Quarter Mile.—W. S. Hewitt and R. B. Hinches, Lakanoo Club, first; M. D. Wilt and Lloyd R. Titus, second; H. M. Rogers and D. W. Cook, third.

Tail-End Race.—A. S. Fennimore first, H. M. Rogers second. Crittenden and Cook failed to finish.

Tournament between H. M. Rogers, combatant, and T. W. Cook, oarsman, and Lloyd R. Titus, combatant, and M. D. Wilt, oarsman. Won by Titus, who knocked Rogers overboard.

Tug of War between Rogers and Wilt, won by Wilt.

Hand Paddling.—H. M. Rogers first, Sterling Hewitt second, M. D. Wilt and E. D. Crittenden third.

Upset race declared off.

Yachting.

5. East Gloucester, club, Gloucester, Mass.
6. Indian Harbor, special, Greenwich, Long Island Sound.

The original of our supplement is a photo of Navahoe in her first season, 1893, taken on the Solent by West & Son, the noted English yacht photographers.

THE new 20-footer designed by Mr. Duggan for the defense of the Seawanhaka cup, and built for Com. James Ross by the Yacht Company at Dorval, was launched and tried on June 24. She is of the same type as Mr. Duggan's previous boats, Glencairn I., Glencairn II., Strathcona and Speculator, with only minor changes of form and dimensions from the latter two.

THE following candid criticism was not intended for publication, but we venture to quote it. The writer is a Clyde yachtsman, who is familiar with steam yachts such as that river produces. We should like to have his opinion of some others of the new "Protected Cruiser" class, such as Columbia II., successor to Columbia I., the new warship-yacht now building at the Crescent Shipyard.

"A most weird thing has turned up here. It looks like an antediluvian whaling ship of Titanic proportions I believe it is the new Niagara, and judging by the amount of gold leaf I should say it is meant for a yacht. If so, a good collision would improve one end of her, and the other would come in very well for a handsome lightship."

Columbia.

THROUGHOUT all of the last week work was hurried on board Columbia, and on Saturday morning the yacht was ready for her trial trip. Mr. Iselin was at Bristol through the week, hurrying matters as much as possible, his headquarters being on the tender St. Michaels. At 9:30 on Saturday morning the yacht was started from the dock and warped out into the channel, but she took the ground after moving a short distance. The efforts of her crew on the warping lines failed to move her, and a tug was summoned, but it also failed. As the tide was falling, guys were run off to keep the yacht upright, and every precaution was taken to prevent injury to her. She lay until the tide rose, at 5 P. M., when she floated clear without damage so far as could be ascertained.

On Sunday morning Columbia got under way about 9 o'clock, and with a light S.W. breeze sailed down to Newport. Here she fell in with Defender, and the two had a brief but decisive and most satisfactory trial. Columbia started on Defender's weather quarter. The two sailed for a short time in a moderate S.W. breeze and smooth water, Columbia rapidly coming up on Defender's weather and passing her. During the morning the deck fitting at the heel of Columbia's bowsprit showed signs of giving way, and the trial was soon brought to an end. In the afternoon she was towed to Bristol, where repairs were made to the bowsprit fitting on Monday, and some other work finished up. On Monday Mr. Iselin made the last payment on the yacht, and took possession, mastheading his well-known red and black signal, and starting in tow for Newport. It was proposed to sail with Defender on Tuesday and to go to New London on Wednesday and then on to New Rochelle. The special race between Columbia and Defender off Sandy Hook has been postponed to July 3.

Shamrock.

ON June 24 the Prince of Wales, accompanied by Mr. Jameson, Lord Suffield, Capt. Halford, Mr. Will Fife, Jr., and Sir Thomas Lipton, visited the Thorneycroft Yard and inspected the new Shamrock. The yacht was launched on June 26, leaving the ways at 3:33 P. M. She was christened by Lady Russell in the presence of Sir Thomas Lipton and a number of guests. The yacht went into the water with a piece of canvas hung over her counter, but the rumored "petticoats" all around her were missing. The tug Excelsior came up to take a line after the yacht was afloat and through carelessness struck her a heavy blow on the port bow, denting the plates, but doing only local damage. After the launch the yacht was towed to the West India Docks, where her steel mast was shipped. She was to leave on Tuesday for Southampton, where she will be fitted out.

Reba, steam yacht, designed by H. C. Wintringham for Nathaniel Witherell, was launched on June 20 by the Greenport Basin & Construction Company, Greenport, L. I. She is of wood, 110ft. over all.

Atlantic Y. C. Annual Regatta.

SEA GATE—NEW YORK HARBOR.

Tuesday, June 20.

THE Atlantic Y. C. sailed its thirty-third annual regatta on June 20, the starters being as follows:

Schooners.

First Class—100ft.

Racing No.		Racing Length.

Mainsail Yachts—Open.

Classes 3 and 4—Under 21ft.

27	Martha M., R. B. Morse	18.20
4	Cleota, N. T. Corry	19.30

The start was made off the new club station, Sea Gate, the schooners sailing around the Scotland and Sandy Hook lightships, while the cutters, the 43ft. and larger classes, turned the Scotland. The day was clear and bright, with a light S.W. wind at the start, which soon freshened and held steady. The race committee, Messrs. David E. Austen, John T. Bliss and Louis F. Jackson, started the race promptly on time, at 10 A. M. With a strong ebb tide and light wind, the yachts were slow in starting, some being handicapped as they were at a distance below the line when the start was given. Shortly after the start Acushla parted her bobstay and withdrew. Hera was badly handicapped at the start, and soon withdrew. The times at the Scotland Lightship were:

Colonia	11 39 00	Gloriana	12 12 28
Quissetta	11 46 40	Eidolon	12 12 33
Amorita	11 48 23	Lady Evelyn	12 19 20
Syce	11 55 30	Ramona	12 21 00
Kestrel	12 11 10	Uvira	12 22 15

The schooners were timed at the Sandy Hook Lightship:

Colonia	11 58 30	Amorita	12 08 40
Quissetta	12 08 00		

The finish was timed:

Carolina	1 13 44	Quissetta	1 46 40
Dot	1 12 35	Gloriana	1 46 44
Dorothy	1 30 18	Kestrel	1 48 50
Qui Vive	1 22 05	Eidolon	1 54 14
Esperanza	1 22 58	Memory	1 57 02
Colonia	1 34 44	Uvira	2 00 28
Syce	1 38 08	Awa	2 08 25
Apteryx	1 36 55	Eclipse	2 09 51
Amorita	1 43 48		

The official times were:

Schooners—First Class—Over 100ft.—Start, 10:05.

Cleota	Did not finish.	

The winners were: Colonia (walkover), Amorita, Ramona, Syce, Eidolon (walkover), Memory (walkover), Edla, Apteryx, Carolina and Dot. Lady Evelyn lost her foretopmast and the jaws of her maingaff. The steamer Cygnus carried the members of the club.

New York Y. C. Annual Regatta.

NEW YORK—NEW YORK BAY.

Thursday, June 22.

THE fifty-third annual regatta of the New York Y. C. was sailed on June 22 in specially good weather—a clear bright day with plenty of wind and smooth water, making an ideal summer excursion for the members on the club steamer Cepheus. The start was made off Buoy 13, just outside the Narrows, at 11 A. M., there being a strong ebb tide and very light N.E. wind. The starters were:

Schooners in Racing Trim.

No.		Racing Length.
5	Colonia, C. A. Postley	95
1.	Amorita, W. Gould Brokaw	75
19.	Quissetta, Henry F. Lippitt	75

34.	Syce, F. M. Hoyt	59
47.	Kestrel, J. B. Mills	59
48.	Acushla II., Addison T. Hanan	59
51.	Albicore (yawl), Seymour, J. Hyde	42
115.	Lydia, E. D. and R. Underhill	36
	Hoodoo (yawl), T. Hammond Smith	..

Single-Masted Vessels and Yawls in Cruising Trim.

11.	Vigilant, Percy Chubb	Over 70
5.	Queen Mab, C. L. F. Robinson	70
10.	Eclipse, L. J. Callanan	60

30-footers Owned by Members of the Club.

Carolina, Pembroke Jones; Esperanza, H. O. Havemeyer, Jr.; Hera, Ralph N. Ellis; Wawa, Reginald Brooks; Asahi, Lloyd Warren.

In addition to the regular cash prizes, the Bennett cups, presented in 1871, were raced for by Colonia, Amorita and Quissetta in the schooner division, and Vigilant, Queen Mab and Gloriana in the cutter division. The courses were for the schooners and larger cutters around the Sandy Hook Lightship; for the smaller cutters around the Scotland Lightship, and for the 30-footers around Old Orchard Shoal Buoy.

With the strong tide and next to no wind, some of the yachts made a very poor start. Those which were lucky enough, like the new Lydia, to get promptly over the line, soon caught a nice easterly breeze, freshening and then hauling to the south, which gave them a long lead over the last to cross. Starting with the wind aft, the yachts soon trimmed sheets for a close reach to the Southwest Spit, where they were timed:

Amorita	1 21 25	Quissetta	1 34 08
Queen Mab	1 22 45	Ariel	1 34 55
Gloriana	1 26 45	Wayward	1 52 00
Colonia	1 28 50		

On the way to the Spit, Acushla II. passed Syce, but when off the point of the Hook the latter was leading, when a stronger puff from the freshening southerly breeze caught Acushla and she repeated the performance of Liris in her first race, just ten years ago and near the same spot, her mast going by the board. The times of the larger yachts at the Sandy Hook Lightship were:

Vigilant	1 13 30	Colonia	1 28 50
Amorita	1 21 25	Quissetta	1 34 08
Queen Mab	1 22 45	Ariel	1 34 55
Gloriana	1 26 45	Wayward	1 52 00

The smaller yachts were timed at the Scotland:

Syce	1 01 00	Lydia	1 03 30

Gloriana, being entered for the Bennett cup, sailed the long course.

They reached in to the Hook with plenty of wind, and carried spinakers home from the Southwest Spit, the finish being timed:

Syce	3 00 00	Gloriana	3 27 50
Vigilant	3 07 40	Eclipse	3 34 30
Amorita	3 15 30	Iroquois	3 44 03
Colonia	3 19 25	Elsemarie	3 55 33
Lydia	3 21 12	Wayward	4 03 14
Queen Mab	3 24 17	Clorita	4 06 02
Ariel	3 25 04	Katrina	4 08 37
Quissetta,	3 25 35	Uncas	4 14 17

The full times were:

The winners were Amorita, Clorita, Ariel, Wayward, Syce,

Lydia and Queen Mab for the regular cups, and Amorita and Queen Mab for the Bennett cups.

The regatta committee, Messrs. S. Nicholson Kane, Chester Griswold and Irving Grinnell, were on board the flagship Corsair III.

Bristol Y. C. Open Regatta.

BRISTOL, R. I.—MOUNT HOPE BAY.

Saturday, June 17.

THE Bristol Y. C. sailed an open regatta on June 17, the start being postponed from 1:30 to 2:30 P. M., owing to lack of wind; at the latter hour a moderate S.W. wind came in and held through the race. The times were:

	Elapsed.	Corrected.
First Class—Jib and Mainsail Boats—12 Miles—Start, 2:30.		
Curio, J. W. Borden	2 39 04	2 31 35
Columbia, Wood Bros.	2 36 55	2 32 36
Hope, C. O. Iselin	2 41 30	2 36 54

E. L. Clark	Withdrew.	

The regatta committee was as follows: Henry W. Hayes, William Hodgkinson, L. Maitland Minsher, William H. Thurber, William G. Lowe, Jr., Edward I. Brownell, William H. Monro; Secretary, L. Maitland Minsher.

Brooklyn Y. C. Annual Regatta.

BATH BEACH—NEW YORK HARBOR.

Monday, June 19.

THE Brooklyn Y. C. sailed its annual regatta on June 19 over the club courses on the Lower Bay, starting off the club station in Gravesend Bay. There was a fresh S.W. wind at noon, when the race started after a wait of an hour, and it held all day, taking the topmast out of Grace E. on the course, and out of Kangaroo just after the finish. The times were:

	Elapsed.	Corrected.
Sloops—36ft. Class—Start, 12 Noon.		
Kangaroo, Com. Humphrey	3 19 40	.. .. ..
Ilikato, C. Converse	3 21 25	.. .. ..

Tom Tit, E. C. Dale	4 21 23	1 36 23
Sparrow, S. W. Foulkes	4 25 38	1 40 38
Bobbie, Dr. Glass	4 33 25	1 48 25
Plover, F. J. Petry	4 37 00	1 52 00

Beverly Y. C. 275th Regatta.

WING'S NECH—BUZZARD'S BAY.

Saturday, June 24.

THE Beverly Y. C. sailed a club race on June 24 in a fresh S.W. wind and lively sea, the times being:

21ft. Class.	
Amanita, J. Crane, Jr.	2 05 20
Quakeress, W. F. Harrison	2 12 50
Kalama, David Rice	2 13 14
Cyrilla, R. W. Emmons	2 17 55
Edith, S. R. Dow	Disabled.
18ft. Class.	
Esther, E. N. Farnsworth	2 04 05
Poltoos, Louis Bacon	2 04 58
Fourth Class Cats.	
Howard, Howard Miller	2 03 57
Hope, J. H. Ellis	2 08 45
15ft. Class.	
Varada, Jr., John Parkinson, Jr.	1 18 12
Flickamorro, N. F. Emmons	1 23 35
Next, Paul Jones	1 24 02
Peacock, Robt. Winsor	1 25 20

Judge, David Rice.

Jamaica Bay Y. C. Dory Class.

ON June 17 the Jamaica Bay Y. C. sailed the first of a series of races for the new dory class, the times being:

	Finish.	Elapsed.
W. Gallaher	4 29 55	1 29 55
Dr. C. Flug	4 28 40	1 28 40
B Daly	4 38 10	1 38 10
E. A. Allyn	4 30 05	1 30 05
F Lafond	4 22 48	1 22 48
W Sheffler	4 26 31	1 26 31
C Kimball	4 27 19	1 27 19

Lafond won 5 points, Scheffler 3 and Kimball 1.

Seawanhaka-Cor. Y. C. Annual Race.

OYSTER BAY—LONG ISLAND SOUND.

Saturday, June 24.

THE Seawanhaka Corinthian Y. C. sailed its twenty-ninth annual race on June 24 over the usual triangular courses, on Long Island Sound, off the mouth of Oyster Bay. There was a good fleet of yachts present, though but two of four boats started in any one class. The day was marred by a very sad accident, the drowning of two men from the catboat Dot.

There was no wind in the morning, and at noon the start was postponed. When the first signal was given at 12:30 there was a promise of a S.E. breeze. Vigilant, in the lead on the first leg, caught the breeze first and set her spinaker. After she rounded the first mark she had a close reach to second in a freshening breeze that shifted to S.W. and headed on the last leg. The first round was timed:

Spindrift	3 12 00	Spunk	3 32 21
Vigilant	3 14 45	Maine, Jr.	3 28 16
Mongoose	3 15 33	Gosbird	3 28 22
Kittie	3 16 17	Ox	3 29 25
Houri	3 16 50	Quissetta	3 46 00
Win or Lose	3 18 32	Amorita	3 47 40
Sirene	3 22 35	Queen Mab	3 49 44
Dandy	2 23 00	Syce	3 54 18
Vera	3 25 11	Kestrel	3 55 54
Kazaza	3 25 13	Liris	4 08 07
Mistral	3 26 10	Clorita	4 10 13
Tosto	3 27 15	Hussar	4 12 20
Midge	3 29 14		

Dot, C. T. Pierce, in the 30ft. cabin class, sailed one round of the long triangle, and was on the last leg when the squall, a very heavy one of the usual summer kind, struck the fleet. She was on a close reach, with boom to starboard, a couple of miles out from Center Island. The squall came from the N.E., and the halyards were started while the yacht luffed up. The big mainsail goosewinged and in some way John Mitchell, a paid hand, went overboard. One of the Corinthians, Mr. Rockwell, went over at the same time, and both were left astern before the yacht was fully under control. The knockabout Midge was near at hand, and went to their aid, but she had parted one shroud and was partly disabled. The steam yachts Vergana and Tide came up and a long search was made for the missing men, but they could not be found. Dot was finally towed in to Riverside by Vergana. Mr. Rockwell, an old friend of Mr. Pierce, resided at Englewood, N. J., with his family, and was only on the yacht for the day.

The finish was timed:

Possum	4 12 31	Houri	4 35 58
Anoatok	4 16 21	Vigilant	4 37 54
Hera	4 17 11	Dandy	4 38 52
Carolina	4 17 32	Sirene	4 40 30
Esperanza	4 20 43	Infanta	4 41 21
Oiseau	4 22 35	Vera	4 43 37
Albicore	4 23 30	Kazaza	4 46 20
Sultan	4 24 19	Tosto	4 47 23
Spindrift	4 26 09	Spunk	4 47 51
Kit	4 29 24	Quissetta	5 40 01
Kittie	4 30 58	Amorita	5 40 38
Momo II.	4 32 10	Queen Mab	5 54 24
Mongoose	4 52 39	Kestrel	5 57 30
Joy	4 35 32	Syce	5 57 35
Win or Lose	4 36 03	Liris	6 51 33
Mistral	4 36 18	Clorita	6 58 23

The official times are:

Nakodo, F. B. Sherman	31.00	Did not finish.	

Though officially as not finishing, Auddax sailed the course with two ladies in her crew and won in her class.

The winners were: Quissetta beat Amorita 2m. 44s.; Clorita, walkover. Quissetta also won the Commodore's cup for schooners.

Vigilant beat Queen Mab 51m. 50s.; also won the Commodore's cup for cutters.

Kestrel beat Syce 5s., Possum beat Anoatok 1m. 13s., Hera beat Carolina 21s., Oiseau beat Momo II. 9m. 35s., Houri walked over, Spindrift beat Kittie 4m. 49s., Mistral beat Tosto 11m. 5s., also won the Leland Corinthian cup; Ripple walked over, Audax beat Sultan 3m. 3s., Kit beat Joy 1m. 22s., Win or Lose beat Dandy 4m. 50s., Spunk beat Vera 1m. 31s., Kazaza won in small cat class; Liris beat Hussar in a private match.

Momo II. is a new boat, this being her first race. She was designed by C. H. Crane for his own use, and built by the Spalding St. Lawrence Boat Company, at Ogdensburg. She is in the new class of so-called 25ft. knockabouts, but is a powerful keel boat of 25ft. l.w.l., with long, flat overhangs and an almost plumb stem. Her section is of a strong S form. Under a large cabin house she has good head room, and very comfortable accommodation. She is of double-skin construction, with an outer skin of mahogany, on bent frames. Her rig measures 1,000 sq. ft., in mainsail and jib.

On Sunday divine service was held on board the flagship Satanella, Fleet Chaplain Vandewater officiating. On Monday the fleet started on the cruise to New London and return.

Boston Y. C. Handicap Race.

SOUTH BOSTON—BOSTON HARBOR.

Saturday, June 24.

THE Boston Y. C. sailed a special race on June 24 for prizes offered by Com. B. P. Cheney. These prizes were many in number, two in each class for handicap time, two in each class for elapsed time, and one for each yacht covering the course. No yacht to take more than one prize. As only eleven yachts started, in three classes, there were only eleven prize winners. The wind was light from S.E. through the early part of the race, but the finish was made in a S.W. squall. The times were:

	Elapsed.	Corrected.
33ft. Class.		
Jeannette, Walter Burgess	2 04 11	2 04 11
Kulinda, F. F. Tripp	2 14 56	2 11 56

Fantasy, William Allerton	Withdrew.	
Ruth, John Donahoe	Withdrew.	

Valiant, steam yacht, W. K. Vanderbilt, arrived at New York on June 21, from Southampton. Mr. Vanderbilt was on board, accompanied by Messrs. W. S. Hoyt, F. C. Lawrence and Paul de Courcy.

The Canada Cup.

FROM the time that the challenge of the Chicago Y. C. for the Canada cup was first broached, the name of A. G. Cuthbert, the designer and builder, formerly of Toronto, but now of Chicago, has appeared continually in the Chicago and Lake papers in connection with the race. The extracts which we have reprinted at times are but samples of the sort of stuff that has been regularly sent out by some one lauding Mr. Cuthbert's skill, both as a designer and diplomatist, and proclaiming the success of his new effort both in the Chicago trials and the final races at Toronto. It was on his advice, as an expert in local conditions about Toronto, that the Chicago Y. C. chose the poorer of the two courses proposed by the Royal Canadian Y. C.

During the winter Mr. Cuthbert has been busy over the yacht which was to bring back to Chicago the Canada cup. An island was secured on which a tight shed was built, and he has almost surpassed both Herreshoff and Fife in the attempt at secrecy. The new yacht Veva was launched on May 30, and she has since been tried. The following, from the Chicago Inter-Ocean, is but one of many reports of the same tenor:

It is now reported on good authority that the racing yacht Veva, owned by the Peare-Lytton syndicate, is a rank failure so far as racing purposes are concerned, and her lines will have to be changed entirely before she becomes a good cruiser. This boat was built at South Chicago at a cost of $4,000, and great things were expected of her. Her designer and builder, A. C. Cuthbert, said she was the best boat he ever built previous to her launching, Decoration Day, and a large fleet from the Chicago Y. C. went out to the mouth of the Calumet River to see her slide into the water.

She was launched all right, and shortly afterward, when she had her masts and sails in place, was brought down town and anchored inside the breakwater. It was soon noticed by the practical sailors around the lake front that something was the matter with Veva; she leaned over on one side. It was also found by measurement that if she would sink 1in. it would increase her waterline 12ft. Other defects were found in her, and the experts who examined her simply said she was "no good."

Mr. Peare, the part owner of her, according to one of his close friends, admits that she is a failure, and the friends go so far as to say that Mr. Peare would not care if she were at the bottom of the lake instead of resting securely inside the breakwater. Mr. Peare had set his mind on winning the challenge cup and bringing it back with him to Chicago, but now has practically given up hope. Veva may be put in dry dock and rebuilt to some extent, but the time remaining before the trial races, which begin July 4, is so short that it is almost certain she will not compete.

There was some talk yesterday that the Peare-Lytton syndicate would make an effort to rent or buy the new boat built by the Davis boys and owned by them, Com. Burroughs of the Columbia Y. C., and one or two others. If this boat, called the Nymph, is secured, more lead will be put on her keel and silk sails will be used. She is said to be very fast and was only launched a couple of weeks ago.

From what we have heard of the yacht's model, there is no reason why she should be other than a complete and irremediable failure. She is a keel boat, but designed on the same mistaken idea of evading measurement as the two unsuccessful 15-footers of 1897. Like them, there is a maximum of topsides, on which the boat is expected to sail; and a minimum of displacement to carry the great weight. It was proposed that she should show a very short waterline and small girth when measured, but that she should change into a large and powerful boat with a big sail plan when she got under way. The only surprising part about the whole affair is not that the yacht is a failure, but that men can be found who will risk good money in such palpably absurd schemes.

Atlantic Y. C. Cruise.

As a fitting sequel to its annual cruise, the Atlantic Y. C. this year proposes to add an outside race from Montauk Point to Sandy Hook and Sea Gate for the return of the fleet.

Com. F. T. Adams offers as a first prize for schooners a $250 cup, and as a first prize for cutters one valued at $150.

Fleet Capt. T. L. Watson offers a second prize for schooners of $125 and a second prize for cutters of $100.

Bartow S. Weeks, chairman of the House Committee, offers a third prize for schooners of $100 and a third prize for cutters of $75.

Winthrop Y. C. Club Race.

WINTHROP—BOSTON HARBOR.

Saturday, June 24.

THE Winthrop Y. C. sailed a club race on June 24, the wind being moderate from the east, but shifting to south and freshening. The times were:

25ft. Class—Start, 3:27.

	Finish.	Elapsed.
Hermes, G. W. Chesterton	4 40 16	1 13 16
Alert, J. McConnell, Jr.	4 46 05	1 19 05
Alma, C. A. Heney	4 48 40	1 21 40

15ft. Class—Start, 3:27.

Flash, W. H. Mirick	4 50 50	1 13 50
Bubble, C. H. Kelley	Withdrew.	

The judges were C. S. Burr and Samuel M. T. Connell.

American Y. C. Pennant Series.

NEWBURYPORT, MASS.

Saturday, June 17.

THE American Y. C. sailed its first race in the pennant series on June 17, the times being, course eight miles:

		Elapsed.	Corrected.
Susie, T. Huse	scratch	1 31 22	1 31 00

The judges were: B. G. Davis, chairman; P. J. Lowell, C. S. Spaulding.

YACHTING NEWS NOTES.

The new 51-footer, Acushla II., was recently towed to Boston by the steam yacht Sagamore. Her keel was removed and replaced at Hanley's, where she was built, and she was towed back to New York.

The new steel steam yacht Willada, designed by H. C. Wintringham for Col. Wm. Hester, was launched on June 22 at Pusey & Jones' yard, Wilmington, Del. She is 128ft. over all, 90ft. l.w.l., 16ft. 6in. beam, and 9ft. 9in. depth of hold. She has a triple compound engine, 9, 14¼ and 23½ by 14, and an Almy boiler.

Aloha, the steel auxiliary brigantine designed by Tams & Lemoine for D. Willis James and Arthur Curtis James, was launched on June 21 at the Erie Basin Dry Dock, being christened by Mrs. Arthur Curtis James. The yacht is of steel, 160ft. over all, 130ft. l.w.l., 29ft. 6in. beam and 14ft. draft.

Conqueror, steam yacht, F. W. Vanderbilt, arrived at St. Michaels, Azores, on June 20, from New York.

Nahma, steam yacht, Estate of Robert Goelet, arrived at Greenoch, from New York, on June 19, to lay up.

Aphrodite, steam yacht, Col. D. H. Payne, took the ground near the Erie Basin about 10 A. M. on June 22 as she was starting to accompany the New York Y. C. fleet in the club regatta. She grounded on soft mud, which held her firmly, but released her at 2:30 P. M. without damage.

The Williamsburg and the Flushing Bay Yacht Clubs have united in one organization. The latter club was formed about a year ago as the result of dissentions in the former, to the detriment of both. The union makes one strong club in place of two comparatively weak rivals.

"Forest and Stream" Sells Boats.

ST. LOUIS, Mo., June 22.—Forest and Stream Publishing Co.: I have received most satisfactory results from my advertisement in your paper, and you will kindly continue same. The number of inquiries I received from that small adv. really surprised me, and I consider it an excellent investment. Yours very truly,

FRED MEDART.
(E. J. M.)

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

June 27-28.—Eau Claire, Wis.—Eau Claire Gun Club's third annual tournament. D. K. Scammon, Manager.

June 27-28.—Moberly, Mo.—Moberly Gun Club's tournament. A. S. Head, Sec'y.

June 27-29.—Altoona, Pa.—Target tournament of the Altoona Rod and Gun Club, Wopsononock Heights. G. G. Zeth, Sec'y.

June 28-30.—Richmond, Ind.—Richmond Gun Club's tournament.

July 1.—Sherbrooke, P. Q.—Annual tournament; targets; Dominion Day; open to all amateurs. Chas. H. Foss, Sec'y.

July 1.—Sedam Park, Denver, Colo.—Messrs. A. B. Daniels-J. A. R. Elliott contest for Du Pont trophy.

July 1-2.—Milwaukee, Wis.—Grand tournament of Milwaukee Gun Club, in Carnival Week. S. M. Du Val, Sec'y.

July 4.—Pawling, N. Y.—All-day tournament of the Pawling Rod and Gun Club; targets.

July 4.—Warren, O.—Tournament of the Warren Gun Club. Geo. H. Jones, Sec'y.

July 4.—Chicago, Ill.—Fifth annual basket picnic of the Garfield Gun Club; live birds and targets. Dr. J. W. Meek, Sec'y.

July 7.—Lyndhurst, N. J.—Match at 100 live birds, $100, between Messrs. A. Doty and H. M. Heflich.

July 7-9.—Denver, Colo.—Second annual tournament of the Overland Gun Club at Sedam's Shooting Park.

July 8.—South Amboy, N. J.—Central New Jersey Trap-Shooters' League contest.

July 8.—Lyndhurst, N. J.—New Jersey State championship contest between Messrs. T. W. Morfey, holder of E. C. cup, and Harold Money, challenger.

July 9-10.—Oshkosh, Wis.—Tournament of the Winnebago Gun Club. Trophy for State target championship. Oscar Crary, Jr., Sec'y.

July 13-14.—Wolcott, N. Y.—Tournament of the Catchpole Gun Club, E. A. Wadsworth, Sec'y.

July 14-15.—St. Paul, Minn.—Tournament of the St. Paul Rod and Gun Club. A. E. Perry, Sec'y-Treas.

July 18-20.—Little Rock, Ark.—Arkansas State tournament.

July 19-20.—Providence, R. I.—Interstate Association's tournament, under auspices of the Providence Gun Club. R. C. Root, Sec'y.

July 21.—Kent, O.—Heikes-Elliott contest for Cast-Iron medal.

July 22.—Holmesburg Junction, Pa.—Grand midsummer target tournament and five-men team match, on grounds of Keystone Shooting League. J. K. Starr, Manager, Philadelphia.

July 25.—Brooklyn, L. I.—Third annual tournament and clambake of the Hell Gate Gun Club. E. Doeinck, Sec'y.

July 26.—Albany, N. Y.—Second annual tournament of the Forester Gun Club. Bluerocks and magautrap; open to all. H. R. Sweny, Sec'y.

July 26-29.—Ocean City, Md.—Third annual midsummer tournament; two days at live birds; two at targets; $300 added. J. R. Malone, Manager.

Aug. 9-10.—Portland, Me.—Interstate Association's tournament, under auspices of the Portland Gun Club. S. B. Adams, Sec'y.

Aug. 11.—Haverhill, Mass.—All-day shoot of the Haverhill Gun Club; added money. C. F. Lambert, Sec'y.

Sept. 6-7.—Portsmouth, Va.—Tournament of the Interstate Association, under auspices of the Portsmouth Gun Club. W. N. White, Sec'y.

Sept. 13-14.—Cherokee, Ia.—Cherokee Gun Club's third annual tournament. J. D. Anderson, Sec'y.

Oct. 6-7.—Pawling, N. Y.—Tournament of Pawling Rod and Gun Club; targets and live birds.

First and third Fridays of each month.—Watson's Park, Burnsine, Ill.—Semi-monthly contest for Montgomery Ward & Co.'s diamond badges.

Brooklyn Gun Club.—Third Saturday of each month, Francotte gun contest. Fourth Saturday of each month, Grand American Handicap contest.

1900.

June —.—Tournament of Ohio Trap-Shooters' League, first week in June. J. C. Porterfield, Sec'y.

In the contest for the championship of New Jersey, between Messrs. T. W. Morfey, holder of the cup, and W. H. Huck, of Boiling Springs, challenger, the former won by a score of 44 to 43. Mr. Huck was suffering much from an attack of inflammatory rheumatism at the time and therefore was not at his best, though he shot a game and good race. The holder was in due form immediately challenged after the race by Mr. Harold Money, and the date and place for the next contest are July 8, Lyndhurst.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The programme for the grand mid-summer target tournament and team match for the five-men team championship of eastern Pennsylvania, eastern Delaware and western New Jersey is now ready for distribution. This tournament will be held on the grounds of the Keystone Shooting League, at Holmesburg Junction, July 22. Conditions of team match, 30 targets per man; no entrance fee; handsome silver trophy to the winning team. The championship trophy shall not become the personal property of any club until it has been won twice by the same club, the club winning the trophy to hold a tournament, under the same conditions, within one year. These tournaments to be held once each year until some club wins the trophy twice. Should any club, after winning the trophy once, fail to hold the necessary tournament, the trophy will be returned to the Keystone Shooting League, where a tournament will be held. The club failing to hold the tournament will be barred from future competition. For those who wish to shoot for cash there will be an optional team sweep, entrance per team $2.50. One money for every three entries, class shooting. Individual optional sweep, on each 15 targets, entrance 50 cents. All clubs desiring to enter teams must make their entry not later than July 17. Address J. K. Starr, P. O. box 295, Philadelphia, Pa. The sweepstake programme, open to all, has 12 events, 15 and 20 targets, $1 and $1.50 entrance.

John Wright, manager of the Brooklyn Gun Club, has acquired a deep seam between his eyes from protracted thinking over what would be pleasing to his family of shooters in the way of prizes for good performance with the gun, but lately he seems to have stopped thinking, and has thrown everything wide open in a way, for he has added another special event to his series of shoots, which will take place on the fourth Saturday of each month, and is to be known as the Grand American Handicap event, the prize of which is an entry to the Grand American Handicap of 1900. The same conditions which govern the competition of the Francotte gun will govern this event, excepting that there will be a series of ten shoots instead of twelve. Otherwise the manner of determining points, handicaps, etc., are the same. He also will add a valuable second prize to each of these events, and eight or ten more minor, yet good, prizes.

Mr. C. C. Beveridge, whose modest demeanor and smoothly shaven face, meek and pious in expression, have earned for him the soubriquet of the Dominie, was a welcome visitor in New York on Friday of last week, after an absence of many months, most of which were spent in Nebraska. He reports a lot of new interest awakened in shooting matters in Nebraska, through the influence of the recent tournaments, but there was much to envy in the advantages which he described in favor of that section, in that live pigeons could be obtained in abundance at $1 per dozen, or 8½ cents a piece. If a shooter desires to try his skill on 1,000,000 pigeons, he can save about $80,000 by going thither. The Dominie contemplates settling at Ocean City, N. J., for the summer, where he can fish and rest after his long season of work.

In the contest for the E. C. cup, emblematic of the championship, between Mr. W. R. Crosby, of O'Fallon, Ill., holder, and Mr. J. A. R. Elliott, at Batavia, N. Y., June 24, the former won by score of 128 to 124. The conditions were 50 unknown, 50 expert and 25 pairs. Mr. Crosby captured the cup in open competition at the St. Louis shoot, which began on May 15, where it was offered after being contested for in many matches. As compared with some previous contests for it, the scores are not large. Still, weather conditions, grounds, etc., are so variable, as compared with different times and places, that no just comparison in this respect is possible.

The Pawling Rod and Gun Club, Pawling, N. Y., are making special effort to make their shoot, July 4, an enjoyable entertainment for all who attend. The grounds are pleasantly situated on a hill overlooking the charming town of Pawling, and the members, most companionable gentlemen, do all in their power to make a visit enjoyable to sportsmen. There is a probability that several New York shooters will attend, and those who have not yet given the matter thought would be wise to begin now. There is an early train which arrives in Pawling before the shoot begins, but much the better way is to journey thitherward the night before, stop at the Dutcher House, and begin the shoot on a full stomach and a good rest.

Mr. H. M. Heflich and A. Doty have arranged a match at 100 live birds, $100 a side, and loser to pay for birds, to be shot on the grounds of the Lyndhurst Shooting Association, on July 7. A fine lot of summer birds are on hand for the occasion, and shooting of a good order will be necessary if fair scores are made.

On July 13 the Calhoun Park Gun Club holds its outing and one-day tournament at targets, thrown Sergeant system. Money divided according to the Rose system, ratios 8, 6, 5 and 2. Shooting commences at 10 o'clock. There are ten events on the programme. W. J. MacCrickart, assistant manager, Pittsburg.

The Catchpole Gun Club, Wolcott, N. Y., will hold a tournament on July 13 and 14, concerning which programmes will be issued later. Mr. E. A. Wadsworth is secretary, and Uncle Ben Catchpole, whose years have not in the least diminished his sports man's spirit, is president.

Mr. John Parker, of Detroit, won the expert medal in the tournament of the Michigan Trap-Shooters' League last week, by a score of 24 out of 25 targets. Mr. A. Shearer, of Bay City, won the semi-expert medal, and Mr. Merrill, of the same city, won the amateur medal.

The West Virginia squad has made quite a record, as persistent good shooters, contesting at Buffalo, Cleveland and Wheeling. At the latter place Dade captured the Parker hammerless in the merchandise event with the good score of 24 out of 25.

As will be noted on reference to Mr. E. S. Rice's communication, published in our trap columns this week, Messrs. A. B. Daniels, of Denver, and Mr. J. A. R. Elliott will contest for the Du Pont trophy at Sedam Park, Denver, Colo, on July 1.

Under date of June 23, Mr. Paul Litzke informs us that Mr. John J. Sumpter, Sr., father of the famous trap-shooter, died at Hot Springs, Ark., on June 22. He was a power in the political and business world in his section of Arkansas.

As will be noted elsewhere in our trap columns, Mr. Elliott has challenged Mr. Crosby for another contest for the E. C. cup and the championship significance which attaches to it. The date will probably be fixed upon soon.

Mr. J. C. Porterfield, secretary-treasurer of the Ohio Trap-Shooters' League, informs us that the league tournament of 1900 will be held the first week in June of that year.

The next shoot of the Central New Jersey Trap-Shooters' League will be held July 8, on the grounds of the Columbia Gun Club, South Amboy, N. J.

At the recent meeting of the Michigan Trap-Shooters' League it was determined that the next shoot of the League will be held in July.

The Hell Gate Gun Club, of New York, will hold its third annual clambake and target tournament at Dexter Park, Brooklyn, on July 25.

Mr. Geo. H. Jones, secretary of the Warren Gun Club, Warren, O., informs us that his club will hold a tournament on July 4.

BERNARD WATERS.

Inanimate Target Championship.

NEW YORK, June 24.—*Editor Forest and Stream:* I have to-day received the two following communications relating to challenges for the E. C. cup and the championship of the world at inanimate targets:

"Batavia, N. Y., June 23.—American E. C. & Schultze Gunpowder Company.—Gentlemen: I hereby challenge Mr. W. R. Crosby for the E. C. cup and inclose herewith forfeit of $25 to bind the same according to the rules governing challenges for the cup.—J. A. R. Elliott."

The second communication was a telegram from Mr. Fred Gilbert to the following effect:

"Chicago, Ill., June 24.—I hereby challenge Crosby to contest for possession E. C. cup under rules. Forfeit mailed."

As Mr. Elliott's challenge was mailed at Batavia, N. Y., June 23, 6 P. M., as shown by the postmark, it unquestionably takes precedence of Mr. Gilbert's telegraphic challenge of the 24th inst. Mr. Crosby has, therefore, been notified of Mr. Elliott's challenge and requested to set date, time and place for the match. Yours truly,

EDWARD BANKS, Secretary
Am. "E. C." & "Schultze" Gunpowder Co.

WESTERN TRAPS.

Garfield Gun Club.

CHICAGO, Ill., June 22.—Dr. J. W. Meek, secretary of the Garfield Gun Club, has sent out to the membership of that goodly body the following announcement for the Fourth of July festivities:

"Chicago, June 20.—The fifth annual basket picnic of the club will be held on the club grounds, Tuesday, July 4. Shooting will begin on live pigeons promptly at 9 o'clock and will continue until about 2 o'clock. An elegant silver club cup will be shot for on live birds—10 birds each man, under a handicap in distance from 25yds. to 33yds. Those desiring to enter this contest must be on hand early. No live-bird shooting after dinner. The afternoon will be devoted to target shooting. Prizes will also be given the winners in a target race, all members being handicapped for this event on the percentage plan. An elegant and abundant dinner will be provided by the wives and lady friends of the club members, and the club will provide an abundance of ice cream, lemonade, etc.

"All who have had the pleasure of participating in these events have voted them a grand success.

"Come out; bring your entire family and enjoy a delightful day in the open air, away from smoke, dust, roar and rattle incident to the Fourth in the city.

"If the weather is favorable we will assure you a thoroughly enjoyable day."

June 24.—The trophy shoot of the Garfield Gun Club was held here to-day. Richards won Class A medal, Hellman Class B, and Fanning Class C. Sweeps followed. Scores:

RAVELRIGG.

Ogden Shoot.

Mr. William McKinley, secretary of the Ogden Gun Club, is good enough to make the following report of the tournament at that place June 20. The crowd seems not to have been very large, but it is not always the size of the shoot which is the criterion of its success as a sportsmanlike event. Mr. McKinley writes:

"The day was all that could be asked, and the home club had everything in fine shape for the usual large crowd of shooters that has heretofore attended these tournments; but this time they were to be disappointed. None of the local tournaments have been well attended this season, owing, seemingly, to the foolish (?) idea of the amateurs that a few "crackerjacks" will "round up" everything. Can someone suggest a programme for a good time, lots of sport, and nobody a heavy loser? In every way but financially our tournament was a success. Below is our little score:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14			
Targets:	10	10	15	10	10	15	10	10	15	10	10	15	10	25	Broke.	Av.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Eureka Gun Club.

June 24.—An overcast sky and a strong wind from the left-quarter made shooting hard to-day. The targets were very erratic in their flight, and were as a rule overshot. Mrs. C. W. Carson and V. L. Cunnyngham shot a 25-target match. While Cunnyngham did good work, he was unable to defeat Mrs. Carson, who shot in remarkably good form throughout the day. Scores:

Cunnyngham	11111111011110111111111111—23

ON LONG ISLAND.

Brooklyn Gun Club.

Brooklyn, N. Y., June 24.—Close work was the feature of to-day's shooting, no less than five men tieing in each of the prize events. G. B. Paterson won the gun case after the second shoot-off. No. 4 was a 25-target handicap event, the prize being a year's subscription to FOREST AND STREAM. The second ties were not shot off, but will be decided at a later date. The scores:

Prize shoot for gun case:

G B Paterson, 9	10111111111111111011111111111011- 30

* Shoot-off of No. 4. Second ties not shot off.

Auburn Gun Club.

AUBURN, Me., June 24.—Following are the scores made by the members of the Auburn Gun Club to-day. The day was very warm, and the attendance much larger than was expected, thirty men facing the traps. The scores, although fair, were not nearly as good as those of the preceding Saturday. In the 25-target handicap match for the gold badge four were tied for it—Moody, White, Berry and Conner—Conner winning it on the shoot-off.

One event was the second shoot for the $100 Parker gun, which is to be given by the "Maine Sportsman" to the best trap shot in the State, the conditions being, a 25-target race, the contestants to be at two-thirds of the shoots, the final match to be shot off at the State tournament, to be held on the grounds of the Auburn Gun Club, Aug. 30 and 31.

Mr. E. C. Ferriday, of the Laflin & Rand Powder Co., was a visitor at the club, and shot through several of the events.

A magautrap has been ordered, and is daily expected by the club. The members are going to Portland the first of next month to shoot for the Lovell challenge badge. A good time is expected, for the Portland boys are a jolly crowd.

The Auburn Gun Club has only been organized two years and has already a membership of forty-eight, which is rapidly increasing. At their regular Saturday shoots there is a larger attendance than at any other club in the State.

Trap around Reading.

READING, Pa., June 17.—The following scores were made to-day in the seventh weekly shoot for a gun on the grounds of the Mt. Penn Gun Club, of this city. Each man shot at 25 targets: Hunsberger 25, Rhoads 23, Yeager 21, Shultz 20, Saylor 16, Laird 16, Dietrich 17. Yeager leads in average, with .88 per cent.

Lebanon, Pa., June 17.—The Keystone Gun Club, of this city, elected the following officers: President, Francis H. Reinoehl; Vice-President, A. G. Reizenstein; Treasurer, Wm. H. Bollman; Captain, A. E. Smith; Steward, Wilson Wentzel; House Committee: Geo. Ayres, John Birch, Wm. Lausch; Handicap Committee: William Bollman, A. E. Smith and William Langdon.

West Chester, Pa., June 22.—At the shoot, held to-day, for the challenge cup of the West Chester Gun Club, of this city, C. Brinton, Lumis and Peters tied on 23 out of 25. In the shoot-off at 10 targets, Lumis missed his first bird and scored 9, while C. Brinton and Peters each broke 10 and continued to smash them until the 29th target, which Brinton lost, although dusting it very hard, while Peters broke his 30th target, and won the cup. The members also shot two sweepstake events, the scores of which follow:

Events:	1	2	3
Targets:	25	10	10
Lumis	23	8	..
Ford	22	9	..
Hoar	20	7	8
Green	22	7	..
Nate	13	9	8
Henry	22	..	..

Events:	1	2	3
Targets:	25	10	10
Harrison	22	..	..
C Brinton	23	9	..
Davis	22	8	8
P Brinton	18	9	6
Todd	..	6	7

No. 1 event was the shoot for challenge cup.
Shoot-off tie, 10 targets: Lumis 9, C. Brinton 10, Peters 10.
Second shoot-off: C. Brinton 10, Peters 10.
Third shoot-off: C. Brinton 9, Peters 10.

DUSTER.

Minneapolis Gun Club.

MINNEAPOLIS, June 22.—The Thursday afternoon's shoot of the Minneapolis Gun Club was not as well attended as usual, probably owing to the threatening weather and strong wind that prevailed. French carried off the honors of the day, winning three medals, Biffton and Johnston also winning their badges with very creditable scores. Several interesting sweepstakes were shot after the finish of the day's regular events. A number of the active members will attend tournaments to be held at Eau Claire, Wis., on June 27 and 28, and at Crookston, Minn., June 30 and July 1. All shooters interested in this matter are invited and can secure special rates to either or both places on application to President S. S. Johnston or any of the leading gun stores. The Saturday matinee shoot will be called promptly at 2 o'clock P. M. The following are the scores of the afternoon's events:

Paegel challenge badge, 25 targets: French 21, Morrison 15, Biffton 19, Parker 19, Dr. Bill 19, Johnston 18, Mrs. Johnston 20, Jones 18, Hays 18, Kennedy 17, Thompson 17, Neely 20, Rheildeffer 17, Davenport 15, Remington 18.

Ties: French 8, Dr. Bill 7.

French won badge.

Club badges, 10 singles, 5 pairs: French 17, Morrison 10, Biffton 16, Parker 15, Dr. Bill 14, Johnston 18, Mrs. Johnston 14, Jones 9, Hayes 8, Kennedy 11, Thompson 12, Neely 14, Rheildeffer 9, Remington 8, Spear 10, Mathes 10, Davenport 13.

Johnston won senior badge; French won junior badge; Kennedy won amateur badge.

Schlitz diamond badge, 25 singles: French 18, Morrison 19, Biffton 24, Parker 23, Dr. Bill 14, Johnston 21, Mrs. Johnston 17, Jones 20, Hays 15, Kennedy 17, Thompson 16, Neely 18, Chamberlin 16, Rheildeffer 16.

Biffton won badge.

Val Blatz diamond badge, 15 singles: French 13, Morrison 10, Biffton 13, Parker 11, Dr. Bill 11, Johnston 13, Mrs. Johnston 11, Jones 10, Hays 7, Bush 11, Kennedy 9, Chamberlin 7, Best 14.

Ties: French 3, Biffton 2, Johnston 2.

French won badge.

Fort Smith Gun Club.

FORT SMITH, Ark., June 22.—The regular weekly club shoot of the Fort Smith Gun Club took place at the Fair Grounds to-day. Considering the fact that half the shooters are new hands at the game, the scores ranked high. Judging from the attendance, we will have the most successful season we have ever had.

At 10:30 A. M. on the day for the shoot it was discovered that there were no targets in town. However, a bit of sharp work by telegraph and the kindness of the Jenny Lind contingent got us out of a bad hole, and the shoot was run off on schedule time. At 12:30 the aforesaid Jenny Lind contingent arrived, bearing with them the coveted birds. The attendance was more than we bargained for, and consequently we ran short of birds.

Matthews, as usual, led the procession with the unusual score of "all of 'em." He shot in four sweeps and broke all he shot at—35 straight. As there were no more birds he was forced to quit with a clean score.

There were sweeps, team races and side bets galore, Jack O'Keiffe, Judge Oglesby, Frank Baptiste and J. P. Durden being the principal offenders. The members are getting quite sporty, and any one who is inclined to plunge can get any kind of a game he wants.

The Gardner Jewelry Co. and Messrs. Klein & Fink have very generously donated to the Fort Smith Gun Club two beautiful medals, the first representing Class A and the second Class B. These medals are the property of the donors, and will be returned to them at the close of the season, or in the event of the dissolution of the Gun Club. They will be contested for each regular practice day, and the holder is subject to individual challenge, twenty-four hours' notice being all that is necessary. Any one winning Class B medal twice in succession will be promoted to Class A. Following are the scores:

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
Matthews	35	35	1,000	A W Boyd	35	14	.400
Leach	35	30	.860	Coffee	35	14	.400
Knott	35	26	.740	O'Keiffe	35	14	.400
Durden	35	26	.740	Oglesby	25	9	.360
Baptiste	35	23	.650	Hunt	35	10	.280
Merriman	35	21	.600	Trobridge	35	10	.280

SECRETARY.

Connecticut State League Shoot.

DORLON'S POINT, South Norwalk, Conn., June 22.—There was a most delightful day for the tournament of the Connecticut State League, held to-day on the grounds of the Naromake Gun Club, of this place. There was a mild wind and favorable conditions for shooting.

Many ladies were present in the good attendance of spectators. Lunch was provided for the shooters. In the cashier's department was Mr. W. E. Lewis; Mr. H. T. Gahrman looked after the entries, while Mr. C. J. Flynn was squad hustler. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	10	10	10	15	10	15	10	10	15	10	10	10

Freehold Gun Club.

Freehold, N. J., June 24.—The regular meet of our club occurred on Friday. The shooting was at targets from five traps, unknown angles, rapid-fire system. A high wind blowing with the traps made high scores difficult. After the regular event a team race between Ellis and Vanderveer, challengers, and Hance and Snyder was shot. Following are scores of both events:

Hance	00111011111111101010110111111111—24
Snyder	10011011000001111011011101111—19
Wm Buck	11111100100110101010111111111101—21
R A Ellis	10001101101111101011111111 10111—22
Ed Vanderveer	10000110001101110111101010 0111—17
Wm Ellis	01101110101000010000100110 1111—15
Arrowsmith	00111010110011110111001010 110000—16
J T Laird	00001100110111001100110011111—17
Vandorn	01011110011111111111111010111 01—23

Hance first, Vandorn second, R. A. Ellis third.

Special shoot, Vanderveer and Ellis against Hance and Snyder:

Ed Vanderveer	00010011010110110101110 00—12
R A Ellis	00111111101111011111111011—20—32
Snyder	01110010011110001101110 01—14
Hance	10111011111111101001110 1101—19—33

Sportsmen's Association of the Northwest.

SPOKANE, Wash., June 17.—The fifteenth annual shooting tournament of the Sportsmen's Association of the Northwest was brought to a close at dark this evening, with a record surpassing in every respect that of any of the previous meetings of the Association. The tournament was admirably managed by the Spokane Rod and Gun Club. It was, in fact, so satisfactory in all its details that it was almost the unanimous desire of the members present that all future tournaments after 1900, which is to be held in Victoria, B. C., be held at Spokane, that city being the most central point of the territory covered by this Association. There were sixty-two shooters in attendance from Washington, Oregon, British Columbia, Idaho and Montana, and a larger number of entries than any of the past meetings of the S. A. N. W.

The Association has a large number of medals, cups and trophies, annually contested for, and the added money, amounting to $450, made the purses well worth striving for. Among the prominent sportsmen present were Dr. W. M. Schultz, M. B. Brownlee and C. H. Smith, of Butte; W. F. Sheard, J. L. Carman and W. A. Eberly, of Tacoma; E. E. Ellis, Ed Garrett and R. Cox, of Seattle; C. K. Cartwright, M. J. Flohr, C. M. Whitlaw and Peter Holohan, of Wallace, Idaho; Sam Lowe, of Kallispell, Idaho; J. S. Stangroom and Dell Cooper, of Whatcom; J. B. Scott, of Fairhaven, Wash.; C. A. Tuttle and D. D. Twohy, of Anaconda; R. Rogers, of Missoula, Mont.; W. A. Hillis, of Libby, Mont.; T. B. Ware, F. K. McBroom, and J. W. Merritt, of Spokane.

The weather was all that could be desired during all three days of the shoot. The grounds, located on a sloping hillside above the beautiful Spokane River, in Natatorium Park, were convenient and pleasant as possible.

A remarkable feature of the tournament was the prevalence of "pump guns," and with one exception the high guns were all of that kind. There was a noticeable absence of manufacturers' agents and experts, the new Laflin & Rand and Blue Ribbon only being represented. Bluerocks and expert traps were used.

First Day, Thursday, June 15.

The events of the first day included four of 15 birds each, unknown angles; the individual championship at 25 birds; a 25-bird event, and a team race of three men each for the championship of the Northwest. The individual championship was won by Sheard, of Tacoma, after a hot race with Snyder and Walker, who killed straight. The team race was won by the Butte team—Jaeger, Walker and Schultz—with 43 out of a possible 45, Tacoma and Missoula tieing for second, with 40. The scores follow:

Events:	1	2	3	4	6	Shot at.	Broke.

Second Day, Friday, June 16.

The events of the second day included two of 15 birds—No. 8, the Multnomah medal shoot, a two-men team race, a 25-bird event for the Smith gun trophy, and a 25-bird race with $65 added. The Multnomah was won for the second time by Stevens, of Seattle; Sheard, of Tacoma, second. The two-men team race was won by Flint and McBroom, of Spokane, with a score of 28 out of 30. No. 11, the Smith gun trophy, was won by Young, of Tacoma, with 24. The scores follow:

Events:	7	8	9	11	12	Shot at.	Broke.
Tuttle	10	20	11	21	21	105	83
Nell	12	16	8	16	20	105	72

Third Day, Saturday, June 17.

The principal event of the third day was the Globe trophy, at 50 birds—10 known angles, 10 known angles reversed, 5 pairs of doubles, 10 unknown angles and 10 reverse traps, unknown angles, use of both barrels. It was won by Hillis, of Montana, with the fine score of 46. Denham, of Tacoma, made a hot race for the winner, with 44. Denham was the winner last year. No. 16 was the Anaconda cup race, at 25 birds, and was won by Stevens, of Seattle, after a shoot-off with Twohy, Hillis and Schultz, each of whom secured 24. The scores follow:

Events:	13	14	15	16	17	Shot at.	Broke.

Eberly	11	38	15	16	19	130	99
Hoffman	9	36	13	20	16	130	94

High average was won by Hillis. On Friday evening the members of the Association were the guests of the Spokane Rod and Gun Club, at the Davenport, where a fine banquet was served. Dr. Kimball, of Spokane, presided, and appropriate toasts were offered and responded to by the representatives of different sections. R.

Michigan Trap-Shooters' League Tournament.

THE first of this year's series of tournaments of the Michigan Trap-Shooters' League was held at Wyandotte, Wednesday and Thursday, June 21 and 22, under the auspices of the Iron City Gun Club. A more desirable location for a shoot could not be imagined, held as it was on the bank of the beautiful Detroit River, with the wooded shores of fair Grasse Isle, with its palatial suburban homes of wealthy Detroiters forming a pleasant background to the picture. In short, the tournament, under Mr. John Parker's able management, was an unqualified success, and did much to promote the interests of trap-shooting throughout the State. The attendance from different parts of the State was not as large as was desired, still those that came made up in enthusiasm what they lacked in numbers. Among them Mr. Wm. Thompson, of Jackson, kept up his good record of attending every State shoot. The Bay City contingent, consisting of Messrs. Merrill, Cotter and Shearer, did its part to make everything go smoothly, as did Mr. B. F. Scott, of Grass Lake; W. De Lisle, of Leslie; Wm. Donaldson, of Windsor; Mayor Reid and Lou Andy, of Walkersville, and the usual Detroit contingent; Pouty Wood, who said his name was Koal; Joe Marks, and Johnnie Cox. The trade was represented by De Wolf, of the Lefever Arms Co., and of course Jack Parker, of the Peters Cartridge and King Smokeless Co., whose cup of joy was made full when his ammunition won every prize and trophy at the shoot. The principal event the first day was the race for the State individual championship for the expert, semi-expert and amateur medals. John Parker struck an old-time gait and won the expert medal by breaking 24 out of 25. Shearer, of Bay City, won the semi-expert medal, and Merrill, also of Bay City, won the amateur medal. Last fall Mr. Thomas Dick donated a magnificent meerschaum pipe, to become the property of any one winning it three times. Mr. B. F. Scott, of Grass Lake, won it in the open shoot last fall, but in the special match race with J. H. Marks, of Detroit, who had challenged for it, lost it by one bird, Marks breaking 35 to Scott's 34 out of 50. Each has a different version as to why the scores were so low.

Event No. 5 was at 25 targets, for the State medals, and event No. 7 was a merchandise handicap event for five prizes, 20 to 25 targets per man. The other eight events were open sweeps.

The scores in detail for the first day were as follows

Events:	1	2	3	4	5	6	7	8	9	10	Shot		
Targets:	10	15	15	15	25	10	25	15	15	10	at.	Broke.	Av.
Koal	10	14	13	15	22	7	19	13	13	7	130	114	.87
Scott	10	14	13	13	19	7	17	13	13	9	130	111	.75
Marks	10	11	15	13	19	7	16	13	13	5	130	106	.81

High averages for the day: Thompson, first, .88 6-13; Koal, second, .87 9-13; Merrill, third, .86 12-13.

Second Day.

After dinner the League held its annual meeting for the election of officers and current business, President Thompson presiding and Secretary Brady officiating. After the secretary and treasurer had rendered his report, which was approved and accepted, Mr. Parker moved that the retiring secretary, Mr. W. H. Brady, receive a vote of thanks from the League for his success in getting the live-bird law passed, which was carried. Capt. Merrill, of Bay City, was elected President; A. Shearer, Secretary and Treasurer, and P. C. Wood, of Detroit, Vice-President. The old board of directors was re-elected, with the exception of A. J. Busfield, of Bay City. John Cotter, of the same place, was elected in his place. The three-men team race for the State diamond medals was won by Pastimes No. 2, of Detroit, with the score of 60. Pastimes No. 1 and Bay City team tied for second, with 58. The Iron City Gun Club trophy was won by William Thompson, of Jackson, who broke 23 out of 25 from the 20yd. mark, it being a handicap by distance event, contestants shooting from 16 to 20yds.

Event No. 5 was the three-men team race, and event No. 8 the handicap by distance for the trophy.

The scores in detail for the day are as follows:

Events:	1	2	3	4	5	6	7	8	9	10	Shot		
Targets:	10	15	15	15	25	10	15	25	10	15	at.	Broke.	Av.

High averages for the day: Thompson, first, .94 8-13; Marks, second, .86 12-13; Cox, third, .84 2-9.

Summary.

The high averages for the shoot were as follows: First, Wm. Thompson, of Jackson broke 238 out of 260—.91 14-26; second, Capt. Merrill, of Bay City, broke 222 out of 260—.85 10-26; second Koal, of Detroit, 222 out of 260—.85 10-26; third, J. H. Marks, of Detroit, broke 219 out of 260—.84 6-26.

At the meeting of the League in the afternoon of the second day it was decided to hold the next shoot at Bay City, some time in July. It was also decided that at the grand annual a live-bird event, 25 birds per man, would be included in the programme, and a perpetual trophy will be donated for the purpose. Then after everyone had voted Jack Parker the only tournament manager, all journeyed home to get in training for the grand annual.

IN NEW JERSEY.

New Jersey State Championship.

June 24.—The contest for the E. C. cup, emblematic of the New Jersey State championship, drew a large attendance to the grounds of the Lyndhurst Shooting Association, friends of both principals, who were interested in seeing the match. The general opinion was in favor of Mr. T. W. Morfey holding against the challenger, Mr. W. H. Huck, of the Boiling Springs Gun Club, of Rutherford, and yet the holding of it was far from being any easy task. Mr. Huck shot a fine race, breaking 24 out of his first 25 to Morfey's 23, and he held a lead of 1 to the 41st round, when a miss made the situation a tie. Huck missed his 48th and 49th, and Morfey missing his 50th left him the winner by 1 target; score, 44 to 43.

Mr. Huck was far from being in good physical condition, in consequence of a severe attack of inflammatory rheumatism, with which he was afflicted for some days. He was quite lame, and the rugged endurance which is his when he is in good health was in a large degree absent in this match. All things considered, he made a great race against one of the very best shots of New Jersey.

The weather was exceedingly hot, with a stiff wind blowing betimes.

The targets were very difficult to hit. There was a sharp, low left-quarterer which was sometimes swift, sometimes slow; and there was a sneaky one which went off to the right under corner of the screen which required the greatest alertness to catch in time. The targets all flew with varying heights and speeds, and the background is against the highest scores. All in all, the scores were very good, as follows:

T W Morfey.....1111111011111111101111111—23
0101111101111111111111110—21—44
W H Huck.....1111111111111111101111111—24
0111110101111110111111001—19—43

The foregoing was No. 5 of the programme. The sweepstake events were as follows:

Events:	1	2	3	4	6	7
Targets:	15	15	15	15	15	25
Morfey	13	12	14	10	14	19

Central New Jersey Trap-Shooters' League.

Fanwood, N. J., June 24.—There was a good contest among the members of the Central New Jersey Trap-Shooters' League, five teams competing on the grounds at The Cedars, Mr. George Thatcher's place, Fanwood. The sky was cloudy and the temperature hot. Toward evening a light rain fell, which did not obstruct the shooting. The targets were rather difficult, owing to irregular flights, and the background also was unfavorable. The Brunswick team won by a score of 79 out of a possible 125.

Climax Gun Club—Keller, Jr., 11, Swoody 12, S. Terry 9, Goodman 19, Hunt 11—62.

Dunellen Gun Club—Runyon 18, Giles 13, Nelson 12, Hoey 15, Lindzey 17—75.

Reservoir Gun Club—McDowell 20, Van Nuis 15, Booraem 11, L. Belloff 11, J. Belloff 21—78.

Brunswick Gun Club—Voorhees 13, Irwin 17, Burck 16, Oakley 18, Allen 15—79.

Columbia Gun Club—Disbrow 19, Ivins 16, H. Bloodgood 16, Wallace 6, Green 12—69.

Boston Gun Club.

WELLINGTON, Mass., June 21.—The eleventh serial prize shoot of clnb was a good one—just a nice number present and fourteen events, comprising all kinds of shooting. The match provoked some good scores, and the other events were not far behind.

Quite a delegation from Brockton visited the grounds and added largely to the pleasure of the shoot. The squads were Brockton vs. Boston, and the rivalry nearly equaled that of a scheduled team affair. Mr. Northing, whose scores bear inspection except, perhaps, when a change of load was inevitable, was noticeably the fairest shooter in the squads, with his gun below elbow until calling pull, and no intermediate preparation. In these days of gun to shoulder and eye along barrel before giving the word, the more sportsmanlike attitude was refreshing to witness.

Leroy, Howe, Woodruff and Spencer shot with best success, and Mr. Gordon ended the afternoon with 32 out of 35, including 5 pairs. Other work as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Targets:	10	10	5p	10	10	10	10	10	5p	10	5p	15	10	10

West Virginia Sportsmen's Association Tournament.

WHEELING, W. Va.—The tournament of the West Virginia Sportsmen's Association, was held under the auspices of the Wheeling Gun Club, Wheeling, W. Va., June 20, 21 and 22. There were a number of visiting shooters, as the names in the scores will show.

June 20, First Day.

There was a strong wind blowing, which made the targets variable in flight, but this seemed to have little effect on the shooting of the experts, Messrs. Fanning and Powers:

June 21, Second Day.

Fine weather favored the shooting to-day. Messrs. Fanning and Powers continued their skillful performance of the previous day, and there also was excellent work done by Messrs. Wright, Dade and Mallory. In the merchandise event Dade was first, with a score of 24 out of 25, and second money was divided between Wright, F. E. and J. F. Mallory, Kennon and Bowman. Flick was third; Myers and Mallory, Jr., fourth.

* State shoot.

There were three squads of five men each entered in the championship event, at 50 targets. For the first time the medal will remain in Wheeling for the ensuing year. The holder of the medal is subject to challenge at any time by any other member of the Association. F. E. Mallory, of Parkersburg, was the holder of the medal last year. Yesterday it was won by J. E. Wright, of this city, president of the La Belle Iron Works. Mr. Powers, of Illinois, tied with Dade for second, each having 47 targets to his credit. There were a number of outsiders who competed in this event for the purse.

The State shooters who finished their 50 targets in the championship event were: F. E. Mallory 45, S. T. Mallory 40, Dade 47, Wright (Rice) 48, J. F. Mallory 39, L. E. Mallory, Jr., 39.

At the annual meeting of the Association the Beechwood Rod and Gun Club was admitted to membership. The Association is in excellent condition financially.

T. E. Percival, of Parkersburg, was re-elected president for the ensuing year, and E. O. Bower, of Sistersville, was re-elected secretary and treasurer. The board of vice-presidents is composed of the presidents of the several clubs. The place of holding the annual State tournament next year will be at Charleston, under the auspices of the Beechwood Club.

June 22, Third Day.

The best shots were still to the front, as in the previous days. A four-men team race was shot, with the following results:

Banks, captain, 22,, Capt. Money 22, N. Apgar 25, Doty 15; total, 84.

Morfey, captain, 20, H. Money 22, Feigenspan 23, Reed 21; total, 86.

FRED PROSSER, Sec'y Sunbury G. C.

Trap Matters at Lincoln, Neb.

UNDER date of June 19 the secretary of the Lincoln Gun Club sends us a newspaper clipping, which recounts the amalgamation of his club with the Capital City Gun Club, of Lincoln, Neb. It states that:

"The interests of the Lincoln Gun Club and the Capital City Gun Club were merged together yesterday and there is now but one gun club in Lincoln, which promises to be, if not already, the strongest gun club in the West. The associate membership of the new concern will soon reach the two hundred mark, with fully one-fourth as stockholders, that many having already subscribed for stock, and the greater part have paid in.

"The new Lincoln Gun Club, as it now is, is an incorporated organization, with a capital stock of $5,000 divided into shares of $10 each and non-assessable. The incorporators of the new club are William D. Bain, William S. Stein and George B. Simpkins. At a meeting held at the Lincoln Hotel recently the following officers were elected for the present year; President, George B. Simpkins; Vice-President, Charles H. Mann; Secretary-Treasurer, William S. Stein. The Board of Directors chosen were Dr. O. F. Lambertson, George B. Simpkins, William D. Bain, Frank Du Teil and Forrest M. Moore. The stockholders who have already paid in are as follows: George B. Simpkins, William S. Stein, William D. Bain, George Kleutsch, Charles E. Latshaw, Harry H. Harley, George L. Carter, George Rogers, C. E. Haynie, Robert Malone, Forrest M. Moore, Charles M. Seitz, Dr. O. F. Lambertson, Frank E. Gillen, A. J. Hagen, Charles H. Mann, Frank D Teil, H. N. Town, E. E. Spencer, W. H. Dorgan, John Dorgan, A. W. Lane, Oliver Rogers, Fred Mockett, Walton G. Roberts, Raymond M. Welch and A. W. Cochran.

"The grounds which will be used by the new club will undoubtedly be the grounds of the old Capital City Gun Club, which are considered the finest arranged and best located of any in the West. The grounds comprise about five acres, inclosed in a 6ft. woven wire fence, and have three sets of target traps arranged on the Sergeant system, and one set of live-bird traps. The former are so located as to permit the use of both at the same time.

"It is the intention of the new club, as soon as resources will permit, to build a club house that will be a credit to the grounds, using the present one as a store room for traps, targets, etc.

"The principal object of the club is to promote the interest in protecting the fish and game in Nebraska, enforcing the fish and game laws of the State, and promoting interest in field and trap shooting. Considerable emphasis is placed on the protection of fish and game in Nebraska and enforcing the State fish and game laws. It is the intention of the club to obtain some legislation in regard to the fish and game laws that will have some weight, and with the list of representative men the club now has on its active membership roll such legislation will not be difficult to obtain."

Illinois State Sportsmen's Association.

CHICAGO, Ill., June 19.—*Editor Forest and Stream:* Won't you kindly inform the sportsmen of Illinois, through the columns of your good paper, that, pursuant to their requests expressed at the time of their election of myself as president of the Illinois State Sportsmen's Association, I am pleased to advise of the appointment of the following gentlemen as directors of the Association for the ensuing year: Fred W. Lord, passenger agent of the Chicago & Great Western R. R., Chicago; Thos. P. Hicks, coal merchant, Chicago; Chauncey M. Powers, Decatur, Ill.; Hon. Jacob Rehm, Blue Island, Ill.; J. H. Amberg, of Cameron, Amberg & Co., Chicago.

Notice of committe appointments will be made known through the columns of FOREST AND STREAM immediately upon first meeting of board of directors. E. S. RICE, Pres.

Under date of June 19, Mr. E. S. Rice, in his capacity as president of the Association has issued the following circular letter:

"Brother Sportsmen of Illinois:

"Having been chosen at the annaul meeting of the Illinois State Sportsmen's Association to serve as president of that organization for the ensuing year, I take early opportunity of calling upon you for your help and earnest support that my work in your behalf may meet with your approval. I desire the name and post-office address of each and every organized gun club, shooting and fishing association or other organized body in the interest of sportsmanship within this State, that I may address such individually. I therefore ask all Illinois club members who may notice this communication to report my request for information to the secretaries of clubs to which they may belong. I beg to assure fellow sportsmen generally of my appreciation in advance of any and all help extended."

Du Pont Trophy Contest.

CHICAGO, Ill., June 19.—*Editor Forest and Stream:* Won't you kindly say to the readers of your good paper that Mr. A. B. Daniels, of Denver, Colo., present holder of Du Pont smokeless powder championship trophy, has accepted the challenge of Mr. J. A. R. Elliott, and has named Sedam Park, Denver, Colo., as place; July 1, 2:30 P. M., as time for contest, 100 birds per man. In other respects shooting will be under the rules governing the Du Pont trophy contests.

Messrs. Du Pont & Co. having requested Capt. Sedam to act as referee, an interesting and hotly contested match is in store for lovers of trap-shooting in the vicinity of Denver.

E. S. RICE.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Sidell Gun Club Tournament.

SIDELL, Ill.—The Sidell Gun Club held a two days' shoot June 14 and 15. This was rather an impromptu affair, and consequently suffered from lack of attendance. Among the few out-of-town shooters present were E. E. Neal, Bloomfield, Ind.; W. Cadwalader, Danville, Ill.; Fred Gilbert and Ed Bingham, the Du Pont Powder Co., and Jack Parker, of the Peters Cartridge and King Powder Co. The latter managed the shoot, but took active part in the competition. Notwithstanding that the attendance was slim, the shoot was a pleasant affair.

First Day.

The first day of the Sidell tournament was not graced with a large attendance, but those who participated spent an enjoyable time, for after the shooting was over the citizens of the town tendered the visiting sportsmen a banquet, at which speech-making was indulged in by all present. The principal feature of the day's shooting was the fine exhibition given by Fred. Gilbert, who scored 225 out of 230. Neal was second, with 90 per cent., and Sconce, of the home club, was third. Event No. 11 was a 50-bird affair, which involved the possession of the Vermilion county medal, and therefore was only open to residents of the county. Cad. and Sconce tied for this on 43, and in the shoot-off at 25 targets Sconce proved the winner by 22 to 21. The conditions of the medal provided that in order to obtain permanent possession of it one must win it five times. Sconce accomplished this by his win to-day, so it becomes his personal property.

Events:	1	2	3	4	5	6	7	8	9	10	11	Shot at.	Broke.	Average.
Targets:	15	20	15	20	15	20	15	20	25	15	50

PAUL R. LITZKE

Trap at St. Louis.

THE Riverside Gun Club held a little tournament on its grounds on June 18, under the management of Fred. Fink. This did not bring out a very large crowd, but a few of the tried and true were in evidence, among whom may be mentioned Chase, Prendergast, Collins, J. L. 147 Winston and King. The latter has recently returned from Europe, and proceeded to demonstrate at once that his sojourn across the water had not materially affected his shooting, as he shot a 90 per cent. clip, and finished second, Chase being high man, with .912.

On these grounds the targets are thrown out over the water and there is a sky background. The weather was perfect and there was a good wind blowing away from the score.

The following are the scores:

Events	1	2	3	4	5	6	7	8	9	10	11	12	Shot at.	Broke.	Average.
Targets:	10	15	10	15	10	20	10	15	10	15	10	20			
Chase	9	14	10	14	8	20	10	13	8	14	9	17	160	146	.912
Kling	9	14	8	14	9	20	10	13	7	13	9	18	160	144	.900
Prendergast	8	13	8	12	10	15	10	14	6	15	9	18	160	138	.862
Collins	7	12	8	12	10	15	10	14	6	15	9	18	160	127	.793
147	8	15	10	13	9	18	8	13	7	13	9	..	140	133	.950

PUBLISHERS' DEPARTMENT.

Atlantic City Horse Show.

VIA PENNSYLVANIA RAILROAD.

THE first exhibition of the Atlantic City Horse Show Association will be held at Inlet Park, Atlantic City, on July 13, 14, 15, 1899. Liberal prizes guarantee a large number of entries, a high class of exhibits, and a carefully prepared program promises abundant entertainment. This popular event will serve to still further increase the attractions of this great seaside resort. Excursion tickets to Atlantic City and return will be sold by the Pennsylvania Railroad from all stations on its line.—*Adv.*

Our Insect Friends and Foes:

How to Collect, Preserve and Study Them. By Belle Cragin. G. P. Putnam's Sons. Miss Cragin sets forth the pleasure to be derived from a systematic study of the habits of insects, and gives many points which will be of practical value to the beginner. She gives comprehensive descriptions of all the more important species to be found in the United States, together with many illustrations.—*Adv.*

Among the things in our advertising columns which have special interest to anglers, Messrs. A. F. Meisselbach & Bro., the well-known reel manufacturers, announce their "Featherlight" and "All Right" reel, and the Harrimac Collapsing Landing Net.—*Adv.*

SIZE IN YACHTING.

UP to the present time international honors are even between the two yachts just built to contest the possession of the America Cup; while the American craft has spent a day of delay and inglorious rest in the mud of Bristol Harbor, fast beyond the help of a powerful tug, her British—or so-called Irish—sister has fared no better, having been aground for a whole tide off Southampton. As each of these untoward mishaps occurred within a very short time after the first launching of the vessel, they are the first; but it is by no means likely that they will be the last. Even though both yachts escaped the danger of a fatal grounding, and it is by no means a small one, they are certain to have frequent violent and disagreeable collisions with the bottom.

The draft of water in racing trim, at least 20 feet, is more than can be carried with either safety or convenience in the waters habitually frequented by yachts; such as the Thames, the Solent and Long Island Sound. There are channels in plenty where the draft is ample; but they are channels and nothing more, mere narrow paths to which the great lead bulbs must confine themselves at any cost. A lower tide than usual, a little crowding by another vessel on the edge of the bank, a slight error of judgment or lapse of vigilance on the part of the helmsman, and the yacht is aground to stay until a new tide at least.

For the next three months this constant menace of grounding will be most carefully guarded against; each yacht will have her guardian steamer in close attendance, to tow her at all times when not actually racing, and when racing it will only be in such a locality as the open sea off Sandy Hook, or between Block Island and Martha's Vineyard. When the conditions so change that it costs more than it is worth to race a yacht in this manner, with a special tender and all the heavy expenses of docking, the two new boats will be tied up to rust, like Defender and Valkyrie III.

It is amusing now to look back to the time, not so many years distant, when the FOREST AND STREAM was generally abused and decried for its advocacy of such a draft as was necessary to make a yacht safe beyond the possibility of capsize; a matter of 12 to 13 feet in a cutter of 90 feet waterline. To-day this amount of draft is given to the centerboard model, while the keel boat goes to 20 feet and over.

The only reason that such a figure is necessary in a yacht of 90 feet waterline is that less would not give her the power to carry an enormous sail plan that is thus possible in a keel boat of good model. The only reason why the length of 90-foot waterline is adhered to is that so large a yacht is actually faster than a smaller one. This limit is purely arbitrary, and based neither on reason nor common sense; if there is any good reason for building a cutter of 90-foot waterline instead of one of 70 feet, there is just as much reason for abandoning the 90-footer for one of 100 or even 120 feet.

So far as the interests of yachting are concerned, they are no longer benefited, and actually suffer with the retention of the 90-footer. The cost of construction and running places them beyond the reach of even the wealthiest patrons of yachting as a sport, apart from business ends. The history of Defender and Valkyrie III. shows the folly of such craft, built for half a dozen races and then left for years to rust and decay; while the very fact that they have been built and may again be resurrected at any time serves as a menace to prevent the building of smaller and more useful yachts.

There is nothing to be gained now by studying the causes which led to the great enlargement in size—that is a fact that cannot be gainsaid; but one of the vital questions in modern yachting is that of the abolition of the 90-foot class and the establishment of one of such size and use as to enlist the support of the wealthier yachtsmen as individual owners.

However much of a success she may prove, Columbia teaches nothing that was not learned from Defender, and if any real progress is to be made in designing, it must be by the construction of half a dozen yachts in a year, and not of one yacht every four or five years.

Outside of the two principals, probably no one knows just how much money will be spent on the series of five races between Columbia and Shamrock this year, but it will be a very large sum. Suppose that at the outset Sir Thomas Lipton had set aside the same amount for the construction of a fleet of 65-footers, such as Tutly, Senta, Astrild and Betty; yachts about as large as Queen Mab, placing his orders with the different British designers, having the yachts ready early in the season, and sailing a series of races open to the 65-foot class. Such a course of preparation would have given him in the end a yacht in perfect form, with the pick of skipper and crew, instead of a craft that comes to America virtually without trial. On the part of the defense, the cost of Columbia would have built a similar fleet, of probably three or four 65-footers, with others added by different individual yachtsmen; the whole fleet being raced through June, July, August and September. Instead of being confined to one boat by one firm, every prominent American designer might have been represented; and, what is of the most importance, the foundation of permanent class racing would have been laid permanently. The two leading characteristics of the America Cup races of to-day, size and secrecy, are both at variance with that advancement of yachting which the Cup was originally designed to promote; and as long as the present conditions exist, the interests of the sport at large are hurt by the continuance of international racing.

SNAP SHOTS.

The Ohio sportsman of to-day finds himself on the stage of action at a day too late for certain phases of hunting he might have enjoyed at an earlier period; he is thousands of years behind time, in fact, for bear hunting once available within Ohio's confines. The National Museum has recently acquired the skull of an extinct bear found on a farm near Hamilton, in Butler county. The man who found it was digging a well and came upon the skull twenty-three feet below the surface, lying on what appeared a nest of petrified sticks. As described by Mr. Garrett F. Miller, Jr., this old-time bear was probably somewhat smaller than our black bear of to-day, and the skull, marked by a deeply concave forehead and small brain case, would indicate that it was wanting in the bear sense which has given Bruin so high a place for shrewdness among the brutes. In those ancient times perhaps a bear did not find it necessary to exercise so much cunning as in these later days of more aggressive enemies. This Ohio species Mr. Miller has named *Ursus procerus,* which we take to mean slim or spindling, or as might be said of a human being, spindle-shanked. Now that a well digger has dug up a bear skull near the station, we may expect to find Overpeak figuring in the railway books as a point affording bear hunting attractions for sportsmen; that would come at least as near to the truth as many an advertisement of other places said to abound in game, and which indeed may have done so at the time, say, when this Ohio bear was perambulating the earth.

The complications in the New Jersey Fish and Game Commission have found solution in the voluntary resignation of Protector Shriner. His letter to the Commissioners, printed in another column, gives his reasons for the step. Mr. Shriner has acted in a way which does credit to him as an official and as a public spirited citizen. The Commissioners had been harassed for months, and probably would have been harried continually by the importunities of Gov. Voorhees to dismiss an official who was distasteful to him. Sensible of the value of Mr. Shriner as their executive agent, and having regard to their oaths of office and their desire to give the State a good service, the Commissioners were convinced that the public interest demanded Mr. Shriner's retention; indeed this was the conviction of all persons who were cognizant of the facts in the case. We do not know how long the struggle might have been prolonged; perhaps it would have gone on until some of the Commissioners would have resigned rather than to be bullied into serving as agents of Gov. Voorhees' personal spite. Now that Mr. Shriner has resigned, it is to be hoped that a successor may be found who will not be a cause of friction between Commission and Executive. For in Gov. Voorhees' antagonism to game and fish protection, on general principles, the Commission will find all the handicap it can carry, without any further opposition from a Governor who allows his personal spite to control his official actions. As for the new protector, if the Commissioners shall find another one as discreet, energetic and efficient as Mr. Shriner, they may count themselves extremely fortunate.

We are so accustomed to consider the usefulness of birds in their capacity of insect destroyers that the service they render as consumers of the seeds of weeds is for the most part lost sight of. The report of Mr. Sylvester D. Judd, of the Biological Survey, brings together a mass of evidence on this subject; and its publication should go far to increase popular appreciation of the feathered allies of agriculture. This report and that of Mr. Palmer, on the introduction of noxious species, well show the practical work the Survey is accomplishing. The fact is that there is necessity of a complete readjustment of the popular attitude toward many of the wild creatures of the earth; and such papers as these two which we have taken from the work of the Survey have high educational value.

As an addendum to Mr. Cheney's notes on eels, which were printed last week, we may cite the letter of a correspondent in an English exchange, who makes a plea in behalf of the otter as in reality an ally of the angler instead of a foe, as has commonly been maintained. For while the otter is a fish eater, says his champion, it has a preference for eels above all other inhabitants of the water; and because it destroys eels, and destroys them on the spawning beds of trout, to which the eels resort for trout eggs, it should be protected as a useful species, instead of being hunted and destroyed as vermin.

If a penny saved is a penny gained, the rescue of fishes from drying sloughs and pools from which the water has receded is a very practical, cheap and profitable form of fishculture. In numerous sections of the West the fish commissioners have long recognized this rescue work as one of the best paying branches of their public service. The new Utah game law makes it the duty of county fish wardens to take from such receding waters the imported trout, bass and herring and to transfer them to other streams.

A Norwegian company has been formed to engage in raising reindeer for marketing the meat. They have control of sixty square miles of wild mountain land, now stocked with a herd of 2,400 deer, which it is proposed to increase to 4,000; and the prospectus calls for an annual killing of a thousand deer a year, worth something over seven dollars each in the market. A canning plant will be established to can reindeer venison, red char and ptarmigan. They will probably can the ptarmigan out of existence; but reindeer in Norway are domestic animals, rather than wild game; and the chief difficulty of the enterprise may be to find a market for canned reindeer.

We may supplement the note Mr. Ames sends about heath hens on Martha's Vineyard by recalling that so late as the spring of 1898 a number of prairie chickens, pinnated grouse, from the West were liberated on the island. Mr. Frank Golant, who reported this at the time, suggested that the extermination of the heath hen, if it was exterminated, had been caused in part by the disastrous fires which had swept through their breeding grounds. The finding of the young this year indicates that the establishing of the Western birds has promise of success.

At the meeting of the American Fisheries Society, at Niagara Falls, last week, Mr. John W. Titcomb, of Vermont, was elected President, and Mr. Seymour Bower, of Michigan, Secretary. The next meeting will be held at the Woods Holl United States Fish Commission Station. We have a notion that the new executive will recognize the advantage of publicity and will cause it to be made known to the world that there is such a society in existence.

The Sportsman Tourist.

The Bee Tree.

OUR life was singularly placid and uneventful during the week we occupied the sheep herder's deserted cabin near the summit of Devil's Mountain, in northern California; it was, that is to say, until we found the bee tree.

Every morning my chum and I tumble out of our rickety bunk a full hour before dawn, scrape together the embers in our cavernous fireplace, gulp down our coffee and bolt our bacon and damper, buckle on cartridge belts, shoulder rifles, and with a hasty query "North?" vanish into the darkness. Then for half an hour we stumble along through a forest of madrone and tan bark, noosing our necks with riatas of wild grape and snarling our feet in tangles of bear vine, seeing nothing of course, but occasionally hearing a scraping of claws on a tree trunk and the weird cr-r-ooning whistle of a startled coon. Then the east begins to glow, the night wind dies away, the air grows perceptibly warmer, the hum of a myriad insects rises and falls in gentle cadence, and the perfume of the woods at dawn—of all odors the most refreshing to the world-weary man—pervades our senses and we pause.

"What a marvelous mingling of sweet smells," I say to my friend; "there is honeysuckle and laurel and lilac and wild azalea, or bay rose, as they call it here, and a hundred other flowers that are nameless to me."

"Yes," replies that utilitarian, "and we must get a move on us if we want meat this morning. So, trek!" We jog on again, presently to separate, he to the right, I to the left, picking our steps stealthily along the ridge, sweeping every glade with careful scrutiny, first the shadows cast by the tall timber around its edge, then each clump of poison oak in the open. Deer, like cattle, are passionately fond of this shrub, and in their browsings will frequently ensconce themselves in a thicket of it, so that only the flapping of an ear or a glint of sunlight on an antler's prong betrays the fat buck at breakfast.

Thus the morning hours glide by unnoted, until perhaps from afar off across the mountain spur comes the spiteful "ping" of my friend's .30, or sundry "pings" in quick succession, then an interval of silence, and then a faint halloo-o, which means "I've got him!"

Whereupon I clamber over the hogback and help pack the quarry into camp. Occasionally, but more rarely, it is the bellow of my .40-65 which re-echoes down the cañon, and then sometimes it is Monty, who helps with the packing.

It was Saturday, the hour 9 A. M., and we were hastening cabinward, for our hearts smote us at having neglected the third member of our party—a veritable son of Satan, otherwise a buckskin mule, on whose hurricane deck our camp kit had traveled sixteen miles over the mountains from the stage road. This brute, doubtless, at that very moment was trying to eat his way out of the sheep corral and strike out for home, as he had succeeded in doing twice before.

We were empty-handed, to be sure, but then there was plenty of meat in camp, and excepting the mule there was nothing in the wide world to bother us; so as we jogged along we laid our plans for the evening's shooting and then fell to discussing the owner of the mountain, one Roberts, whose ranch house peeped from the green of the long ridge across the cañon.

"It is an extraordinary thing," Monty was saying, "that, although there is any number of bees about this ranch, Roberts says in the twenty-two years he has been here he never found a——. By Jupiter! there's a bee tree now!"

Instinctively I dodged. Recollections of childhood's more or less happy hours—some of them very tender recollections—surged in upon me. I bethought me of a freckled-faced urchin with sapling, hook and line, perched upon a granite abutment beneath a railway bridge just over a deep still pool in a far-off State across the Rockies; of the restful fragrance of the pines upon that drowsy afternoon; of the clinkity-clink of Hank Bemis' grist mill down stream; of a strange buzzing, growing louder and louder, until of a sudden a swarm of these pesky little miscreants swooped down upon that innocent child and roosted all over his frail anatomy, but mostly in his hair; of a squawk of infantile horror; of the flop of a small body into an ice-cold brook, ditto one can of hoppers, one fish pole and one string of trout; of the scramble ashore; the race homeward and the subsequent conversation in the woodshed—all this came into my head, and also that other time when this same small boy sat down on the hollow log at the Sunday-school picnic and instanly became the animated—most animated—center of attraction of that festal gathering; the observed—too much observed—of all observers.

"Better leave it alone," said I. "Thanks to these pestilential little humbugs, I have conspicuously displayed upon my person many a time and oft the sign 'Closed for Repairs.' We are having a royal good time as it is, without hunting up trouble." But he would not have it that way.

"Why, old man," said he, "Roberts will be tickled most to death at this. I'll go over and tell him to-night. To-morrow's Sunday. We won't go shooting in the morning, but will snooze away till 9 and then we'll tackle that bee tree. Great Scott! it is a big one! I shouldn't be a bit surprised if we got fifteen gallons of honey out of it!"

"More likely each of you will get stung in fifteen different places, and each new sting will be fifteen times sorer than the last! Leave these diurnal vampires in their coop!" I ventured; but he was obdurate, and having taken the bearings of the tree, a giant white oak, on a precipitous bluff about a quarter of a mile from our cabin, we went home, watered and hobbled the mule, cooked and ate tenderloin of venison, did our chores and in the afternoon he struck out for the ranch, while I slid down hill a mile to the creek and captured enough trout for supper.

The following morning we were awakened by a miniature earthquake in the cabin, and there was Roberts projecting his 6ft. 2 of sturdy manhood through the doorway, and at his heels the Kids—his half-brothers, aged twelve and fourteen respectively—and tagging after them the most extraordinary specimen of mongrel quadruped ever seen outside of a menagerie. "That's the dasiest coon dorg in Humboldt county, you bet. Ain't you, Tige?" remarked the elder kid, as he threw down an axe and a lariat. "When he seed me take that axe he was bound to jine the percession."

"What breed do you call him?" I asked of Roberts, who was unloading himself of three five-gallon coal oil cans fitted with rope handles, a roll of mosquito netting and a mysterious package, which we afterward learned contained sulphur.

He looked puzzled. 'He's got some shep," he said, slowly, "and some hound, and a little bull, and mebbe a mite of mastiff; and then there was that derned Australian kangaroo dog that Toomy had down in the valley and—and— some others. He's what you might call mix-breed; but then he's all-fired death on coons; he is that, for a fac'."

During breakfast Roberts outlined his plan of campaign. "I ain't never had no experience with bees much hardly," he premised, "but from what I've heard, it's easy. You cut down the tree and light a fire near the hole where the bees is, and put sulphur on it. The smoke makes 'em silly, and they won't bite, leastwise not to amount to nothing. Then you chop out the hole and lift out the honeycomb, and there you are. I reckon I've brung cans enough to hold the honey."

It did sound easy, and after breakfast we gathered together the impedimenta and started in single-file for the bee tree, marshaled by the coon dog. When in sight of the tree, Roberts divided the mosquito net into convenient lengths, and each of the bee hunters enveloped his head, and hat in it, turning up his coat collar to hold it securely in place. Roberts next put on a pair of buckskin gloves, while my friend swathed his hands in a couple of hankerchiefs, while I found a coign of vantage about 50yds. above the trail, where my view was unobstructed. I had lost no bees and didn't propose to hunt any. The coal oil cans and other paraphernalia were deposited at the base of the tree, and the party slowly circled around it, viewing it from every point. The coon dog went too, wagging his stumpy tail in anticipation of the good times coming. Then the bee hunters held a conclave a short distance from the tree, and the coon dog looked disgusted.

"It's a tarnally all-fired big tree," remarked Roberts. "It's too blame big to cut and too blame big to climb [only he didn't say blame], and thet limb where the bees is is thirty foot up."

"Couldn't we nail slabs on the trunk, climb up and saw off the limb?" inquired Monty.

"Ain't got no saw," Roberts answered.

"Well, cut it off then."

"Ain't got no nails."

They then filed back to the tree and tapped it with the axe as high as they could reach. It was solid. Next the younger kid mounted Roberts' shoulder and sounded it all around a second time. Still solid. Then the bee hunters withdrew for further conference, and the coon dog looked as if he had just received a telegram that the last coon on earth had died of dropsy, "interment private."

But my chum was a man of resources. "That limb is not more than 18in. thick," said he, "and it is nothing but a shell. We can shoot it off with my .30 and soft-nosed bullets. We'll get the honey in the limb to-day and to-morrow we'll bring along some nails and boards, tap the trunk and corral the rest of it." Unanimously carried. The rifle was fetched from the cabin; the elder kid threw his lariat and caught the hollow limb; Roberts kindled a fire and had his sulphur and coal oil cans in readiness, also the axe; Monty began blazing away at the bee tree, ripping great slivers of dead wood off at every shot; the angry insects buzzed about the doorway of their domicile, while the coon dog and the younger kid danced around the bole, the former emitting short, paroxysmal yelps of delight, and the latter shouting encouragement to the workers.

At the tenth shot the limb wobbled. At the eleventh it drooped, and then with a lusty pull from Monty, who had thrown aside his rifle, and the kids, down it crashed, nearly flattening the coon dog, who had jumped for it as soon as he saw it coming.

Roberts rushed forward with his fire and sulphur; Monty with the axe; the kids with the tinware. Everybody had something to say and everybody said it at once: "Durn that dorg!" "Get out of the way!" "Gee, whew! I'm stung!" "Blame that sulphur!" "Cut that hole bigger!" "Phew, I'm suffocating!" "Jiminny Crickets! they're all over me!" "Oh! ouch!" and lastly, above the turmoil, Roberts' voice: "They're yaller jackets! They're yaller jackets! Run for it!"

And they did run for it. Down the trail they streamed, helter-skelter, shedding hats and headgear, expletives and clothing, as they ran, but not the coon dog! He was clear grit, clean through. Once accorded a fair field, he asked no favor, but sailed into that hollow limb and bit and scratched and growled and snapped until every square inch of his ebon epidermis was tawny with clustering wasps.

All at once a look of pained surprise overspread his homely face. He let out one long piercing howl, "ki-yi-yi!" and started for the river, slumbering in cooling greenery a mile below the bluff. He fairly sailed down that steep descent. At his first mad bound he took a poison oak bush 10ft. high. Next came a precipice of shelving gravel, where every time his feet touched he loosened half a ton of stones and boulders. These rattled and rumbled in his wake, like small arms and artillery, and now and then impinged upon his miserable but aureoled carcase. Did he mind it? Not a whit; it was a welcome change.

On he went. Right ahead lay a mass of wild oats, breast high. He saw it as he shot downward, riding on the avalanche, and the "ki-yi" that soared up to me was surcharged with exultation. He cleaved that undulating sea like an ocean liner chasing a record. Then came a patch of scrubby oak and chaparral, and the coon dog still kept moving. Another field of oats, more brush, a stony piece of ground where thistles grew, then timber and the river. He scorched the whole course, and when I could not see him I heard him. He wasn't one of those who believed in suffering in silence. He liked folks to know about it. I saw him mow the thistles right and left; I saw him vanish in the timber; a wailing "ki-yi," pianissimo, floated out from the tree tops. Then silence. He had got there.

To resolve myself into an ambulance corps and Red Cross auxiliary was the work of an instant. I reached the cabin on a run, and noted the casualties. Roberts had been stung seven times, Monty five, while the kids had two apiece. To the adult sufferers I administered without delay three fingers of whisky, neat, in the bottom of a pint pannikin. I did this to check their flow of language, which was copious, while I collected my humble store of medicaments, to-wit: flour, vinegar, gun grease, brown paper and clay from our spring.

By dinner time all my patients were convalescent.

* * * * * *

But the coon dog? A letter from one of the kids has this to say: "But you fellows spoiled the cutest coon dog in Humboldt county with that bee tree funny business of yours. If I look at an axe or pick up a bit of rope, that coon dog crawls 'way under the barn and can't be coaxed out even at meal times. Reckon he wonders mighty often what in thunder we wanted to get that dern limb down for anyhow."

Reckon he does.

MARIN.

In Filibuster Days.—I.

A Story of the Walker Expedition.

WHEN on a lovely evening of the early spring of the year 1856 the stanch schooner Minnie Schiffer was cast loose from the puffing tug off the mouth of the Mississippi River at the beginning of her voyage from New Orleans to Greytown, Nicaragua, a motley crowd was gathered upon her swarming deck. A band of recruits, 150 in number, under command of Col. Jacques, a French soldier of fortune, en route to join the army of filibusters commanded by William Walker (the "Little Gray-Eyed Man of Destiny," then engaged in the attempt to conquer the small Central American State of Nicaragua), swarmed upon the forward part of the vessel, while a little company of thirty emigrants, men, women and children, most of whom were farmers from western Iowa, were grouped on the quarter-deck; and as the noisy little tug steamed back toward the mouth of the great river on its return trip to New Orleans, and the sun was sinking in a halo of glory that filled all the western sky, while the hoisted sails flapped idly in the motionless air as the uneasy ocean heaved and sank beneath the vessel's keel, the colonel of the filibusters called the attention of his troops to the sight of the Stars and Stripes slowly unfolding in the evening breeze over the little Government station of the Balize, just distinguishable in the distance, and told them to take a good look at the flag and at the land over which it waved in beauty, adding that in all probability some of them were then looking at their native country for the last time.

What a strange thing is this feeling of patriotism, so common to all mankind, which, like a hidden magnet, attracts so irresistibly toward the land of one's birth.

In the group of emigrants stood an imaginative boy of sixteen, whose head has since whitened in the frosts of time, and who was then beginning the first important journey of a subsequently wandering life who, as the full significance of the French colonel's words was grasped by his all too heedless mind, felt a strange swelling of the heart and the rush of unbidden tears to his eyes; and turning aside to hide his emotion was surprised and consoled to note that among the grim and hardened faces of the filibuster recruits gathered from the floating population of the Mississippi River towns—"wharf rats" in their own vernacular—were many pairs of eyes misty and wet as his own.

> "Breathes there the man with soul so dead
> Who never to himself hath said,
> This is my own, my native land!"

Down in the rosy west sank the sun, buried and lost in the fiery glow of its own creating; the stars shone down upon the glassy deep, and the boy who was launched upon the first voyage of a lifetime went to bed wondering if he would still be able to see the land when he should rise in the morning.

But, alas! when he came on deck next morning and found nothing in sight beyond the little vessel save frowning sky and angry sea, and when the heretofore level deck was found to be steep as a house roof, while occasional waves washed the lee scuppers, and a strange upheaval of all his inner anatomy beginning to assert itself, which promptly demanded a most unwilling tribute to Neptune, he found himself confronted by one of the most unpleasant facts of a lifetime, and one which but few are called upon to face—that in his case, as in that of a few other unfortunates of the race, mal de mer was a foe which no amount of seagoing experience could propitiate, and which six subsequent voyages, covering many thousands of miles, has utterly failed to disarm, but which upon subsequent occasions has assailed him so savagely that a sentence to an ocean voyage to China on a sailing vessel on a turbulent sea would to-day be regarded by him as almost, if not quite, a death sentence.

During the twenty-three days of the voyage, as the laggard schooner crawled across the Gulf of Mexico, the Caribbean Sea and the Bay of Honduras, during only the times when the sea was comparatively calm came moments at all enjoyable to the vigorously healthy boy, fascinated with every strange incident of his first seagoing experience.

The purpose of the emigrants, of whom my father and two of us boys were members, was to settle in the mountainous portion of Nicaragua, which country we fondly imagined would, by annexation, soon become a part of the United States.

On our journey down the Mississippi my father had bought a mill in St. Louis, for grinding the corn of the natives, and all were jubilant over the prospect of forming the first American settlement in the soon-to-be-annexed State of Nicaragua.

The filibusters were a motley crew of many nationalities, mostly Americans, and their arms were a curious lot. Most of them were armed with muskets, but the medley of revolvers, derringers, bowie-knives, swords

and dirks were evidently gathered according to the fancy of each.

Before the mouth of the Mississippi had been reached the accidental discharge of a revolver had wounded a recruit in the shoulder, when the Colonel promptly disarmed the whole battallion—a wise precaution, as the event proved.

Near the middle of the Gulf a calm ensued, and for nearly thirty-six hours the ocean was like glass. The heat grew intolerable. Pitch oozed from the deck seams, and when the sun on the second calm day neared the meridian the women were sent below, that the men might go over the side for a swim in the blue water that looked so invitingly cool.

Although a very good swimmer, my father would not go in; nor would he, for a time, heed the pleadings of my brother and myself for permission to swim. Finally, when nearly all the crowd of bathers had returned to the deck after an enjoyable swim, and no sign of sharks had appeared, he consented to let us go in over the bow while he kept watch for our safety.

After a fine swim near the bow—which was disturbed only by the sudden recollection of the boyish experiment of shoving one foot down in an endeavor to touch bottom, which sent a shiver through me, as I thought of the countless fathoms beneath—we returned to the deck, and were nearly dressed when, there being but five men in the water, three under the bow and two swimming side by side around the stern, a filibuster captain, sitting on the quarter-deck and looking over the side at the swimmers beneath, noticed just behind their feet something round in shape and rapidly growing larger, and not until the swimmers had advanced quite a distance and the strange object in their wake turned more obliquely toward them did he realize that a large shark coming from deep water, and in his first appearance showing nothing of his length, was almost at the feet of the unsuspecting swimmers.

He jumped to his feet, crying, "Shark! shark!" and a man sprang to the cook's galley, and seizing some billets of wood, threw them into the water above the monster. Another seized the big bass drum of the filibusters, which fortunately lay close at hand, and holding it over the schooner's side beat it furiously. An officer ran up with a revolver and rapidly fired its contents into the water behind the frightened swimmers, who, knowing that a single rope hung from the foremast over the vessel's side, and that he who reached it first had the best chance of safety, swam for their lives.

The frightened shark swam off about 100ft. from the schooner's side, where he lay motionless alongside, a foot of two beneath the surface, and with a "stony British stare" of his cruel eyes gazed at the noisy crowd who had driven him from his prey.

As the afternoon advanced a faint zephyr crept over the sea, and very slowly and gradually swelling into a breeze the lazy schooner crawled along; and as the shark now took up his position in her wake the captain of the vessel came on deck with a fish-hook big enough to hold a horse, and a big line, some hundreds of feet in length, and baiting the hook with a junk of pork big enough for a dinner for his ship's crew, hove the bait over the stern and trailed in the schooner's wake 100ft. astern.

Gradually the breeze grew stronger, the ship's wake grew more tumultuous, and the cowardly brute, creeping up close to the enticing lure, crossed back and forth amid the tumbling waves, nearer and nearer to the bait, but still afraid to strike, and wearing our patience threadbare. Finally the practiced eye of the captain caught indications of a strike, and slacking up on the line, he allowed the hungry shark to swallow the bait, when, taking a turn with the line to enable him to play the monster, he gave a jerk that sent the hook well home, and then followed a fight grandly worth the seeing.

The great brute, over 12ft. in length, sent that all too slender looking cord through the waves from side to side of the vessel's wake with a noise like that of tearing muslin, while the throng on the schooner's deck stood with bated breath, watching the furious struggles of the tethered tiger of the sea, dreading the momentarily parting af the line, while the skillful old sailor in charge of the free circus played his giant catch with a deft coolness that woke our enthusiasm, and the long struggle went on as though the hungry shark were really a bundle of springs of a huge eight-day clock, wound up to the striking notch.

Finally his struggles grew weaker, and as the captain slowly worked him nearer the vessel's stern an officer fired three revolver shots at his head, now drawn near the surface; and this not appearing sufficient to quiet him a musket was heavily loaded and twice fired at the same target, when he grew more tractable, and the captain then tied a ship's rope in a big running noose around the fish line, and dropping it over the side allowed it to drift back over the head and shoulders of the shark, when the rope was tightened and half a hundred men seized hold and brought him up over the side on to the deck.

But, bottled smoke! he woke suddenly to life, and his sweeping tail, which for a time threatened to smash in the schooner's deck, soon cleared a wide space among the watchers at his funeral, when a thoughtful fellow seized the axe from the cook's galley, and watching for an opportunity succeeded in chopping off about 3ft. of his tail. Still he floundered dangerously, when finally his head was severed from his body. This finished him, but at the same time rendered it impossible to measure his length accurately, though from the number of planks of the deck which the pieces crossed it was plain that he was over 12ft. long.

About half an hour afterward it occurred to a curious youth to examine the shark's teeth. Just as I was about to push my hand into his mouth to feel of its triple row of dagger points, one of the filibusters, who, in spite of the Colonel's orders for disarmament, was still in possession of a bowie-knife, suddenly pushed me aside and thrust the knife into the shark's mouth. Instantly the great jaws closed upon the polished blade, and for ten minutes no man in the crowd could move it from that viselike grip. My curiosity was gratified with an outside view, and so I have two whole hands yet attached to my arms.

The tail of the shark was cooked by the sailors. The other bloody fragments were hove overboard, and all rejoiced that the skill of the captain had turned the tables on the savage creature, and that the biter had been badly bitten. It was, however, by a rising vote unanimously decided that fresh water beat the briny deep out of sight for bathing purposes.

A few mornings after we saw our first clipper ship, one of those oldtime ocean greyhounds, and the prettiest craft that ever rode the waves. Up from the horizon on our port bow rose a cloud of snow, which the sailors promptly announced as a Baltimore clipper.

Eager as I was for a near view of the beautiful craft, I observed with regret that our own course across her bow would make this impossible by carrying us far beyond her before she could reach our line of travel. But a marvelous lesson awaited me. She rose above the horizon with wonderful rapidity, and swept across the sea as though on the wings of the wind and with the waves as the dust of her feet! Away across our bow sped the great snow cloud of beauty, so far in advance of our own crawling tub that only a distant view of the majestic creature rewarded my hungry gaze until she sank hull down in the northern sea.

If the new Herreshoff cup defender will only sail as well!

The loveliness of the tropical sea under the light of an unclouded moon captivated me. Drifting along one evening, an hour after a glorious sunset, a vessel still smaller than our own hove in sight, and drifted past us so closely that the trumpets of the two skippers were all unnecessary in their friendly hail. All was quiet on our decks, while the two captains conversed, when a mischievous sailor on the little craft hailed us:

"What ship is that?"

"The Minnie Schiffer," cried a filibuster, in reply.

"Where are you from?"

"New Orleans."

"Where are you bound?"

"Nicaragua."

"What are you loaded with?"

"Wharf rats!"

"What are you going to do with them?"

"Feed the Costa Ricans on 'em!" bawled the filibuster, and the faint echo of boisterous laughter floated back to us over the moonlit waves, as the little stranger drifted onward toward the land of the free, while our own happy-go-lucky crowd of filibusters floated on toward the strange south land where they were expected to fight the soldiers of Costa Rica, which had joined forces with the sister republic in defense against their common foe.

And now occurred an event which at first brought rejoicing to all on board, but finally came near to being the harbinger of a fearful tragedy.

Among the emigrants were a Mr. and Mrs. Webster Forbes, from Council Bluffs, Ia., and to them was born on the bosom of the Caribbean Sea a lovely little baby girl. All on board were jubilant over the prospect of the little schooner's landing a greater number of passengers than she had begun her voyage with.

The next day begun very pleasant, the filibuster force was drawn up in order on the schooner's deck, each man holding a mug, cup, can, glass or other dish containing a generous ration of whisky; and after the tiny little stranger had been carried slowly along the line in the arms of a motherly old lady, a Mrs. Tarbox, and each man had been allowed a glimpse of a wee nose peeping out from the bundle of flannels, Col. Jacques proposed the health of the tiny creature (who, in accordance with the petition of all on board, had already received the name of Minnie Schiffer Forbes, in honor of the little schooner which carried her), and the toast was drunk amid wild enthusiasm.

This was perhaps pardonable; but now began a carouse among some of the line officers of the battalion, a few of whom proved insubordinate and utterly unfit for command.

As night drew on one of the drunken lieutenants assaulted one of the emigrants, and was soundly drubbed for his pains, and another, a captain, picked a quarrel with the father of the baby girl, and presuming upon his rank began a course of conduct to which no American could be expected to submit.

The Colonel's attention being called to it, and the captain proving refractory and insubordinate, he was promptly placed under arrest, when some of the men of his company, growing belligerent, defying the authority of the Colonel and threatening the little band of emigrants with dire vengeance in the growing tumult, the emigrants prepared to assist the Colonel if necessary for their own safety.

For a time it looked squally and threatening for the safety of the little Colonel, whose French nativity now appeared as a target for the prejudices of the turbulent crowd, and as he suddenly sprang below I feared for the moment that his nerve had deserted him and that the more reckless of the mob, led by the drunken officers, might inaugurate pandemonium. But a moment later the brave fellow appeared with a revolver strapped to each side, and in a tone whose quiet firmness was backed by an unmistakable boding glance of his big black eyes, ordered the crowd forward from the quarter-deck; and the excited fellows moved slowly forward, and beyond a few muttered threats of breaking open the hatches, securing the muskets and bayonets, and carrying the schooner by storm, the tempest subsided, and silence and darkness closed down upon the little group of anxious emigrants on the deck of the swarming ship.

So began the life voyage of the child born upon the sea, and if any reader of FOREST AND STREAM can inform me concerning the later history of the little one, whose whereabouts were unknown to me after the eventful Nicaragua expedition, I shall esteem it a kindness indeed if he will do so.

The amusements in vogue on the crowded schooner were many, and as the voyage lengthened and time hung heavily on the hands of the restless crowd, various expedients were adopted to shorten the long days, and among the various ones tried none afforded more merriment than the attempts at improvisation in delineating the history of the schooner and her living cargo, to the accompaniment of a rollicking chorus.

One performer, a sailor named Clark, showed considerable ingenuity in this line, and assisted by a band of half a dozen shipmates to bellow a chorus vigorous and energetic enough to cover up and atone for any hitch in the versification, many merry moments were passed, which were as thoroughly enjoyed by the thronging onlookers as by the excited and eager performers.

A jolly Spanish officer of the battallion attempted it, and although quite proficient in speaking English caused much uproarious merriment by the oddity of some of his blunders, in the occasionally hurried effort to avoid being tripped up by the nimble chorus galloping close to the heels of his runaway rhyme.

In the days of the earlier Mississippi River steamers some of the negro boatmen exhibited considerable talent in this direction. In an attempt to delineate the hardships of the first spring voyage among a mass of doggerel a negro fireman improvised the following verse:

"De ice am driftin' down de riber;
Ho, yah! Ho yah, yah.
Make de nigger shake an' shiber,
Ho, yah! Ho yah, yah.

Steamboats sinkin' ebery day,
Ho, yah! Ho yah, yah.
Snags an' sandbars in de way,
Ho, yah! Ho yah, yah."

Finally the shore of the land of our search appeared, and as we drifted slowly along down the coast, just north of Greytown, the view was beautiful enough to atone for much of the discomfort of the long voyage.

The fleet of fishing canoes sailing out of the distant harbor mouth and spreading out over the sea like an opening fan—the dark blue of the ocean, bordered by a sharply defined line of green, the shoal water near the beach—the chalkline of white breakers at the edge of the narrow belt of yellow sand, beyond which rose the heavy dense forest, the green of whose strange vegetation was occasionally relieved by gorgeous flowers—the low level belt of forest extending inland to the base of the line of mountains blue with distance, and with one volcano smoking plainly in view not many miles inland—all contributed to the loveliness of a scene unexcelled and unforgotten.

Entering the harbor, the schooner was anchored near the southern shore, near Point Arenas.

Stirring news awaited us. The campaign of the filibuster army, which when we left New Orleans was reported crowned with an almost complete success, was now raging fiercely in the interior, and had grown to proportions which forbid positively the taking of women and children beyond the coast; and the only course now open to the disappointed colonists appeared to be to land at Greytown and await the course of events.

The alliance of Costa Rica, whose troops had come to the aid of those of Nicaragua, had rendered the task of subjugating the little state an almost impossible one; and the fever which marched with the invading army proved more formidable still.

The British Government having established a protectorate over the territory of the Mosquito Indians, a narrow strip of country along the Atlantic Coast from Greytown northward to and beyond Bluefields, sixty miles distant, and watching with jealous and unfriendly eyes all movements of the filibusters from the United States, the little band of armed invaders on the deck of the Minnie Schiffer were kept closely in hand by the vigilant French colonel, and hurriedly transferred to a small light-draft river steamer, which lay awaiting their coming, and started on the journey up the San Juan River to the interior to the assistance of their companions in arms under Walker.

We had learned to like many of the motley crowd, who, under a rough exterior, carried the metal of sterling manhood, and the French soldier of fortune who commanded them—and who shortly afterward was killed in action—had merited the respect of all on board.

We bade them good-by with regret, and landing in the quaint old town of Greytown awaited the course of events.

My father rented a house on the shore of the lagoon in rear of the town, and as no favorable news came from the interior, and as the little band of discouraged emigrants gradually broke up, some dying of the diseases of the unhealthy coast, some pushing on to California via the Isthmus of Panama, he planned to engage in some remunerative enterprise while awaiting the turn of the tide of war.

And now came my first adventure with the alligators. The lagoon swarmed with them, some of which were of monstrous size.

I had brought the little muzzle-loading rifle with which I had killed deer on the prairies of western Iowa, and as we came through St. Louis, Mo., my father had bought me a Mississippi yager rifle, which threw a ½oz. round ball, and proved quite an effective weapon.

Several shots at the heads of swimming alligators with the little rifle had proved that it was too light a weapon, and when one morning my father called to me that an alligator of most unusual size was coming along near the shore, I took the yager and ran down to the shore under cover of a clump of bushes, and, dropping on one knee, I cocked the rifle and awaited the coming of the giant saurian.

All unsuspicious of danger, and swimming with head half exposed above the water, he passed slowly along until opposite me, at about 40yds. distance.

Aiming carefully at a point near the lower line of the exposed portion of his skull, I fired, and the roar of the rifle was followed by a geyser-like eruption of the quiet water of the lagoon, followed by a shout of exultation from my father, who stood watching the result of the shot. I never saw an alligator make such a commotion; but the shot didn't do him a bit of good, and apparently no fatal harm, for, disappearing for a few moments, the great head rose again to view further out from shore, and the brute swam away as though unharmed. How he could sustain such a shock was a puzzler. To be sure, they grow to enormous size in tropical waters, and we were credibly informed that the bed of one where he had been jumped from his lair in the mud of the lagoon showed 21ft. from nose to tail. I grew discouraged for a time, as their armor seemed too heavy for my guns.

In the harbor of Greytown lay the British frigate Eurydice, of twenty-six guns, which had been stationed there

for some time; and one fine morning the United States frigate Susquehanna, of fifteen guns, ran into the harbor and gladdened us all with a glimpse of the old flag.

On board was Commodore Paulding, and the sight of the old gentleman coming ashore in his twenty-oared barge, the perfect movement of the oarsmen contrasting so sharply with the careless action of the British sailors on the Eurydice (the discipline on board of which had evidently grown lax during her long stay in the harbor), was a sight to make a boy's bosom swell to the peril of his jacket buttons.

While the Susquehanna lay in the harbor my brother and I were one day fishing in the harbor, and a storm which threatened a thorough soaking coming suddenly up, we ran alongside the Eurydice, laying near by, and as politely as we knew how asked permission to come aboard during the coming storm.

"Keep off!" was the gruff response.

Still hoping to escape the storm, we pulled for the Susquehanna, lying at quite a distance, but much nearer than the shore.

Reaching her side just as the first drops of rain came pattering down, we quickly fastened the boat to the steps lowered abaft of one of her side wheels and ran up to the top, meeting the sentry at the deck.

"What is wanted, boys?" said he.

"Please, sir, can we come under the awning while it rains?"

"Certainly," he replied, stepping aside, and we stepped upon the deck of the first American man-of-war we had ever seen.

The formidable appearance of the great guns, the ball-piled pyramid behind each, and the armed sentries pacing back and forth on her deck impressed us strangely.

On the quarter-deck stood a group of officers in all the magnificence of gold-laced uniforms, and among them stood a fine-looking, elderly gentleman, who proved to be Commodore Paulding, who, walking forward, greeted us kindly, inquiring if we were Americans, when we told him the story of our coming to Nicaragua.

"Boys," said the Commodore, "tell your father for me that he would better go back again to the United States and stay under the shadow of the Stars and Stripes."

After a very pleasant chat with the kindly old gentleman, and after witnessing the distribution of the whisky ration on board (which was dipped from an open barrel in a small cup and passed to each man at the calling of his name), the storm having spent itself, we returned to town, much pleased with our visit to the battle ship of the dear native land, and with the kindness of the courtly old Commodore.

VALLEY, Washington.

[TO BE CONTINUED.]

Pioneer Days.—VI.

BY ROWLAND E. ROBINSON.

IT chanced on the next day, what they accounted a great piece of good luck came to our pioneers. They were out upon the bay to see if their late visitors were lingering about the shores, when their eyes were attracted to a strange object adrift on the waters that were roughened by a stiff northwest wind.

"It's an almighty big turtle!" Kenelm declared, as something very like a rounded back wallowed in a trough.

"It looks more like a buoy that's gone adrift, for it shows red paint," Josiah said, as the object was tossed on the crest of a wave, "only it don't ride high enough."

"Wal, you've got it nigher 'n I did," the other said after close inspection, "for it's a cask, sure as you live. Lord send it is some sort o' sperits, for the Injuns hes drained us as dry as a paowder horn."

The wish was granted, for it proved to be a ten-gallon keg of brandy, perhaps a part of the stores or cargo of some French craft sunk off Le Rocher Fendu, and just now set afloat again by the breaking up of the wreck. At any rate it was of fine quality, ripe and mellow with age.

"That's good enough for the Commandant of Carrillon," said Josiah.

"Too good for Montcalm," Kenelm Dalyrymple swore, for he had memories of Ft. William Henry.

They made a secret hiding place for their treasure in a hollow stump, for it was too precious liquor to be guzzled by their ever-thirsty Waubanakee friends.

Not many days later Josiah was fashioning a huge mortar out of an oak stump close by the end of the house by alternate burning and gouging. This was for a plumping mill, that, when complete, consisted of the mortar, a heavy pestle slung at the end of a spring pole, the butt of which was fastened in the logs of the house, and all with a view to the coming corn crop. As he chipped away the wood or rekindled the fire and wet the edge of the slowly-shaping mortar to keep it from burning, his ear caught the sound of footsteps of some large quadruped approaching along the footpath which ran inland to meet the thoroughfare that linked the scattered settlements together from Bennington to the Winooski. Wondering what visitor could now be coming, for he knew no deer or moose would approach so unhesitatingly, nor Broad and Bright browsing the undergrowth and cropping the scant woods herbage, advance so regularly and rapidly.

He wondered no less when he saw a horseman emerge from the woods, a man of gigantic stature whose figure and carriage at once struck him as familiar. But when the traveler called out:

"Ho! thou dweller in the wilderness, hast thou no welcome for the stranger within thy gates?" the voice and the quaint phraseology left him no longer in doubt, and he hastened forward to give him greeting.

"Why, if it hain't Colonel Ethan Allen, for all of this livin' world. An' haow be ye, sir? By the Lord Harry, if I hain't glad tu see ye, and so'll my pardner be. He's aout on the creek fishin' for aour dinner! 'Light an' come in, whilst I ta' keer o' your hoss."

Kenelm had an inborn and cultivated distaste for everything that bore the name of work, yet in the free life of a hunter, trapper and fisher, would endure far more exposure, privation, and greater strain of muscle and never complain, than any regular employment entailed. A hail brought him in from his steady trolling up and down the channel, bringing with him the result of his two hours' fishing, a great wide-backed, thick-fleshed pike.

"Why, the Lord bless us, if it hain't Colonel Allen, an' you du us praoud if it hain't gittin' lost brings you here, an' if you be lost, why, it's aour good luck," he cried, as he recognized the distinguished visitor and inwardly thanked fortune for the means of entertainment which the lake had so timely provided.

In those days not to have liquor in the house for the entertainment of a guest was thought to be more disgraceful than to be without bread, and the hosts were truly grateful that they had this to offer their visitor, who having tasted it, needed no pressing.

"Heaven be praised for preserving such good liquor from unworthy lips and undue dilution with water, and sending it for the refreshment of honest men," he fervently said, as he smacked his lips over a second glass. "I shall be tempted to tarry long where the waters bring such bountiful fare to your door. I doubt if the ravens furnished Elijah such fish and such fine liquor."

"You'r' more'n welcome to 'bide as long as you please, Colonel," said Kenelm. "But what beats me is haow ye come tu find us if ye wanted tu, or why ye wanted tu."

"I want to know every true man in the Grants, and see a way provided for his protection against the Yorkers. It is a wonder they have let you alone so long."

"Oh, but we've hed 'em!" said Kenelm, and he and Josiah told of their late encounter, to Allen's great delight, especially as to the Indians being palmed off on the surveyor's party as Green Mountain Boys. He instructed them to notify Pangburn if they were again molested, and assured them of protection, and that they must be ready to give like aid to others. But he told Josiah that he doubted whether his title was good, for he believed Capron to be a knave.

"However, I've a pretty good understanding with the old Quaker surveyor, Benjamin Ferris, and I think he can make things easy for you with Delaplaine, for he is a Quaker, too, and they stick together like—well—like Green Mountain Boys."

He spent the remainder of the day with them, and helped make half the night jovial, at which he was an exceedingly good hand, having no end of stories to tell and great capacity for strong drink. When he left them next morning his fast friends for life, his head was the clearest of the three, though the one glass that furnished the board had gone fullest and oftenest to his lips.

It was a hot, hazy August day; the sun was a fiery, rayless ball in the brassy sky; some ripened water-maples in the marsh were blazing like steadfast flames in the still air. A gray heron sagged on slow pinions in briefest flight to a more promising shallow where the minnows snapped lazily at flies resting on the rims of lilypads or darted away in sudden fright as an evil-looking gar pike swam into their retreat. A pike broke the glassy surface of the channel with a slow swirl of miniature whirlpools boring the water in the widening arch of wavelets that subsided in the rustling sedges and shook the blue spikes of pickerel weed. A brood of well-grown, full-fledged wood ducks flashed past, exultant in the new power of flight, racing with their quivering reflections. High above the cedar-crested cliff an eagle soared on noiseless wings, surveying his silent realm of wood and waters.

In the midst of the hot stagnation of air, Kenelm and Josiah moved languidly on the shorn marsh, gathering the rustling cocks of wild hay into stilted stacks that looked like exaggerations of the muskrat houses which were already built along the outer border of the marsh. Far up the creek there was an approaching clank and splash of oars, and presently a scow appeared, manned by a full crew, two of whom were in the garb of Quakers, and one was at once recognized as their old chance acquaintance, the surveyor, the other a stranger of portly figure and benign countenance. When they met he was introduced as Nicholas Delaplaine. They were shown the canal-like approach to the shore and landing, and all went up to the house.

"I'd like to see thy deed," Delaplaine said to Josiah, who was growing sick at heart with a presentiment of trouble. "I'm afeard thee's been played a scurvy trick, for I never sold this to any one." Then he carefully examined the deed and pronounced it a fraud; as he could easily prove. "Thee's got about five acres cleared, and a good house and fine crops growing. It's too bad, but I don't want to be hard on thee for what isn't thy fault, except in lack of caution."

After some consideration he continued: "I'm going to propose to thee to give thee fifty pounds for what thee has done, or thee may give me fifty and keep the place, I giving thee a warrantee deed of it."

"That's fair, an' I'm obleeged tu ye, Mr. Delaplaine," said Josiah; "but I want you tu wait on me a month afore I give you an answer. I want time to go tu Connecticut an' back afore I can tell which I'll do."

"That thee may have and welcome, or longer if thee wishes," said Nicholas.

Dinner was got for the party, after which they returned to the falls, Josiah going with them, after making hasty preparation for his long journey. Long and weary it was, with a bitter reward, for his faithless sweetheart was married and gone, so that he had not even the poor satisfaction of upbraiding her for breaking her troth.

One September evening near the expiration of the month he made his appearance at the cabin, travel-worn and heartsick, all his hopes shattered, and leaving him with no desire to keep his pitch.

"I thought she was sparked tu stay," he said wearily, throwing himself upon the blankets, "but she jilted me, and of all the men in the world, you can't guess for who!"

"No," said Kenelm.

"For that d—— scoundrel Capron!" said Josiah. "Let the pitch go; I don't care for it no more. Women is just as you said they was, Kenelm. The devil take 'em all but my mother!"

The Hoot of the Owl.

MANY of your correspondents speak of the hooting of the big owl as a nightly occurrence. My own observation is that their note is the warning of a thaw in the winter or a storm at other times. When using the log sled I always dreaded to hear them call, for it meant slush and soft snow—always unwelcome to the logger

PINE TREE.

Neighbors.—III.*

Editor Forest and Stream:

The acquaintance of Jim and his neighbor had made such progress that formality ceased and invitations to call were unnecessary. There was even talk of putting a gate in the back fence. This was suggested by the women, who thought it would be so much nicer than having to go around the front way every time one wanted to "run over for just a minute." Jim winked knowingly at his neighbor, as if to say that a woman's back hair was not always in condition for public exhibition, and it is so inconvenient, you know, to have to "tidy up a bit" to go out front, as a woman always does when she goes to the butcher's wagon; and a back gate would save that trouble when one wanted to take the other a sample of her latest creation in jams or jellies. And the men, too, found it inconvenient to climb over, which a woman could not do with any sort of grace, so it was agreed all around that a back gate would be a handy thing to have.

Jim had settled himself into a comfortable position, and was adjusting his glasses for a quiet perusal of FOREST AND STREAM. His wife was rummaging in her work-basket for her thimble, and the prospect seemed good for a quiet evening together, when a gentle tap on the side door was followed by its opening, and the neighbor's wife walked in with a rippling little laugh preceding her "My! how cozy you look! My man is doing something to his shooting fixings, loading bullets, I guess, and he wanted me to ask you to go over and spend the evening with him," and, as if that settled it, she sat down and began undoing a bundle of fancy-work, a warning to Jim that if he did not go his reading would be made miserable by feminine gossip of frills and furbelows, which former experience had taught him to avoid, and when his wife held up a half-finished piece of feminine finery and began to talk of insertions and box pleats he laid down his paper and made his escape.

His knock on the door was answered by the expected "Come in," and he found his neighbor, coatless and collarless, emerging from the door of a room adjoining the one he entered.

"Come in here," commanded the neighbor, and Jim followed him into his snuggery. As he seated himself in a low-cushioned chair that seemed to fit every curve of his body he partly faced an open-grate mantel, now cold, but suggestive of winter comfort, overtopped by an autumnal picture of a hunter, which on closer examination proved to his host, seated on a log beside an old woods road, examining a grouse he had just shot, while a lolling, wise-faced dog lay looking on with evident satisfaction. Occupying one side of the room was a large case of mounted specimens of various game birds, hawks and owls, and beside it a cabinet of relics and curios. On the opposite side a glass case contained odds and ends of a sportsman's outfit, while all around the walls were hung with pictures, mostly of hunting scenes and landscapes. In the center of the room stood a large table covered with magazines, books and a smoker's set. "I am glad you came," said the neighbor. "I wanted company. How do you like my den?"

"You have a pleasant retreat. I especially admire that picture."

"It is from real life, and is a story in itself. The old road leads to a small lake that affords picturesque scenery and fair fishing. A camera enthusiast accompanied me one day for the purpose of making some pictures of the lake. On the way I shot a grouse, and when the dog retrieved it I was so struck with the beauty of its plumage that I sat down to examine it, which suggested the picture. I had a painting made from the photograph, and it is a pleasant reminder of one of the incidents in my experience."

"The camera is a happy means of retaining scenes that might be forgotten. If some one would invent as convenient a way of regaining lost opportunities his name would go down to posterity as a public benefactor," said Jim.

"Your idea is ingenious at least, and reminds me of an old hunter who had lain impatiently watching a flight of wild geese in the hope that some would fly low enough for a shot. When his patience was exhausted he arose and cried, 'Gol darn it, if I had a balloon I'd fetch 'em.'"

"Well," said Jim, "shooting from a balloon or a flying machine may not seem more marvelous to future generations than hammerless and pump guns would have been to our forefathers. The demand for more rapid means of extermination is always on the increase, and few men nowadays would be content to return to muzzle-loading days, when game had a more even chance against its pursuers."

"I for one cannot look back to those days without a feeling of regret that they are past. The younger men of to-day cannot appreciate it, for the breechloader came before their time; but I do not believe that any old-timer whose experience began with the muzzleloader can look upon his new acquisitions with the same degree of pleasure that he did his first tools. Then his outfit was harder to get, and the manner of preparation for its use gave him more time to think. His success was greater because he was more careful, and when he went hunting he was not so mechanical nor business-like. Look here!" He went to a closet and got out a handsome double-barreled muzzleloader. "That is my old friend; I used it for years before the breechloader became popular, and considerably since. I might use it to-day if I were not afraid of being ridiculed. It is a genuine Joe Manton, and cost nearly twice as much as my best hammerless. I give it as much care as I do my best guns, and think more of it. To me it is like a book filled with chapters of my happiest days afield, and I read better stories from it than are told to-day. It has outlived a dozen dogs, and will outlive me. And here is the old game bag, stained and frayed. I might find a few feathers in it from birds that were killed nearly half a lifetime ago, and they repeat the old, old story. I have the shot pouch and powder flask that belong to the outfit. Sometimes when alone I put them on and wish the days were back when they were in fashion."

---

*Being a continuation of "Making Acquaintance," in our issue of June 24, and "The Man Who Visits Spiker," issue July 3.

"I can't make even a fair guess what kind of tools the young man of to-day will have when he is as old as we are," said Jim. "Perhaps he will look back to this time with the same feelings that we look back to our youth, and will wish for a return of the good old hammerless days, and so the world goes along. As we grow older we do not see things in the same way that we used to. Sportsmen, more than any other class, seem to delight in calling back their earlier days, and I think their frequent communion with nature, which never changes, is responsible for this. It is a constant reminder of days when strife and responsibility were ununknown, when the morrow was looked forward to as a continuation of the joys of the present. Recall your boyhood days when the fields seem to have been greener, the sun shone brighter and your bread and butter tasted better, than anything you get now. Does the boy of to-day experience the same feeling? I don't know, but I cannot believe he does. I like to think of the old home when I was a boy; the bright fields and the dark woods that bordered them; the big barn and the old wagon house, even the woodshed, with recollection of irksome tasks and occasional interviews with pa. Days when a little labor went a great way, and nothing depended upon it but the punishment if it was not performed; when I never became tired nor cared for appearance; when I was proud of my stonebruise or walked on my heel with a stubbed toe; when my supper consisted of a bowl of bread and milk, and I went to bed under the shingle roof and was asleep before I fairly touched the pillow. The city boy grows to manhood without knowledge of these things. He learns to shoot because he looks upon it as a fad; he becomes enthused, then a sportsman and a better man."

"We can't be boys again," said the neighbor, "but we can indulge in a boy's pastime. What do you say to a day's fishing?"

"It's a capital thought. Where would you go?"

"We can't go far in a day, but we might hunt up a quiet nook somewhere down river where we can spend the day in loafing around and develop an appetite at least."

"Then let's take the women along and make a picnic of it," said Jim, as the door opened and he heard the rustle of a dress in the next room.

"That's a better thought yet; we'll do it."

"What's this about the women?" asked the neighbor's wife, entering the room.

"Oh, nothing; only we're going to take you fishing," said the neighbor.

"And have you consulted them yet?" she asked; but there was a gleam of pleasure in her eyes that assured the men there would be no trouble to gain consent, and Jim departed to make known the plan to his wife.

J. H. B.

PITTSBURG, Pa., June 27.

Memories of the Connecticut Valley.

EMPORIA, Kan., June.—*Editor Forest and Stream:* While you of the Eastland have been burning up with heat and drouth, Kansas has been blessed with a week of abundant showers, and so the prairies with their wealth of future harvests are beautiful to look upon. But a rainy day here is something to be dreaded. There is little of the lushness and sweetness of such a day in New England, but a time of stickiness, nastiness and mud beyond compare; and so instead of going a-fishing as one should, even if they cannot catch anything but mud cats and turtles, I have been moping about the house enjoying your correspondent who signs himself with two stars (I wish he would not be quite so modest, but give his name).

His trip to the Running Gutter Brook in Hatfield, Mass., has set me to thinking of the many days so pleasant to look back upon I have spent along that brook, and about the old mill pond of which he also speaks. It was my boyhood playground, and though I have since wandered over a good bit of our broad land, yet I have never found its equal, nor do I think it is all because we are apt to hold the things of our childhood so dear as we look back upon them. For with several thousand acres of woodland almost unbroken, save by the old wood roads; with the hills rising as abrupt as New England granite can make them; with sweet cold springs of water and several brooks made up from these springs, clear and beautiful as only the brooks that the trout love can be; and formerly with several ponds that have since, by the breaking of the dams, gone out—it is altogether a bit of the Adirondacks in miniature. And it is only twenty miles from Springfield. Some time it will be appreciated; and though a trespass notice and a wire fence take away the wilderness and freedom from the woods, yet this is coming to be the only way to keep the wild creatures with us; and, so I hope the day will come when the deer and even the moose will feed in what was once their pasture ground, even if it shall be behind the woven wire.

Men are still living who have seen wild turkeys in these woods. It is too far north for quail to succeed without special care—for they are found but little north of Mts. Tom and Holyoke. But in my boyhood days I have flushed in two hours over twenty ruffed grouse within a mile of the house. The snipe and woodcock loved the damp places; the wild ducks well knew the shallow feeding places of the ponds; the wild pigeons loved the grand old pines that then stood like the monarchs they were on these lands. Foxes were plenty enough for the good of the other game, with an occasional wildcat to keep them company. In the winter occasionally the track of an otter was seen where he had dragged himself from one brook to another; and in the spring on the slush ice of the pond there were usually two, side by side, dragging themselves for a distance, then in their haste springing forward a number of feet, and so passing on up to their summer quarters. The big Northern hare and his smaller cousin, the cottontail, afforded their full share of sport; and the gray, red and chipmunk squirrels abounded. For rarities an occasional great blue heron was seen. A pair of big fish eagles nested yearly in a pine on mountain side. Rarely a bald eagle would visit us; and the great Northern owl each winter told us when a thaw was coming; and on one occasion one stayed all night for my delectation undisturbed, I am glad to say, although then, boy-like, I wished for a rifle to shoot him with. I know not how much of all this wealth of wild life is left now. The grand old forests are gone; for—and I regret to say it—my hands helped in their destruction; but the second growth is there. The rocks and hills are indestructible. The springs still boil up. The brooks still add of their fullness to the Connecticut. The arbutus, the Indian pipe and the lady slipper can be found by those who love them. The wintergreen, checkerberry and all the running vines still make the woods beautiful. With care and protection much of the wild life could be restored and other wildness and beauty added.

But to come back to your correspondent, for while by this time I did not suppose there was a fair sized trout left in the brook, yet I trust that the big one of which he spoke, increased in length and girth by two years of good feeding, was waiting for his especial benefit. I trust the black flies all had business elsewhere. I trust the mosquitoes were so gorged with the blood of other fishermen that day that they were content to let him pass undisturbed; that he stirred up no hornets' nest; that the ruffed grouse with an apparently broken wing led him a chase only to leave him with the rush and roar of wing so pleasant to hear; that he got very thirsty and waited until he reached the Williamsburg road, and then at the little ford between the woods and bridge, where the water purls over the white pebbles, he lay down and drank and drank and drank; that then he went on over to the west branch toward where it comes down from the mountain, and found the place where the brook comes rushing over the ledge into the saucer-shaped pool, and after whirling around a few times hurries on again; and then "with good digestion waiting on appetite" he sat down and ate his luncheon, while the robins and blackbirds and pines sang to him their sweetest music, and though too late for arbutus and too early for buttercups, yet some sweet first wild rose of summer welcomed him with its half-opened blossom. And then picking up a goodly fish here and there he found his way down to the Hubbard's mill pond dam—now I suppose only a ruin; and so to the pond of the sawmill; then leaving the Cowles Meadow Brook for another day, went home. All this and all the other good that that delectable land could give him—if he is a good fisherman and true—I trust were his that day.

I would like to give him or some one else a hint in regard to some big trout. If the mill dam is the same as it was, go down under the hill and you will find a pool of water that is partly under the planks of the sluiceway. Under those plank is—or was—the hiding place of trout that will weigh from 2 to 4lbs. I knew they were there, as several that weighed like that were speared there (I had no hand in the business). But I never could get one, as I used only worms in my fishing, and as they had abundance of minnows and such feed, they were never hungry for anything I could offer. Perhaps they could be tempted with a fly.

But what memories the mention of that old pond bring up. Of my chosen friend among my schoolmates—drowned at the age of twenty-seven years in the Old Bed at the foot of Mt. Tom in sight of his home. Of the big brother dearer than any one else on earth, who taught me to fish and to draw the chickadees to feed from my hand of a winter's day, when working in the timber; and to find the earliest arbutus in the spring—but long since cut down in the strength of his manhood. Of still older brothers, on whose grave for many years has been laid the flowers that mark the soldier's last resting place; and of many others not so dear but of pleasant memory. I have felt the tug of the fighting bass and rushing trout, and even wet a line in the Sound off Fisher's Island; but for pure fun o' fishing, give me back my boyhood, a rainy day, those old companions, and the pond with its store of shiners, sunfish (or "punkin seeds," as we called them), its bullheads, eels and above all its pickerel. And so far as fishing is concerned, the world may wag its way, but I will stay by the old pond.

There was a long row of boys in the home; but the mother—although, as I afterward found out, while worrying about us as only mothers do—coming of the old pioneer stock, and so knowing the restless blood that run in our veins, when the rainy day came, and with it the request that we might go fishing, seldom said no; and so the tribe, barefoot but dressed in warm woolen clothing, with long pine poles and lines to match, and a big box of worms for bait for the lesser fish, would start off; and stopping to pick up some frogs for pickerel bait as we went along, we would reach the pond. Across one branch of it was a causeway for the road for the log teams. On each side of this the water was deep and black; and here most of the fishing was done. But along the edges of the pond were a few places where the pickerel grass grew; and so putting on a coarse hook and baiting with frog, the lure would be sent out along the edge of the grass and "skittered" along the surface of the water. Three times was the rule to go over each place, and then if there was no response to move on. But often the V-shaped ripple would tell of the coming of the fish; then a glimpse of the white, up-turned belly as the bait was taken; a moment of intense suspense would follow; then the sharp jerk, and the fish would be flopping on the bank and a proud, happy boy would cut a forked stick and string his prize. Can anything now give such pure unalloyed delight as were such moments?

When we had gone over the pickerel water, we would change to a smaller hook, wind a bit of lead hammered thin around the line for sinker, put on a cork for float and a worm for bait, and go to still-fishing. The rain drops would gently make little circles and bubbles on the surface of the quiet pond, and just as gently wet us to the skin; and the road would change to mud and stickiness; but we were fishing, and so cared for none of these things. How eagerly we would watch those floating bits of cork until the bite came, and then with what fierce joy the struggling captive would be sent out on to the land; and what bitter disappointment followed when, as sometimes happened (and they were always big ones), a fish was sent into the water on the other side of the causeway. But the moments and hours would slip by all too fast; and wet and hungry we would go to home and supper. But whether successful or not, it was never to fault-finding nor even to be made fun of; for if unsuccessful the mother would only say, "Well, you have had your walk anyway," and I realize now how much that meant. After my big brother left home, with what joyful anticipation I would look forward to his occasional return. The memory of one Fourth of July comes as I write. On the pond there was a raft made of slabs from the sawlogs, big enough and solid enough for an army pontoon. We took this and poled it about next the shores of the pond to places inaccessible from land, and I watched him as he pulled in the great pickerel. What cared I for oration, picnic, election cake or lemonade? I was with my brother, and a-fishing—and that was enough. But now I must walk alone, and the way has been darkened always since his death.

PINE TREE.

Changing Ways.

SAN FRANCISCO, Cal., June 22.—*Editor Forest and Stream:* I have just been reading the last number of FOREST AND STREAM by the waning twilight, smoking my first pipe, which has also waned and needs refilling.

Settling down in my easy chair, my mind wanders back to my boyhood days, when I was wont to look at my father's two good old guns resting on the rack, made of two pairs of branching buck horns, trophies of his shooting days, and wonder if the day would ever come when I would become the proud possessor of a gun all my own.

Boys in those days never were given watches and guns when barely in their teens, as now. I see young gentlemen of twelve and fourteen togged out with double barrels, cartridge belts and all the paraphernalia of old sportsmen; nor did boys have an allowance of pocket money to an amount we boys never dreamed of possessing.

It was the height of our ambition to be able to scratch together enough to make sure of sufficient for entrance money by selling melons and gingerbread on "General Training Day" (the annual militia muster) to gain admittance to the circus, that came through our village periodically.

What old boy does not remember "June Titus and Angevine's" grand circus and menagerie, that made its annual rounds of the country, and to which we boys looked forward as the great event of the year? And when the advance agent came to town and posted up those famous displays of wonderful horses and ferocious lions and tigers chasing fleeing Africans (one in the tiger's mouth who was unfortunate in being a poor sprinter, and was being taken in and done for), how we spent hours in staring at these illustrations, with open-mouthed wonder, and on going to bed dreamed of being tossed by huge elephants and chewed up by roaring lions and tigers until in our efforts to escape we found ourselves on the floor, arousing the household by an unearthly yell. There is none of that sort of thing for the boys of these days. They are all too precocious. Even the Santa Claus legend don't go any more. I asked a mature young gentlman of six the day before last Christmas if he was going to hang up his stocking, whereupon his nose turned up with scorn, he replying, "Oh, that old gag don't go. How is Santa Claus to come down a narrow chimney flue with that pack on his back? Besides, there's no such fellow as Santa Claus, anyhow. That yarn will do for kids and babies, but it don't fool me."

Here was this precocious youth of six already blasé, and prepared to argue the case with his grandfather, and refute all the delightful legends of our childhood. I once fell in with a book called "The Myths of the Middle Ages," wherein the author proceeds to utterly demolish the story of William Tell, Pope Joan, etc. He proves that the story of William Tell is claimed by every country on the face of the globe; that Pope Joan was not a woman—in fact never existed; and so he goes on to knock spots out of the whole category of those wonderful characters in which we believed, as true as Gospel. Now, what should be done with such an iconoclast? It would give me great pleasure to knock him on the head at sight. Thus to utterly destroy the beliefs of our childhood.

I have wandered off from what I had in my mind to say when I commenced—the reflections that were running through it after reading the FOREST AND STREAM.

I was going to ask what there is in the general make-up of a man that develops a passion in him to destroy life wantonly often, and call it sport, the disposition to kill something. Do we ever stop to ask ourselves what sporting really is? Is it not cruetly? Do we inherit this passion from our savage ancestors? A man goes out and shoots birds and animals, and returns in great glee if successful. Does he give a thought to the wounded game that drags itself off to die in agony? There is a sad side to the business, one the sportsman does not see. If thought was given to the poor wounded birds and the suffering he has given, would it not detract greatly from his pleasure? For the true sportsman is humane and naturally merciful, but he doesn't stop to think of the misery and suffering he inflicts when he wounds an escaping bird that falls in the bush to die a lingering death.

I have been thinking a good deal over this question, superinduced by reading the stories in the FOREST AND STREAM of the killing of deer, birds and other game related with so much glee and satisfaction. Some people will say that all were created for man's uses. How do we know that? I grant you that possibly for his necessities, for food; but how many sportsmen who go after birds and beasts are impelled to do so by necessity? No; it is that wanton passion to kill something. If they only confined themselves to animals that are enemies to man they are to be applauded, but such are scarce.

I find that this aversion to killing is growing as I get older, and the sportsman's interest assumes a milder form. I go out less, and when I do I avoid the risk of wounding my game. If I am not sure of it I do not shoot.

On one occasion I came across a wounded deer slowly dying. As I approached, it turned its large mournful eyes upon me with an expression of mute agony, which said plainly, "What have I done to deserve this cruel deed?" Those reproachful eyes haunted me for days, and I have never pulled a trigger on a deer since, and I have had them nearly run over me.

As evidence that I am not alone in my views, I met in the street a few days since an acquaintance who is

accounted one of the most enthusiastic sportsmen on the coast, and said, "Well, how about shooting; been doing any lately?" "No; the fact is," said he, "I am beginning to think as I grow older that shooting after all is a cruel thing, and I am conscious of a growing repugnance to taking life." I was surprised to hear such sentiments from the last man of my acquaintance whom I suspected of such views.

As I say, I find myself taking less and less interest in shooting, and the dust of many moons rests upon my guns on their racks; but I have abated naught in my enthusiasm for fishing—somewhat inconsistent, no doubt. There is a distinction, if not a difference; and I satisfy my conscience by adopting the views of scientists, who assert that fish are not sensible to pain as are birds and animals, the proof of this being the fact that after being hooked and escaping, they will bite again. Take, for instance, the shark, who, after being hauled on deck and having been ripped open and thrown overboard, will follow the bait again with his entrails trailing behind. All sailors will corroborate this assertion. Besides, the true sportsman always kills his fish immediately, and there is no lingering suffering. No doubt I shall be laughed at for this not very nice distinction perhaps between shooting and fishing, but it is a compromise that satisfies my conscience, until I change my views or the fishing becomes too poor to be an object, which I trust will not be the case for many a day—not, at least, as long as I am able to follow a good trout stream.

PODGERS.

Just About a Boy.—XXII.

THERE was a new, clean smell in the air when we rode away from Ward's cabin under the snappy stars, and there was that peculiar stillness which comes into the night just before the gray of dawn. So it was a silent cavalcade of dim forms, conversing but little, and that little in very low tones, that rode toward the dim, dark bulk across the the northern sky which I knew to be the red buttes where the Bad Lands came down and ended against the plain.

In due time we reached a spot where a few scraggly cedars grew and tied our horses there, going on afoot to the hillside above the spring, where Ward thought we should get a deer without much trouble when they came down to drink about daylight. Objects were still only dim blots in the general scheme of darkness when we four settled down among the rocks and began our watch that was to end in killing a big buck.

If anyone spoke now it was in a whisper and the comfort of a pipe was out of the question, for game can scent tobacco smoke a good bit further than they can the men who make it.

Ike had picked a special point of vantage for the boy, and had taken him under his special care, to be initiated into the mysteries of big game shooting, while Phil and I sat among the boulders a short distance away, talking of old times.

This was too difficult to continue in a whispering conversation of any great length, so we soon became mere motionless, but watchful, bits of the landscape, and remained as such until a cheeping call such as a young grouse makes turned our eyes toward big Ike.

A pantomine followed, in which Ike told us by signs that three deer were advancing toward the spring below us, though objects were hardly yet more than patches of darkness in the gray dawn, which had now snuffed out all but the morning star. Phil and I soon had the deer located as they moved against a patch of quaking asp, and then saw a little later that there was a very small buck and two does in company. Again Ike chirped, and again there was pantomine, which said, "Let them go; we will get a bigger buck for the kid." Slowly the deer loitered along, nipping at the fresh herbage, looking, listening, always alert, and slowly advancing toward the spring, and before the sun was up they had dipped their pretty noses into the clear water, while the four of us watched them at a distance of 20yds. They had finished drinking when two more, a doe and a fawn, trotted up, took a late drink and then the whole five moved down into the cañons and were gone when the sun shot his first yellow ray across the world and tipped Mt. Zahn with gold.

Then Ike unfolded his big frame and straightened up behind the rocks. "Come on, Kid; ain't no use monkeyin' 'round hyer no longer; deer don't drink arfter sunup, an' we'll hafto hunt th' gulches fer yer buck now," he said.

"Which away, Ike?" asked Phil.

"Reckon them breaks where yer lion like tu got yeh d'ought tu pan out—which way's th' wind—alright, guess we'd better git in yunder," he said, as he wet one finger and held it up to "feel the wind," an old trick of the wilderness, by the way, and one that always shows the true wind direction, because the windward side of the wet finger "gets cold quickest." Leaving the spring we started to travel afoot in a wide circle that would cut a lot of very rough country, and end at the horses, Ike and the boy traveling together and Phil and I spreading out so we could cover a good bit of ground thoroughly.

A mile had been reeled off when I heard the grouse call again, and Phil beckoned me to come. Together we advanced toward Ike, being guided by a pantomine from him as he crouched behind a big boulder where we soon arrived.

"Nine of 'em 'n a bunch; Kid see 'em fust, 'n' they's a whalin' big buck in amongst 'em. Juss gone int' thet patch o' cedars crost th' cañon, 'n' I reckon they're a-headin' fer th' no'th side o' th' hill tu bed down," Ike explained. "Reckon we'd better cut 'round this side 'n' head 'em 'bout on th' ridge, hadn't we?" queried Phil.

"Juss what I cal'lated. Kid'd ought tu git a good open shot thar, 'n' he kaint miss handy, fur he'll have good runnin' shots if they break. Less move, fur they ain't travelin' slow."

A minute later we were moving around and up the hill at a slow trot, and soon had brought the ridge into view, but the deer were not in sight.

"See 'f yeh kin locate 'em, Phil," said Ike, as he crouched with the boy and I behind the boulders.

Phil left his gun and crawled out along the side hill, carefully scanning the hillside as it came into view below the ridge.

Suddenly he reversed his movement and came rapidly back to us. "Comin' right here 't th' fut o' th' hill—big buck fust, 'n' not 40yds. away. Git ready, Kid, yeh got a shore shot this time, 'n' he's a whopper, too," he said.

The boy poked his brown rifle barrel forward over the rocks, scraping it slightly as he did so, and just then the big buck came to the top of the ridge and stopped stock still, looking toward the morning sun and flapping his big ears forward.

"Stidy, Kid," hissed Ike in his ear; "don't yeh pull trigger now tull yeh know yeh got him, fur yeh won't git 'nother shot at 'nother buck like thet 'f yeh live tu be a hundred year old. Take yer time—haff way up his shoul'er 'n' when yeh know it covers him, cut 'er loose, but——" Bang! The rest of Ike's instructions were lost in the roar of the gun. The big buck doubled up like a jackknife, and then bounded, or rather plunged, away down the hill with the whole bunch at his heels and all with their "flags flying," except the big buck, who ran low, with heavy, plunging leaps and outstretched neck.

Instantly the boy leveled his rifle and the lead began to stream after the buck, while Ike had his gun with the sights in line with the fleeing deer as a safety measure.

"Stidy, kid," said Phil; "yeh got him hard hit, 'n' he kaint git fur—no use o' schutin' up th' meat."

But the boy's blood was up, and the rifle barked and spat, and the dust clouds rose about the buck where they struck, until, just when another leap would have hid him among the cedars, he plunged down in a heap and rolled against a boulder—still.

The two other deer just behind him cleared both his prostrate form and the big rock at a single bound and crashed away among the blue growth of stunted trees which waved as a farewell as they disappeared.

Then the boy broke loose and yelled like a young Indian on his first warpath, and the way he bounded down that rocky steep would have done credit to the big blue buck himself.

Ike and Phil grinned and looked at me.

"Kinder gits rattled sum when it's all over, don't he?" said Ike.

"Mighty stidy headed kid while th' fun's goin' on," said Phil. "I'se watchin' his gun, too—wan't a sign o' shake' er fever f'm th' time he fust poked it acrost th' rock tull th' buck went down, though he shot might fast."

"Only the way he always shoots," I answered. "I've seen him kill half a dozen young prairie chickens in about as many seconds with a light rifle while they crossed a road, and it was about dusk, too."

We were proceeding slowly down toward the boy and the buck as we spoke, and in a moment the youngster began:

"Gee! Hain't he a daisy! Ain't that a head fur yeh! Reckon I didn't fix him plenty er nothin'—five shots, 'n' three of 'em clean thro' him, 'n' 'nother 'n juss ketched th' side o' his year 'n' tuk a chip out—kaint find th' other 'n 'tall; must 'a' missed, I reckon. I want tu keep thet head, C'manch', 'n' take it back tu th' States—one, two—nine prongs. Gee, he must be an old feller!"

"Well, Kid, git yer knife out," said Ike; "yeh might's well learn tu take keer o' yer game now 's ary other time, so take holt—it's gittin' warm a'ready, 'n' we'd better be gittin' too-woards home."

"I'll git th' hosses up," said Phil as he started off.

Under Ike's directions the boy proved himself a good butcher, and soon had the quarters unjointed and the body skinned out of the deer, and yet had not skinned the quarters and legs out of the hide at all.

"Peck 'em a heap easier thet a way," said Ike. "Say, kid, ain't thet a purty big hole thar fer one ball to make—lemme see it a minnit—. Yessir, blamed ef he didn't put two bullets int' almost th' same place—see, one of 'em juss cut a piece out'n nen follered right in th' same place where th' other 'n' went. Kid, yeh couldn't do it ag'in 'n a thousan' year—barrin' acksdunts."

When Phil came up with the horses, we packed the deer on one, tied the head on a second, and the tenderloins were rolled in a "slicker" and lashed on behind the saddle of the third. Then we started back for the ranch, Ike and Phil telling of other hunts when deer had not been killed, with so little trouble; of times when a buck must die or a man must starve, and only a cartridge or two to go on; times when the Sioux got restless and hunted the hunter, while he must needs hunt and dodge together. They were interesting men, those two sturdy plainsmen who lived where the Bad Lands came to the edge of the plains, and who had fought the country, the storms, the Indians and all, and were still alive and as tough as pine knots when we came down the hill in the warming day.

"You see thet feather a-hangin' over th' bear skull down 't th' house, didn't yeh, Comanch'?" said Phil. "Wull, right up ag'in thet boulder over yonder 's where ole Joe Lay Flee bored th' Sioux ut wored ut—long 'n seventy-four er five—'n' I juss santered up yere 'n got th' big feather outen his war bonnut arfterwards—thet is arfter we'd burried Joe—pore cuss, they had him shot full o' arrers, 'n' he pegged out 'n' a cupple o' days arfter he got yere; but he got seven ut he knowed of, he tole us—thet's his grave over yon, wher' th' pile o' rocks is. Ike 'n' me planted him thar. Good feller, Joe was, too."

"What's uh matter, Kid? Yeh ain't sayin' nuthin," said Ike.

"I'm inderested," answered the youngster, as he glanced back at the horse that carried the big buck's head and watched it swing from side to side and up and down under the movement imparted by the swinging gait of the cow horse. "Gee, won't they look alright down 'n th' States," he said, as we pulled up in the shade of the house and began to unpack.

EL COMANCHO.

Extraordinary Docility of a Ruffed Grouse.

SPRINGFIELD, Mass., July 1.—*Editor Forest and Stream:* In one of the mountain towns west of this city a system of water-works is being built. The reservoir is 200ft. above the river, with a primitive road cut through the forest to the reservoir. By the side of this road, under a fallen tree trunk, a ruffed grouse has nested within 1ft. of the traveled track of the road. At first she resented the intrusions of the passing workmen, but soon seemed to lose her fear and would remain on the nest while the teams passed, and at last allowed one of the men to take her bodily from the eggs and put her back again, when she quietly resumed her sitting, hatched her brood and left.

Natural History.

Practical Snake-Lore.

Modern Treatment of Snake Bites.

CONSIDERING the proneness of the average newspaper to circulate snake myths such as stories of their young running in and out of their digestive organs, of snakes charming their prey, and of snakes carrying horns or stings in their tales, it is very remarkable how utterly oblivious they have been, and remain, of the advances which modern science has made in the treatment of snake bites. In nearly all other branches of science the newspapers keep their readers fairly well acquainted with what is going on, even though the new and wonderful inventions cut but small figure in the ordinary affairs of life. But where there is an important advance in the treatment of snake bites there is peculiar reason why it should be promptly given the widest publicity. For promptness of proper action is almost of as vital consequence in counteracting the effect of venom in the veins as it is in saving a spent swimmer from drowning. In both cases even the delay necessary to summon medical aid may be fatal. The knowledge what to do in both cases might well be taught in public schools in rural districts, and should certainly be a part of the mental equipment of all who spend much time in the woods and on the waters.

Of the old-fashioned popular remedies for snake bites, it may be said generally that the giving of a single moderate drink of whisky and lancing and sucking the wound are good as far as they go. Ammonia is worse than useless. It increases the pressure in the arteries, which increases the loss of blood through their walls, and it is positively dangerous. Split chicken and other poultices are inert. And the same may be said generally of all the multitude of so-called vegetable antidotes. I have a very long list of these, collected in different parts of the country, and including that of Sampson, who was a slave purchased and set free by the Colony of South Carolina, about 1745, for making known several antidotes which he professed to have learned from the Indians. Possibly some of these by stimulating the action of skin, bowels or kidneys may assist nature's efforts to finally eliminate venom from the system. But if a fatal dose has been injected (which, fortunately, does not always happen), the venom in the veins has a fatal start ahead of any remedy taken into the stomach. As early as 1860 Dr. Weir Mitchell, of Philadelphia, published experiments showing that the only way of neutralizing venom in the veins was by injecting the antidote with a hypodermic needle. And the needle remains to-day the one indispensable instrument, though there has been great advance in the remedies to be injected. Dr. Mitchell found that venom contains two separate and distinct poisons. One, called venom peptone, kills by paralyzing the principal nervous centers controlling the heart and lungs. The other, venom globulin, destroys the chemical constitution of the blood itself. It loses the property of coagulating, and it becomes as thin almost as kerosene, so that it no longer courses through veins and arteries, but leaks through their walls as water would through muslin. The stomach is too slow and roundabout a method of getting our antidotes into the blood to meet and destroys such venom. The man who would be prepared to properly treat a snake bite must have at hand a hypodermic needle and the proper antidotes. There are quite a number of chemical reagents which promptly break up all organic compounds, such as snake venom, but we must select those which will do this with least destructive action upon the flesh. Dr. Mitchell's earliest recommendation was the use of bromine or iodine. Later experiments led to the use of permanganate of potash—which has also been recommended, by the way, as an antidote for poisoning by morphine. But the most recent experiments have seemed to show that a solution of chromic acid, of one-one-hundredth, has least destructive effect upon the flesh and the greatest upon the venom, and next to that is recommended chloride of gold. But time is of the essence in the application of these remedies, as may be easily imagined when one thinks how swiftly the currents of the blood flow. A five-minutes' unchecked flow of blood may scatter the venom where the antidote can never find the half of it. So the first thing on receiving a bite should be to check the circulation by bandages. Every second here counts, and even vengeance on the snake should wait for this. The object is to arrest the venom until the antidote can be injected after it. Then the bandages may be alternately loosened and tightened again, to restore circulation and let the system meet the poison a little at a time.

Ten years ago this would have been the best treatment known, and it is the best to-day on the line of neutralizing the venom. But in 1888 a Dr. A. Mueller, of Australia, published an account of remarkable cures made by himself on an entirely different line. He did not try to pursue the poison with an antidote, which would destroy it, but to meet it in the nerve centers with another poison which would act on these centers in a directly contrary manner. For instance, if venom kills by turning off the nerve currents, he would use a reagent which would kill by turning them on. If venom acts anywhere with a minus sign this should act at the same point with a plus. He would neutralize, not so much the venom as its effects. He found this reagent in strychnine. Strychnine makes known its action upon the nervous centers by causing convulsions resembling those of tetanus, or lockjaw. And in 1883 rattlesnake venom was first successfully used by Dr. Ameden, of Glens Falls, N. Y., as a remedy for tetanus.

The treatment recommended by Dr. Mueller is the promptest possible injection of about a tenth of a grain of strychnine, to be followed by another in twenty minutes unless the symptoms become more favorable, and ever by a third. Slight tetanic symptoms will give warning when the strychnine has overcome the venom and before it can produce dangerous strychnine poisoning.

While this treatment has not met universal acceptance yet it has been very largely followed, both in Australia and India, and it is apparently rapidly growing in favor. But it possibly has one weak point, and that point, too, perhaps, of greater importance in America than in India or

Australia. In theory, at least, it admirably counteracts the effects of venom peptone, but it does not appear to neutralize in any way the venom globulin. The proportions of these venoms vary in different snakes. All our venomous snakes, except the elaps or coral snake, belong to the pit viper family, and they all seem to have a much larger proportion of venom globulin than any other venomous snakes. For instance, our rattlesnake has twenty-five per cent. of it, while the India cobra carries ninety-seven per cent of venom peptone and only three per cent. of venom globulin. And here in Central America, where this happens to be written, I have many reliable accounts of a snake called by the natives the blood snake, whose venom is so strong in globulin that the mucous membrane of a person bitten will exude blood everywhere, gums, nose, bladder, etc., and sometimes even a bloody sweat will come through the ordinary skin. In one case told me by the physician who attended it, and successfully, a slight accidental cut on a finger bled continuously for twenty-four hours. I have sent samples of this snake to the National Museum in Washington, to be identified, and when identification is received I will transmit his name.

So, in all this hemisphere, the man who would be equipped to treat a snake bite promptly should have a hypodermic needle, and both strychnine and chromic acid. And if the popular idea of the Keely cure is well founded, chloride of gold might be added to the assortment. For the opportunity might occur, not to kill, but to cure two birds with one shot.

In this connection it should be suggested to our surgical instrument manufacturers to get up a compact pocket case containing a needle and the necessary drugs both in tablet and liquid; and a mechanical cupping or sucking arrangement would be a very desirable addition. Such a case is already said to be made by William Hume, Lothian street, Edinburgh, price 10s. 6d.; and one without the mechanical sucker for 6 francs, by Pelliot & Dulon, Rue de Siècle, Paris.

JACK HILDIGO.

Birds as Weed Destroyers.

BY SYLVESTER D. JUDD, PH. D., ASSISTANT IN BIOLOGICAL SURVEY.

From the Yearbook of the Department of Agriculture.

THE problem of weed destruction is perennial in every land where agriculture is practiced. Indeed, so serious is it that soil culture may be said to be an everlasting war against weeds. For a thorough understanding of the weed problem, it is necessary not only to define a weed, and to study its relations to crops, but to ascertain what are the agents, natural or artificial, which act as weed destroyers.

A weed is a plant out of place. Certain plants seem to have formed a habit of constantly getting out of place and installing themselves in cultivated ground. Whether actually among crops or in adjacent waste land, from which they can spread to cultivated soil, they are always a menace. In the garden they occupy the room allotted to useful plants and appropriate their light, water and food, so that any check on these noxious plants, a million of which can spring up on a single acre, will not only lessen nature's chance of populating the soil with these worse than useles species, but will enable the farmer to attain greater success with cultivated crops. The hoe and the cultivator will do much to eradicate them, but some will always succeed in ripening a multitude of seeds to sprout the following season. Certain garden weeds produce an incredible number of seeds. A single plant of one of these species may mature as many as a hundred thousand seeds in a season, and if unchecked would produce in the spring of the third year ten billion plants.

Fortunately certain agents are at work to check this harvest, and perhaps the most efficient among them are seed-eating birds. Each fall and winter they flock in myriads to agricultural districts and live upon the ripened seed of weeds. Since they attack weeds in the most critical stage of life, the seed period, it follows that their services must be of enormous practical value. The benefits are greatest in the case of hoed crops, since here are found the largest number of annual weeds, which, of course, are killed by frost and must depend for perpetuation solely upon seeds. The principal weeds which birds prevent from seeding are ragweed, pigeon grass, smartweed, bindweed, crab grass, lamb's-quarters and pigweed. It is sometimes asserted that no thrifty farmer will allow these noxious species to ripen seed, but such prevention is practically impossible, because even if all the edges of fields and all waste ground could be cleared, weed patches along ditches, roads and hedgerows would still remain to disseminate seed to cultivated land. It is in just these places that birds congregate in greatest numbers.

Some birds eat more or less weed seed throughout the year even when insects are most abundant. But their good work practically extends from early autumn until late spring, and is perhaps most noticeable in winter when the ground is white with snow. During cold weather most of the birds about the farm feed extensively upon seed, and gorge themselves until their stomachs and gullets become completely distended. It is not at all uncommon for a crow blackbird to eat from thirty to fifty seeds of smartwood or bindweed, or a field sparrow 100 seeds of crab grass, at a single meal. In the stomach of a Nuttall's sparrow were found 300 seeds of amaranth, and in another 300 seeds of lamb's-quarters; a tree sparrow had consumed 700 seeds of pigeon grass, while a snowflake from Shrewsbury, Mass., which had been breakfasting in a garden in February, had picked up 1,000 seeds of pigweed. The birds most actively engaged in consuming weed seed are sparrows and finches, including more than a score of species,* horned larks, blackbirds, cowbirds, meadow larks, doves and quail.

Sparrows are the most abundant and widely distributed of the smaller birds inhabiting the rural districts of the United States. Their intimate association with agricultural interests has suggested the importance of a careful inquiry as to their food habits, and such an investigation based on field observations and an examination of the contents of stomachs in the laboratory is now being made by the Biological Survey. Sparrows have been collected in practically all the States, the District of Columbia and Canada, and some 4,000 stomachs have already been examined. The results show that during the colder half of the year the food of these birds consists almost entirely of the seeds of weeds.

Sparrows generally seem to be regarded with favor, but the English sparrow drives away native birds and does so much damage to grain and fruit that it is considered a pest. The native sparrows might also be suspected of injurying crops; but though they frequently sample grain in stubble fields they have not, as yet, been found guilty of committing serious depredations. In order to compare the grain-eating propensities of the various species, specimens were collected in a field a few miles south of Washington, D. C., before and after the wheat was cut. Of nineteen native birds, representing song, field, chipping and grasshopper sparrows, only two had eaten grain, and these had taken only one kernel each, while every one of the five English sparrows was gorged with wheat. But with all his faults, the English sparrow does some good by assisting in the work of weed-seed destruction. Flocks of thousands of these birds may be seen every autumn on the lawns of the Department of Agriculture, feeding on crab grass and yard grass, two weeds which crowd out good turf-making grasses. The English sparrow also deserves credit for destroying seed of the dandelion, which is a prolific weed throughout the United States, especially in lawns, cemeteries and pastures.

In 1894 English sparrows were observed by the writer destroying dandelion seeds in Cambridge, Mass., and during the last three years in the public parks of Washington, D. C. In the latter city the birds eat these seeds from the middle of March until the middle of August, but chiefly in April and the first half of May, when the lawns are literally yellow with flowers. After the yellow petal-like corollas have disappeared the flower presents an elongated, green, egg-shaped body with a downy tuft at the upper end, and in this stage it is most frequently attacked by the English sparrow. The bird removes several long scales of the inner involucre by a clean cut close to the receptacle or base of the head, thus exposing the plumed seeds, or akenes. He seizes a mouthful of these akenes and then lops off the plumes with his bill and swallows the seeds. In many cases, especially when hungry, he does not take the trouble to remove the plumes. Generally a score of seeds are droppd in tearing open a head, and usually a few are left clinging to the edge of the receptacle. The mutilation caused by the birds' beaks can be detected until the flower stalk dries and falls.

In order to determine how much damage was done to dandelions on the lawns of the Department of Agriculture, every flower stalk was picked from a rectangular space 6ft. 2in. long by 3ft. 3in. wide. This was on April 29, 1898. Of the 413 stalks collected, 358 showed unmistakable marks of the sparrow's bill. On the next day 293 stalks were gathered from a circle 2ft. in diameter on the other side of the lawn, and 275, or 93 per cent., proved to be mutilated. These and similar observations seem to show that at least three-fourths of the dandelions which bloom in April and May on the Department lawns are mutilated by birds.

In the destruction of dandelion seeds, the English sparrow is aided by several native birds, chiefly the song sparrow, chipping sparrow, white-throated sparrow and goldfinch. So far as observed the native birds usually do not cut open dandelions, but feed upon those left by the English sparrow. The song sparrow, however, is capable of getting out seeds alone, for one which was kept in captivity manipulated dandelions in precisely the same way as the English sparrow. The song sparrow and the chipping sparrow make a practice of feeding from the short-stemmed heads that have already been opened, but even here the chipping sparrow has difficulty in pulling out the seds, and often simply picks up those which have been dropped. Goldfinches frequently pursue an entirely different course, although they also pick seeds from the green involucres torn open by English sparrows. On May 3, 1898, a dozen goldfinches were observed for a couple of hours on the Department lawns. First they hopped along the ground; then one bird flew to a dandelion stalk 6in. high, alighted crosswise, and moving toward the downy ball until it bent the whole stem to the ground, ate seed after seed.

Besides the lawn weeds already mentioned, such as dandelions, crab grass, and yard grass, several others, including pigeon grass, knotweed, sedge, oxalis and chickweed, furnish food for birds. These plants are also troublesome in other places besides lawns. Knotweed litters up paths and roads in spots where turf is broken, chickweed occurs in plowed ground, and pigeon grass, which is considered one of the worst weeds in Minnesota, is found among many crops. The seeds of these plants are eaten by the song sparrow, chipping sparrow, field sparrow, junco, English sparrow, tree sparrow, Gambel's sparrow and white-throated and white-crowned sparrows.

Among the weeds which are troublesome in fields, especially among hoed crops, may be mentioned ragweed, several species of the genus *Polygonum*, including bindweed, smartweed and knotweed, pigweed, nut grass and other sedges, crab grass, pigeon grass, lamb's-quarters and chickweed. Every one of these weeds is an annual, not living over the winter, and their seeds constitute fully three-fourths of the food of a score of native sparrows during the colder half of the year. Prof. F. E. L. Beal, who has carefully studied this subject in the Upper Mississippi Valley, has estimated the amount of weed seed eaten by the tree sparrow, junca and other sparrows that swarm down from Canada in the fall and feed in the rank growth of weedes bordering roadsides and cultivated fields. He examined the stomachs of many tree sparrows and found them entirely filled with weed seed, and concluded that each bird consumed at least a quarter of an ounce daily. Upon this basis, after making a fair allowance of the number of birds to the square mile, he calculated that in the State of Iowa alone the tree sparrow annually destroys about 1,750,000lbs., or about 875 tons, of weed seed during its winter sojourn

Besides tree sparrows and juncos, the most important gregarious sparrows that destroy weeds in the Mississippi Valley and on the Great Plains are the fox sparrow, snowflake, the white-crowned sparrow, Harris' sparrow and longspurs. Further south are found lark finches, while on the Pacific slope occur Nuttall's sparrow, the golden-crowned sparrow and Townsend's sparrow. East of the Alleghanies the most active weed eaters are the tree sparrow, fox sparrow, junco, white-throated sparrow, song sparrow, field sparrow and chipping sparrow.

On a farm in Maryland, just outside the District of Columbia, tree sparrows, fox sparrows, white throats, song sparrows and juncos fairly swarmed during December in the briers of the ditches between the cornfields. They came into the open fields to feed upon weed seed, and worked hardest where the smartweed formed a tangle on low ground. Later in the season the place was carefully examined. In one cornfield near a ditch the smartweed formed a thicket over 3ft. high, and the ground beneath was literally black with seeds. Examination showed that these seeds had been cracked open and the meat removed. In a rectangular space of 18 sq. in. were found 1,130 half seeds and only two whole seeds. Even as late as May 13 the birds were still feeding on the seeds of these and other weeds in the fields; in fact, out of a collection of sixteen sparrows, twelve, mainly song, chipping and field sparrows, had been eating old weed seed. A search was made for seeds of various weeds; but so thoroughly had the work been done that only half a dozen seeds could be found. The birds had taken practically all the seed that was not covered; in fact, the song sparrow and several others scratch up much buried seed.

Most of the song sparrows, practically all the field, chipping, vesper and grasshopper sparrows, dickcissels, lark finches and Harris' sparrows of the central portion of the United States spend the winter in the South, while their places are taken in the North by snowflakes, juncos, clay-colored longspurs, fox sparrows and white-throated and white-crowned sparrows. All these birds have much the same food habits, but they differ in the quantity and kind of seed which they eat. Thus, the tree sparrows, or "winter chippies," snowflakes and longspurs feed largely upon seeds of grasses, especially those of pigeon grass, crab grass and allied species, while the white-throated sparrow in the Eastern States, Nuttall's sparrow in the Pacific Coast region, and the white-crowned sparrow so abundant in the central part of the United States, are particularly fond of amaranth and lamb's-quarters. In January the whitethroat depends upon ragweed and various species of *Polygonum*, such as bindweed, knotweed and smartweed, for more than half of its food; the white-crowned and fox sparrows take nearly as much as the whitethroat, while juncos destroy a still greater amount of ragweed.

The chippy and song sparrow are perhaps the best known of all the native sparrows of the United States. When not living in hedgerows or bushes about buildings the song sparrow inhabits the shrubbery along water courses. It seeks its food on the ground, generally among bushes or weeds, and has a peculiar mouse-like way of running through the grass. Seeds of weeds, especially smartweed, bindweed and other species of the genus *Polygonum*, pigeon grass, pigweed, lamb's-quarters and ragweed, and also some crab grass, form four-fifths of the food of this species during the colder half of the year. Ninety-five out of a hundred of the birds collected during March and April had eaten weed seed, and many stomachs contained from 50 to 200 seeds each.

The chipping sparrow is a familiar little bird, readily recognized by its reddish cap, cicada-like note, and habit of lining its nest with horsehair. It eats the seeds of such troublesome grasses as pigeon grass, crab grass and closely allied species, and during September and October these and other weed seeds make up three-fourths of its food.

The field sparrow is closely related to the chipping sparrow, but may be distinguished by its reddish bill. It is thoroughly commonplace in appearance, and in habits is much shyer than the chipping sparrow, which is often called a dooryard bird. Field sparrows are very abundant about the farm, and their food consists of practically the same seeds as those eaten by its relative.

The grasshopper sparrow, so called from its dry, monotonous note, is even more a bird of the fields than the field sparrow. It is one of the few species that eats the seeds of rib grass. The dickcissel of the Central States, which also has an insect-like note, is larger than the grasshopper sparrow, and its plumage is conspicuously marked with bright yellow, black and gray, somewhat like that of a meadow lark. The lark finch is also a large sparrow of striking appearance. Its head is striped with black, and from this fact it is known in certain sections as "snake bird." It is particularly fond of the seeds of leguminous plants. The vesper sparrow, celebrated for its twilight chanting, is as much a bird of the open grassy fields as the lark finch or dickcissel. When disturbed it flits up from the ground, spreading its white-splashed tail, and alights but a short distance away to resume its work. However varied in dress or habit, all the native sparrows are alike in subsisting largely upon seeds of noxious plants.

The goldfinch, or wild canary, is as useful as it is beautiful, and as a weed destroyer has few equals. It confines its attention very largely to one family of plants, the compositæ, and is especially fond of thistles, wild lettuce, wild sunflower and ragweed. It is so often seen on thistles, both Canada and bull thistles, that it is commonly known as the thistle bird. Near Washington a flock of a dozen birds was seen during the latter part of August feeding on sunflowers that had escaped from cultivation, and in the Central and Western States the goldfinches do much good by eating the seeds of wild sunflowers and other closely related weeds. They have also been seen feeding upon wild lettuce, and probably eat prickly lettuce, which has proved the most rapidly spreading weed ever introduced into this country, but as yet no actual observations as to the latter food habit have been made. Stomachs collected in August were filled with the seeds of compositæ, mostly sunflowers and thistles.

At Burlington, Ia., during July and August Mr. Paul Bartsch found goldfinches feeding exclusively upon the bull thistle. He was able to approach within a few feet of several birds while thus engaged, and noticed that the seeds or akenes were bitten off and swallowed, while the plumes or pappus floated away. When there was no wind the pappus often failed to fly away and clung to the birds, almost burying them with down. A dozen of the birds were killed and their gizzards and gullets were found literally crammed with thistle seeds. At Sing Sing, N. Y., goldfinches have been seen eating the seeds of the Scotch thistle and boneset. Cone flowers, prairie sunflowers, evening primroses, catnip, ele-

*These species include the tree, song, field, chipping, grasshopper, fox, Nuttall's, golden-crowned, white-crowned, and white-throated sparrows, juncos, snowflakes, goldfinches, pine siskin, redpolls, towhees and grosbeaks.

phant's foot and mullein also form part of their food, and late in the season they turn their attention to ragweed and consume great quantities of the seeds of this troublesome species. In winter and spring large flocks feed to some extent upon the seeds of conifers and catkin-bearing trees, such as the sycamore and birch. In destroying the seeds of the gray birch on the edge of grass lands they do some good, for this tree has a habit of seeding adjacent pastures, which then grow up into a thicket of young saplings.

The pine siskin and the redpoll linnet are two drab-gray birds related to the goldfinch, which feed largely upon seeds of conifers, sycamores, birches and alders, but also descend to the ground to eat weed seed. In winter they feed upon sow thistles, field asters and golden-rods. The redpoll linnet is known to destroy mullein seeds, and the pine siskin is often seen consuming quantities of seeds of checkweed, lambs'-quarters and ragweed.

The common Eastern towhee, or chewink, and the green and the brown towhees of the far West are great scratchers, and there is little doubt but that they find many seeds that other birds fail to secure. Unfortunately their food habits have not been sufficiently studied to furnish any detailed account of their value as weed destroyers.

The grosbeaks likewise have been insufficiently studied. The evening grosbeak and the rose-breasted grosbeak are known to eat seeds of ragweed, and the blue grosbeak or redbird of the South is abundant along hedgerows and briery tangles adjoining farms, and during the winter months does good work by feeding upon the seeds of such noxious plants as ragweed, pigeon grass, bindweed and smartweed.

Horned larks occur either as residents or winter visitants throughout the greater part of the United States. They are strictly terrestrial, and inhabit either open fields or grassy, gravelly or sandy plains. In midwinter they may be found in flocks on plowed fields, where the land is lying fallow, picking up seeds of weeds which if left would germinate and cause trouble the following season. When thus employed, the larks select the same seeds as the cardinal grosbeak, but occasionally they also eat buttonweed and sorrel.

The several species of blackbirds, although subsisting quite extensively upon weed seed, do considerable damage to crops. This is particularly noticeable in the Mississippi Valley, where redwings, yellowheads and crow blackbirds flock to the grainfields by the million. The ravages in the rice fields of the South by the bobolink or reedbird, in company with the redwings, are even more serious. The rusty grackles, Brewer's blackbird and the cowbird are less injurious. All these birds are fond of pigeon grass, paspalum, crab grass, pigweed, knotweed and ragweed, and the cowbird also eats the seeds of wild sunflowers, gromwell, sorrel, mustard, chickweed and thistle. More than 10 per cent. of the food of the crow blackbird, and more than 75 per cent. of that of the redwing, during the colder half of the year, consists of weed seed.

The meadow lark has long been placed on the border line of game birds, but it is a mistake to class any bird as game when its usefulness and beauty so far surpass its value as food. The farmer cannot afford to dispense with the services of the meadow lark, for it busies itself all summer eating grasshoppers and noxious insects, and when autumn comes varies its diet with ragweed, pigeon grass and other weeds, until in December these noxious plants comprise 25 per cent. of its food.

The ruffed grouse of the Eastern woodlands sometimes eats small quantities of weed seed, while the prairie hen seeking its food in the open or near cultivated fields in the great agricultural region of the Central United States, does still more service. In the West and Southwest the California Valley quail and Gambel's quail consume weed seeds, but they also commit wholesale depredations on fruit. The Eastern quail, or Bob White, on the contrary, seldom if ever causes the fruit grower any trouble, but does much good by destroying weed seed in fields where grain has been cut and a rank growth of weeds has taken its place. Seeds of rib grass, tickfoil and berries of nightshade are sometimes eaten, and pigeon grass and smartweed are frequently consumed in large quantities. The amount of grain found in the few stomachs thus far examined is surprisingly small, while the proportion of weed seed is astonishingly large, in some cases crops and gizzards being literally gorged with hundreds of seeds of ragweed.

The mourning dove is abundant throughout much of the United States, and is especially common in stubble fields and waste places grown up to weeds. It is preeminently a seed eater, and although at times turning its attention to grain it nevertheless consumes an enormous amount of weed seed. The crop of one dove secured in a rye field in Warner, Tenn., contained 7,500 seeds of *Oxalis stricta*. Just outside the District of Columbia the bird has been seen feeding in fields overgrown with pigeon grass and ragweed, and especially in old cornfields, where smartweed and bindweed formed tangles of sufficient extent to injure the crop. In the Eastern States it has a peculiar habit of picking up pokeweed seeds and crushing them in its muscular stomach. Several weeds belonging to the genera *Lithospermum, Oxalis* and *Euphorbia* are also utilized as food to a somewhat lesser extent. In California the dove feeds upon the seeds of a leguminous weed known as turkey mullein. The habit is so well known in some localities that a botanist upon inquiring how he could collect some seeds of this plant was advised to shoot a few doves and open their crops. The ground dove of the Southern States is very similar to the mourning dove in food habits, and probably does almost as much good in eradicating weeds.

No less than fifty different birds act as weed destroyers, and the noxious plants which they help to eradicate number more than three-score species. Some of these plants are much more in favor than others, while several are almost universally sought after. During the colder half of the year food is furnished for many species of birds by well-known and widely distributed weeds.

The blackbirds, the bobolink, the dove and the English sparrow, in spite of grain-eating procliviities, do much good by consuming large quantities of weed seed.

Shore larks and grosbeaks also render considerable service, while the meadow lark is even more beneficial. Goldfinches destroy weeds which are not touched by other birds, confining their attacks chiefly to one group of plants (the compositæ), many of the members of which are serious pests.

But the birds which accomplish most as weed destroyers are the score or more of native sparrows that flock to the weed patches in early autumn and remain until late spring. During cold weather they require an abundance of food to keep their bodies warm, and it is their habit to keep their stomachs and gullets heaping full. Often one of these birds is found to have eaten 300 seeds of pigeon grass or 500 seeds of lamb's-quarters or pigweed. Because of their gregarious and terrestrial habits, they are efficient consumers of seeds of ragweed, pigeon grass, crab grass, bindweed, purslane, smartweed and pigweed. In short, these birds are little weeders, whose work is seldom noted but always felt.

Martha's Vineyard Heath Hens.

BOSTON, June 26.—*Editor Forest and Stream:* Some time ago when we had the "prairie chicken revival" in FOREST AND STREAM, I offered a few notes about the prairie chickens (heath hens) of Martha's Vineyard, and asked a few questions in the hope that some one could and would tell us whether it is history or myth that birds from the West have ever been liberated on the island. Again I proffer the question. A good friend of mine, who knows my interest in the Martha's Vineyard bird, and whose duties often require him to cross unfrequented parts of the island, occasionally sends me word of his seeing the "heath hen."

The other day I received a little pasteboard box by mail. It was very neat in appearance and raised the momentary hope that some one had sent me some curious trinket from the jeweler.

On opening it I found on a layer of white cotton a card whereon was inscribed, "Sacred to the memory of one heath hen chick."

On lifting a layer of the cotton I found, lying in state on another layer, sure enough, a lovely little chick, downy and delicate and yellow—and unmistakably a young prairie chicken.

I sent it at once to a taxidermist for careful preservation—a relic of a vanishing race—and awaited further developments by mail.

The next day brought the following, which I think does credit to the author:

"EDGARTOWN, Mass., June 15.—*Dear Mr. Ames:* I send you by mail with this a small box containing a chick heath hen, which I ran over this P. M., breaking its leg, necessitating killing it. Saw seven; caught four as cute little chaps as you ever laid eyes on. This sample will perhaps show the color of the older bird. I was tempted to send you a pair of live ones, but the cries of the mother bird softened my heart, and I let them go."

In my letter to the writer of the foregoing I did not fail to commend his kind-heartedness. It would need very skillful management to keep the little ones alive, and I would much prefer to think of them growing up under their mother's care to help perpetuate their race on the island where its continuance is to me one of the most interesting of ornithological facts. Mrs. Eckstorm, whose series of letters, of remarkable charm and value, on "The Maine Woods." and written when she was Fanny Hardy, old readers of FOREST AND STREAM will remember, tells me of her strong belief that the story of the liberation of Western prairie chickens on Martha's Vineyard is true, and that it is now practically impossible to find these birds of undeniably original stock.

I would be thankful for good ground for believing the contrary.

I should also be glad to be able to fix approximately the original range of the bird. I have no doubt that it included Nantucket and Long Island and the pine barrens of New Jersey, and have seen statements that it once ranged along the southern border of Connecticut, but never till recently heard of it in Massachusetts. Some weeks ago a writer in the Springfield Republican, who showed much knowledge of the fauna of Massachusetts in the early times, spoke of the heath hen as one of the game birds frequenting at that time the region about Mt. Holyoke and Mt. Tom.

It was this region where the wild turkey lingered longest, and where some other rare forms of bird life —like the duck hawk—still survive. C. H. AMES.

A Buffalo Chase in Central Park.

ONE of the female buffaloes in Central Park menagerie escaped this morning and roamed for an hour around the park. She was confined in the regular buffalo paddock, and ran by her keeper, Philip Holmes, as he was feeding the other animals in the inclosure. The bison knocked Holmes over, walked over him, and ran into the shed and out on the driveway. From this she ran a little way to a chain which separated the driveway from a walk, jumped over the chain like an antelope, and kept straight on down the bridle path. A number of children who had seen the buffalo knock the keeper down somewhat frightened the animal by shouting. This annoyed the beast, and when the children followed her toward the bridle path she broke into a run. At the head of the bridle path is a gate 6ft. high, which the buffalo took like a deer, and started down the path toward Fifty-ninth street and Fifth avenue.

The buffalo kept on the bridle path till she approached the big entrance at Fifty-ninth street and Fifth avenue, where she took the Drive, and dashed out, scattering the people right and left. She kept on to Eighth avenue, when she saw the green again, and left the asphalt for the Drive. By this time a great crowd was following the beast. When she went into the park again there was another crowd to receive her. But she paid no attention to it, and kept on the West Drive, scaring a bicyclist so that he ran into the crowd and wrecked his wheel. The animal then made a little détour and came out on the sheep green among the sheep. She seemed to like the grazing, and walked in and out among the sheep, contentedly eating the grass. The crowd, meanwhile, which now seemed not to be afraid, gathered around and watched the novel sight. The police came running up, but a minute too late. The crowd had not been quiet enough, and their shouts and cries to the buffalo and to one another frightened her, and she made off again just as some keepers came up with ropes made into lassoes.

The buffalo kept on over the green to the Mall, where she scared several hundred people gathered there. She did not seem to want to frighten any one, as she only nosed around curiously. Presently she wandered over to the Ramble, with the keepers and policemen and crowd, out of breath, following her. Then she started for the Bow Bridge, and made for a big body of water, which she crossed with evident enjoyment.

She then appeared on the other side of the park, and came out near the conservatory lake, where the children sail their boats. The water again attracted her and she plunged in. She did not attempt to come out for a while, and a big crowd gathered about. Capt. England had assumed charge of the pursuit at this time, and at this point he pushed the crowd back some distance from the lake.

For twenty minutes the buffalo swam about, to the intense amusement of everyone. She was not at all violent, and Keeper Snyder at last went close to the edge of the water and tossed his lasso toward the animal. The first few throws were unsuccessful, but he finally managed to get the noose over the buffalo's horns. Half a dozen policemen got hold of the rope and forced the creature to the shore. Snyder threw another noose around her jaw and head, and more ropes were placed around her body. Fifteen policemen tugged at the forward ropes' ends, and fifteen more took hold of the rear ends, while the keepers and a dozen citizens helped them out. A cheer went up as the crowd saw that the capture had been made, and nearly a thousand people followed the buffalo down the Drive to the paddock. The animal required some urging at times, but at length she reached the inclosure. When she was finally shoved into the shed she ran out into the open-air ground at once, and there was a lively scattering among the keepers, one of them making haste to climb the fence. But she soon quieted down and the crowd dispersed.—New York Evening Post, June 28.

Labrador Eggers.

KENNEBUNKPORT, Me.—*Editor Forest and Stream:* It was my privilege to make the acquaintance of an old gentleman who had followed the sea the greater part of his life. He had been in many ports and seen the greater part of the whole Atlantic coast. Like many others of this kind, he had many long yarns to spin. Among others he was wont to reel off was of a cruise to "the Labrador," as he called it, as skipper of a fisherman. They ran short of provisions, and as it was the time of year the birds were laying, they went ashore and broke all the eggs they could find for a mile along the shore, destroying thousands. Then for several consecutive mornings they collected the freshly-laid eggs, and not only got all they wished for present necessity, but took several barrels home for the crew. They also killed many birds, as these were disinclined to leave their nests and could be easily got at. He stated that there were then many Nova Scotia vessels there that made a business of it, carrying the eggs back and distributing them among their neighbors at a small price. The eggs were also packed to be kept some time; and in short, the eggers literally stripped all the territory they could get to. I remember his stating that the same thing was done from Newfoundland to Maine, along the whole coast line of the Provinces. This was thirty years ago or more; and fishermen have recently informed me that this practice is still carried on, perhaps on a smaller scale, but nevertheless it exists. I believe the English Government made an effort to check it a number of years ago, but a very ineffectual one. The case I have told of was at a time when such a thing as the value of the birds was not thought of. Now it is different. The rapid decrease in their numbers is a thing that is indisputable and truly deplorable. O. H. H.

Some Things I Have Seen.

WHEN I was a boy I lived in the town of Adams, Mass., in that part of the town now called South Adams. I used to drive cows to pasture every night and morning. One night, as I was driving the cows home from the pasture, I noticed that at one particular place in the path, a large mud puddle, they acted frightened. I hurried on to see what was the matter, and there, in the path, lay a large striped snake, with its mouth wide open. A great many little snakes were there too, and they all ran down her throat as fast as they could. Some of them swam the mud puddle to get to her. As soon as they were all safely inside her mouth, she disappeared in a hole under the roots of a cycamore or buttonball tree that stood close beside the path. I did not molest her in any way, but let her go with her babies.

There was no grass for the young ones to hide in, as she lay in the bare path. Here is one instance of an old snake and young ones being seen together.

When I was older I worked in a cotton mill in the same town, in what was called Brown's mill, and one day when a bale of cotton was opened there was a live snake found in it. It was 15 or 16in. long, of a slate color on the back, and very light on the belly, and it had a red ring around its neck. The snake was very lively and showed fight. It was killed, and I do not know whether it was venomous or not; but I have always thought I should like to know.

When I was a young man of twenty-two I spent a year in Illinois, La Moille township, Bureau county. One day, as my nephew and I were riding along the public road, George suddenly exclaimed: "See that snake!" I looked, and saw a large striped snake. We stopped and George jumped out of the wagon and killed the snake, cutting it in two with a spade. When we came back past the place—it was but a short time that we were gone—George made the same exclamation, "See that snake!" It was a strange sight. Around and upon the snake that we had killed there were a great number of little ones squirming about. I have no doubt that the little ones were the young of the dead snake. We were not partial to snakes, so we killed them all.

One day I went across the line into Lee county to hunt ducks. I was hunting beside a small pond on the prairie, when I saw a strange snake, of a kind that I have never seen before nor since. It lay stretched out on

a log of an old raft on the pond. It was of a dull lead color, and was about 3ft. long, and about 1in. through (of course I did not measure it exactly). About 3/4in. from the end of its tail there was a sort of knob, or prong, which stuck up. If anyone can tell its name from this description I shall be glad to know it.

I believe that every man who keeps his eyes open sees some strange things, which are hard to believe, but which, nevertheless, are strictly true.

J. M. SHELDON.

A Sunday Evening with the Birds.

SITTING on a small veranda which juts out from the third floor on the south side of my home last Sunday afternoon, I noticed song birds of many of the species that inhabit our country on the lawns hunting worms. It had rained nearly all the morning, and cleared toward evening, which accounted for so many being there at one time. In glancing at the shade trees I noticed a robin's nest in the forks of one tree, and in another a family of English sparrows have their home; two of these are sitting on limbs near the nest, trying to dry their feathers by straightening them with their bills. On a third tree I discover a small nest hung in the branches of a limb, which puzzles me for some time; but finally I discover the male bird with food for the female, which is sitting on the nest. It is the thistlebird, or summer yellowbird. After watching them for several hours I find the male bird brings food to the female every twelve to fifteen minutes, and every time he nears the nest his chirp attracts the attention of the female, and she answers with a little twitter which I believe if it could be interpreted would mean, "How kind and attentive you are to me." They are very quick to attack any small birds coming in the vicinity of their nest. I saw a small bird that looked like a field sparrow sitting on a limb some distance from the nest, and in a moment the male bird made a vicious attack on it and drove it off the lawn. Later in the evening he drove a catbird from the tree. As darkness appears, the male bird increases his visits to the nest, coming every few minutes with green worms. I see the robin is on her nest, also the sparrows; seven of them have retired for the night; and the yellowbird now sits on a branch above the nest chirping to his wife about the doings of the day or what he is going to do to-morrow, or possibly about the family which will appear before long, when he will have more mouths to help feed. I know not which, but he is certainly very happy over something, as his song proves. As nature wraps her mantle around this green earth of ours my view of these beautiful creatures (which were put here to help soften the stern features of the earth's cold face of clay) disappears.

F. M. B.

GETTYSBURG, Pa.

Wild Pigeons in West Virginia.

THE day was in this section when the wild pigeon appeared regularly, and there is a place in the brush about four miles of this town known as the "Pigeon Roost," where I have myself seen the enriched land still marked by an unusual growth of vegetation. The luxuriant poke (*Phytolacca decandra*) flourishes there, and other plants not natural to that class of soil. The day was when the woods rustled with their wings and the sound of boughs crashing under their weight could be heard. The farmer policed his newly sown field of wheat, and there was danger of a ripe field of buckwheat being eaten in spite of the threatening presence of all the family. Then the mountaineer was at a disadvantage. No hunter of any standing owned or had anything to do with a shotgun. The shotgun was regarded as almost effeminate. A rifle ball was too much to sacrifice for a single pigeon, and the hunter was not well prepared to destroy any considerable number unless he could find a row of the birds on some straight dead bough. Then came some fancy shooting, and a single ball would bring down a dozen or so, and no ammunition wasted.

Persons old enough have seen the wild pigeon even as James Fenimore Cooper describes it in the "Pioneers." They are gone, and the stories of their flights are surrounded with a glamour to us of the younger generation. It is in hope of adding a new idea to a subject which has been thoroughly discussed in these columns that I try to talk about pigeons.

The flights of pigeons in this section were periodical, but in those days, far back in the mountains in the dense forests that crown the very apex of the Alleghanies, the hunter and fisher could find the pigeon all the summer. Now the time has come when the rank and file no longer fly over the land in their annual migrations, but back in those woods the wild pigeon is still to be seen, generally in pairs. Those mountains have scarcely any bird life, and the pigeons are noticed more particularly perhaps.

The fact remains that as many wild pigeons make their summer home in Pocahontas county as ever.

ANDREW PRICE.

MARLINTON, West Virginia.

A New Coon in Town.

A SHORT time ago Mr. G. L. Baker became aware that some four-footed marauder was nightly visiting his poultry yard. He promptly set a trap for the unwelcome visitant, and the following night Mr. Raccoon was made a prisoner. Mr. Baker resides within five minutes of the center of the city, and the presence of the shifty, carnivorous night prowler illustrates anew the attractions of the University City as a game preserve wherein such species as the great American polecat, the rabbit, opossum, fox, raccoon and ruffed grouse have lately been killed. Surely Ithaca has attractions other than Cornell to offer the big, unsympathetic world about her. Messrs. Potter and Brock the past season killed eighty coons in the covers round about Ithaca.

A Mr. Krum, of Caroline, a wayside railroad station a few miles south of here, reports a robin frequenting his premises that has an unmistakable Bob White call, this remarkable plaint being the chief burden of Redbreast's song. The robin gives the call as cheerily and spiritedly as any true mother quail would whistle it.

M. CHILL.

Save the Birds.

ITHACA, N. Y.—On a recent Sunday two of the leading city pastors, Dr. Griffis, of the Congregational Church, and Rev. J. F. Fitschen, Jr., of the First Presbyterian Church, from their respective pulpits spoke eloquently and persuasively in favor of bird preservation. Dr. Griffis, in the course of his remarks, illustrated how rich the Bible law, prophecy, poetry and gospel was of kindness to our little brothers of the air. The Doctor dwelt most happily upon the gifts, graces and powers of the birds, the English sparrow not being denied a kindly word. At the close of Dr. Griffis' talk an Audubon Society was formed for the protection of the birds. Rev. Mr. Fitschen made a no less impassioned plea for bird life preservation, and requested that all ladies of his congregation refrain from wearing any sort of bird plumage in their hats.

If, from every pulpit in America, there might go forth messages echoing the sentiments noted above, a solution to the problem of saving our native song birds from extermination might be counted among the nearby possibilities.

M. CHILL.

Stray Carrier Pigeon.

HUNTERSVILLE, W. Va., June 24.—A carrier pigeon came to Lemuel J. Piles' house about ten days ago, where it has remained as a pet since. The family had never heard of such a thing as a carrier pigeon, but were desirous that the owner know of its whereabouts. On one leg is a silver band marked "A. N. 947." Carrier pigeons not infrequently appear here, but no one owns any in this section in the writer's knowledge.

ANDREW PRICE.

Game Bag and Gun.

In the Gold Range of British Columbia.

Editor Forest and Stream:

I spent the month of September on the Quesnelle Lake, in British Columbia, and some of my experiences there may be of interest to readers of the FOREST AND STREAM. I was out with a party of prospectors who took this route into the mountains, as the head of the lake lies in the gold range. We left Soda Creek, on the Fraser River, on Aug. 21 with four horses packed with provisions. There were four of us in the party besides a Siwash, who was to act as guide and bring the horses back.

At first we had a good Government trail to follow, but after the second day our guide left it and took an old Indian trail, or what had been one. In many places the track was obstructed or entirely effaced, but the Indian never failed to take the right direction and to pick up the trail again, although he had never traveled over it before.

This route took us through the valleys of the Beaver and Antoine lakes, where the best of deer hunting is found. We passed Antoine Lake in the early morning, and Tom and I hastened on ahead and got out of hearing of the bell on the leader. At one place the trail skirts the lake at the foot of a mountain, and right here is a lick. The ground at this place is tracked like a farmyard by the deer that come down from the poplar thickets on the mountain to visit the lick and drink at the lake. As we passed around a bend in the trail there came a crash from the willows on the edge of the lake, and a big buck jumped across the trail just ahead and started up the mountain. As he cleared a log we both fired at the same time, and when the smoke lifted had the satisfaction of seeing his legs kicking in the air. We did not wait to settle which one of us had hit him, but cut his throat and took the best of the meat. A little later we had a battle royal packing it on Sandy's back. The little cayuse had often been through it before, but he had been on the range all summer and felt like a colt. He pretended to be greatly frightened at the blood, until Tom lost patience and gave him an application of the pack rope, whereupon he subsided and stood like a war horse.

At the end of the fourth day we reached the swamp at the mouth of the Horsefly River. Here our difficulties began. The Indian went back next morning with the horses and left us to our fate, and we started out to explore the country. This was not an easy job. The swamp was a mass of tangled willows, and we had to cut our way through with axes in order to make any headway. We located the river, but could not follow it down to the lake on account of the brush on the banks. We then set to work to find a suitable tree for a canoe. There were birch trees in abundance, but at this season the bark did not peel well, so we looked about for a cottonwood. The best one that we could find stood some distance back from the river near a slough that ran off with many turns and twists into the swamp. Two of us made a raft and went exploring. At short intervals were beaver dams, that had to be cut or portaged, but we made our way down and found that at last the slough reached the river. Then all hands went to work at the tree. Our stock of tools consisted of two axes and a pick, but in two days we managed to turn out a canoe big enough to carry us all, together with our dunnage, weighing about 500lbs.

We did little hunting at this place, owing to the difficulty of getting about, but saw signs of deer and bear and shot several ducks on the slough.

At last our boat was finished, and we had a tug of war launching it. We had to drag it 100yds., and it was green and very heavy. But we cut a road, and put down rollers, and at last slid it into the water.

Next morning we loaded up all our stuff and started on our way to the lake, very glad to leave our limited quarters in the swamp. There was a very large dam at the mouth of the slough, that had to be portaged. Then we loaded up again and ran down the river about a mile to the bay. Here we saw large flocks of geese, but could not get near enough to them for a shot. We took the right hand side of the bay and soon passed out into the lake. The Quesnell Lake is a beautiful sheet of water and is surrounded by some of the finest hunting grounds in America. The scenery all along it is fine. In the distance the gold range loomed up, many of the mountains covered with snow. We followed the south bank of the lake all that day. One place here is remarkable for the number of lynx found. We ran right up to one that was sitting on the beach, staring at vacancy like the old tom-cat that he was. He saw us at about the same time that we saw him, and seemed to regard that part of the shore as his private property, for he put up his back and squared around all ready for a fight. I was in the bow with my rifle handy, and I gave it to him as well as I could. I aimed for his body, but the boat was rocking violently and the bullet went a little low, breaking one foreleg and cutting the flesh nearly all off the other. He danced on his hindlegs for a minute and then sprang into the thick timber and disappeared. We landed, and with great difficulty tracked him about 200yds. up the side of the mountain. There was a carpet of springy moss that did not hold the track, and at times the blood-spots disappeared entirely; but we trailed him up to a tangle of fallen timber and found him stretched out nearly dead. Another bullet put him out of his misery, and the journey up the lake was resumed. The water became very rough and forced us to land early in the afternoon among some very bad rocks. In saving the canoe from being smashed we all got thoroughly wet. We built a big fire, dried ourselves again and made camp.

Next morning we were up before daylight and crossed the lake, which was here about four miles wide. We ran along the shore the rest of the day, and at every place where we touhed were the tracks of bear, caribou, lynx and many other animals. Large flocks of ducks and geese were scared up ahead of us, and we shot enough for our use. Trout were constantly jumping, and many could be seen lying on the bottom in 10 or 12ft. of water. The water is remarkably clear and cold. That night we did a little fishing, and caught a good string.

Next day we ran past rocky shores of granite and limestone, and arrived at the head of the north arm of the lake. Here was Mitchell's cabin, a dilapidated shanty built many years ago and occasionally used by hunters and trappers. We preferred our tent to sleep in, but cached some of our flour and other stuff in the cabin. The head of the lake is very shallow, and is the haunt of thousands of ducks and geese. The flight to the south had begun, and geese were dropping in constantly, and the honking was almost deafening. At one point there was a grass plot of several acres which they had eaten bare. A thicket near this afforded an ambush, and we shot several, although one shot at a flock was enough to send the wary old honkers out of sight down the lake.

Early next morning Tom and I started out after caribou, and I killed one by a lucky shot through the heavy timber. We hung up the meat, and in the afternoon packed it into camp and smoked it until late into the night. Early in the evening we heard the howling of a wolf, which was answered from different directions. Attracted by the smell of blood, a considerable pack soon assembled, and they made short work of the offal of the caribou, as we afterward found. They followed our tracks to the camp and gave us a most dismal serenade all night. We had a bright fire and they were not hungry enough to be very bold, but we did not feel like wandering far away from the fire, and vainly wished for a bottle of strychnine. In the morning they were still howling in the timber near by, and we made a sally hoping to get a shot. But the moment we started away from the tent they took the alarm and became silent. We did some exploring, and found that we were on the edge of a meadow three or four miles long by a mile wide, which ran back between Mount Mitchell and the range to the west. Through this meadow ran many shallow watercourses, and also the Mitchell River, a stream of some size. At the head of the meadow Cameron Creek empties into the river, and this was the stream we proposed to follow up.

All this section was covered with huckleberries, then just getting ripe, and bears of all kinds and sizes were numerous. Still-hunting was difficult, and we saw few of the bears, although we often got near to them.

There were many beaver dams in the meadow; in fact, a good share of it seems to have been made by these industrious little fellows. We had a trap with us and kept it set, and I don't remember how many muskrats got into it, but we did not catch a beaver.

After a couple of days spent in exploring the meadow and country adjoining, we packed up everything not absolutely necessary and cached it in the old cabin, and made up packs of about 50lbs. apiece to take with us. We started, and it immediately began to rain. We had hoped to find a track of some kind—at least a game trail—but we had to strike out into a wilderness of heavy timber, thick willows, fallen logs and marshes, and we were fortunate if we could find an opening leading for a few yards in the right direction. The worst of all were the devil's clubs. These are a cross between a vine and a bush, and they grew everywhere. The branches run in all directions and have o joint every 6in. At every joint the branch takes a turn some other way. In every square inch of vine and leaf there are a hundred long, sharp prickers that will reach you through thick clothes. Every little while some of us fell or sat down on a vine, and then the air grew sulphurous. We tried the side of the mountain, but soon gave it up. Finally we took to the creek and floundered along in ice water up to our knees. By a combination of these three choices of route we journeyed for five days and reached Ghost Lake, which is nothing but a pond. For several days we were followed by a pack of wolves, probably the same that had gotten a taste of our caribou. They howled unpleasantly near, but never came to close quarters. It had been raining more or less all the time, but now began to snow, and things looked gloomy. We built a good camp of boughs and managed to get dry again. We had seen little game on the way, owing to the noise we made traveling, but had killed enough willow grouse to keep us supplied with fresh meat. I took a day off and went hunting. The huckleberries were thick and bears numerous. I found a deer trail leading up a small gully, and traveling quietly along this I ran upon an old cinnamon contentedly munching berries. He did not see me, and I shot him where he sat, and he never knew what was the matter. I climbed one of the snow-covered mountains after big-horn and mountain goats, but did not get a shot.

Next day we followed the creek up to a great glacier. Further travel in that direction was impossible, and more-

over it was time for us to be getting out. Our provisions were running short, as some of them had become damaged, and we started back. Passing the lake we saw four beaver along the shore, and wasted several ounces of lead with no result. This time we climbed high up the mountain and struck a game trail that took us in the right direction and cut off a considerable distance. At last this came to an abrupt end, and we floundered around in worse going than ever. We finally worked back to the creek and kept near it the rest of the way. We all felt like shouting with joy when, after two days, we reached the meadow. The traveling through this was bad enough, but far better than what we had left, and that night we were back in old quarters at the lake. We lived high that night, for once more we had sugar and prunes to eat, and I never enjoyed anything more than I did that meal.

We were tired out, and decided to stay awhile and rest. Then followed a week of rare sport. We shot deer, another caribou, geese, ducks and grouse, and caught the gamiest of trout in the lake. We were enjoying life to the fullest extent, but finally decided that it was time to leave. We brought the canoe from its hiding place and got everything ready to start; but a storm came up that last three days and kept us in the tent. When it finally broke away we heeded the warning of winter's approach and were soon headed down the lake. On the way we saw several lynx, but could not get near enough for a shot. A deer swam across from an island ahead of us, but we were too far away to catch him, and in spite of many shots that made the water boil all around him he reached the mainland and disappeared. However, an imprudent coyote that followed us, barking, along the shore, did not fare so well, as Tom bowled him over with a long shot from the canoe.

On the second night down the lake we camped at the mouth of a creek, and I took the Winchester and followed the creek back into the woods. I had not gone far when a doe jumped up ahead and after a few leaps stopped and looked around at me. I was all tangled up in a willow thicket and got out in time to send a bullet after her just as her curiosity became satisfied and she bolted into a clump of cedars. To my surprise she went down in a heap.

We passed Horsefly Bay, where we had embarked, and kept on to the foot of the lake. Here we found some Chinese miners, and after "muchee talkee" sold them our surplus flour and bacon. We left them our canoe, and took the trail that leads down the river to the forks. From there we had a good trail for the rest of our homeward journey.

AVERY H. WILCOX.

In the Rockies.—VI.

"Find tongues in trees, books in the running brooks, sermons in stones." —Shakespeare.

As I realized it a fierce exultation fired my heart, and a yell of triumph trembled upon my lips, as I dashed down the steep declivity. But when I reached his side there was a majesty about the mighty animal, even in death, that impressed me, and I stood subdued. There was a deep stillness upon the scene so lately one of stir and strife and battle. The trill of the little stream, murmuring out from among the rocks and trickling twinklingly through the copse to which it gave life, was the only sound audible. A faint breeze which sighed over the lonely place took upon its wings the strong spirit of the mighty moose, and bore it far from that secret glade in which in life it had been in harmony with the wild world of nature around it, and the blood-red Indian pinks that blossomed beside the spring bent their heads before the breeze as if in grief and sorrow. There was death in the midst of life.

I drank deep at the crystal well, and sat down upon the soft turf beside it. It was a lovely spot in which to rest and linger and muse. All around arose the gray rocks, in the midst of which lay the copse, a lovely oasis. The grasses crept up to the feet of the rocks as if propitiatingly, and tender mosses softly covered them, nature's first live-giving effort. There was life in the midst of death.

Sitting there I could see the battle nature had waged with rock-ribbed ruin to establish a precarious foothold for life. Inch by inch, foot by foot, the linchens had crept out from the life-giving water, and clothed the naked rocks with a living, verdant garment. Then came gnats and flies, and humblest forms of insect life to live amid the mosses. Then light-winged swallows came on glancing wings to chase the gnats and flies, and planted the first seeds of grass, upon which later came to feed the progenitor of the moose who lies there now, and incidentally to drop the first seed of the aspens upon which he had browsed as he came up the mountain side. And last of all came the destroyer—man. The grim, gray rocks which with impotent wrath saw their domain of death invaded, inch by inch, foot by foot, as inexorably as fate, by life-giving nature, doubtless welcomed the advent of one before whom whole races and types of nature's beings pass away.

Strange, is it not, that man should find life and vigor and health and recreation in undoing what nature has done, in killing and destroying where she has given life? What unconscious mission is he blindly filling in obedience to that inscrutable omniscience which has worked its will through other blind instruments from protoplasm to man?

Sitting there in dreamy content, beneath me a tawny carpet superior to the science of looms, overhead the feathery foliage of the aspens filtering the yellow sunshine through, I looked out at the gray, granitic rocks stretching up the mountain side to where the snow fields lay cold and white upon the summit. It was typical of human life.

The copse was typical of the pleasant primrose paths of dalliance and ease; the rocks of the rough places of toil and trouble which ever lay just beyond the pleasures of life—the desert of disaster which surrounded human happiness. And as in real life, so here, standing amid the pleasant copse, neither disaster nor heath looks sinister seen from a distance.

But to leave the copse of plenty, with its restful banks and fragrant flowers and refreshing waters, to toil up over the rough rocks is a mimic image of the journey of life. The path to the pinnacle of fame that seemed easy to surmount is pitted with perils. There are crevices in the rock that you cannot see from below. Those smooth mossy stones that looked so inviting are but pitfalls for the unwary, and the weary feet, instead of resting, slip on the treacherous moss and fall. There are sharp, flinty rocks that cut your feet, and loose, rolling stones that topple over and bruise you, and great chasms between the rocks that yawn for the adventurous.

The pools that looked like living waters are but stagnant pools, impregnated with the bitter minerals of the rocks around them, the Mara waters of tribulation. How many turn back, appalled at the difficulties of the ascent, and how many, alas! of highest courage, fall from the precipices, and perish. And when at last the heights are reached, swarms of mosquitoes and gnats arise, like petty troubles, to bite and sting. And the snow upon the pinnacle of fame that looked so fair and white is but a cold, uncomforting, soulless sheet shrouding dead hopes that lie buried beneath it.

All along the summit stretches the cold, silent bosom of the blinding, white Death. Here the journey of life ends. The weary feet worn with toiling over the rocks sink deep into the soft snow. He struggles on with short, quick, panting breath, in the high altitude of death. The sight grows dim in its reflected glare. It is cold—so cold upon the snowy summit. He ceases struggling and sinks down to rest in its soft embrace, and a breathless curtain of silence stretches between the cold, pitiless glare of the sky above and the dazzling whiteness beneath.

So the summit is reached, and the journey of life is done. Behind him lie the rough rocks, and the pleasant paths. Before him—ah! who shall say what lies beyond the brink? Back from that summit no man has ever come to depict the scene that lies in the vast, limitless beyond.

But as the mind comes back from pondering upon the unfathomable problems of life and death, and turns with grateful relief to the wholesome things of every-day life, so did I leave behind me that strange land of snowy summits and rock-strewn scenery and flashing streams and returned to the familiar work-away world of every day. But I never look upon that antlered head, hanging now upon my walls, that I do not recall that little cove blooming in the midst of its rocks, high on the mountain side, above that far-off, unknown and nameless lake in the remotest recesses of the Rocky Mountains.

FRANCIS J. HAGAN.

"Exterminatory Peregrinations."

ST. AUGUSTINE, Fla., July 1.—*Editor Forest and Stream:* I accept your comment upon Mr. Rice's letter in this week's FOREST AND STREAM as an intimation that it is time to close the subject. Although, as I told you in my letters in your issues of June 10 and 24 respecting the exterminatory peregrinations of Mr. Geo. O. Shields here in Florida, the subject of his bird plume butchering was by no means exhausted, I quite agree with you that we may consider the discussion closed. But I always did like to have the last say. Will you permit me then this last word? Mr. Rice insinuated that my quotations from Mr. Shields' book describing his wanton killing of our birds and other creatures were not fairly made. In justice to myself I urge any reader of FOREST AND STREAM who may be interested to look up the quoted paragraphs and their connections in the book itself. It is entitled "Hunting in the Great West," and Mr. Shields is now advertising to send it for 25 cents. As an eye-opener, an exposure of Mr. Shields by Mr. Shields' own braggart pen, it is worth the money. It shows up the true sportsmanship of this man who is so coarsely reviling others.

DIDYMUS.

P. S.—More last words: Please give my compliments to Mr. Arthur F. Rice, and assure him that if ever he finds his way to Florida and St. Augustine, I would consider it a privilege to do whatever might be in my power to make his visit a pleasant one. I could not promise him much in the way of game; and our plume birds were long ago killed off. But we have such air and sea and sky and flowers and perfume and bird song and sunshine as would give him unstinted delight in his outing; and if he ever goes fishing, we could introduce him to channel bass and drum.

D.

Quail Reports Wanted.

DANVERS, Mass.—*Editor Forest and Stream:* I should like to hear from different sections of the East as to how the quail are whistling for mating. Tell Mr. Foulk to report from his country, New York and Maryland. There the February blizzard was very bad. I heard of the sad remains of feathers and bones from a flock over in West Peabody.

JOHN W. BABBITT.

Camp-Fire Flickerings.

"That reminds me."

Editor Forest and Stream:

The inquiry of Major Mather in regard to the "service berry," and the numerous communications printed relative thereto, all edifying and showing the edible quality of those berries, remind me of an occasion when a party of four congenial spirits were camping at Muzzy Lake, in northern Ohio, some years ago, doing a little bass fishing and fall shooting, and having a general good time. On a Saturday evening we were agreeably surprised by a couple of old friends from a ten-miles distant city dropping in upon us, and, of course, a merry evening was the result. In the morning that followed, the cook for the day, desirious of increasing the menu, requested one of the party to take two buckets and go to a neighboring farmhouse and "get some milk and cackle berries," which he at once started to do. One of our guests having heard the remark, puzzled over it for a while in silence, but his overburdened brain finally gave vent to expression: "Say, you fellows, what kind of berries are those 'cackle berries' you told L. to get? I never heard of them before." The answer, "Why, eggs, you darned old rooster," broke the spell, and afforded a heap of fun during the entire day, and the aforementioned visitor went by the euphonious soubriquet of "Cackle Berries" for some time thereafter.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

In Newfoundland.

A Day on the Come-by-Chance with Rod and Reel.

"Up rose the sun; the mists were curled
Back from the solitary world,
Which lay around, behind, before.
What booted it to traverse o'er
Plain, forest, river? Man nor brute,
Nor dint of hoof, nor print of foot,
Lay in the wild, luxuriant soil;
The very air was mute;
And not an insect's shrill, small horn,
Nor matin bird's new voice was borne
From herb nor thicket."

IT was just such a sunrise and such a country as those of which Byron sings. It was a glorious summer morning. "The very air was mute." We—a survey party—were camped on a sidehill that was clothed with luxuriant verdure, and through the foliage of the trees glistened the waters of the Come-by-Chance, as it wound slowly and majestically on its passage to the sea. In the distance we could catch glimpses of the sheen of many lakelets, and the vision was bounded by ranges of high hills, the highest peak—Powder Horn Hill—gorgeous with the rays of the rising sun. It was an off day in camp, and rigged in my best backwoods toggery I started out to explore a pretty little pond that nestled between the hills; and I was anxious to throw a fly where perhaps one had never been thrown before. After a few minutes' tramp I struck the pond and bent my flies. I met with indifferent success till I came to a corner of the lake that was overgrown with large trees whose branches spread far out over the surface. Just here the water was deep and dark and it looked indeed a likely spot. I dropped my flies just under the branches of a large juniper, and immediately got a splendid rise; but I could not fish from the land side with any ease, so I cast about and procured a small raft of railway sleepers (one that we had been using the day before for the purpose of chaining across the pond), got aboard and hauled myself well out into the lake by the overhanging branches. I was amply repaid for my pains, for the first throw I got a splendid rise, but lost my fish, owing to my inability to use but one hand, for, as the raft was very cranky, I had to hold on to the trees with the other. I threw again, and this time hooked a veritable 3-pounder; but alas, I lost him also. In my excitement I forgot all about standing on the ranky raft, let go my hold of the branches, and the next moment was gazing at the sunlight from the bottom of the lake. A few strokes brought me to the bank, and I picked up my dogwood rod and gear and started for camp, a wetter and a wiser man. I then crept in, not to waken the other fellows, and took off every stitch, hung them around on the bushes, wrapped myself up in my blankets and slept the sleep of the just till breakfast was announced at 9 o'clock.

It is a long, glorious day in summer time, from sunrise, a little after 4, till 8 o'clock, and millions who dwell in cities lose the best part of their lives sleeping those golden hours away.

A great change had come over the face of nature while I had slept. The peak of the Powder Horn was wrapped around with dark, murky clouds, the wind had changed and brought in the fog. The morning had been too bright to last, and before 12 o'clock the rain came down in torrents, so that we were confined to camp all day. About 4 o'clock the rain ceased, but it remained dark and threatening; but as it did not actually rain, and as I was tired lying around all day, I donned my oilskins and long boots, and fetching my dogwood, started out again to hunt up some fish.

This time I avoided the likely spot of the morning and tried some of the gullies of the Come-by-Chance. In this place it sweeps through a pretty level country, and forms a large number of deep gullies, each of which is fairly well stocked with fish. I tried several of these, but as they were near the line of the railway they had been fished over and over again by the various crews of railway men who had camped near them. I fished till I came to the last of the near series of gullies, with but very little success. This one, unlike the others, was surrounded by heavy trees, and in order to fish it one had to walk in the water clear of the branches. I had tried at the head of it, where the water runs in, but the numerous footprints in the sand convinced me that it had been fished too often very recently for me to expect anything worth while, and I was conjecturing for a time how the river looked after it had left the gully, as I could see by the formation of the country beyond that it fell a little, but how much I could not tell. If it fell for any distance it would have been no use for me to go on a voyage of discovery, as it was getting late, and the fog and clouds made it darker than usual. But I thought I'd try at the foot of the gully anyhow, so I walked along in about 2ft of water till I came to where the river leaves the gully. I was certain that no one had been as far as that lately, because trout were ordinarily plentiful enough, without having to wet one's self in order to procure a fair catch. I was rewarded for my pains, for as I reached the end of the gully and followed the river, that here ripples over a sandy bottom with a gentle decline for about 100yds., there suddenly burst upon my vision the prettiest and most likely looking gully it had ever been my good fortune to behold. The feelings of an angler on such an occasion can be better imagined than described. Just before me the lakelet nestled in the trees, shut away from all outside sounds and scenes. At my feet the river dropped into a basin forming an ideal spot for an angler to linger in. My nerves were tingling with excitement, and no explorer ever felt so delighted with his discoverey as I did that summer afternoon. The angler can imagine how he'd feel if he struck a spot that in all probability had never before been fished, and the feeling that "he was the first that ever burst into that silent" scene would be intensified by one look at the spot that his very instinct would tell him was teeming with fish life. The only sign of its ever

having echoed to the sounds of wandering life was a trail across the shallow of the head-water, where the gentle caribou had passed and repassed for many ages.

I looked over my cast, which contained a silver doctor, a terra nova, a gray hackle and a little black fly, saw they were all right, and softly dropped my flies just where the river ceases to appear to flow and mingles with the waters of the gully—just beside the golden lilies that lay in great luxuriance there. The effect was magical. With that indescribable swish—a noise more pleasant to the senses of an angler than music's sweetest strains—the gully appeared to be alive.

The flies were literally devoured, and it was with the keenest pleasure imaginable that I hooked, fought five minutes or so, and landed at one haul four rich, fat, gamey mud trout, ranging in weight from ¾ to 1¼lbs. At every throw I succeeded in hooking two, three or four beauties, and at last, when darkness had settled in, I knocked off with fair play, well satisfied with my evening's sport, and having for once at least got a "square meal" of it. I filled a canvas bag that I carried, then cut two "gads" and loaded them and started for camp, about half a mile off. I was now in a quandary, for I was in a strange country, and in the eagerness of my pursuit I had failed to make mental notes of landmarks that would guide me on the way back. However, I tramped back through the gully, and at the head-waters, where 'twas shallow, I was fortunate enough to strike the deer trail, and I knew it led through a long marsh in the vicinity of our camp. I followed it as well as might be, feeling the way with my feet, for the trail, as is usual, was well defined. It was now so dark I could scarcely see an arm's length before me.

At last I broke out into the marsh, and heard the welcome sound of our camp dog's honest bark, and arrived safely in a short time, and was for the time being the cynosure of a score of admiring camp fellows, who gathered around, pipes in mouth, to inspect the catch and indulge in the usual camp talk on such occasions. They had decided before my arrival that I had lost my way and were just getting ready to start out and hunt me up. My one regret was that in my hurry I had to leave my dogwood pole—one that I had cut in the woods and that had been my companion in many pleasant hours.

After a change of dry clothes and a good "tuck-in" at supper—not the least enjoyable part of which was a dish of rich, red, "musky" mud trout, I lit my pipe and laid me down to rest, well satisfied with my day on the Come-by-Chance with my old dogwood rod and flies.

W. J. Carroll.

Newfoundland.

After Ouananiche.

There has been considerable variety about the early fishing for ouananiche this season in the Grande Décharge of Lake St. John. In the first place it opened late, as everybody expected it would, on account of the extreme lateness of the season. The waters were high, but for a day or two the sport was reported good. Then heavy rains and high winds set in, filling the high water of the lake with thick mud to such an extent that the fish were unable to see the flies on the surface of the pools in the Décharge. A few anglers went away disapopinted. Those who could possibly spare the time returned to Roberval to await the arrival of more favorable weather, and last week proved an off season for ouananiche fishing, though the fish could be seen in the pools in very large numbers. On Saturday and Sunday last the wind fell, and, by Monday the surplus water that was flowing out of the lake over the Décharge had lost much of its sediment, and the ouananiche were again on the feed. I had a good day's sport there, killing over a dozen fish, and might have taken as many more. When I found that the fish were taking the fly freely, I laid aside my 7oz. rod to experiment with one of exactly half that weight. There has been so much nonsense written from time to time about the rod-smashing qualities of the ouananiche that I had some time ago made up my mind to give the fish a chance. I was not fortunate enough to hook anything larger than a 3lb. fish on the 3½oz. rod, but a 3lb. ouananiche, like a 15lb. salmon, is usually in perfect fighting condition, and the little cane was put to a thorough test, and came honorably out of the conflict. Some of the fish killed upon it were lofty leapers, and occasionally they ran out into the heaviest water of the pools. The light bamboo was so readily responsive that I gave it no allowance for size and never lowered the tip when the fish vaulted from the water, always allowing him rather the freedom of the line. It took a little longer time to lead the fish to net than would have been necessary with a heavier rod, but not so much more as might have been expected, and if the extra sport afforded is not considered a sufficient compensation for the additional expenditure of time, I may add the assurance that out of a number of fish so played not one was lost by the tearing away of the hook, that so frequently occurs when ouananiche are handled on stiffer rods. When first I angled for these fish, before the construction of the railway as far as Lake St. John, I went at them with an old two-handed English rod, that I had used for jack pike in the Old Country, as a boy. Experience led me to substitute, first a stiff Canadian lancewood trout rod, and then an American split cane of moderate weight. Now, for purposes of finest sport and greatest comfort I am an advocate of the lightest rod, for ouananiche fishing, that can be found upon the market, provided it be properly made; that is to say, well balanced, and possessed of a reasonable share of back bone. I have fished with 5oz. rods possessing less of these requisite qualities than that weighing 3oz. and a fraction, with which I killed my last few ouananiche. The former scarcely enabled the angler to take in the slack of the line without the aid of the automatic reel. The latest addition to my rod case needs no such artificial aid.

I still believe, as I wrote in "The Ouananiche and its Canadian Environment," over three years ago, that the most serviceable tool for the speedy killing of the fish is a 7 to 9oz. trout rod. But those who have acquired the admiration for this noble fighter that a few seasons of ouananiche fishing brings will have no more ambition to make a score, and when the fish are plentiful and the rises frequent will find their highest enjoyment in taking the ouananiche from its chosen waters upon the finest and lightest of tackle.

Of course rods may be smashed by ouananiche just as well as by any other fish, but there is no good reason why they should be. While I was fishing from one of the rocky islets in the former Griffith pools of the Grande Décharge the other day, with my smallest rod, Joseph Morel, one of my guides, took up my heaviest trout rod—a Quebec lancewood weapon, upon which I have landed a 14lb. pike and any number of heavy trout and ouananiche. He wanted to reach a large patch of foam that was eddying around a long distance from shore, and succeeded in drawing his flies through it several times without securing a rise. Finally he drew the lures close in to the rock upon which he was standing, when both were seized at once at his very feet. One of the fish was quite large, probably a 4-pounder. Without regard to the almost perpendicular position of the rod, Morel struck smartly, and naturally enough, off went the rod at the upper ferrule. A salmon rod might have done the same thing.

The fishing at the Décharge is now at its best, and promises to continue good for some time to come. In one afternoon this week Lt.-Col. Haggard took over forty fish, and as many more the next morning, returning by far the most of them to the water.

E. T. D. Chambers.

Quebec, Canada, June 30.

P. S.—My attention has been drawn to a slip of the pen that occurred in my last letter to Forest and Stream. In speaking of the recent big catch of trout on the Triton tract by Judge Hiscocks, Douglas E. Petit and William Nottingham, of Syracuse, the two largest fish of a catch of twelve, weighing 60lbs., were recorded as weighing 6½ and 3½lbs. respectively. If this were true of the two largest fish, it would be difficult to make up the aggregate of 60lbs. What I should have written, if there had been less haste and more care in the writing of it, is that the largest of the big fish weighed 6½lbs. and the smallest 3½lbs.

E. T. D. C.

Angling Intemperance.

Charlestown, N. H., June 26.—*Editor Forest and Stream:* I have so far refrained from "putting in my oar" in the discussion of the epithet of "game hog," or his near relative, the "count fisherman," but the inclosed slip, which I cut from the Boston Sunday Herald of yesterday, has rather excited my indignation. I do not know who Mr. Seymour is, or what he did with his 701 trout, caught in one day with one rod! but I hope he returned at least 600 of them to the water. Still, even then, many of them must have been more or less injured, and if the gills were torn it is doubtful if they survived the injury. I cannot conceive of such brutal slaughter as coming under the name of either sport or amusement. This is the report:

"Mr. and Mrs. J. S. Seymour, of New York, who are at Seven Ponds, took 650 trout in six hours' fishing weighing from ½ to 1½lbs. Another day Mr. Seymour took 701 trout on one rod. Three were taken at one cast. Mr. and Mrs. Seymour saw eleven deer one day."

I was always satisfied with a moderate creel full, and ready to reel up my line and go home at that time; and in ordinary fishing near home two or three dozen, enough for breakfast for a small family, were an ample reward for my afternoon's tramp. It was the same with shooting. When I had a dozen birds or half a dozen gray squirrels I was ready to throw my gun over my shoulder and leave the rest of the game for another day.

Neither fur, fin nor feather are plentiful enough here in the old settled parts of New England to make any larger bags possible, but the "count fisherman" yet troubles us a good deal. There are two or three men in our village who persecute the trout brooks every spring, from the day the snow is off till the water gets too low, and come into the village and brag of the number they have caught, and they keep it up, "day in and day out," till no one who really wishes a quiet afternoon's enjoyment can find trout enough to reward him for a two or three mile tramp. I met one of these fellows last year with a six-quart tin pail half full of dressed trout, and though I could not say that any of them were under the legal limit of 5in., I certainly did not see one that would measure 6in., even counting in the tail, and I have no doubt that they were all fish with which some of my friends and myself had stocked the brook the year before. The worst of it is, that these fellows contribute nothing toward restocking the brooks; they just go out and catch all they can, and as long as they can, until those of us who have spent time and money in getting the trout from the State hatcheries and distributing them in the breeding brooks have buttoned up our pockets and refused to make further efforts to supply amusement to this class of our "fellow townsmen"!

To return to my text, I have some doubts as to the truth of the statement, for Mr. Seymour must have caught a trout a minute for nearly twelve hours to accomplish the alleged feat, but the 650 fish to himself and wife in six hours' fishing is about as bad, and I should think she would have been ashamed of herself, if he was not!

I was much pleased to read the letter of my friend Commissioner Shurtleff in regard to the discovery of the "Sunapee saibling," in the Averill Ponds. When up at Colebrook, some sixteen years ago, I heard of the large trout that were found in these ponds; but the waters were reported to be very difficult of access, with no camps or accommodations of any sort after reaching them, and I gave up the idea of going into them.

I had heard similar stories of the big trout in Dan Hole Ponds, near Wolfeboro, N. H., some years previous, but never got into them myself, and now the fish have both proved to be the saibling, which is first recorded as being noticed as a different variety of trout in Sunapee in 1881.

It goes to confirm my belief that we do not yet know all the inhabitants of our waters, and that both the saibling and wannanish will yet be found to be inhabitants of Lake Superior. That very entertaining paper, "A Trouting Trip to St. Ignace," published in Orvis and Cheney's "Fishing With the Fly," speaks of several varieties of trout in Lake Superior, and I cannot believe in lumping them all as *Salmo namaycush*. What has become of the *Siskawitz* we used to hear of? I think the matter worthy of careful investigation.

Von W.

ANGLING NOTES.

Water in Bloom.

Ponds and lakes being "in bloom," or "working," or "breaking," or "purging," has served as an excuse for anglers who have returned from fishing with no fish ever since I can remember. At this moment I do not recall that I ever heard of a stream "blooming," but Hay Bay, in Canada, was most certainly "in bloom" on one occasion in the fall when I went there with some friends to fish for muscalonge. Some waters bloom at one season, and others at another, and it has been commonly understood that the blooming or purging was caused by the seeds of water plants floating in or permeating the water until reproduction took place and they sank to the bottom. In Germany the blooming is called *wasser-bluthe*, water blossom; and in France *les fleurs d'eau*. Sir Thomas Wardle, F. G. S., F. C. S., read a paper on this subject before a field club in England, from which I will make some extracts, as it gives the results of scientific inquiry into the causes of water blooming or purging, although he uses the term "breaking." His investigations were conducted at Copmere, a lake of forty-four acres, the time being autumn:

"The lake presented an unexpected appearance. Its color was a bright emerald green, but not that of green coloring matter in solution. By a close inspection with our lenses, we saw the water to be permeated through its entire depth by bright green particles so numerous and pervading as to give the appearance of a green liquid, even when a glassful was held up to the light. * * * I say appearance, because in addition to the permeation of the bright emerald particles, there was also a green scum floating on the surface, thickest among the sedges, where it had been drifted by the wind, also unresolvable by the unassisted eye, evidently possessing points of difference, mainly by specific gravity, from the particles suspended below the surface; besides this, the green was of a darker tint. Each drop contained a number of these green specks. * * * At certain times in each year, generally in autumn, the Shropshire Meres become turbid with these green particles, the water becomes unfit for domestic purposes, and it defies the powers of filtration, soon clogging up the pores of filters. Fish become sickly in it, and in some instances die, and in others are easily caught. * * * This condition continues in varying periods from a few days to months. After a time the water emits a purtrid odor from the decomposition of the green particles. * * * The prevalence of these green particles is variable. They disappear and reappear and occur in greater quantities in various parts of the Shropshire Meres. * * * Copmere did not break in 1895; it remained very clear all summer and autumn; but a very singular fact is connected with this exception of breaking, in that a great quantity of fish died that year of a fungus-growth disease, whereas in 1896 none died, notwithstanding the mere broke badly. * * * You will now be prepared to know that this breaking of the meres is due to microscopic algæ, of which various species cause the phenomenal appearance. Dr. Drummond found the green color of the water of Lake Glaslough, in Ireland, owing to vast quantities of flocculent oscillating algæ. In Loch Hainining, in Selkirkshire, a rich purple color occurs. * * * The broken water is characterized by various colors, sometimes green, purple, brown or red." (Here follows a list of about a dozen species of algæ found in different waters, including one found in the arctic regions.) "Most probably these minute algæ, having been born of last year's spores, remain at the bottom of the lakes during the winter and until they find a need for further growth and development, and for this, according to Mr. Blunt, they begin to absorb carbonic acid, which they find dissolved in the water. * * * Under the influence of light the carbonic acid is decomposed, the oxygen is set free, and, thus liberated, adheres in globules to the algæ, causing them to rise into a fuller and stronger light."

The entire article is of interest, but I have quoted its salient features, and, as the author says, the murder is out, and breaking of water explained, and that is about all there is of it, as no remedy for this condition is suggested, although more is promised on the subject. The various colors of the algæ will explain why some fishermen report a lake blooming in one color while another lake blooms in quite a different color, but it does not always follow that because a pond or lake is in bloom (still another term for this condition of the water is "cruddling") the fish in that water will not bite, for it is of record that fish have been caught when the water is blooming.

Fly-Fishing for Shad.

My name would have been signed here and these notes ended for this week had I not chanced to pick up *Game Laws in Brief and Woodcraft Magazine* and open it to Mr. Hammond's article on fly-fishing for shad. It seems to me that the magazine opened of itself in my hands to the article to remind me of something I have been trying to remember for more than a year. During the Sportsmen's Show in Boston last year I sat at dinner one night with Mr. Walter M. Brackett, and we talked of fish and fishing, and he mentioned that years before he had taken shad with the fly in the Charles River, I think, but am not sure. Anyway, I made a memorandum of what he told me (probably on the back of an envelope, as I am in the habit of doing, and about seven times out of ten losing the envelope or failing ever to see it again), intending to print it in "Angling Notes" some time, but have not seen it since, although the chief facts have been recalled on several occasions. Last week I was on Long Island where the State is hatching shad eggs taken from fish caught in the Nessaquogue River, and one of the men told me of two shad caught last year in the stream with a fly, and I was again reminded of Mr. Brackett's experience, and forgot it before I returned to New York. Now Mr. Hammond's article has again reminded me of it, and I will ask Mr. Brackett to relate in this journal his early experience with shad on the fly, as the surest way to get it on record.

A. N. Cheney.

Memories of Antigo.

WHEN, during the formative period of the earth's existence, the subsidence of the glacial movement began, the snouts of the foremost glaciers lay in a straggling irregular line, from northwest to southeast, aross the North American Continent. This line is clearly indicated by heaps of boulders, foreign to the underlying formation, which bear the unmistakable signs of glacial abrasion and rise in many places to the height of the tallest pines. Nestling among these Titanic cairns are countless pools of purest spring water, whose uniform depth at all seasons suggests the absolute independence of their sources of filtration and surface drainage. These pools seldom reach a greater depth than 10ft. in their deepest parts, and from center to shore line the inevitable boulder crops up.

The trout preserve of the Antigo Fishing Club lies just inside the outer edge of this advanced line of glacial subsidence, and within its limits are two of these pools or miniature lakes. On the northern bank of the larger of these, flanked by a three-acre clearing, stands the club house. This lake, whose area is nearly equal to that of the club house clearing, has no visible inlet, yet its outlet is of sufficient volume to turn a country grist mill.

So clear are the waters of this woodland lake that from any point of the banks objects lying at the bottom can be seen as plainly as if suspended in midair at the same distance. On all sides, excepting the north, where the clearing comes out to the bank, the forest grows down to the water's edge, and in many places the drooping branches of overhanging cedars form a permanent zone of shadow, extending well out from the shore, forming an ideal trout harbor.

From the bank on the edge of the club house clearing you may see on a calm and cloudless day in June, when the sun is at its meridan, countless shadows as of floating leaves, projected against the bottom of the lake, although there may not be so much as a fleck of foam to be seen anywhere on its mirror-like surface. Only the closest scrutiny will reveal the presence of scores of speckled trout, poised motionless midway in the limpid depths. For, seen in their native element, the rich and varied tints of this aristocrat of the woodland lakes and brooks become an elusive, phantomlike gray.

If the watcher on the bank, whether he be the merest tyro in the "gentle art" or the seasoned veteran of eastern trout preserves, would see something well worth the seventeen-mile drive and the two-mile tramp which it costs to get in, let him descend to the water level and drop his fly out as far as possible among those shadow spots. Your bait may have flicked the water so lightly that you scarcely saw the spatter of it, but keen eyes—many pairs of them—have seen it plainly, through intervening spaces of water greater than the entire length of your cast, and by the time you can carry your hand to the reel that article is in active requisition.

The Wisconsin trout is a hungry biter, and it does not need the electric tremor of the rod to tell you what is going on out there. You can see it for yourself, as plainly as through the plate glass sides of an aquarium. It is a case of "first come, first served." There is one big beauty hooked hard and fast, while a school of his fellows are struggling for the honor of being first in the frying-pan.

If you have a party of hungry fellow guests watching you impatiently from the bank above, you will bring your fish ashore at once, attach two leaders to your line and reel the snappy creatures in by threes, till even the hungriest sinner there, who counseled and abetted the slaughter, turns down his thumb.

If, however, you have a soul superior to the importunities of appetite, you will wind in your first fish very gently until you can make out the markings on its satiny skin, and there, at your leisure, you will study the diverting tricks of habit of the frisky "beauties" which are following, as far as they can, their luckless relative into captivity. There will certainly be a score of them—there may be a hundred—and you stand there with the mighty hush of the forest about you, forgetting the flight of time and the weakening struggles of your hapless victim, while you gloat with a sense of rich possession over that exquisite page of animated nature, illumined by the glad June sunshine.

If a man be a public benefactor, who makes two blades of grass grow where only one grew before, what shall be said of the two true disciples of Izaak Walton to whose zeal we owe it that to-day the waters of the Evergreen and its tributaries teem with toothsome trout, where, less than sixteen years ago, the flavorless chub and the measly shiner alone rewarded the angler's quest for nobler game? Voluntarily, and without hope of reward, these two public-spirited citizens, whose names are withheld out of deference to their well-known modesty, undertook the seemingly hopeless task of stocking the Evergreen with speckled trout, from waters lying ten miles distant through the then unbroken forest.

One morning early in the summer of '82, our two philanthropists started from an eastern tributary of the Wolf bearing between them two camp kettles filled with fresh spring water, each containing sixteen frisky young trout, or thirty-two all told. Over boulders, ledges and fallen tree trunks, the two plucky fishermen struggled with their precious burdens, reaching, after many mishaps, the East Fork of the Evergreen with only eight live fish in their kettles. And this was the humble beginning of the prosperous trout colony which includes the Antigo Fishing Club's preserve.

I had been spending a week at the club's snug quarters still-hunting and grouse shooting in company with Mr. Henshaw, the Nestor of the club, and Mr. Lou Bucknam, the life of it, when business engagements which would not wait took my genial hosts to town, leaving to me the pleasant alternative of either going along with them or playing at housekeeping until they should return for me at the expiration of my ten days' vacation.

As I had picked up a smattering of plain cookery, and there was a saddle of buck hanging up in the woodshed and a cellar crammed full of big Irish potatoes, I decided to remain in camp. Besides, I had not half gotten my fill of the charm of the grand old Wisconsin woods in their brown November dress. So, after turning over to me the keys of the larder, conferring upon me discretionary powers regarding the use of a certain axe and bucksaw, and investing me with absolute authority over Bismarck, the club's mongrel mascot, my late hosts departed down the Elton trail, shouting back a promise to come out and spend the following Sunday with me.

I had often watched with amused interest the exaggerated air of importance which a small boy, left temporarily in charge of a pie and cake shop, assumes toward another small boy who has the misfortune to come in for a penny bun; but never had I understood the true inwardness of that sudden access of arrogance until that perfect November afternoon when I set out to air the dignities of the office of major-domo—without portfolio—of the Antigo Fishing Club. As I stood on the steps of the club house, surveying the three goodly acres of clearing, with its patch of big pumpkins and fat shocks of corn, and jingling the keys of the woodshed, the pantry and cellar, I realized something of the oldtime nerve tingle of the night I ran races under the moonlight, in my first pair of red-topped, copper-toed boots.

It was a typical November evening, save the absence of snow, and there were plenty of signs of that in the air. High up against the dull gray cloud rack, which had hidden the sun since early morning, a flock of wild geese were winging their way swiftly southward, squawking and gabbling as they went, as if sighting a familiar resting place.

There was that peculiar property in the air which the backwoods folk call "hollow," and the slightest sounds fell with startling distinctness on the evening solitudes. The barking of the dogs drifted faintly in from the Elton settlement, two long miles away, through the woods. A whirring of wings through the frost-browned leaves on the edge of the clearing told of the flight of a feeding grouse. A subdued rustling in the neighboring corn shocks betrayed the whereabouts of foraging squirrels threshing out their evening ration of corn. Out in front of the club house stood Bismarck, pricking his ears alternately at the sounds from the settlement, the threshing in the corn shocks and the whirring of wings in the foliage. In the dusky background the trout lake lay sleeping in its prison of ice, its glassy surface mirroring perfectly the dark woods beyond—the counterfeit presentment of a summer calm.

While I was lighting the club house lamps that evening, Bismarck, grown tired at last of his favorite pastime of barking at the settlement dogs, began scratching at the kitchen door, and when I opened it he came in shaking the wet from his back. There was a glimmer of white on the doorstep, and glancing out I saw the great moist flakes, the first of the season, falling silently down through the twilight.

There was that in the situation most satisfying, both to the imaginative and realistic sense. Without, the witchery of the lone dark forest, the secrets of centuries locked fast in its silence, a mighty barrier reef, outstretched between the haven of the woodsman's clearing, and the fret and din of a world gone mad from lust of gold and want of bread, in whose depths are hushed eternally the voices of shipwreck from its storm-swept outer shores. Within, the crackling of wood fires, the glow of lamplight, the swelling song of a tea-kettle coming to a boil, a tantalizing combination of odors which three shrewd guesses would name as follows: Potatoes roasting in a redhot oven, venison steak frying in its own fat, and double strong Mocha threatening to boil over. Bismarck, lying back of the kitchen stove, thumped approval with his bony tail, as from time to time the odors of cookery came his way.

"O, Solitude! where are the charms
That sages have found in thy face?"

sang the castaway of Juan Fernandez, to the accompaniment of trampling surf and the shrill whistle of the sea winds, and solitude, up to the present time, having maintained a discreet silence regarding the whereabouts of the attractive properties which the disgruntled bard of the desert isle in her found missing, I, her self-constituted spokesman, do hereby declare not the least of those charms to be the unexpected discovery on an upper shelf of a club house pantry of a deep pumpkin pie with seven brown spots on it—"the kind that mother used to make." Cooking your own supper and sitting down alone to it in a backwoods clearing, with the nearest neighbor two miles away, may not be what it is cracked up to be, but a pie like that on the table is a mitigating circumstance.

It seemed a little strange at first, those dark silent rooms overhead, where the echo of familiar voices seemed still to linger, the three vacant chairs in front of the fireplace, and the three pairs of hunting boots ranged by the wall—that intangible something which looks out at you from the windows of every deserted old farmhouse.

A cynical feminine writer of books has defined man as "the only animal that chews tobacco and makes love all the year round." For this, O fair Philistine! I respectfully beg to substitute the following: The only domestic animal that deprecates dining alone. A man's enjoyment of a solitary meal is in the inverse ratio of his fitness for the higher duties of citzenship. The occasional bad breaks at stupid state dinners, such as spilling your soup in your neighbor's lap, is a trifle compared to the sense of isolation conveyed by the rattle of a spoon in an empty tea-cup, when supping alone on a wintry night in the aching stillness of a backwoods camp whence all but you have fled.

It is under such circumstances as these that a man learns to appreciate the companionship of a faithful dog, stump-tailed dogs alone excepted. At such a time there is more comfort in a single tail-wag of an honest old dog than in all the smoking tobacco in the United States commissary. There is practically no limit to the moral support stored up in the tail of a well-conditioned dog. It stands to-day as a symbol of the broadest democracy known to the world. Under the peasant's toil-stained garb and the cloak of the prince to the purple born, the eyes of a dog see only the man, and neither bribes nor blows can gain for either the preference of that democratic tail.

Of all that bountiful supper, only the pickles and dishes remained to be returned to the pantry—thanks to Bismarck's assistance. The cares of housekeeping were resting lightly upon me. When the supper things had been put away and I sat in the Nestor's easy chair smoking the Nestor's corncob pipe, my feet outstretched to the glowing maple coals, the lamplight falling over my shoulder on the pages of "Treasure Island," I could not help pausing from time to time, despite the fascination of the yarn, to wonder why it was that womenfolk were everlastingly harping on that old string about "Man's work being from sun to sun, and woman's work never being done," and I made a mental note of some pointers which I intended to give my landlady upon my return to the city. Why, it had not taken me fifteen minutes to clear the table, give Bismarck his supper, put a log on the fire and light my pipe, and here I was through for the day, with all the evening ahead of me for the cultivation of my mind. I had set the supper dishes out in the kitchen to await the breakfast dish-washing. What could be simpler?

I had reached that part of Stevenson's captivating story where the surviving mutineers of the Hispaniola, advancing on the spot laid down in Flint's chart as the burial place of the blood-stained treasure, are suddenly halted by that awful cry in the familiar tones of the dead pirate skipper, ringing through the stillness. The very air of the room seemed echoing with "Darby McGraw! Darby McGraw!" when Bismarck, who was snoozing at my feet, suddenly, and without the slightest premonitory symptom of nightmare, uttered a prolonged and blood-curdling howl, followed by an excellent imitation of a mule in a treadmill with the belt and the brake off.

Now, the genial author of this breezy pirate tale has made no provision whatsoever for a climax in any of the situations leading up successively to the discovery by Silver's cutthroat band of the rifled treasure pit, but it occurred exactly at the point where Bismarck's nightmare overtook the reading. Although I struggled on desperately to the end, there was not a minute after Bismarck took a hand when the author's cleverly contrived climax stood a ghost of a chance of winning. It was all dog and "Darby McGraw."

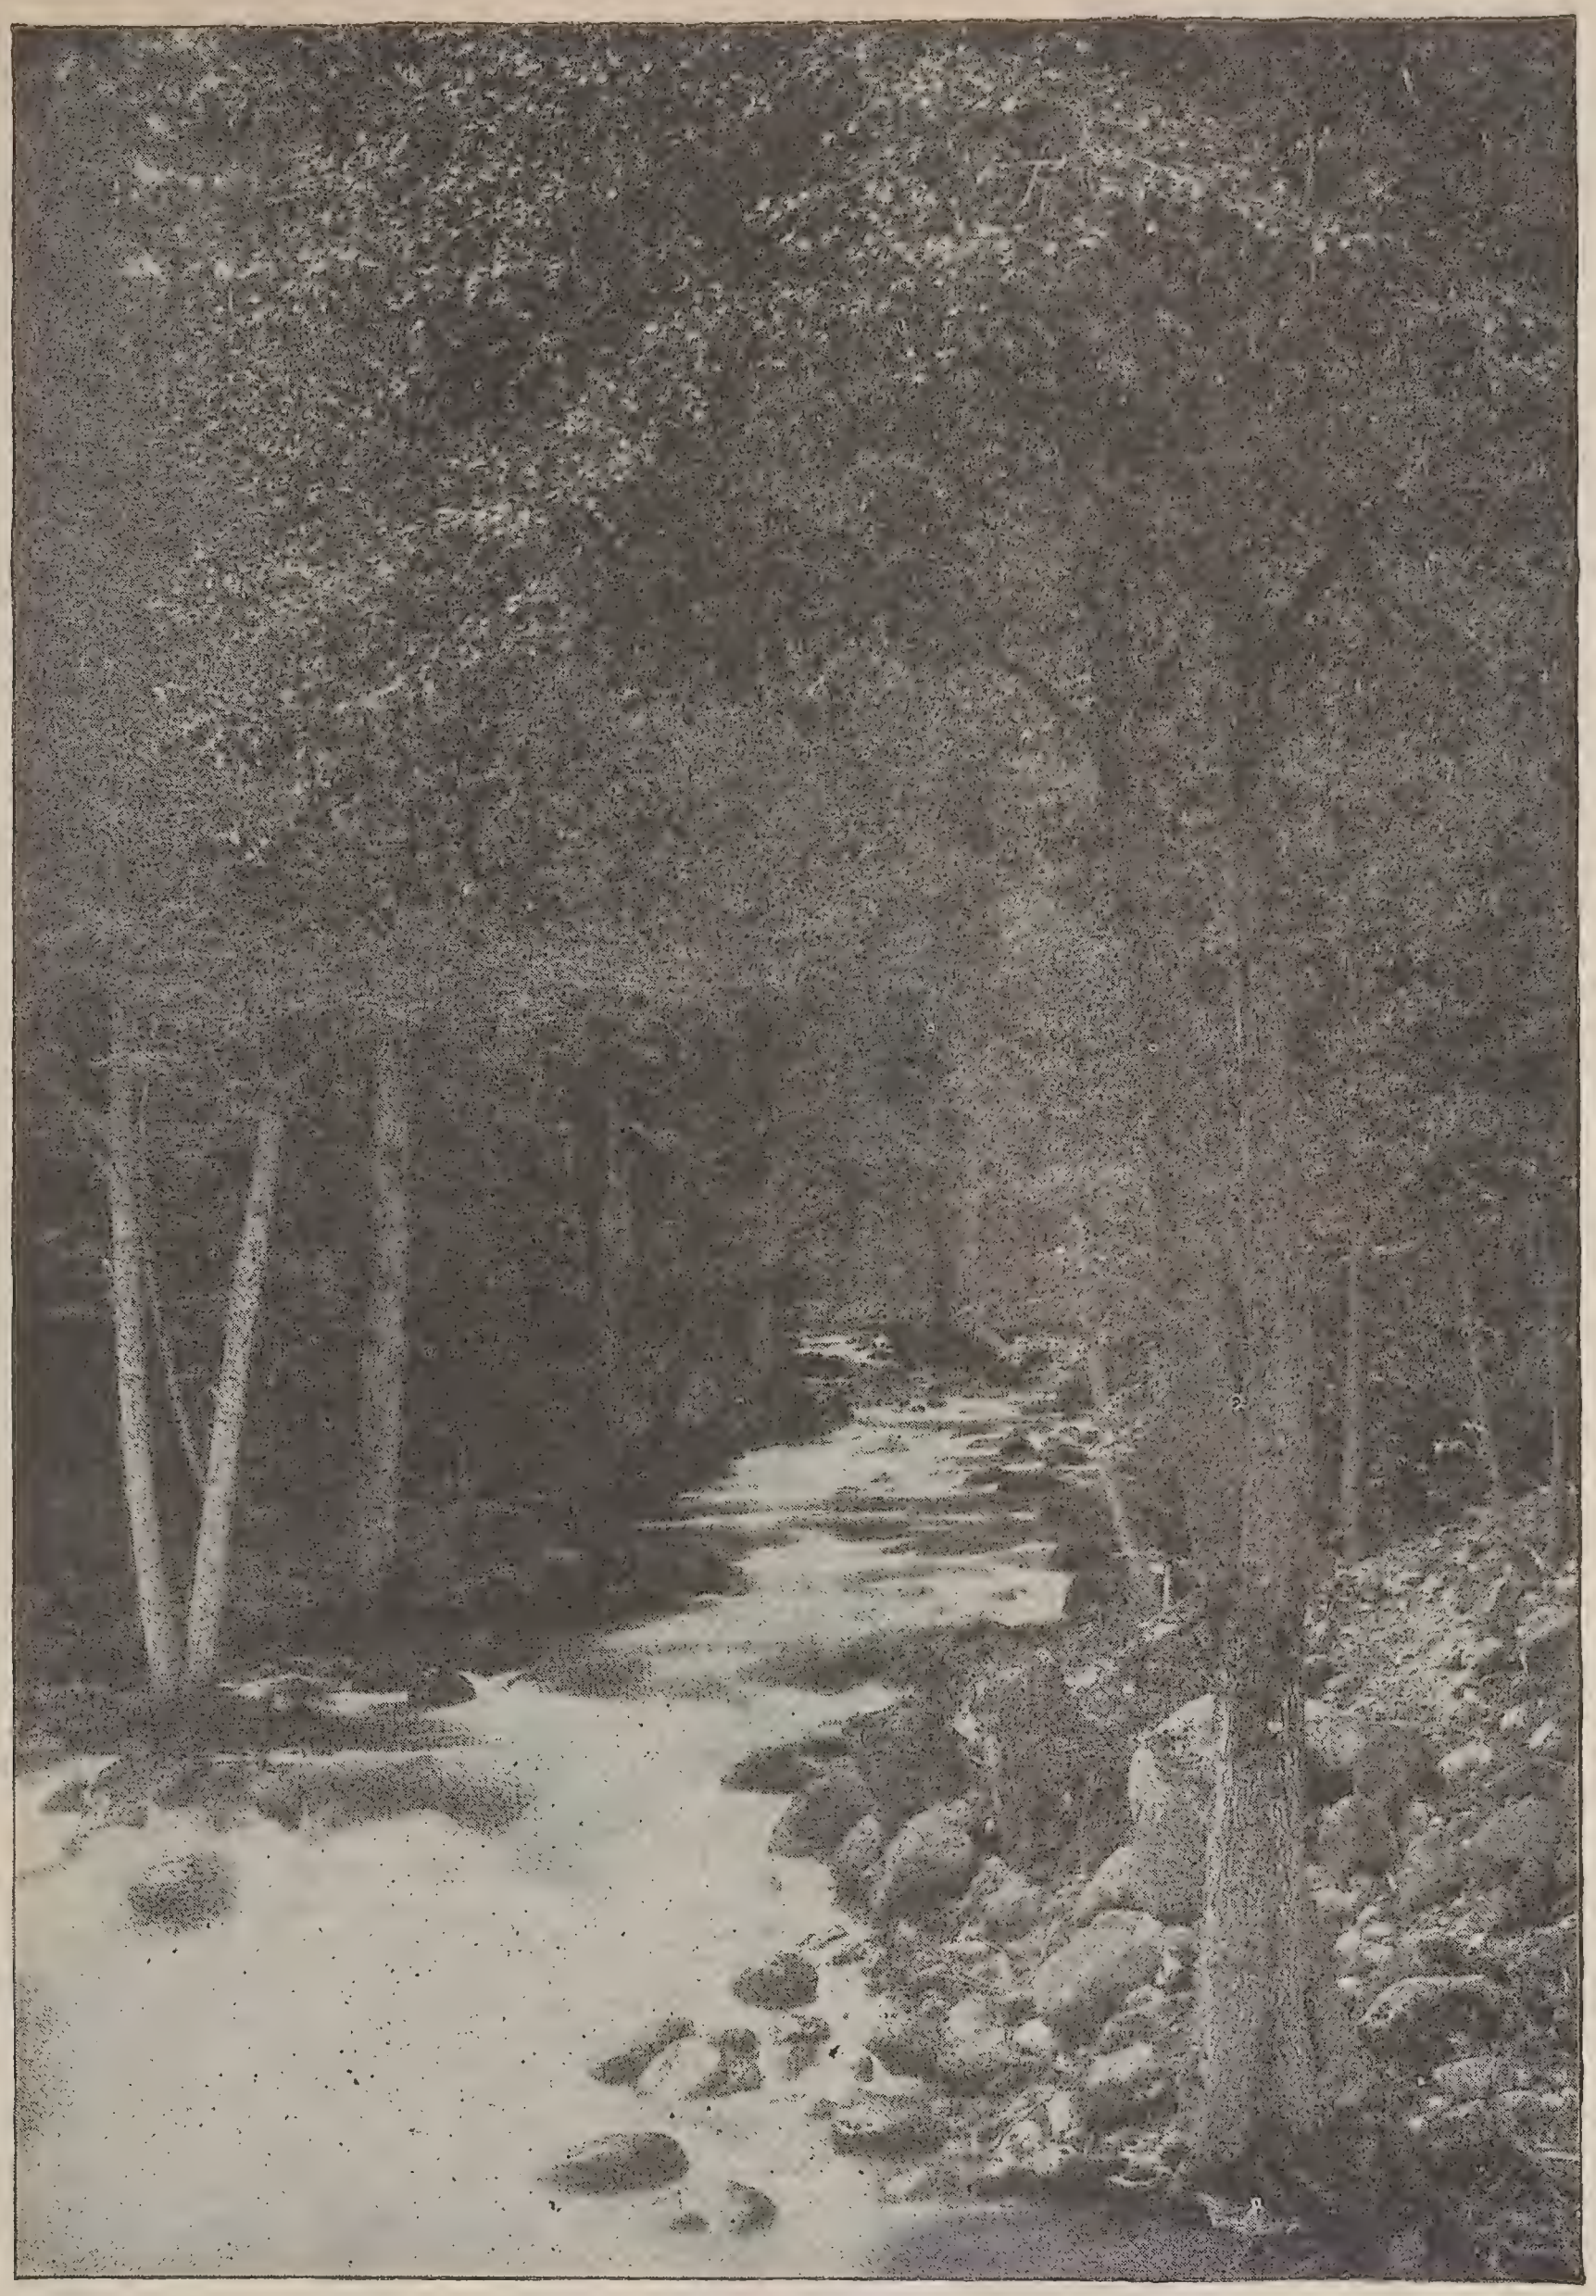
When, the last thing before retiring that night, I went out to take a squint at the weather, as is the custom of all old hunters in camp, the air was still thick with the falling flakes, while a moaning sound in the neighboring pines, as of surf on a distant bar, told of the rising storm.

What hour the storm burst over the clearing I did not lie awake to see, but at dawn next morning I looked from my sleeping room window across a sea of tossing boughs, through which a roaring northwest gale drove the snow in a powdery smudge. As I descended to the kitchen the stairs creaked frostily, and Bismarck's nose was like a lump of ice, as from time to time he poked it playfully into the back of my neck, as I stooped to the task of building the fires.

Through the kitchen window I saw the clearing, a whirling eddy of snow, and when I opened the door to give Bismarck a morning run at the rabbits a barrel of the "beautiful" tumbled inside. There was an inch of new ice in the rain barrel and a foot of snow on the level. But within, the frosty air was fragrant with the scent of freshly kindled fat pine fires, and their snap and crackle echoed cheerily in the dawn-lit silence of the rooms.

What to do with myself that day to keep off the creeping feeling of loneliness was the question that confronted me as I sat over my second cup of coffee, watching through the window opposite the whipping of the naked boughs along the margin of the trout lake. It was an ideal day for still-hunting, barring the falling trees and flying limbs. Many a time-scarred monarch of the woods had gone down in that long night's battle with the elements. Two large elms had already tumbled into the clearing, their shattered branches lying about them like the arms of a fallen knight, and from time to time I caught above the roaring of the storm the sound of the great trunks crashing downward through the undergrowth. Only a man's necessities would take him into the woods on such a day.

But if not still-hunting, what then? Out in the middle of the lake was a mooring stake, rising through the ice to the height of a man, where we used to hitch the Baldy, the club house punt, during the summer fly-fishing, and which marked the location of one of the deepest trout holes. Lying just inside this stake was a patch of open water about the dimensions of a double blanket. As I looked, my loneliness flew up the chimney, for I knew that out there in that patch of blue water were hosts of old acquaintances.



There was a rack of rods on the dining room wall, with reels, lines, everything ready to begin work. At the foot of the bank was the Baldy turned bottom side up on the boulders. After dinner I would push it out to that emerald patch in the snow and catch a mess of trout for the Sunday breakfast of my returning friends.

The sun came out along toward noon, a blotch of rainbow color in a flying, sparkling mist, but neither the storm nor the cold lost its grip.

I could not help but smile to myself at the incongruity of my outfit, as I scrambled down the bank that afternoon, with Bismarck bringing up the rear, to the spot where the rounded hillock of snow marked the location of the punt. Not often does it fall to the sportsman's lot to go fly-fishing arrayed in German socks and arctics, coonskin coat and fleece-lined buckskin gloves, nor seldom does his outfit include such things as a broom, a snow-shovel and an axe.

With the punt resurrected and turned on its bottom, and the fishing tackle placed therein, I began feeling my way through the soft deep drifts that bordered the springy margin of the lake. Once clear of these, I headed straight for the mooring stake, testing the ice at every step with the butt of the heavy axe. Proceeding slowly, I had worked my way out to within 15ft. of the dark green patch, when a loud thunk, thunk, a bending of the ice beneath my feet, and a wrinkling of the water along the edge of the opening—signs so familiar to all adventurous skaters—warned me back.

To get to the shore, exchange the axe for the snow shovel and broom successively, clear a slide through the length of my line of tracks, run the punt to the end of it and beyond was the work of a little less than an hour, and when I added my weight to the forward thwart of my amphibious craft the ice went down and the water came up, and the Baldy slid gracefully into the open. As the punt took the water, I caught, through a rift in the float-

A CALIFORNIA TROUT STREAM.

ing slush, a glimpse of a school of my summer friends skurrying away under the ice. I was not long in getting after them.

First, as an essential to successful work with a fly, the Baldy must have more room. This I proceeded to obtain by running the snout of the punt as far up on the ice as possible, and rocking it violently in that position. This process, supplemented by an occasional punch alongside with the head of the axe, I repeated until an oblong square as large as the ground plan floor of the club house was filled with broken ice. In the center of this was the mooring stake. Laying the punt alongside the stake and grasping it with both hands to steady myself, I succeeded after fifteen minutes' rocking in forcing the slush to the sides of the hole, to which it quickly froze fast.

I enjoyed the rocking almost as much as what came after it. Around and around the edges of the pool ran the merry tinkle of the ice bells, swinging on the choppy waves, mingling their crystalline notes with the mighty symphony of the winds.

The pool was hardly clear of ice, when the trout began to come back, singly and in pairs, in groups and battalions; there were hundreds of them if there were ten! They formed up in two schools on opposite sides of the opening and began to encircle it, keeping just within the shadow of the snow-covered ice field. They evidently thought themselves well hidden, but I could have counted every one of the beautiful creatures, if they had only lain still long enough. It took them fifteen minutes or more to get used to the punt and the coonskin coat, but they finally settled down exactly as they had formed up. And then the sport began. I got a fly out just where I wanted it, and the largest trout in the larger school came after it alone and got it. I took him gently over the side, and he did not flop much in the three inches of snow that had drifted into the boat since putting out. They came up singly and they did not come fast, and I almost wished that they had not come at all—and I put back all that I caught but six large males. For it was only by virtue of my position as guest of a fishing club owning a preserve, that I claimed immunity from the operation of laws which held to a strict accountability the man who at any time during the close season takes a trout in public waters. Any now I had the making of a breakfast for three, and that was more than I had hoped to get, fishing through a hole in the ice, with the tip of a red squirrel's tail for bait. And so there I stayed, hour after hour, reeling them in and letting them go again, and keeping the count on the gunwale of the Baldy, while Bismarck sat humped up in the snow in the shelter of a wooded point howling disgustedly from time to time, as he saw me putting a big trout back—stayed until the shores of the lake grew dim in the wintry twilight, alternately "rocking" when a skim of ice hid the bottom from view and blowing on the icy bait, the loud roaring of the storm in my ears, the wild sense of its freedom in my veins, and the generous thrill of humane sport tingling in every nerve. At last, when I pulled the Baldy out, the scratches on the gunwale totaled 78.

That night as I watched the smoke from the corncob pipe drift lazily into the chimney, I seemed to find in the merest incident recalled of that afternoon on the storm-swept lake a flavor hitherto unsuspected.

WILLIAM ALFRED WHITNEY.

A Colorado Trout.

MR. CHARLES HALLOCK sends us this paragraph from a Denver correspondent:

"Seven of us went trout fishing the other day, and we caught a fine mess. One of the fellows caught a trout weighing 6¼lbs. Couldn't land him; had to shoot him in the head. He was 27½in. long and as pretty as could be. Am going to send you his picture. He swallowed a 10in. trout as bait. Can you beat that? A. E. B. M. D."

Fishing Up and Down the Potomac.

Fish Stories.

WITH each day spent upon the water, some unusual occurrence but adds to the credulity of the angler by enlarging for him the bounds of possibility; the marvelous tale of his brother of the angle does not shock his reason as it does that of the general; it only recalls some incident more strange within his own or his friend's experience.

A great part of the angler's reputation for imaginary adventures arises not more out of the exuberance of his fancy than the lack of opportunities for observation—the ignorance of his doubting audience who can find nothing within their own knowledge on which to base their faith—which with most people is measured by the accustomed; and with fish stories it is so often impossible to substantiate them by any other proof than the unsupported assertion of the narrator. This of necessity because the man alone will see and hear a million sights and sounds a mob could never find.

This at least must be taken for presumptive evidence of the reliability of the majority of fishy stories; that most of them which are told for fair are believed by anglers. If each manufactured his moving tale of flood and drouth he would have no respect for those of his fellows of the gentle craft, but would know they too were fictions. On the contrary, none so eager to hear the latest yarn from a fisherman or stranger and none so ready to believe as the honest fisherman. Too guileless himself to deceive, he harbors no suspicion of his neighbor, and is more often the victim than the inventor of dreams. The sample or two given are hardly wonderful enough to record, and are for anglers alone who will not only accept them without question, but whose only comment will be, "That's nothing to what happened to me last," etc.

Dr. Harban, one of the most expert of the Capital City's anglers, was casting a minnow in the Potomac; his trace was looped to the line with a thin snap-hook swivel; as he had taken a good bass and was reeling it home, another fish ran at the bright lacquered swivel and the snap, like a barbless hook, caught enough of the cartilage of the lip to hold him, and the Doctor, fishing with one hook, was astonished to land two bass at a single cast.

Jesse Middleton, fishing at Choppewamsic, casting a battery of No. 4 flies, had a strike on the edge of the weeds, where he expected a big jackfish. Striking hard at the rise, for it is not easy to set the hook in the bony mouth of an old pickerel, the fish, which turned out to be a small one, was pulled half-way to the boat.

The hook, point down, had caught in the thin cartilage in the floor of the mouth and made a rent nearly 2in. long through which the fly dropped while he was recovering the unexpected slack.

A large pickerel, attracted by the disturbance, made a rush to rob the little fellow of his prize, took the fly, fastened himself, and both were safely landed on the same hook.

A commotion among the lilypads attracted our attention to what we took to be the red dorsal fin of a 10lb. carp disporting in the shallow waters. As the boat approached it moved away slowly, and at 50ft. a No. 14 dry fly that was being experimented with in the holes of the moss beds, was thrown over the fin and twitched. It caught on and the fish came so easily to the boat as to be a puzzle. When close up it was seen to be a catfish nearly 1ft. long with the little hook fast near its tail, but making no more struggle than a dead fish. As it was about to be lifted into the boat it was seen that a great water moccasin as thick as a wrist had the cat gripped over the middle of the back, its jaws dislocated fully 1½in. to accommodate them to the broad back of the fish.

What we had seen was the snake trying to swim with the fish out of water, as he could make no progress broadside among the lilies and the moss. Handing the rod to the boatman, a shell was slipped into the little skeleton Stevens, and putting the muzzle close to the snake's he was uncoupled. On lifting the catfish, which seemed to be paralyzed with fright, or exhaustion, or pressure on the spine, into the boat, it began to gasp as one who falls into the water with quite audible sighs, and quickly recovered, struggling more wildly than is usual when one is taken from the hook. The mark of the snake's grip was plainly bleached, probably by the gastric juices or pressure, and there were several marks of teeth on other parts of the body, but it seemed practically unhurt, and on being restored to the water, made off with a rush that flirted water over us both.

The first man to whom the incident was related on the train coming home in the evening, was Andy Cullinan, who was not at all surprised, as he had already had a similar experience. He and his friend, Will Murray, were out one night on the Freestone Marsh after frogs. Will was poling the boat and Cullinan managing the jacklight and picking up the green croakers. He saw the white vest of a big fellow near the shore, and directed the skiff close to it. Just as he was about to pick it, a suspicious wriggle invited closer inspection, and he found it was the white front of a catfish some 10in. long, and saw the beady eyes of a moccasin with that paralyzing grip across the back. Reaching under the seat where his gun was folded in his coat, he fired three quick shots at the snake, which began to move away. Uncertain whether he had struck it, he belabored it with the paddle, and as the water was shallow, easily killed it, and the catfish swam away, apparently uninjured. The frogs were disturbed no more that evening.

The catfish is apparently a regular article of diet with this very common—miscalled moccasin—a perfectly harmless water snake, though having all the repulsive characteristics of its more dangerous cousins. One would imagine the three long spines of the cat would be fatal to the peace of mind and health of the reptile, but his gradual swallowing head first probably lays the spines flat along and they never get a chance to rise. Bass are not always so fortunate. They are occasionally found helpless with a catfish fast in their throats. Their method or swallowing in gulps perhaps gives the spines room to be erected, and then the trouble begins.

Nearly thirty years ago a writer in the Gentleman's Magazine (n. s. 5, p. 15) said: "There are no doubt many curious incidents which have occurred in every angler's experience which he would not care to vouch for in a mixed company. I remember many in my own. For instance, I was once fishing from Thames bank in a space between two bushes about the width of my writing table; I had a book and a pipe, and was lying my length on the warm grass confounding my luck—unlike John Leech's hero—because I could not get a bite, when a kingfisher perched on the end of my rod, which was at my side, waiting for its prey, and without appearing to care the least for my presence, took his header, brought up his beak, whisked his little tail at me and flew away, as if he had done something very clever. Now I venture to say that sixty per cent. of the readers of this magazine are, or have been, more or less anglers, and that such an incident never happened to them."

This was doubtless true; but J. M., fishing with a float at Four-Mile Run, was standing on a log that stood out in the water with a Henshall rod, 8¼ft., holding it in his hand, when a kingfisher perched upon the tip, scolding like mad.

He drew the rod backward slowly and was about to make a grab for the bird, when it flew away, circled and lit again upon the rod, still chattering, as if resenting the familiarity or presence of the angler.

Cooney Zella—and there is not a fisherman in Washington would doubt one of modest Cooney's stories—was fishing with a companion at Little Falls for white perch in the early spring with small minnows. The perch turned shy and they finally took off their bobs and sinkers, threw the bait as far down stream as they could reach and skittered it back with short jerks something as a fly is drawn over the surface, and caught three herring with nearly every cast. They used up their minnows, and secured near a bushel of herring in this way. The next day to convince a doubting Thomas of a friend, they took him along and repeated the strange performance, but have never been able since to get them in this way. That herring should take a bait in fresh water other than by accident, or should show such a fondness for minnows, or should take them at the surface in that gamy way, are all matters of wonder. It may have been that they were fresh run from the sea, and had not yet lost their appetites, or checked at the falls in their ascent may have been at play during their rest for their final rush up the gorge. Whatever may be the explanation there is no doubt in the minds of his friends, without the corroborative testimony of his companions, that the strange story is true.

HENRY TALBOTT.

Boston Anglers.

BOSTON, July 1, 1899.—Fishing parties to the British Provinces are much in favor with sportsmen in this part of the country, and as certain sections in Canada and Nova Scotia become better known they gain in favor. Quite a party of Fitchburg and Boston fishermen have just returned from a most pleasing trip to Nova Scotia waters. The party was composed of Rev. A. J. Kempton, Dr. Russell Bingham, Mr. A. Cutler, Mr. W. F. Joseph, Mr. McDonald, of Fitchburg, and Mr. Albert Hollis and J. Bert Baxter, of Dame, Stoddard & Kendall, Boston. They left Boston by the Yarmouth S. S. Line, and thence to Yarmouth, Nova Scotia. From that city the conveyance was by rail to Bridgewater; thence by stage to Milton, on the Liverpool River. From Milton the fishermen went to Indian Gardens, a drive of twenty-four miles, where their tents were pitched. Here most satisfactory catches of trout were made, the fishermen actually getting all they wanted, and all taken by fly-fishing. After four days' delightful stay at the Gardens, the party came down the river to Kempton Lake Brook for two days and a night. Fine fishing was also enjoyed at that place.

Breaking up once more, the gentlemen started for Milton. Down the river at Milton the party broke up, part going home by the same way as coming. The remainder of the party having a few more days to spend in the delights of Nova Scotia angling, stopped at a hotel, kept by Mrs. Freeman, where it cost $1 per day for accommodations that would make some of the Maine two-dollar-a-day fishing resorts green with envy. From that point the party took a drive of sixteen miles to Greenfield, where they spent the day salmon fishing. But the time was late in the season. Not a salmon would rise to the fly, although they were there in great numbers. They could be seen moving about and occasionally rising to the surface, but not to any sort of lure the fishermen could offer. Returning to Milton the fishermen prepared to leave for Boston, greatly regretting that the time had come when a most delightful release from business must end. The party made quite a long call at Shelburn, stopping at a hotel finely equipped for sportsmen; and well it might be, for it is kept by a noted trout fisherman, Mr. D. B. Frost. Here a number of sportsmen from the States were found, who gave the locality a great name for fishing, though the visit of the Boston party was a little late; the best time being from May 1 to about June 16. After five hours' stay in Yarmouth, the steamer Yarmouth was boarded for the return trip. Boston was reached about 9:30 A. M., after a delightful night on the ocean. The party broke up here, pledging each other to make the same trip another season. The guides employed were Bordman Hunt, Lemuel Hunt and Thomas Hunt, of Greenfield, and Samuel Freeman, of Milton. "Too much cannot be said in praise of the capacity and faithfulness of these guides," say the returned fishermen, "and they charged us only very reasonable prices." Readers of the FOREST AND STREAM desiring fuller information concerning the region visited by the above party, either for hunting or fishing, may address J. Bert Baxter, of Dame, Stoddard & Kendall, Boston, who will willingly reply, though in no way interested, beyond giving brother sportsmen a good chance.

In Passing it may be noted that Mr. L. Dana Chapman, secretary and treasurer of the Megantic Fish and Game Club, has positive information that the Canadian Government has decided to open September to the hunting of moose, caribou, deer, partridges and other birds. This is doubtless done in order to offset the law passed by the Maine Legislature last winter permitting of the shooting of one deer in September by paying a license fee of $6 by non-residents and $4 by residents of the State.

SPECIAL.

Protector Shriner's Resignation.

ONE of the chief aims of Foster M. Voorhees since his election as Governor, says a Paterson, N. J., exchange, has been to depose Charles A. Shriner from the office of State Fish and Game Protector. Mr. Shriner's ability made no difference when the personal and political spite of the Governor had to be gratified. The Fish and Game Commission was anxious to retain the services of Mr. Shriner, whose special fitness for the work is known to and appreciated by all the leading sportsmen in this part of the country. Its disposition resulted in several stormy interviews between the Governor and the Commissioners, and Mr. Shriner concluded to end the friction by resigning. The Commission met at Jersey City yesterday afternoon, and Mr. Shriner's resignation was received and accepted. The fish and game protector explained his reasons in the following communication:

"I hereby tender you my resignation as Fish and Game Protector of New Jersey, and in doing so desire to explain my reasons therefor. Governor Voorhees, since his advent into office, has persistently demanded my removal, his reasons for this demand being my opposition to his nomination and election last year, an opposition engendered wholly by his determined spirit of hostility to the protection of fish and game. His attitude in relation to my office has necessarily created a great deal of friction between yourselves and him, and it is plainly apparent from the power he wields and his disposition to make use of it that my retaining the office I hold at present will be injurious to the iterests of protection of fish and game. I feel confident that more harmonious relations between yourselves and the executive will follow my resignation, and the result of this cannot but be of benefit to the work in which I have always taken a great interest. I trust I may be right in the conclusion I have arrived at, and I assure you that this step on my part will not in the least weaken my interest in the protection and propagation of our wild fauna and that whatever of knowledge and experience I have gained in this particular field will at all times be cheerfully at the disposal of your honorable body and of my successor in office. I thank you cordially for your kindness and uniform courtesy to me and hope that the proceedings of your honorable body will again be as harmonious as they were previous to the election of the present Governor."

Mr. Shriner's resignation will take effect when his successor is appointed. The news that he has made up his mind to retire from the position will be learned with regret by all who are in a position to know the vast amount of good he has accomplished during the past four years in the propagation of fish and game in this State. The laws have been rigidly enforced and beneficial legislation secured through his efforts. Governor Voorhees began his plans to depose Mr. Shriner as soon as he took possession of the Gubernatorial chair. The Commission is supposed to be non-partisan. The two Republican members were reappointed, but two new Democratic members were named, and they were made aware of the Governor's hositility to Mr. Shriner. Although Mr. Shriner is a Democrat, it was the Democratic members who brought up the subject of Mr. Shriner's removal and suggested a Republican. The Republican members of the Commission objected on the ground that Mr. Shriner was too valuable a man to lose, and the question was thus tied up until Mr. Shriner opened the way for harmony. On account of the absence of one of the members a successor was not appointed yesterday, but it is understood that George Riley, of Newark, will be the man, although there are several aspirants for the position. Mr. Shriner said to-day that Mr. Riley would make an excellent official, being in every way qualified for the position.

A Word from Kelpie.

AVALON, Cal., June 23.—*Editor Forest and Stream:* I do not read or write much nowadays, so that I am out of touch with the FOREST AND STREAM, and I owe a lot of letters among the Old Guard. I have just notified Hickory that I can't camp with the kingfishers this summer, much as I would like to do so, as I am booked to remain on this island of Santa Catalina for a good while. Mrs. Kelpie is with me, and if any of the FOREST AND STREAM family should be here this year and wish to look me up, they will find my cottage on Metropole avenue.

I do not cruise or fish much, but do a good deal of mountain climbing, and find the plants, minerals and scenery very interesting. I sent you a note about the first tuna, but you must look to the other fellows to write about the fishing. It is all that has been claimed for it, but as I said, I don't fish this season. I will just say, however, that I will back any of our old kingfishers to handle a tuna (or tunny) with the best. A man who with a 7 or 8oz. rod and light bass tackle can bring to gaff a 40lb. maskinonge need not take a back seat in these matters, even if he does not use a rod like a billiard cue.

I had a very pleasant visit with our old friend, Judge Greene, when at Portland, and had also the pleasure of meeting Mr. Billy Newman and Mr. J. Roberts Meade. We had a discussion about the Victoria regia, a specimen of which is in the Golden Gate Park at San Francisco. Billy said it came from Australia. I said Africa. So we hunted the library over unsuccessfully, until we found it under the title "Water Lilies," and it hailed from South America. The judge smiled sardonically, and said that was just as he expected. This was wrong of him, and Billy and I were going to put him out of the room, but on further consideration gave it up. He was too big.

KELPIE.

"The Toilsomeness of Sport."

PROVIDENCE, R. I., June 25.—In last week's editorial, "The Toilsomeness of Sport," you strike it about right. June 23 I arose at 3:30, pushed off the skiff, rowed up to Greene's Island buoy and anchored, and took one weakfish of 5½lbs. (with rod and reel). Then I rowed home against wind and tide, had breakfast and took the 7:09 train and was at work at 8 o'clock. We always forget the blistered hand and aching back, but remember the savage rushes of our fish, way down below us somewhere, not knowing what moment the hook will tear out, till finally we reel up the captive, the net is passed under him and a beautiful creature lies in the bottom of the boat.

S. S. B.

Worms for Bait.

ESSEX, N. Y., June 26.—*Editor Forest and Stream* We have a young lady who assists in the housekeeping department who calls pajamas "bejabers," and who speaks of the "humiliating weather." Speaking of humiliating weather suggests the fact that we have not had any to amount to anything this spring and summer. The drought has been very severe, and not only have the crops of corn and grain and grass suffered, but also the crop of worms underground is far below the average. It is a difficult matter to find enough to make a mess for the hungry perch in our front yard, and were it not for one specially favored spot the perch would often have to go hungry. Thanks to this spot we manage to feed them quite regularly, and the perch are so grateful that they follow us right up to the kitchen door in considerable numbers.

Our worm patch is a little spot of rich black earth near one of the barns, where some corn fodder was thrown out during the winter. This fodder acted as a mulch and conserved the moisture in the soil and kept it near the surface. The ground elsewhere is either baked hard as a brick or burned into a powdery dust, and the worms from far and near have flocked to this little oasis in the desert and made it populous with life, so that it is possible to fill the bait can in a very few minutes' time.

A man who uses worms for ice fishing tells me that he keeps a tub full in his cellar all winter long. Once a week he pours a quart of sour milk on the surface of the earth, and this supplies the worms with food and keeps them in good condition. J. B. B.

A Brook in the Yosemite.

THE readers of FOREST AND STREAM will at once notice something about the brooks of the Yosemite which would not add to their attractions from an angler's standpoint. The presence of a great number of slippery boulders and smaller stones is not especially conducive to the comfort of the fisherman in long rubber boots, with his basket and tackle. A chance slip sometimes spoils outfit and temper—at least until the next big fish is hooked. The streams of the Yosemite, however, were not designed for the fisherman's exclusive pleasure, and he will not let himself be deterred by the obstacles which nature may have put in his way. The trees on the borders of the brook are mainly California alders. This alder is peculiar in the earliness of its flowers, which appear in central California just as soon as the leaves of the previous year fall. Dr. Parry says that "In spite of occasional sharp frosts, the process of fertilization proceeds steadily, and by Feb. 1, at least as far north as the lower Sacramento Valley, it is mainly completed, and the swollen winter streams over which these trees lean are conspicuously darkened by the effete male catkins, which resemble torpid caterpillars." The California alder is found along many of the streams of the State, and adds to their beauty by its neat habit and symmetrical proportions. The photograph was made by Dr. H. W. Rollins, of Boston, in the Yosemite Valley and the stream is supposed to be a tributary of the Merced River.

Trout in Central New York.

ITHACA, N. Y., June 30.—The trout streams about Harford Mills, Speedsville, Slaterville, and a stream or two in the vicinity of Willseyville have yielded and are still yielding some satisfactory creels of brook trout. Harford Mills may be reached on the N. Y. and L. division of the Lehigh Valley Railroad. Slaterville and Speedsville are a few miles from stations on that system. As handily as any, perhaps, they can be reached by stage or carriage from this city.

No angling of any pleasing nature has been had at the Ithaca end of Cayuga Lake thus far. Later on, along the eastern shore, black bass and perch should be taken in goodly numbers. M. CHILL.

Chicago and the West.

J. B. H.

IOWA, June 28.—My long-time companion and friend, J. B. H., the central figure in the Camp Forest and Stream for the ten years last past, died at his home yesterday in the afternoon. No one can take his place.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Staten Island Fishing.

ANNADALE, S. I., N. Y., June 25.—Last Saturday Henry Schmidt, of Annadale, and Walter Burt, of New York city, caught fourteen weakfish. Fred Klous and John J. Webb caught twenty-four weakfish and four fluke on Sunday, the 25th. Adolp. Wissert and Henry Schmidt, of Annadale, caught twelve weakfish. Mr. Meyer and Mr. Cohn caught six weakfish and three fluke.

CHAS. GELLER.

Feathered Rivals.

LET me tell you of a bit of rivalry among the birds that came under my notice. When living in the valley of the Connecticut, my home for a few years was on the edge of the first rise from the meadow. Back of the house was an old pear tree, in which a pair of orioles nested each year. In front of the house was a great elm tree—a favorite resort of the birds both of the meadows and uplands.

One Sabbath I was sitting out in front of the house when I noticed a bobolink come up from the meadows and light in the elm. Then it struck up its song in notes without exception the sweetest I ever heard—a very Jenny Lind among the birds. This drew the notice of one of the orioles, which with angry notes flew into the tree near the bobolink, then struck up in its sweetest tones in apparent rivalry with the bobolink. The bobolink answered it, and so for a brief time the concert went on, until the oriole, seeming to realize that he was far outdone by his rival, broke out into harsh scolding, flew at the bobolink and drove him back to the meadows. I had come to look upon the orioles as among the fixtures of the place, but if it would have brought back the bird from the meadow they would have had to seek other quarters, and although it has been a dozen years since then, yet the memory of the song of that sweet singer among the birds lingers with me yet. PINE TREE.

The Kennel.

Fixtures.

BENCH SHOWS.

Sept. 4-7.—Toronto, Can.—Toronto Industrial Exhibition Association's eleventh annual show.
Nov. 22-24.—New York.—American Pet Dog Club's show. S. C. Hodge, Supt.

FIELD TRIALS.

Nov. 6.—Bicknell, Ind.—Indiana Field Trial Club's trials. S. H. Socwell, Sec'y.
Nov. 14.—Chatham, Ont.—International Field Trial Club's tenth annual trials. W. B. Wells, Hon. Sec'y.
Nov. 14.—Washington, C. H., O.—Ohio Field Trial Club's trials. C. E. Baughn, Sec'y.
Dec. 8.—Newton, N. C.—Continental Field Trial Club's trials. Thos. Sturges, Sec'y.

Eastern Field Trials Derby.

Editor Forest and Stream:

The following are the entries for the Eastern Field Trials Club Derby. There are sixteen pointers and thirty-eight setters, and the total of fifty-four is the largest since 1892. All were whelped in 1898:

English Setters.

James McKay's black and white dog Pride, Feb. 19 (Cincinnatus Pride—Queen Vic).

Arthur Stern's black, white and tan bitch My Nellie S., March 7 (Antonio—Robin's Cora).

Arthur Stern's black, white and tan bitch My Sue S., March 7 (Antonio—Robin's Cora).

Henry Pape's orange and white dog Buccaneer, March 17 (Antonio—May Win).

George Crocker's orange and white dog Bob Acres, July 4 (Tony Gale—Minnie T.).

George Crocker's black, white and tan bitch Miss Meadows, July 4 (Tony Gale—Minnie T.).

George Crocker's black, white and tan dog Chadwich, July 4 (Tony Gale—Lightfoot).

George Crocker's black, white and tan bitch Miss Baugh, July 4 (Tony Gale—Lightfoot).

George Crocker's black, white and tan bitch Queen Lill, July 4 (Tony Gale—Lightfoot).

H. B. Holmes' black, white and tan dog Glen Noble, May 26 (Glen—Lem Gladstone).

John M. Watson's black, white and tan bitch Luna Belle, March (Tony Boy—Lena Bell).

Avent & Duryea's black, white and tan dog Pontiac, March 23 (Count Gladstone IV.—Hester Pryn).

Avent & Duryea's black, white and tan bitch Sioux, March 23 (Count Gladstone IV.—Hester Pryn).

Avent & Duryea's black, white and tan dog Ute, March 23 (Count Gladstone IV.—Hester Pryn).

Mrs. H. B. Duryea's black, white and tan dog ———, March 19 (Count Gladstone IV.—Tory Luna).

Pierre Lorillard, Jr.'s, black, white and tan dog Gailor, Jan 3 (Eugene T.—Gloster's Girl).

Pierre Lorillard, Jr.'s, black, white and tan bitch Pet of Rancocas, Jan. 3 (Eugene T.—Gloster's Girl).

Pierre Lorillard, Jr.'s, black, white and tan bitch Geneva, Jan. 3 (Tony Boy—Lena Bell).

Pierre Lorillard, Jr.'s, black, white and tan bitch Miss Lee, July 4 (Eugene T.—Trinket).

Eldred Kennels' blue belton bitch Eldred Lash, Aug. 16 (Cincinnatus Pride—Antonia).

J. R. Blake's lemon and white dog Don Noble, Feb. 3 (Don P.—Jessie).

Leon E. Seay's black, white and tan dog Mox Gladstone, June 8 (Greenway—Buena Vista II.).

C. I. Shoop's black, white and tan dog Harwick Boy, June 8 (Harwick—Spot's Girl).

C. I. Shoop's black, white and tan dog Harwick, Jr., June 8 (Harwick—Spot's Girl).

C. I. Shoop's black, white and tan bitch Lady Harwick, May 26 (Harwick—Miss Tony).

C. I. Shoop's black, white and tan bitch Harwick's Girl, June 8 (Harwick—Spot's Girl).

C. I. Shoop's black, white and tan dog Count Hunter, May 7 (Count Gladstone IV.—Hunter's Queen).

W. Gould Brokaw's black, white and tan bitch Fairview Bonnie, April 15 (Belton Boy—Vic).

Geo. E. Gray's (Agt.) black, white and tan dog Dewey, October (Harwick—Queen Esther).

D. E. Rose's (Agt.) orange and white bitch Trixie, April (———————).

D. E. Rose's (Agt.) black, white and tan bitch Bona, April (Tony Boy—Christena).

D. E. Rose's (Agt.) black, white and tan bitch ——— (Tony Boy—Cynosure).

D. E. Rose's (Agt.) black, white and tan bitch Minnie M. (———————).

W. W. Titus' black, white and tan dog Joe Cumming, Jr., January (Joe Cumming—Laura).

Edmund H. Osthaus' black, white and tan dog Solas, Aug. 1 (Cincinnatus Pride—Gleam's Nellie).

H. K. Devereux's black, white and tan dog Della's Sport, Jan. 31 (Marie's Sport—Della K.).

John A. Wilson's black, white and tan dog Rajah, Aug. 13 (Cincinnatus Pride—Antonia).

John A. Wilson's black, white and tan dog Honest Joe, Aug. 13 (Cincinnatus Pride—Antonia).

Pointers.

Arthur Stern's liver and white bitch Bootsic, June 7 (Young Rip Rap—Dolly Jingo).

L. C. Clark's liver and white dog Frank F., Jan. 5 (Gamester—Sally).

George F. Nesbitt's liver and white dog Rip, Jan. 5 (Gamester—Sally).

Charlottesville Field Trial Kennels' liver and white dog Mahdi, May 27 (Tippoo—Queen Kent).

Charlottesville Field Trial Kennels' liver and white dog Dervish, May 27 (Tippoo—Queen Kent).

Charlottesville Field Trial Kennels' liver and white dog Khartum, July 3 (Rip Rap—Toxie).

Charlottesville Field Trial Kennels' black and white ticked bitch Soudan, July 3 (Rip Rap—Toxie).

Charlottesville Field Trial Kennels' black and white ticked bitch Bedouin, June 3 (Rip Rap—Queen III.).

W. Gould Brokaw's liver and white dog Fairview Tom, March 16 (Sir Walter—Van's Pride).

W. Gould Brokaw's liver and white bitch Fairview Tibbie, March 16 (Sir Walter—Van's Pride).

W. Gould Brokaw's liver and white bitch Fairview Patty, April 3 (Prince Boy—Fanny Davenport)

James S. Crane's liver and white dog My Jingo, March 7 (Jingo—Dot's Pearl).

James S. Crane's liver and white bitch Dot's Daisy, March 7 (Jingo—Dot's Pearl).

George E. Gray's (Agt.) black and white dog Good Enough, April 15 (Rip Rap—Pearl's Dot).

George E. Gray's (Agt.) liver and white dog Dot's Rap, April 15 (Rip Rap—Pearl's Dot).

M. F. Rodgers' liver and white dog Brant, April 15 (Rip Rap—Pearl's Dot).

SIMEON C. BRADLEY, Sec'y-Treas.

Yachting.

Fixtures.

JULY.

5. American, annual, open, Milton Point, Long Island Sound.
5. East Gloucester, club, Gloucester, Mass.
6. Indian Harbor, special, Greenwich, Long Island Sound.
7. Sea Cliff, open, Sea Cliff, Long Island Sound.
8. Riverside, annual, open, Riverside, Long Island Sound.
8. Jamaica Bay, dory class, Jamaica Bay.
8. Corinthian, Phila., knockabouts, Essington, Delaware River.
8. Royal Nova Scotia, open, Halifax, N. S.
8. Burgess, club, Marblehead, Massachusetts Bay.
8. Winthrop, club, Winthrop, Boston Harbor.
8. Wood's Holl, open, Quissett.
8. Norwalk, club, Norwalk, Long Island Sound.
9. Penataquit Cor., 15ft. class, Bayshore, Great South Bay.
10. Manchester, 1st cham., Manchester.
12. East Gloucester, cup, Gloucester, Mass.
15-17-18-19-20-21-22. Larchmont, race week.
15. Penataquit Cor., snipe class, Bayshore, Great South Bay.
15. American, handicap, Newburyport, Mass.
15. Beverly, club Cor., Monument Beach, Buzzard's Bay.
15. East Gloucester, cruise, Gloucester, Mass.
15. Wollaston, ladies' day, Wollaston, Mass.
15. Quincy, open, Quincy, Boston Harbor.
15. Winthrop, hand sweeps, Winthrop, Boston Harbor.
15. Corinthian, Marblehead, 3d cham., Marblehead, Mass. Bay.
15. Taunton, club, Taunton, Mass.
15. Jamaica Bay, club special, Jamaica Bay.
15. Royal Nova Scotia, all classes, Halifax, N. S.
15. Corinthian, Phila., knockabouts, Essington, Delaware River.
15. Wood's Holl, sprit and cat classes, Wood's Holl.
15. Savin Hill, club handicap, Savin Hill, Boston Harbor.
15. Burgess, 16ft. class, Marblehead, Massachusetts Bay.
15. Seawanhaka Cor., Roosevelt cup, Oyster Bay, L. I. Sound.
15. Quannapowitt, club.
16. East Gloucester, cruise to Marblehead.
16. Williamsburgh, club, cats, Long Island Sound.

THE present week will be a busy one for yachtsmen. On Monday the trial races of the Seawanhaka Corinthian Y. C. begin at Oyster Bay, continuing on July 5 and 6, and longer if it proves necessary, in order to select the best representative for the races at Dorval three weeks later. On the same day the cruise of the Atlantic Y. C. begins, with the rendezvous at Larchmont. On Tuesday the yacht clubs throughout the country will celebrate with races. At Chicago the first of a series of trial races for the selection of a challenger for the Canada cup will begin, continuing on succeeding days. On Thursday comes the long-expected meeting of Columbia and Defender off Sandy Hook.

WE are indebted to the photographers, Messrs. Davis & Sanford, of New York, for the portrait of Mr. Will Fife, Jr., designer of the new Cup challenger.

Beverly Y. C.

WING'S NECK—BUZZARD'S BAY.

Saturday, July 1.

THE race of the Beverly Y. C. on July 1 was sailed in a breeze that capsized one boat and disabled several, all having two reefs tied in. Vif went to the aid of her competitor Laurel when the latter capsized and lost some time, but finally finished. The times were:

25ft. Class.

Ulula, W. H. Winship	2 16 16
Blazing Star, C. M. Baker	2 16 18
May Queen, D. L. Whittemore	2 19 15

21ft. Class.

Amanita, J. Crane, Jr.	2 14 12
Quakeress, W. F. Harrison	2 19 00
Kalama, David Rice	2 19 10
Edith, S. R. Dow	2 24 34
Dariel, H. W. Harris	2 25 24
Cyrilla, R. W. Emmons	2 27 29

Fourth Class—Cats.

Howard, H. O. Miller	2 04 05
Hope, J. H. Ellis	2 16 06
Daisy, Howard Stockton	Disabled.

15ft. Class.

Next, C. H. Jones	1 16 40
Uarada, J. Parkinson, Jr.	1 17 40
Peacock, Robert Winsor, Jr.	1 20 18
Flickamorro, W. F. Emmons	1 21 45

Fifth Class—Cats.

Vif, A. Winsor, Jr.	2 23 50
Laurel, Sidney Burgess	Capsized.

Burgess Y. C.

MARBLEHEAD—MASSACHUSETTS BAY.

Saturday, July 1.

THE Burgess Y. C. sailed its thirty-third race on July 1 in a fresh southerly breeze, shifting to S.W. The times were:

Raceabouts.

	Elapsed.	Corrected.
Tunipoo, E. A. Boardman	2 32 20	. . . .
Colleen, H. M. Sears	2 35 13	. . . .

Yacht Designing.—XXXIII.

BY W. P. STEPHENS.

(*Continued from page* 494, *June* 24.)

OF the many *non-circular* curves there are three whose names are familiar to all, and which are more or less useful in naval architecture. Each of the three is formed by the intersection of a plane surface with a cone whose base is a circle, and from this they are called the *Conic Sections.*

The *ellipse* is practically a flattened circle, a complete and continuous curve, with what may be termed one long and one short diameter. Its distinguishing characteristic is that the sum of the distances of every point on the curve from two fixed points shall be equal to some given distance. The two fixed points, E, F, Fig. 92, are termed the *foci;* the longer diameter, AB, passing through these points, is termed the *major* or *transverse axis;* the shorter diameter, CD, at right-angles to the longer, is termed the *minor* or *conjugate axis.* The sum of the distances of any point, G, from the two foci, GE and GF, must be equal to the sum of the similar distances (as EH, FH) of any other point. The *center* of the *ellipse* is at the intersection of the two axes, I.

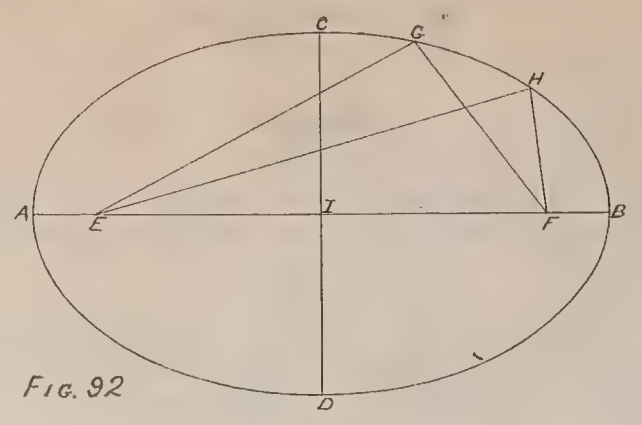

FIG. 92

The *parabola* is a symmetrical curve of infinite extent, there being no limit to the length of the two extremities. Its characteristic is that every point on the curve shall be equally distant from some given point and a given straight line. In Fig. 93 the fixed point, F, is called the *focus,* the line, AB, is called the *directrix,* and any given point on the curve as C, must be equally distant from both F and AB; that is, CD and CF must be equal. Any straight line perpendicular to the *directrix* and cutting the curve, as DC, is a *diameter,* and the *diameter* passing through the *focus* is termed the *axis.*

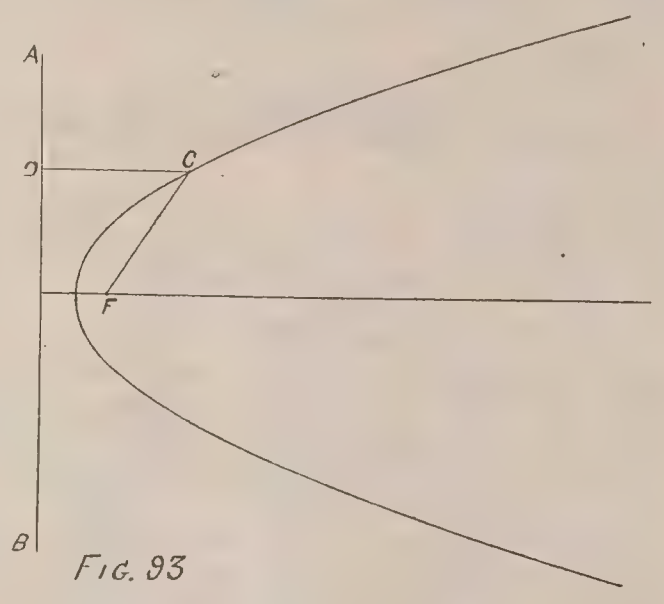

FIG. 93

The *hyperbola,* Fig. 94, is of infinite extent also; its characteristics are that the difference of the distances of any point from two given points shall be equal to a given distance. The two fixed points, A, B, are the *foci;* then if D and E represent any points on the curve, the line AF, or the difference between AD and BD, must be equal to AG, the difference of AE and BE. The point C, midway between the two *foci,* is the *center.* It is evident that from A and B two curves may be drawn, equal and opposite, so that for any two foci there is always a pair of twin hyperbolas. The line AB, passing through the *foci,* is the *transverse axis,* and any line, as DH, passing through the *center* and cutting both curves is a *diameter.*

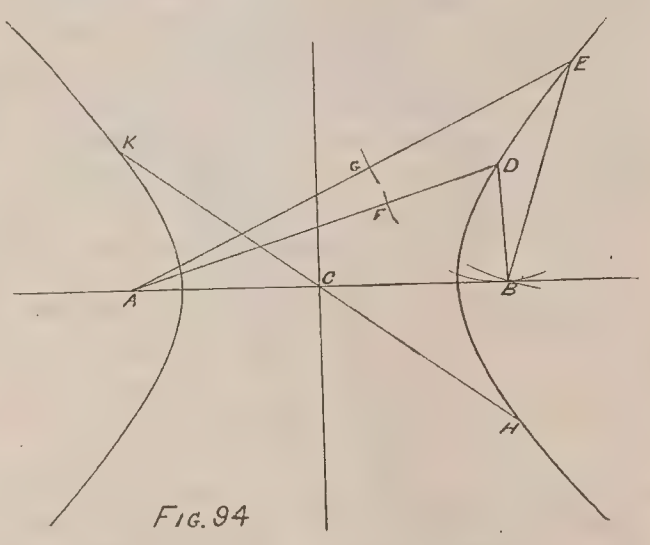

FIG. 94

The *hyperbola* is very little used in naval architecture. The *ellipse* is the line of intersection of a plane with a cylinder as well as a cone, consequently the deck openings for raking masts or funnels and inclined rudder posts, or the hawse pipes through the bows, are all elliptical. It is also used for windows and portholes where space is limited in one direction, and for flat arches.

The *parabola* is still more important in naval architecture, from the fact that nearly all the curves of a vessel, the level and waterlines, and also the sections, are *arcs* of *parabolas* or of a *parabolic* nature; so that they may be treated as *parabolas* in describing them and computing their elements.

While a true arc of a *circle,* described as in Problem XI., is frequently used for the curve of the sheer, an arc of a *parabola* is preferred by many as giving a more pleasing effect to the eye. Such a curve, as shown in B, Fig. 95, starts from a straight line and gradually increases in curvature to any desired degree. It gives a bold appearance to the bow, and for a given height at the stem-head the rail is high forward of the mast without the appearance of too much sheer. At the after end it curves up quickly in a graceful sweep that gives life to the counter. A circular sweep through the same points at bow, amidships and on the transom, is shown at A, Fig. 95, and also by the broken line in B. The waterlines of modern yachts are of this same *parabolic* form, comparatively straight forward and increasing to a sharp sweep in the run; while the bow-buttock lines are of the same form, but reversed, being full and round in the bow and running out very straight and clean in the after part of the underwater body, probably continuing as absolutely straight lines in the counter. The theoretic curve of a sail is also *parabolic,* with a strong hollow next to the mast or stay, graduating into a flat surface about the leach. A section of a mainsail from mast to leach, taken along the line of the reefs or about parallel to the boom, should show a *parabolic* curve.

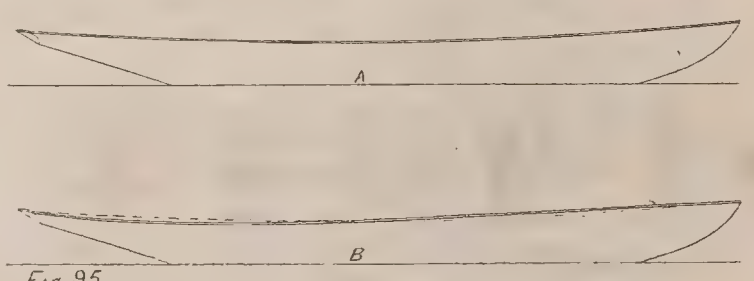

FIG. 95

Problem XV.—To describe an *ellipse.* The following are the best of numerous methods, the first mechanical, the second and third geometrical:

First Method.—Lay off the major axis AB, Fig. 96; bisect it and lay off the minor axis CD. With half of AB as a radius, describe from D the two arcs cutting AB in F, F¹, the *foci.* Drive a pin or small wire nail at each of the points F, F¹, and make a loop of cord just long enough to pass around the two nails and to reach the point D. Place the point of a pencil within this cord at D, and move it steadily around the right and back to D again. It is customary to tie the ends of the cord to F and F¹, but if this is done the pencil and cord must be shifted to draw the lower half of the *ellipse.* By using the continuous loop of cord the line may be drawn more smoothly and evenly and by one single stroke. This method will give a fair curve for the oval windows of a cabin house, or if the two nails are placed far apart and the loop made very short it will make the long, flat curve that is used on the transom of a rowboat.

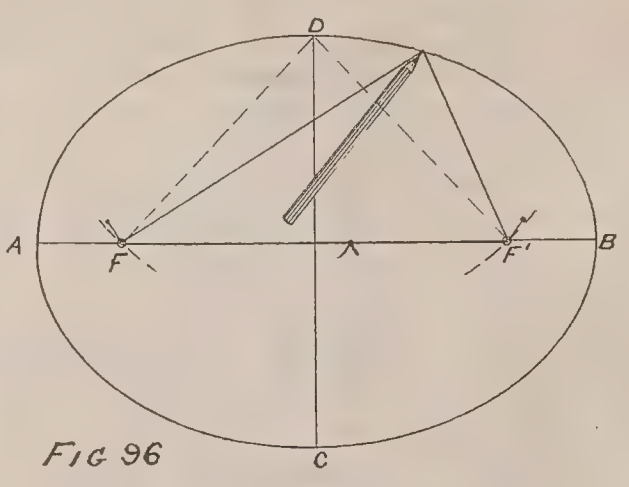

FIG 96

Second Method, Geometrical.—From the center E, Fig. 97, with AE and DE as radii, describe the two circles touching the major and minor axis respectively. Draw a number of radii of the larger circle, not necessarily at equal distances. Let CE be one of these radii, then through C where it intersects the larger circle draw a line parallel to DE, and through F, the intersection with the smaller circle, draw a line parallel to AB; the intersection of these lines will be a point of the *ellipse* and similar intersections for each of the other radii will give a succession of such points. The radii should be spaced quite closely together near the ends of the *major axis* where the curve is most abrupt, but they may be well apart near the *minor axis.*

Third Method, Geometrical.—Draw as befoire AB and CD, Fig. 98, and from D with the radius AE describe

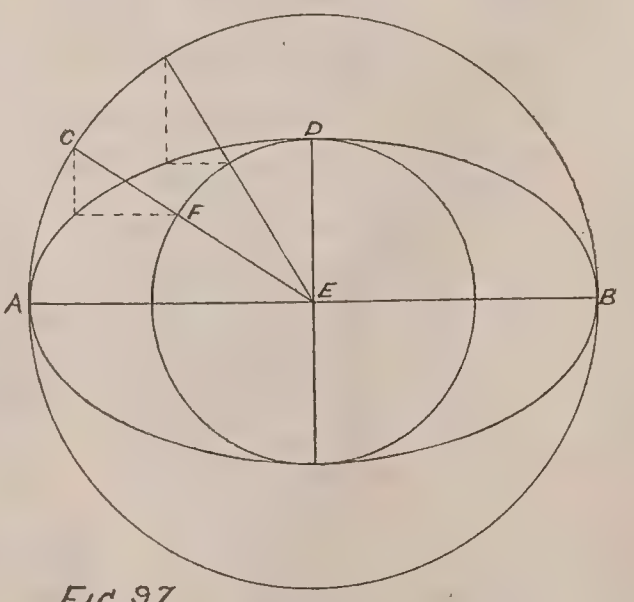

FIG. 97

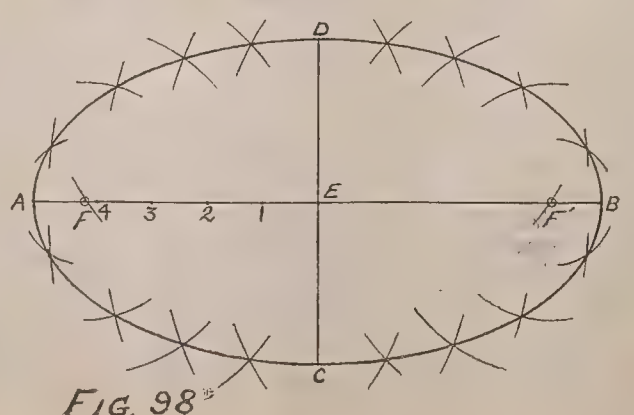

FIG. 98

the arms F and F¹, giving the foci. From E, with the dividers set to any convenient distance, step off on AE the equal intervals denoted by 1, 2, 3, 4, First take A1 as a radius, and with the compasses describe two arcs, from F and F¹, as centers. Take B1 as a radius and describe similar arcs from the same centers and thus in turn with A2 and B2, etc. The various intersections of these arcs will give points on the required ellipse.

In the various processes of yacht designing it is constantly necessary to ascertain the three different attributes of a *surface,* the *area, center* of *gravity* and *moment,* and the corresponding attributes of a *solid,* the *cubic contents* or *volume,* the *center* of *gravity,* and the *moment.* Thus, in designing a sail plan, as described in Part VII., it is necessary to ascertain the area of every sail, its center of gravity, and its moment about some assumed axis. In the same way, in dealing with a metal keel, it is necessary to ascertain the cubic contents, from which the weight may be calculated, the center of gravity, and the moment in relation to the hull proper. There are many different rules and processes for the computation of these elements in different surfaces and solids, but the following are the most useful in the ordinary practice of yacht designing:

Areas of Figures.

Parallelogram.—This is the simplest of all geometrical figures. It may be a square, as Fig. 99, a, with four equal sides and four right angles; a rectangle, b, with opposite sides equal and adjoining sides unequal and four right angles; a rhombus, c, with equal sides and acute and obtuse angles; a rhomboid, d, with adjoining sides unequal. In all cases, as the name indicates, the opposite sides are parallel. The area is ascertained in the case of the square and rectangle by multiplying any two adjoining sides together, the base by the altitude, or the length by the height. In the case of the two inclined figures, c and d,

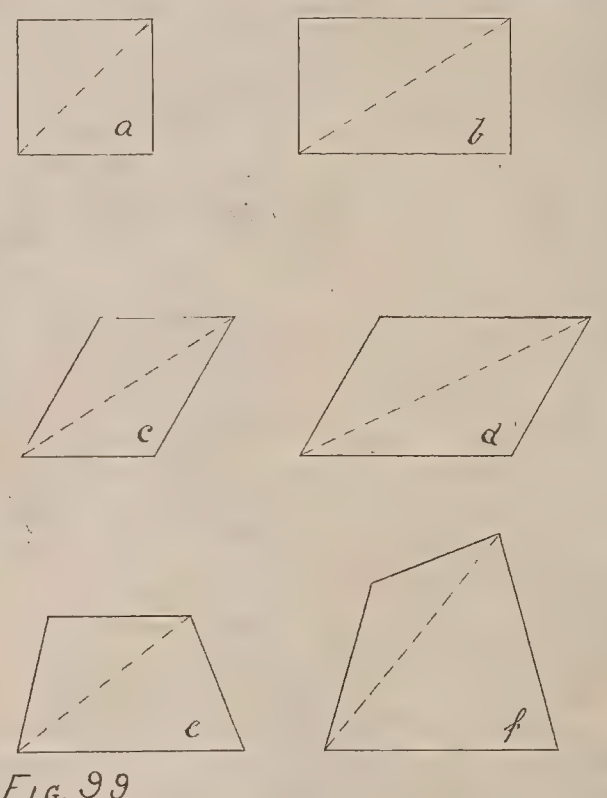

FIG. 99

the area is ascertained by multiplying the base, as before, by the least distance to its opposite side; the same as in the square and rectangle except that the height or altitude is now shorter than the side of the figure.

Trapezoid.—In this figure only two sides are parallel, as in e, Fig. 99. The area is ascertained by adding together the two parallel sides, multiplying them by the least distance between them, and dividing the product by 2.

Triangle.—This figure has already been described in Part XXX. It will be evident that each of the figures a, b, c, d may be divided by a diagonal into two equal and symmetrical triangles, each of which is necessarily of one-half of the area of the original figure. The area of a triangle consequently is ascertained by multiplying any one side, the *base,* by the distance to the opposite angle, the *perpendicular,* or altitude, and dividing the product by 2. This is true even in the case of an obtuse-angled triangle, Fig. 72, b, in which the *altitude* falls on the prolongation of the *base* outside the figure.

Trapezium.—This is an irregular figure, f, Fig. 99, with four sides, all unequal; such as a gaff mainsail. The area is found by dividing it by a diagonal into two triangles and calculating the area of each by the preceding rule.

Regular Polygon.—This figure, a pentagon, with five sides; hexagon, with six; heptagon, with seven; octagon, with eight, etc., may have any number of sides, but all equal. Its area is ascertained by adding together all the sides, multiplying the sum by the perpendicular distance from the center to one side, and dividing by 2. This is, of course, equivalent to computing the area of one of the many equal triangles into which the figure may be divided and multiplying by the number of such triangles.

Irregular Polygon.—This is a figure with any number of sides, which are not all equal. Its area is calculated by dividing into triangles.

Circle.—The circumference of a circle is ascertained by multiplying the diameter by the figure 3.141591. The area of a circle may be ascertained with a very close degree of accuracy by multiplying the square of the diameter by the figure 0.7854. The square of a number is that number multiplied by itself. The area may also be ascertained by multiplying the square of the circumference by the figure 0.07958.

Ellipse.—The area of an ellipse may be ascertained very closely by multiplying the transverse and the conjugate diameters together and the product by the figure 0.7854.

Parabola.—The area of a segment of a parabola may be ascertained with close approximation by multiplying the base by two-thirds of the altitude.

Mr. N. L. Stebbins, the yacht photographer, recently made a short trip to England and Scotland, in the course of which he secured many specially interesting views a little outside the ordinary run of yacht photography. Among these are portraits of Messrs. Watson and Thorneycroft, each in his office; views of Mr. Watson's drafting room, and of portions of the Thorneycroft Works, and of other noted shipyards.

Columbia and Defender.

As noted last week, the first trial of Columbia under sail was made on June 25, when she got under way from Bristol at about 9 A. M., with Messrs. Iselin and N. G. Herreshoff on board, and sailed down to Newport, escorted by Corsair, with Com. Morgan on board and a tug well loaded with newspaper men. Off Newport she met Defender, but at this time her crew were busy setting up the braces from the stemhead to the bowsprit fid, the inner gammon iron having shown signs of weakness. As soon as this work was completed, about 11:30, the two came together and sailed in company for about a quarter of an hour. The wind was still light—about eight miles an hour—and both were under the three lower sails only. The short trial on the wind, without any timing, was considered by all who saw it as decidedly in favor of the new boat, as with Defender on her weather quarter at the start, Columbia soon worked out clear ahead. At noon Columbia anchored outside Rose Island, but as the weather was unpleasant in the afternoon she did not try Defender again, but sailed back to Bristol. Workmen were busy all day Tuesday on various work about the yacht, the bowsprit fastenings in particular being strengthened. In the afternoon she was formally turned over by the builders to Mr. Iselin, and was placed in commission, after which the tender St. Michaels towed her to Newport.

On Tuesday two informal races were sailed with Defender, outside Newport Harbor, the result of each being in favor of Columbia, but by a small margin. There was plenty of wind for both trials, a whole-sail breeze from S.W., with smooth water. The two started from the harbor about 10 o'clock, and worked out to Brenton's Reef Lightship. Columbia, under lower sails, passed to leeward of the Lightship in advance of Defender, with working topsail set, the latter weathering the Lightship. No times were taken, and no attempt was made at a formal start. Columbia set her working topsail after some delay, and worked out a little lead. After several tacks toward Point Judith, both set baby jibtopsails at noon and stood on for a short distance further. The gain throughout was on the side of Columbia, but it was very small. On the reach in the two did not start evenly, and while Columbia ran in to the harbor so that her crew might get dinner on board the tender, Defender lay to off Narragansett Pier, and the crew had dinner on board.

Columbia was not under way again until 4 P. M., by which time Defender was coming up the bay in search of her. At 4:30 they started again off Beaver Tail, Defender just on the weather beam of Columbia, both under working topsails and in a breeze of about fifteen knots. When they stopped at about 5 o'clock, Columbia's topsail sheet having pulled out the clew of the sail, she had gained on Defender, but very little.

On Wednesday the two sailed from Newport to New London, a distance of thirty-eight miles, no times being taken, but the start being made as evenly as possible. The day was stormy, with a heavy rain and a strong S.W. wind kicking up a lively sea off Point Judith. The whole course was covered under the three lower sails on each boat. Navahoe started early in the morning alone, but it was after 11 o'clock when Columbia weighed anchor, Defender being already under way. They passed Brenton's Reef Lightship, under mainsails and jibs, about noon, Columbia ahead but well to leeward of Defender. Shortly after they set forestaysails. In the beat out to Point Judith, Columbia gained steadily, and she had a clear lead before the buoy was passed. The rain stopped and the sky lightened a little, but the wind held strong. The long leg from Point Judith to Race Rock Light, nearly twenty-nine miles, was a close reach. There was a little more rain on the way, and the wind fell for a short time, but the water was rough for the entire distance. The new boat behaved well in the sea, being very easy and buoyant. She anchored in New London Harbor at 4:30, about eight minutes ahead of Defender, or nearly ten minutes' gain, allowing for the difference at the start.

Both yachts laid over at New London for the university boat races, and started on Friday for New Rochelle, Defender under sail and Columbia in tow of her tender. Columbia arrived early in the morning, and in the afternoon she was under way for a sail in a fresh northerly breeze. On Saturday she was under way again, this time setting her large club topsail. Defender was painted on Saturday, at her anchorage off New Rochelle.

The race originally set for July 1 was postponed to Monday, July 3, and again postponed on account of the many who wished to witness it, but who were going out of town for the three holidays. The new date is Thursday, July 6. The race will be over a thirty-mile course, starting from Sandy Hook or Scotland Lightship, for a $250 cup, offered by the New York Y. C. The yachts will sail either to windward or leeward and return, or a triangular course. The sailing directions are as follows:

Start.—The start will be off Sandy Hook or Scotland Lightship, as will be signaled. The preparatory signal will be made at 11:30 A. M.

Courses.—No. 1 (Letter B). From the starting line to and around a mark fifteen miles to the windward, or to leeward, and return, leaving the mark on the starboard hand.

No. 2 (Letter T). From the starting line, ten miles to and around a mark; thence ten miles to and around another mark, and thence ten miles to finish line, turning the marks on the outside of the triangle, to port or starboard, according as the yachts are sent around.

Starting and finishing lines, which will be between a point on the flagship Corsair, indicated by a white flag, and the mainmast of the lightship, will be at right angles with the outward and home courses, respectively.

Compass courses will be set before the preparatory signal is made, and will be kept flying until after the start. The signals for Course No. 2 must be read beginning forward.

Marks will be floats displaying a red flag with white stripe.

Preparatory Signal.—A gun will be fired and a red ball hoisted.

Signal for the Start.—Ten minutes later a second gun will be fired and another red ball hoisted.

Handicap Time.—Two minutes later a third gun will be fired and both balls will drop.

Should a signal gun miss fire, a prolonged blast of the whistle will be given.

The Iron Steamboat Cepheus has been chartered for the members and guests, and will leave Pier 1, North River, at 9:30 A. M., and on the return will stop at that pier and at the foot of West Twenty-second street. She will be in charge of Secretary Oddie.

There is a prospect of the two meeting again in a short time over a course on Lond Island Sound, and on July 20 the pair will meet in a series of three out of five races, to be sailed off Newport, for a prize offered by the Newport Yacht Racing Association.

Lloyds' Yacht Register.

With the new volume just issued, Lloyds' Yacht Register comes very close to celebrating its majority, as it was established, as an auxiliary branch of the great shipping register, in 1878. The new volume lists in all a total of 8,098 yachts, of which 6,581 are measured and regularly classified by the Society's rule, the remainder being American yachts not thus measured. Out of the 6,581 yachts, 5,161 are sailing and 1,420 are steam vessels. Of the sailing yachts 4,920 are built of wood; 169 are composite, and but 59 are of steel and 13 of iron. Of the steam yachts 791 are of wood, 54 of composite build, 382 of steel and 193 of iron. Great Britain alone, without her colonies, has built 4,491 of these yachts, and owns 4,007 of them, with a gross tonnage of 156,368 tons out of a total of 271,880 tons. This latter total is divided between sail and steam in the ratio of 91,134 to 180,746. While many of the principal American yachts are classed at Lloyds' and the names of most of the prominent Amer-

ican yachtsmen appear on the list of some 1,700 subscribers to the Yacht Register, the figures are not sufficiently complete to afford a comparison of the number and tonnage of the American and British fleets.

During the past year there have been built in Great Britain 39 sailing yachts of 10 tons and over, with a gross tonnage of 1,793 tons; and 35 steam yachts, with a tonnage of 8,172 tons.

Two of the largest steam yachts now building are for Americans, Messrs. James Gordon Bennett and A. J. Drexel. Both of these are designed by Mr. Watson. The Bennett yacht reaches the enormous tonnage of 2,054 tons, with a length of 284ft. between perpendiculars, a beam of 39ft. 6in. and a depth of 25ft. She is building by W. Denny & Bros., Dumbarton-on-the-Clyde. The Drexel yacht is of 1,710 tons, 282ft. long, 36ft. 2in. beam and 27ft. depth, and is building by Scott & Co., Greenock. Her engines will have 8 cylinders, two 22in., two 36in. and four 40in. by 27in.

The Register contains the usual complete lists of yachts, yacht clubs, racing flags, the Y. R. A. rules and allowance tables, list of signal letters, builders and yacht owners. Among the list of yacht owners who have obtained certificates as masters is an American, Mr. Allison V. Armour, owner of Utowana, steam yacht.

A very interesting list is found in the last pages of the book, of yachts removed from the Register during the past year. The various causes run "No longer a yacht," "Broken up," "Foundered," "Wrecked," "Now a fishing vessel," "Now a houseboat," "Now a trading vessel," "Now a pilot vessel" and "Condemned." Quite a story might be written from this list.

The principal representative of the Society in the United States is Mr. Thomas Congdon, Principal Surveyor for the United States, and Surveyor for the Port of New York. The first Supplement for 1899 accompanies the book; the Rules are now published in a separate volume, owing to the size of the Register proper.

Mischief, sloop, the famous old "iron pot" designed by A. Cary Smith in 1879 for the late J. R. Busk, the defender of the America Cup against Atalanta in 1881, has just been sold at auction in Boston for $1,050. Her original cost was about $16,000.

New Rochelle Y. C. Annual Regatta.

NEW ROCHELLE—LONG ISLAND SOUND.

Saturday, July 1.

The New Rochelle Y. C. sailed its annual regatta on the usual date, the Saturday preceding the Fourth of July. In spite of a tedious calm in the morning, there was a good S.W. wind when the start was given at 1 P. M. for the larger classes. The new Kestrel was classed with the ten-year-old Liris and Awa, so she was given a sail-over prize, and the other two were classed separately in the cruising division. The course for the knockabouts, yawls and all larger yachts was from off New Rochelle Harbor, past the Gangway Buoy and the Old Hen Black Buoy, seven and one-third miles, sailed twice. The short course, a triangle marked by the Hen and Chickens buoys and the Middle Ground Buoy, was sailed three times by the cabin cats, twice by the small sloops and open cats, and once by the dories. The times were:

	Length.	Elapsed.	Corrected.
Cutters and Sloops—52ft. Class—Start, 1:00.			
Kestrel, J. B. Mills	49.46	3 29 55	3 29 55

Spunk, C. E. Silkworth	21.00	1 34 22	1 34 22
Vera, A. M. Bradley	20.07	1 35 23	1 33 54
Open Catboats—18ft. Class—Start, 1:30.			
Ka-za-za, T. J. McCahill	17.02	1 28 50	1 28 50
Diana, A. Roesch, Jr	16.00	1 48 25	1 46 08
Capt., A. Gattinger	16.58	1 46 48	1 45 55
Snapper, G. W. Fuller	15.00	1 59 12	1 54 24
Dories—Start, 1:45.			
Dud, G. A. Cory		. . ..	1 09 40
Periwinkle, James Francis		. . ..	1 16 32
Fun, J. W. Alker		. . ..	1 19 13
Tom Cod, P. A. Johnson		. . ..	1 11 32
Rudder, T. F. Day		Disabled.	
Zena, F. E. Barnes		Did not finish.	

Hera led Esperanza easily over the first round, but on the second the steam yacht Calypso forced her off her course and gave the lead to Esperanza.

The winners were: Kestrel, Liris, Esperanza, Waheta, Anoatok, Water Lily, Sultan, Hope, Windora, Qui Vive, Elsie, Vera, Ka-za-za, Spindrift, Thelga and Dud.

Columbia Y. C.

CHICAGO—LAKE MICHIGAN.

Saturday, June 24.

The Columbia Y. C., of Chicago, sailed a race from that city to Michigan City, on June 24, a distance of forty miles. The times were:

	Start.	Finish.	Corrected.
52ft. Class.			
Siren	12 31 19	4 48 30	4 16 30
42ft. Class.			
Peri	12 32 02	5 45 30	5 12 42
Valiant	12 30 50	6 04 04	5 32 54
Pinta	12 34 00	6 33 40	5 59 40
Nomad	12 32 05	5 47 30	5 15 25
Wizard	12 34 07	Withdrew.	
Hattie B	12 34 55	Withdrew.	
35ft. Class.			
Vixen	12 32 02	Withdrew.	
Nymph	12 30 40	6 28 05	5 32 54
30ft. Class.			
Tartar	12 31 25	Withdrew.	
25ft. Class.			
Vanity	12 30 50	Withdrew.	

Peri wins the Anonson cup for the best corrected time of a cruising yacht. Siren, Peri and Nymph each wins in her class.

Squantum Y. C.

The Squantum Y. C. sailed a race on July 1 for the Burkhardt cup, the times being:

	Corrected.
First Class.	
Wild Duck, Burkhardt Bros.	0 51 32
Ornyx, Hamilton Flood	0 55 20
Alberta, Frank Freeman	1 08 59
Second Class.	
Juanita, E. Sawin	1 02 04
Mary G., C. Johnson	1 04 07
Maud, Dr. Locke	1 05 08

Mosquito Fleet Y. C.

The Mosquito Fleet Y. C., of South Boston, sailed an open race on June 28, the times being:

25ft. Class.	
Hermes, A. W. Chesterton	2 51 10
Eleanor, D. B. Clapp	2 53 46
Jeannette, Walter Burgess	3 08 13
21ft. Class.	
Arab IV., W. F. Scott	Withdrew.
Privateer, A. H. Doble	Withdrew.

Lake Champlain Yacht Club.

BURLINGTON, Vt., May 27.—*Editor Forest and Stream:* The first annual cruise and series of races of the Lake Champlain Y. C. will take place on the following dates:

All yachts and pleasure craft will rendezvous at Port Henry, N. Y., on July 30, with races on Monday, July 31. On Tuesday, Aug. 1, the fleet will cruise to Essex, N. Y., where there will be races on Wednesday, Aug. 2. Thursday, Aug. 3, cruise to Burlington, Vt., with races on Friday, Aug. 4. Cruise to Plattsburgh, N. Y., with races in front of Hotel Champlain, Monday, Aug. 7. Cruise to Keeler's Bay, Vt., Aug. 8, with races Aug. 9, where fleet will disperse.

All owners of naphtha, steam and sailing yachts are cordially invited to take part in the cruise.

All prizes, races and arrangements for regattas at the different places visited will be provided for and managed by the local club, which is requested to issue circulars announcing the races as early as possible, distributing them to owners of boats and to members of the Lake Champlain and local yacht clubs.

Owners of both power and sailing craft intending to participate in the cruise will please notify A. Adsit, Burlington, Vt., as soon as possible, giving name, rig and dimensions of craft, also stating what part of cruise they will take part in, if unable to accompany the fleet through the whole cruise.

Per order of Committee,
A. ADSIT,
W. T. FOOTE, JR.,
E. H. SNYDER,
F. D. CURTIS,
H. T. KELLOGG.

The Canada Cup.

THE yacht Prairie arrived at Chicago from Ogdensburg on June 22, none the worse for her 1,200-mile tow through the St. Lawrence River and the Lakes. She was docked at South Chicago for scraping and repainting. Except for such opportunities as offered on the voyage for trying her under sail, nothing had been done toward working her up to racing form. The Rochester boat Genesee, arrived on the same day, coming from Buffalo on a steamer. With these two yachts there will be the new Josephine and Bald Eagle, the new Warrington boat, building at Racine, and possibly a new boat for the owners of the unsuccessful Veva. The latter two were begun at such late dates that it is hardly possible for them to be in condition for racing, but Mr. Peare has worked very hard to have his boat Brier ready in time. The old Vanxenna has been cut down in measurement to fit the 35ft. class. The only yacht which has had ample time for preparation is Josephine, launched in the latter part of April and under way regularly ever since.

The first trial race will be sailed on July 4, the others following on successive days until a choice has been made. The steam yacht Pathfinder, Com. Morgan, will act as convoy to the challenger on the 900-mile voyage to Toronto.

Savin Hill Y. C. Open Race.

SAVIN HILL—BOSTON HARBOR.

Saturday, July 1.

THE Savin Hill Y. C. sailed a good race on July 1 in a fresh S.W. wind, the times being:

30ft. Class.

	Elapsed.
Ashumet, W. F. Bache	1 31 18
Moemer, R. C. Nickerson	1 46 28
25ft. Class—Open.	
Romance, Loring Sears	1 50 22
Widgeon, A. J. Horton	1 51 08
Raccoon, H. H. Chivers	2 03 54
25ft. Class—Cabin.	
Hermes, A. W. Chesterton	1 32 22
Eleanor, D. B. Clapp	1 36 49
Tantrum, C. T. Jones	1 51 02
Little Peter, Henry Moebs	2 04 38
Jeannette, Walter Burgess	Withdrew
21ft. Class—Open.	
Heiress, C. D. Mower	1 09 51
Bud, S. N. Small	1 12 59
Oogrook, Walter Abbott	Withdrew
Thelma, F. L. Pigeon	Withdrew
21ft. Class—Cabin.	
Arab, W. F. Scott	1 10 56
Privateer, A. H. Doble	1 14 36
Dafila, H. E. Fowle	Withdrew
Spartan, W. C. Lewis	Withdrew
Carrie M., N. C. Roberson	Withdrew
18ft. Class.	
Dauntless, Benner & Patten	1 15 07
Perhaps, J. E. Robinson	1 19 19
Helmi, J. E. Hunt	1 20 03
Duchess, Chas. Hayden et al	Withdrew
Jocque, Walter Kelly	Withdrew
15ft. Class.	
Ray, S. A. Freeman	1 23 43
Bess, J. W. Horr	Withdrew

Quincy Y. C. Club Race.

QUINCY—BOSTON HARBOR.

Saturday, July 1.

THE Quincy Y. C. sailed its first club race on July 1 in a light breeze that freshened soon after the start. The times were:

Class A.

	Elapsed.	Corrected.
Chatham, C. H. Carey	1 23 38	1 27 38
Evelyn, Dr. Fred E. Jones	1 25 44	1 27 44
Vexer, W. H. Shaw	1 24 05	1 28 05
Dorothy, F. F. Crane	1 31 38	1 33 38
Class B.		
Kitty, J. A. Evans	1 35 40	1 35 40
Supero, C. H. Alden	1 38 19	1 39 19
Lauriel, Ira M. Whittemore	1 42 25	1 44 25
Tantrum, E. W. Fitzpatrick	1 45 00	1 45 00
Robin, H. W. Robbins	1 49 30	1 49 30

Newport Races.

THE first race of the 30ft. class at Newport on July 1 had but two starters. It was sailed over the Dyers Island course in a strong S.W. wind, the times being:

Start, 3:21:00.

	Finish.	Elapsed.
Wawa, Reginald Brooks	5 22 02	2 01 02
Veda, Cornelius Vanderbilt, Jr.	5 24 57	2 03 57

Shamrock.

AFTER her launch on June 27, Shamrock was towed to the West India Docks, where her mast was stepped and then she was towed to Fay's Yard, at Southampton, arriving on Wednesday and running aground in the mud. She laid until high water, when she floated, apparently without injury. A great deal of alleged information is published about her, with varying sets of dimensions, but it is evident that Fife and Thorneycroft have been more successful than the Herrehoffs, and while the dimensions, material and details of construction of Columbia are now pretty well known, there is no certainty as to any of the stories about Shamrock. The phrase "Sir Thomas Lipton says," has become a standing head in the daily papers, but the matter of these interviews, true or false, amounts to nothing so far as actual details of the yacht are concerned.

Eastern Y. C. Annual Regatta.

MARBLEHEAD—MASSACHUSETTS BAY.

Saturday, July 1.

THE Eastern Y. C. sailed its annual regatta on July 1 in a variable S.W. wind, only eight yachts starting. The times were:

First Class—Schooners—31 Miles.

	Start.	Finish.	Elapsed.	Corrected.
Constellation	11 16 13	2 29 57	3 13 44	3 13 44
Hildegarde	11 16 47	2 36 07	3 19 20	3 19 20
Marguerite	11 18 23	2 55 38	3 37 15	3 21 12
Gitana	11 17 59	3 07 19	3 49 20	3 34 12
Fifth Class—Cutters—24½ Miles.				
Milicete	11 30 00	3 39 24	4 09 24	4 09 24
Hesper	11 30 00	4 06 08	4 36 08	4 26 58
Seventh Class—Cutters—24½ Miles.				
Katonah	11 35 00	3 53 06	4 18 06	4 18 06
Onward	11 35 00	4 23 27	4 48 27	4 42 23

The regatta committee included Messrs. H. H. Buck, Henry Howard, Odin B. Roberts and Eben B. Clarke.

Jamaica Bay Y. C. Dory Races.

THE second dory race of the Jamaica Bay Y. C. was sailed on July 1 in a fresh south wind, the times being:

	Finish.	Elapsed.
W. G. Gallagher	4 23 09	1 12 59
Dr. C. J. Pflug	4 21 45	1 11 35
B F Daly	4 24 54	1 14 44
E. P. Allyn	Withdrew.	
F. S. Lafond	4 18 07	1 07 57
R. M. Kimball	4 48 22	1 38 12
W. W. Scheffler	4 27 35	1 17 25

Lafond's dory has won 10 points in the series, while Scheffler's and Dr. Pflug's have 3 each, and Gallagher and Kimball 1 each.

YACHTING NEWS NOTES.

The McLeod boat was launched at Oakville, Ontario, last week, and soon put in commission. She is a handsome keel cutter of 30ft. l.w.l., 9ft. beam and 6ft. draft, with 1,400 sq. ft. of sail in a sloop rig, only the two lower sails. It has been decided to divide the $1,000 offered for the Canadian trial races as follows: 1st, $300; 2d, $225; 3d, $175; 4th, $100; 5th, $100; 6th, $100.

Wizard, sloop, formerly owned by the late Com. Colt, was sold on June 29 to the Breakwater Oyster Company, to be used as an oyster sloop. Her last owner, Col. Wm. Hester, has just built the steam yacht Willada.

On June 28 the Daimler Mfg. Co. launched the twin screw yacht Laurana, designed and built by it for Oscar M. Lipton, Jamaica Bay Y. C. She is 86ft. over all, 15ft. beam and 4ft. 6in. draft, with two Daimler engines of 25 H. P. each.

A new yachting journal has just made its appearance in London under the title of The Skipper; a Weekly Log of Nautical Matters. It is a weekly of large size, the page being a little smaller than that of the FOREST AND STREAM. The first number indicates that it will not be devoted exclusively to yachting, but will deal also with naval and other nautical subjects. Mr. E. F. Knight contributes an interesting account of his adventures last year in getting into Havana as a newspaper correspondent, a very trying experience even for such an old hand. Among the illustrations is a good picture of the jury rudder of the steamship Bulgaria. The paper is edited by Mr. Julius Gabe, well known as a yachting writer, and is published at the Clock House, Arundel street, the Strand, London.

According to a decision rendered on June 29 by Judge Addison Brown, the New York Sun Printing and Publishing Company is ordered to pay to Wm. L. Moore the sum of $65,000 with interest from Nov. 1 for the loss of the steam yacht Kanapaha, formerly Corsair I., under charter to the Sun when she was lost off the north coast of Cuba on Sept. 5, 1898.

The Newburgh Canoe and Boating Association sailed its second race on June 15 in a light and variable wind with heavy rain. The times were:

Viola M., B. Montfort	4 51 40
Madrine, W. Meguim	4 58 10
Mary, H. Schultz	5 30 00
Pancake, H. Jova	Withdrew.
Sappho, F. M. Cantine	Withdrew.
Gull, J. T. VanDalfsen	Withdrew.

Viola wins in the open class, Madrine in the cruiser class and Mary in the lark class, though not of the lark type.

With its issue of June 1 the "Thames Number," The Yachtsman, now in its seventeenth volume, appears in a new form, being permanently enlarged to a page of 12 by 10in., while the quality of the paper is improved, giving very much better effect to the numerous illustrations in the letter-press pages. The separate supplements which have been such a feature of the paper from the start are of course continued, two being given. The issue of June 8 contains a particularly fine supplement, a portrait of Tutty, the Payne 65-footer, from a photo by Kirk & Sons. We congratulte The Yachtsman on that prosperity of which the change is a manifest evidence.

The cutter Neva, owned by H. G. Lytton, of Chicago, is now for sale for a curious reason. The yacht was built in Cleveland and used for some years on Lake Erie without developing any special peculiarities, but since Mr. Lytton purchased her last year he has encountered one mishap after another. On the long cruise through the lakes to Chicago, three gales were met, and the yacht finally dismasted. Last month she was again dismasted off Chicago, her turnbuckles parting. On June 18 Mr. Lytton was sailing with two friends, Ira G. Holmes, of Chicago, and David Conover, of Philadelphia. The two got into the dinghy, towing astern, and sat there for a time, but as the wind freshened they decided to board the yacht. On standing up, the dinghy yawed and threw both into the water, Mr. Holmes disappearing instantly and being seen no more. Mr. Conover was picked up. Only a short time before Mr. Lytton's father, now in Lucerne, Switzerland, wrote to him that he had dreamed of the yacht being lost with all on board, and warning him to sell her. Mr. Lytton has now decided to do so.

Rifle Range and Gallery.

Sept. 4.—Sea Girt, N. J.—Meeting of the New Jersey State Rifle Association. De Lancy G. Walker, Sec'y.

The World's Pistol Record.

SAN FRANCISCO, June 26.—*Editor Forest and Stream:* At the Shell Mound Park ranges yesterday J. E. Gorman, of the Golden Gate Rifle and Pistol Club, tied the world's pistol record, piling up 465 points at the target in fifty shots. The large crowd that looked on thought that Gorman would gain a chamionship, but as it was his phenomenal nerve and eye accomplished what cracks all over the country have been striving to do for years.

Five shooting clubs were represented at the ranges, and the excellent scores made by the marksmen is attributed to the ideal shooting weather, neither the wind being too strong nor the sun too bright, as is often the case at Shell Mound, and all through the afternoon enthusiasts watched the shifting scores at the ranges with iterest.

Gorman, who lives at 456 Minna street, tied the record which has been held for a number of years by E. E. Partridge, of Boston (Mass.) Rifle Association. The pistol used by him was a .22-calibre Smith & Wesson. Gorman's first ten rounds aggregated 93. He was at his best in the second ten, scoring 96. The third ten footed up 92, his fourth went up to 95, but the last half score fell to 89.

Rifle scores Golden Gate Club: F. H. Bushnell, 208, 206, 193; D. W. McLaughlin, 222, 218, 206; A. Strecker, 215, 216, 212; J. E. Gorman, 224, 216, 210; E. N. Moore, 223, 204, 191; O. Bremer, 208, 206, 204; C. M. Henderson, 193, 188, 186; F. H. Belknap, 200, 186, 170.

J. A. Ricker, manager of "Outdoor Life," was the Golden Gate Club's guest of honor at the ranges yesterday.

The other schützen clubs engaged in bullseye shooting, 20 shots, no re-entry, all 6in. centers getting flags. An unusual score of 16 flags in the 20 shots was made by Dr. L. O. Rodgers in the Germania contest.

In the contest for the Bushnell medal, 10 shots, no re-entry, the following scores were made: D. W. McLaughlin 208, A. Strecker 215, F. Young 206, F. Schuster 202.

Competition shoot for cash prizes resulted as follows: D. B. Faktor 72, J. Young 72, F. B. Schuster 71, D. W. McLaughlin 69, N. Ahrens 69.

ROEEL.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

July 7.—Lyndhurst, N. J.—Match at 100 live birds, $100, between Messrs. A. Doty and H. M. Heflich.

July 7-9.—Denver, Colo.—Second annual tournament of the Overland Gun Club at Sedam's Shooting Park.

July 8.—South Amboy, N. J.—Central New Jersey Trap-Shooters' League contest.

July 8.—Lyndhurst, N. J.—New Jersey State championship contest between Messrs. T. W. Morfey, holder of E. C. cup, and Harold Money, challenger.

July 9-10.—Oshkosh, Wis.—Tournament of the Winnebago Gun Club. Trophy for State target championship. Oscar Crary, Jr., Sec'y.

July 13-14.—Wolcott, N. Y.—Tournament of the Catchpole Gun Club. E. A. Wadsworth, Sec'y.

Oct. 6-7.—Pawling, N. Y.—Tournament of Pawling Rod and Gun Club; targets and live birds.

First and third Fridays of each month.—Watson's Park, Burnsine, Ill.—Semi-monthly contest for Montgomery Ward & Co.'s diamond badges.

Brooklyn Gun Club.—Third Saturday of each month, Francotte gun contest. Fourth Saturday of each month, Grand American Handicap contest.

1900.

June —.—Tournament of Ohio Trap-Shooters' League, first week in June. J. C. Porterfield, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The Western Canada championship and annual trap-shooting tournament, under the management of the Industrial Exhibition, Winnipeg, Man., July 13 and 14, has an attractive programme, to which is added $500. There are eight events on the first day's programme. Of these two are at 15 targets, $1.50 entrance, $5 added to each; one at 20 and one at 10 doubles, $2 entrance, $5 added to each; one at 10, $1, $10 added; one miss-and-out, thr

re-entries allowed, 50 cents entry, three moneys. No. 5 is Western Canada championship cup, value 200, and medal, value $25; 50 targets, entrance $2. No. 7 is the club team shoot, four men per team, 25 targets per man, entrance $4 per team, four gold medals. There are ten events in the programme of the second day; of these three are at 15 targets; two at 10; three at 20; entries fixed on a basis of 10 cents per target, and added money on the basis of $1 per target, as in the programme of the first day. The sixth event of this day is the International team shoot, teams to constitute four Americans and four Canadians, or more if the attendance permits. The prize is two silk flags, Union Jack and Stars and Stripes; 20 targets per man, entrance $1 per man, flags to be shot for annually at Exhibition tournament, Winnipeg. The last event on the programme is a miss-and-out. Most events will be governed by the Rose system, ratios 4, 3, 2 and 1. The management has given a bond to the Customs Department guaranteeing to American shooters free entry of their guns. Manufacturers' agents and paid experts may shoot for targets only. Mr. G. W. Van Vliet, 589 William avenue, Winnipeg, is honorary secretary and manager.

The Brooklyn Times of June 26 publishes the following: "Albany, June 26.—Articles of incorporation were filed to-day with the Secretary of State by the Interstate Park Association. Its principal business office is to be in the Borough of Queens. Its objects are to maintain and conduct a park for the use and accommodation of sportsmen, including a club house and other requisite for the promotion and encouragement of trap-shooting and other sporting and athletic interests, and the development of skill in marksmanship. The capital stock is $100,000, consisting of shares of $100 each. The directors are John S. Wright, of Brooklyn, and Clarence Condit and Augustus P. Meyerhoff, of New York."

The Remington Arms Co., 313 Broadway, New York, have issued a neat card, portraying a sporting scene, a shooter in full hunting costume lighting his pipe, two setters and a horse and wagon being the central figures. On it is adjusted a folding matchbox bearing the legend, "A match for all others here," which is complementary to the title of the card, namely, "Remington shotguns are matchless."

July has a lively significance in the way of matches. There is the Heikes-Elliott contest for the cast-iorn medal on July 21; the St. Louis Republic live-bird championship trophy, July 18, between C. Young and J. A. R. Elliott; Elliott and Crosby, July 28, and several minor matches.

As will be noted elsewhere in our columns, Mr. W. R. Crosby has accepted Mr. J. A. R. Elliott's challenge to contest for the E. C. cup and the championship of the world at inanimate targets, and has named July 24 and Batavia, N. Y., as date and place.

The Sherburne Gun Club held a meeting on June 30 and elected officers for the next year as follows: W. H. Wild, President; F. Shepar, Vice-President; J. F. Paddilford, Secretary; L. C. Parlmitor, Treasurer.

Owing to the fact that Tuesday of this week is the glorious Fourth of July, FOREST AND STREAM goes to press on Monday, which makes necessary the leaving over till next week the publication of some communications.

The Arkansas State Sportsmen's Association's tournament has been postponed, owing to reasons fully set forth by Mr. Paul R. Litzke, in another column in our trap department.

There is in the daily press a mention that Elliott defeated Daniels for the Du Pont trophy, at Sedam Park, July 1, by the score of 98 to 97.

The Du Pont Gun Club, of Omaha, Neb., has claimed Sept. 6 to 7 inclusive for its fourth annual tournament.

BERNARD WATERS.

Change of Dates.

LITTLE ROCK, Ark., June 30.—Owing to unavoidable obstacles it has become necessary to postpone the Arkansas State Sportsmen's Association tournament until some time in August. However, at present it is impossible to state just what the exact dates will be. For nine years past nearly all the trap-shooting done in this city has occurred on what is known as the North Little Rock grounds, which is just opposite the city proper, across the river, and a capital place for the purpose. A new railroad is coming into our city, and this road is constructing another bridge across the Arkansas River in the vicinity of what has for so long a time been the home of the local shooters. These have been reluctant about abandoning their grounds, and had supposed that it would be possible to hold them, notwithstanding, but it is becoming more and more evident that they must yield to the march of improvement, so that it has been decided to look for a location elsewhere.

As it is certainly impossible to attempt to pull off the State shoot on these grounds, it becomes necessary to postpone this event, as it would be utterly impossible to secure grounds elsewhere in the brief time yet allowed by the dates claimed.

In view of this a meeting of the sportsmen was held last night, which resulted in the reorganization of the shooting interests. New officers were chosen, and a committee was appointed to look up a new location for the club, with a view of purchasing it. The new officers are Mayor J. A. Woodson, President; W. D. Matthews, Vice-President; E. T. Reaves, Treasurer; Paul R. Litzke, Secretary. The committee on grounds consists of W. D. Matthews, John H. Martin and Paul R. Litzke.

The Capital Gun Club has a membership of over 100, but of late this club has shown very little activity. It now appears that new life and vigor have once more taken possession of this body, and that in the future, as in the somewhat distant past, this club will once more be a factor in trap-shooting in the South. At any rate, judging by the enthusiasm shown at this meeting, one would be led to infer such. Many of the older members who have taken no interest in the club's affairs for several years past were present, while in addition there is a host of young shooters ready and anxious to affiliate, all of which prompts me to predict that the State tournament, which will be held under the auspices of the club, will be one of the most attractive given in the section of the country.

The club members realize that in order to make this a success they must offer inducements, and this is what it intends to do in the way of a good sum of hard ready cash. With the renewed interest manifested the time is opportune for such an event, and the officers of the club will meet again a week hence, at which time a line of action will be mapped out.

All over the State new gun clubs are springing up, and in many of the smaller towns the shooters are organizing for this purpose, all of which only serves to brighten the prospects of the State Association, which recently looked quite gloomy. Henceforth, the local club will shoot weekly, and everything will be done to increase the interest.

PAUL R. LITZKE.

Sherburne Gun Club.

SHERBURNE, June 30.—Please publish the following scores, made at the Sherburne Gun Club tournament, June 22:

The Woonsockets.

WOONSOCKET, R. I., June 24.—There were eight shooters at the grounds of the Woonsocket Gun Club this afternoon. The State championship pennant decorated the new flagstaff on the club house, to the great gratification of all present. Two thunder showers interfered with the shooting, but four 25-bird strings being shot. The scores by events were as follows, viz.:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	25	25	25	25	Targets:	25	25	25	25
L W Campbell	18	25	22	21	H D Barber	20	21	22	..

ARNOLD SEAGRAVE, Sec'y.

Dupont Gun Club.

OMAHA, Neb., June 24.—Following are scores of Omaha-Dupont Gun Club; also special match at doubles between Mr. W. D. Townsend and Mr. Roberts. Mr. Parmelee killed 99 in 100 on June 24:

June 17.—Twenty targets: Roberts 13, Elbourn 16, Lyons 16, Brewer 19, Goodrich 15, Goldsmith 16, Morrill 10, Brucker 16, Dooran 18, Plumber 13, Curtis 14, Young 17, Berlin 19, Watt 14, Townsend 19.

Match shoot, 25 pairs, for $10 a side and birds:

Townsend	11 11 10 10 11 01 11 10 10 11 11 10 11—20 11 11 11 11 01 01 11 11 11 10 10 10—19—39
Roberts	11 11 11 11 11 11 11 10 11 10 11 11 10—23 11 11 11 11 11 11 11 11 11 11 01 11—23—46

June 24.—Twenty targets: Curtis 20, Goodrich 13, Berlin 19, Webley 18, Walsh 16, Fogg 17, Goldsmith 8, Sandy 20, Brewer 18, Brucker 19, Elbourn 18, Townsend 19, Parmelee 20, Smeod 15, Plumber 16, Morrill 18, Kinnear 12.

W. D. BURGESS.

IN NEW JERSEY.

East Side Gun Club.

Newark, N. J., June 22.—The last shoot of the East Side Gun Club's season was held to-day at Smith Brothers' ground, Foundry street. It was a lovely day, and the birds were a good lot. Otten won the club shoot by killing all his birds. Following the club event were a number of miss-and-out and other sweeps. Scores:

H Otten, 7	1212211121—10	C Steffens, 7	1201001211— 7
B Clinchard, 5	0121111111— 9	H C Koegel, 7	1210111100— 7

Hassinger	5	..	5	2	3	..							

*Miss-and-outs, 28-33yds.; others 28yds.

The following is the standing of the members of the East Side Gun Club for the season ending with this shoot:

First prize, $15, F. Perment, 6, 28; second prize, $7.50, B. Clinchard, 5, 25; third prize, $5, W. Hassinger, 7, 18; F. Leuthauser, 7, 3; U. F. Bender, 7, 1; F. W. Moffett, 7, 3; W. Ferguson, Jr., 6, 4; H. C. Koegel, 7, 12; D. Hudson, 7, 5; L. H. Schortemeier, 7, 15; A. H. Winters, 5. 2; H. Reiboldt, 6, 10; F. Hilfers, 6, 1; E. Waldman, 5, 10; F. A. Seitz, 5, 5; E. Geoffrey, 7, 16; G. H. Piercey, 7, 7; J. Fischer, 6, 9; H. Otten, 7, 15; C. W. Feigenspan, 7, 4; Alex. Koeller, 6, 2; Dr. Mulvany, 6, 5; A. Castle, 7, 1.

Fort Smith Gun Club.

FORT SMITH, Ark., June 30.—The Fort Smith Gun Club is on the boom, and an attendance of thirteen shooters on last Thursday evening testified to the fact that there are many lovers of the sport in the city. Messrs. Knott and Warner were the out-of-town shooters, and both acquitted themselves creditably.

The Gardner Jewelry Co. medal and the medal presented to the Fort Smith Gun Club by the members were contested for, and while Matthews made a runaway race for the Gardner medal, representing Class A, and had it all to himself, the race for Class B medal between Durden and Trobridge was close and interesting, these gentlemen tieing on 35 each out of 50, and Durden winning on the shoot-off on 8 out of 10 birds.

These medals will be contested for at each regular practice shoot Thursday evenings.

The birds were thrown much harder than usual, and the scores are consequently low.

Following are the scores:

Medal race, class A, at 50 targets: Matthews 42, Leach 32, Knott 30, Hartwell 30.

Matthews wins Class A medal.

Medal race, Class B, 50 targets: Durden 35, Trobridge 35, Hunt 29, Warner 25, Echols 25, George 24, Bemis 22, Oglesby 21, O'Keiffe 19.

Durden won Class B medal in the 10 birds shot in match race following.

Team race, 10 targets: Hunt's side—Hunt 4, Leach 8, Knott 6, Oglesby 9, Trobridge 7, O'Keiffe 5; total 39. George's side—George 4, Matthews 9, Durden 8, Hartwell 8, Bemis 3, Warner 7; total 39.

Hunt won on toss-up.

Toronto Gold Medal Shoot.

TORONTO, June 26.—The shoot for the gold medal was brought to a successful close on Wednesday afternoon at the company's new shooting grounds, near Woodbine Park. The series consisted of six matches at 25 bluerocks each, and the best four scores to count. There was a large turnout to witness the finish, and considerable cheering greeted the medalist as he defeated the men of his class. The gold medal and 20 per cent. of the purse were won by the following gentlemen: Class A, Geo. H. Briggs, 84; Class B, James Davidson, 80; Class C, J. Devaney, 54.

Conditions of shoot: Classes A, B and C, gold medal and 20 per cent of purse to first, 40 to second, 30 to third and 10 to fourth man in each class; six matches at 25 bluerocks, highest total in 100 to count:

Class A.

G H Briggs	22 20 20 22—84	W Moore	17 18 19 21—75
R Crew	20 22 21 21—84	J White	15 18 18 22—73
A Hulme	22 20 21 20—83	T Lucas	16 17 20 20—73
G Simpson	20 20 23 19—82		

Tie on 84, 25 birds:

Briggs ..... 20 Crew 19

Class B.

J Davidson	21 18 20 21—80	S Carpenter	19 21 18 20—78

Class C.

J Devancy	12 14 17 11—54	N Milborn	10 12 10 13—45

Boston Gun Club.

WELLINGTON, Mass., June 29.—A soaking rainstorm prevented much shooting at the Boston Gun Club, Wednesday, June 28. At first it looked showery, and nobody doubted but what the usual programme would be disposed of during the afternoon, but very soon the leaden clouds closed in, and a 10-target event was sufficient to render a participant disagreeably moist. Twenty-four-yard shooting all at once became popular, not because of the high scores made, but that such distance enabled the shooters to stand under a projecting cover. Still later this leaked in good style, and then it was 26yds., from out of the house itself.

Match scores were placed only to the 20th round, and remain unfinished, as final ten meant a drenching no one cared to invite. Other scores:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	10	10	5p	10	10	10	10	10	5
Gordon, 17	7	9	8	5	4	6	7	..	4	3

Henry, 11	..	..	..	..	..	..	..	..	6	..

All events unknown angles from magautrap; 1, 5, 9 and 10, 24yds. rise, one man up.

St. Paul Rod and Gun Club.

ST. PAUL, Minn., June 24.—The following scores were made at our weekly shoot, held here to-day. Morrison won the senior prize and Wilkinson the junior prize in the club shoot. Three 15-target merchandise events were shot, the first of which was won by Perry, who tied with Hauser on 15, and won in the shoot-off by breaking 5 straight to Hauser's 33 The second was won by Fonda in the shoot-off with Wilkinson. Danz captured the third event. Scores:

Morrison	1011101111011111111111111—22

A. E. PERRY, Sec'y.

Inanimate Target Championship.

NEW YORK, July 1.—*Editor Forest and Stream:* I have to-day received from Mr. W. R. Crosby a letter dated June 29, in which he accepts Mr. J. A. R. Elliott's challenge for the E. C. cup and the championship of the world at inanimate targets, and names Batavia, N. Y., July 24, and 2:30 P. M. as the place, date and time for the match.

EDWARD BANKS,
Sec'y Am. "E. C." & "Schultze" Gunpowder Co.

The Altoona Tournament.

THE three days' tournament of the Altoona Rod and Gun Club, July 27 to 29 inclusive, fell short of what was expected in the way of attendance, and indeed but for the presence of that Spartan band of shooters, the manufacturers' agents, it would have come near to being a failure. While this tournament was open to the world, the manufacturers' agents elected to shoot for targets only, for, as one of them very sagely remarked, the average amateur who doesn't care if the trade representatives shoot for the money is generally among those who pack up their guns and return to the safety of the family hearth at an early stage of the proceedings.

As to the specific reasons why there was such a lack of support no one can specically set them forth, but in a general way it is probable that an open tournament, 2-cent targets and no added money had a check on the shooting ardor of the amateur, while the equitable system seemed to have a discouraging effect on those who took part, for with the moneys so fine and so regardless of equity but few came out with a sum greater than their entrance.

The tournament was held on the club's grounds, which are situated on Wopsononock Heights, famous for their picturesque scenery and the immensity of view which they afford. The ride up the mountain is not the least interesting feature of a trip to Wopsononock Heights. A ride of a few minutes by electric car lands one at the depot in Juniata, a suburb of Altoona, where one changes cars, taking the narrow-gauge to the Heights. The grade is very steep, and the little engine, with its two or three rickety looking cars, strains and pulls bravely till the top is reached. The road winds and twists about, doubling back and forth, and gaining ground slowly in striving for the perpendicular. The hotel is a summer and amusement resort. A country road and board walk, about two-thirds of a mile long, lead one to the shooting grounds, which are on the edge of the plateau. Far away in the deep valley below, the houses look as small as children's toys, and the trees are in keeping as to size, looking like trees in miniature. In the valley lies the city of Altoona, while further up the valley some seventeen miles, seemingly but a short distance as compared with the greater distances, lies the city of Tyrone. Beyond the broad valley, ridge after ridge of mountains faded away in dim perspective, softened by the hazy atmosphere, till they were lost in the distance. The Heights are 2,600ft. above the sea level. From the lookout, a wooden structure 50ft. high, from twenty to eighty miles of distance, presents itself to the view. The air was pure and bracing, conducive to wholsesome sleep and to good appetites.

The trade was represented by Messrs. Edward Banks, Neaf Apgar, J. S. Fanning, W. F. Parker, J. J. Hallowell, Capt. A. W. Money, Paul North, W. L. Colville and Admiral A. G. Courtney. They shot for targets only, although the competition was open to all. There were home and visiting shooters as follows: W. S. Sands, U. S. Houck, Dr. F. M. Christy, E. Kottman, Mike, C. E. Rhoades, W. F. Tappan, E. B. Bailey, Dr. Spanogle, G. T. Harpham, P. M. Morrison, W. S. Booky, E. L. Murray, Wm. Bell, J. Koelliker, J. Bowman, J. B. Kurtz, T. J. House, of Altoona; C. Kline and L. R. Leister, of Huntington, Pa.; L. B. Blair, W. R. Hicks, E. J. Harris, E. J. Trego, D. D. Stine, W. Smith, Osterburg, Pa.; R. B. Bennett, Pittsburg; J. S. Dennick, Ruffsdale, Pa.; R. A. McNought, F. Bender, Hollidaysburg, Pa.; C. Wentworth, L. B. Kellerman, J. B. Highberger, J. A. Holderbaum, Cessna, Pa.; J. S. Denniker, Ruffsdale, Pa., and a number of others.

Mr. G. G. Zeth was manager. Mr. N. E. Ferguson was cashier. Mr. Sergeant, representative of the Laflin & Rand Powder Co., was referee.

First Day, June 27.

The weather was warm, the sun shining clear and bright. There was quite a breeze blowing, which affected the flight of the targets in all possible ways betimes, so that the scores of all were more or less affected in consequence, the experts, however, from their quicker time and greater skill showing the least falling off. There were two magautraps installed on the grounds, but owing to the smaller number of shooters than was expected only one trap was used for the programme events, the other being used for side shooting, in such events as the shooters were pleased to engage in.

Second Day, June 28.

The weather was clear, warm and bright. There was a stiff wind in the forenoon, which played all kinds of freakish doings with the targets. They would duck, jump and undulate in the most erratic manner, and in a way which no quickness or skill of the shooter could guard against.

In the afternoon the Hayseed squad, so-called, whose members were Messrs. Banks, Fanning, Hallowell, Apgar and Parker, and the Daisy squad—Messrs. Colville, Courtney, North, Denny and Capt. Money—lined up at the score, to give an exhibition of quick target smashing. The ten men fired one after another, as the targets followed each other into the air in rapid succession. So rapid was the work that it was difficult for the eye to follow the targets and note the results accurately. The first attempt was unsatisfactory, two shooting at the same target, and confusion resulting therefrom. The second attempt was a success till near the end, when the shooters got somewhat mixed and two or three shots were fired at the same target. Out of the 100 targets shot at but few were unbroken, and the time consumed was but a few minutes. The conditions for good shooting were much more favorable in the afternoon, the wind having much subsided.

Third Day, June 29.

A violent thunderstorm, which set in early in the night, cooled the temperature greatly. The tents of the club were blown down, but, aside from this, no damage was done, though there had been rumors that the two upper stories of the lookout had been blown off and other serious damage done, all of which was found to be without a basis in fact.

The number of shooters had fallen off, so that the programme events were finished early in the afternoon, after which much extra shooting was done, the club throwing some targets at 1 cent and others free. A novel feature of the extra events was some shooting from the lookout at targets thrown from the magautrap below, the conditions being thus quite unlike any shooting in ordinary practice.

Glintings.

When the midnight train of the Pennsylvania Railroad pulled in to Altoona on Thursday night of last week it found waiting the Eastern contingent, namely, Capt. Money, Capt. J. A. H. Dressel, Messrs. Edward Banks, W. F. Parker and B. Waters. Messrs. Colville and North had taken other routes in their homeward flight. Quite a number of the home shooters saw the party off, among whom were Mr. G. G. Zeth, C. H. Heath, "Uncle Joe" Carlin, Jake Stier and others. Mr. Stier, at the last moment, gave the party a handsome douceur of old rye significance which enveloped his memory in rose-colored atmosphere by common consent of the party. Altoona was Mr. Banks' old home, and the affectionate greeting and farewells and endless friendly courtesy paid to him throughout the tournament were significant of his great popularity. If good wishes could have materialized then and there, all concerned would have been princes of the world instead of princes of good fellows.

Mr. R. A. McNought, of Hollidaysburg, Pa., was one of the most enthusiastic shooters at the tournament. He has not yet had full experience in some of the details of shooting, so that he either holds his gun wrong or it does not fit him; be that as it may, from the recoil he got a lovely black eye, which grew blacker and more puffy as the days passed. A friend urged upon him that his eye was swelling badly, and the blue and black shadings were spreading. His retort was that it could swell only so much anyway, after which the gun would kick the swelling down again; and he continued shooting. Of such game men are made the salt of the earth.

Neaf Apgar, after some very good shooting at the Altoona tournament, the result of very careful and close attention to the proposition involved in making scores, remarked that "There is a great deal of aperture about these targets." Indeed, with sky and horizon so immense, it was a great "aperture."

Mr. Colville gave an informal dinner to some of the club members and the press on Wednesday night, at which the holding of a great tournament on Wopsononock Heights was discussed. The matter is under contemplation for one of next year's events. It will require some added money and a great deal of work to make it a success; but few things in the world are accomplished without labor and capital. Let the good work go on.

Britt, Iowa.

Editor Forest and Stream:

H. C. Mortenson's annual tournament, held at Britt, Ia., June 20 and 21, was an enjoyable one, although the attendance was somewhat limited. The weather the first day was quite hot, and in the afternoon there was a nice breeze blowing across the traps. There were ten events each day, making 150 targets per man. Three dollars was added to each event excepting the last one each day, which was a "jacksnipe" event, and created a good deal of amusement for the spectators, of which there were a goodly number, and a good per cent. of them ladies. The second day the wind came up, and the way it made targets climb into the air to the left quarter was a caution. Charlie Budd nearly broke his spinal column looking into the air for one of them. There were but six who shot every event in the two days. They landed as follows: Sheldon 259, Long 258, Cook 256, Mortenson 255, Kline 251, Steege 249. The scores:

First Day.

Arkansas and the South.

St. Louis Doings.

ST. LOUIS, Mo., June 25.—A 100-target handicap, for a silv water set, was shot at Du Pont Park to-day. This brought for eight entries, and resulted in a win for Ed Prendergast by a sco of 95; he scored 92 out of 100 and then broke his allowance of Dr. Smith and Spencer were second, with a total of 92. In t contest of a week ago Dr. Smith won the trophy on 87, thou on this occasion Prendergast took no part in this competitio One of the conditions of this event was that the winner, if prove to be other than Dr. Smith, must shoot off with the latt for absolute possession of the prize. So immediately after Prende gast was declared the winner he and the Doctor proceeded settle the ultimate ownership of the silverware in a 100-targ race. In this Prendergast again demonstrated that he was t superior of the medicine man in shooting skill, and complacent walked off with the prize, having scored 88 to Smith's 85. Th was a decidedly popular win, as Mr. Prendergast has for a lor time been foremost in upholding the shooting standard of t Mound City, while above all he possesses the happy faculty making friends of all those with whom he comes in contact. is safe to assert that there are a host of shooters everywhere wh will rejoice to learn of his success.

George and Burns shot in the original contest, but as the had no chance to win did not shoot up their allowance. Th former scored 63 and the latter 53. The detailed scores a appended:

Moberly Shoot.

The gun club of Moberly, Mo., held a two days' tournament targets on June 27 and 28. This was not expected by the pr moters to be a very pretentious affair, as the club did not fe able to make any special bid for patronage. However, this tourn ment was given with a view of replenishing the club's coffer, the very low charge of 1 cent was made for targets, and thos who are familiar with conducting shooting meetings will readil understand that this cannot prove a very great source of revenu so altogether this shoot was conducted on a very liberal basi The best evidence of this was the number of out-of-town shoote in attendance, among whom were most of the good amateur sho of Missouri, while there were some who came from other State The list of those who were present is as follows: Chris S. Got lieb, Dave Elliott, F. M. Berkey, W. H. Plunkett, J. D. Dillo and J. J. Cornett, Kansas City; J. W. Lemon, H. H. Hollyma W. N. Bate, G. W. Bate and Deimer, Palmyra; C. McL. Clark, Cha and Herbert Taylor, the latter representing the Du Pont powd Co.; W. H. Allen, Pleasant Hill; Joe L. Douglass and Hen Lee, Boone county; G. W. Hayden, Paris; J. W. Gulick, Brook field; W. W. Reavis, Pisga; H. M. Davis, Richmond; J. Wilmot, Lexington; J. H. Winscott, Sturgeon; F. C. Rieh Alton, Ill.; J. L. Head (Dennis), Peru, Ind.; and C. W. Bud Des Moines, Ia., of the U. M. C. Co. and Parker gun; Cha North, Cleveland, O., with the Chamberlin Target & Cartrid Co. Mr. Chas. North was looking after the magautrap an making himself generally useful, so he took practically no pa in the competition. The tournament was a very satisfactory on being conducted on a liberal basis, and its success is mainly d to the efforts of Drs. Clapp and Hickerson, who were untirin in their efforts to make it pleasant and agreeable for the visitin shooters:

First Day, Tuesday, June 27.

The number of principals engaged in the contest to-day w very gratifying to the club, for all told this showed an aggregat of twenty-eight, of which number fifteen shot through. Charle Budd was the star performer, as, with a loss of but 4 targets, h was easily high man. After his miss in the third event he g his eye on the rocks and never made a skip until he had run u the great total of 162 straight. This gave him the great percen tage of 979. Dr. Clapp, Dave Elliott and Dennis are all tied f second place with 928. Taken collectively, the competition w hard enough, and the place hunter could not thrive here. Th weather was quite warm, and it rained a little during the da though not enough to interfere with the shooting.

Missouri State Amateur Association.

The board of directors of this organization held a meeting Moberly, Mo., on June 28. Those present were Messrs. W. H Allen, Pleasant Hill; Dr. C. B. Clapp, Moberly; Chris S. Gottlie O. K. Gun Club, Kansas City; Dave Elliott, Washington Par Gun Club, Kansas City, and Herbert Taylor, of the St. Lou Gun Club, these composing the board. Election of officers bein in order, the following were chosen: Dr. C. B. Clapp, Presiden Chris S. Gottlieb, Vice-President; Dr. E. R. Hickerson, Secr tary and Treasurer. It was decided to hold the next annu tournament at Moberly some time during the month of July, 1900. In the future this organization will hold its tournament different cities each year, and will in no way conflict with th Missouri State Fish and Game Protective Association tournament which will doubtless always be held in either St. Louis or Kans City, as they have grown to such proportions as to be of national character. From the above it is evident that the Amate Association will do nothing that would in any way jeopardize th interests of the parent organization. PAUL R. LITZKE.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1899, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JULY 15, 1899.

VOL. LIII.—No. 3. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

Hunters assure us, that to chuse the best dog, and which they purpose to keepe from out a litter of other young whelps, there is no better meane than the damme herselfe: for, if they be removed from out their kennell, him that she first brings thither againe shall alwaies prove the best; or if one but encompasse her kennell with fire, looke which of her whelps she first seeketh to save, is undoubtedly the best: whereby it appeareth, they have a certaine use of Prognosticating, that we have not; or else some hidden vertue, to judge of their young ones, different and more lively than ours. **Montaigne (1580).**

THE HUMANE ALLIANCE AND ITS ILLICIT TRAFFIC.

THERE is in this city a publication called the Humane Alliance, which its title page and the general character of its reading matter proclaim to be "devoted to the cause of humane education." It professes to be published for the special purpose of instilling in the minds of young people kind feelings toward animals; and it is of course very violently opposed to the sportsman's practice of shooting birds. By one of those contrarieties of human nature which make life piquant and the study of our erring fellow creatures always interesting and instructive, the Humane Alliance, while indulging in diatribes against those who lawfully use the gun, is itself engaged in an enterprise which is one of the most shameless and brazen examples of defiance of the bird law that has ever come under our notice. It points its finger at the sportsman with his honest bag of game, while its own pockets are bulging with illicit booty.

The Alliance advertises as premiums for new subscribers a ring-tailed monkey for so many, and for others caged birds of various species. If the enterprise of the subscription department of the Humane Alliance were restricted to providing homeless and presumably depraved ring-tailed monkeys with homes in families of assured respectability where the moral influences would be such as might be helpful to the development of the simian character, one could have nothing but good to say of it. But the Alliance advertises itself to be engaged in a wholesale violation of the bird protective law of New York; in addition to its monkey premiums, it announces, it has in captivity and will give to subscribers large numbers of indigo birds and nonpareils. It has such a stock of these birds on hand we are told, that "it is necessary to reduce the number of birds at once." We leave to others to reconcile the humanity piously professed by the Alliance with the inhumanity of capturing and caging wild birds; much more to the point is it to direct attention to the fact that the Humane Alliance is violating the law of the land. Section 78 of Chapter 31 of the General Laws of New York reads: "Wild birds shall not be killed or caught at any time or possessed living or dead." The indigo bird is a common summer resident of New York State. It arrives here early in May and remains until October. It is therefore clearly within the scope of the law, and the possession of each and every one of these indigo birds by the Humane Alliance is a clear violation of the statute. We commend the matter to the attention of the Chief Game Protector. The address of the Humane Alliance is 127 East Twenty-third street, New York city. It should be no difficult matter to run down their storehouse of indigo birds, nor should there be any difficulty in bringing the managers of the concern to justice and imposing upon them the prescribed penalty, which is $25 for each bird unlawfully in possession. Confiding subscribers to the Humane Alliance, who may be tempted to accept its seductive offer of indigo birds, would do well to remember that by receiving the birds they become particeps criminis, and make themselves liable to arrest and fine of $25 for each bird had in possession.

Other birds advertised as in possesion are cardinals, larks, linnets, mocking birds and nonpareils. A bird of the captivity of which the Alliance makes a specialty is the nonpareil. This is exempt from the New York law, as the bird ranges only as far north as North Carolina, and cannot therefore be considered a New York bird. Since, however, in the States where the nonpareil is found there are laws to forbid its taking, we may rightly assume that the birds held in possesion by the Humane Alliance have been unlawfully taken and are therefore to be considered as spoils of lawlessness. While the New York State officials can do nothing to correct the abuse, it is a scandal and a shame that there should be in New York city such an institution as this holding out inducements to its agents in other States to violate the laws of those States. Now that our correspondent Didymus has brought to a conclusion his lively discussion of the wanton shooting of Florida plume birds by visiting gunners, we recommend to him to investigate the export of Florida song birds to Northern dealers in humanity and illicit caged birds.

THE HENWIFE AND THE SPORTSMAN.

CONSIDER the way of the henwife who puts a sitting of duck eggs under a hen. When in due course the ducklings come forth, from their natal hour the henwife watches over the brood with a solicitude not less vigilant than that of the maternal hen, and superadded to this with a woman's tenderness which hen nature can never know. She extricates them from the predicaments into which silly ducklings fall; and if one of them happens to be killed, she mourns over it with genuine pity and sighs for its untimely taking off. She notes from day to day with quiet satisfaction their astonishing growth; sees to their safe housing at night, making all secure against encroaching vermin; doctors them for the gapes and such other ills as duck flesh is heir to, rubbing on lard for this and applying sulphur for that; and in a thousand and one ways supplements with her own superior human wit the well meant but often mistaken mothering of the hen.

And all this for what? That when the fowl shall have attained a due stage of plumpness, tenderness, juiciness and avoirdupois, she may wring their necks or chop their heads off to make of them the *piece de resistance* of the summer boarders' Sunday dinner or to sell their carcasses at so much a pound in the poultry market.

From the very moment the eggs were put to hatch, this final doom was her purpose. All the feeding, cherishing, protecting, nursing of these ducklings was to preserve their lives and fatten them for killing. From before their birth they were predestined and foreordained by her to be brought into the world, to puddle and guzzle their fleeting hour, to distend their little crops with mush and corn and kitchen scraps, and at the appointed hour to die.

Consider how the silly things vie one with another in growth; how they scramble at meal times, the stronger pushing the weaker to one side and gulping more than their own share of the food; and consider how those who thus snatch the most to eat grow the faster and the sooner bring their heads to the block, their bodies to the cook, and the legend "roast duck" to the bill of fare. For in a brood of ducks it is not the fittest which survive; the fittest go first to execution at the hands of the henwife. And consider moreover how vain and foolish are the weaker ones left behind, who quack with joy to find themselves freed from the competition of their stronger brothers, and forthwith fatuously gorge themselves in peace and plenty, which means for them only that thus making up for lost time and putting on flesh they too must the sooner come to their undoing. For though they know it not, in their comings and their goings, their eating and drinking and making merry, ever over them stands the henwife, who is to them as the Three Fates—Clotho who spins the thread of life, Lachesis who twists it, and Atropos who cuts it.

Now, this henwife who puts duck eggs to hatch that she may have ducks to kill, shall we account her cruel? Most certainly not, though the final end of the entire operation is the death wrought by her own hand. Was the solicitude she showed for the infant fowl only feigned solicitude, her compassion for ducklings in distress insincere? There was none ever more genuine, though the heart that pitied and the hand that helped them were in the end the heart and the hand that destroyed. In fact—and this is the point of our consideration—the henwife who raises tame birds to kill may be accounted as humane—and only as humane, no more, no less—as her brother who hunts with wild birds to kill; and conversely, her brother who hunts wild birds to kill with a gun may be accounted as humane—no more, no less—as the henwife who raises tame birds to kill.

SNAP SHOTS.

OUR correspondent Pine Tree sends us a report which he surmises must be allied to the wonderful frog farm stories which intermittently go the rounds. It is of a Morgan county, Missouri, genius who has built up a large business in breeding quail for market, selling them at $4 per dozen for meat, or $5 a pair for pets. "The care and food are much like those for chickens, and the birds prove very hardy and free from disease." If this young Missourian has discovered a way to breed quail he has done something which many have long attempted in vain. The only successful quail breeder we ever heard of was a New Jersey man, who refused to impart his secret to others, and it died with him. We have known of many quail breeding enterprises which were partially successful; the birds lived just long enough to induce the experimenter to fancy that he had hit on the right method, and just at that point the birds died or escaped. Quail raising is in general like pheasant raising. The eggs may be hatched under the domestic hen, and chicks are at first fed on chopped egg and insects, and when about three weeks old may be given Indian meal, with an abundant supply of insect food. But though it is possible to bring the birds perhaps to maturity, their wild nature asserts itself, and they must be given their liberty. This is the teaching of such experiences as we are informed of.

From all we can learn the depredations of the Rock Springs Lumber Company, at Rock Springs, Wyoming, are continued. The matter has repeatedly been brought to the attention of the Interior Department, and a show of investigation has been made, but at least one of the Department's agents, Mr. Abbott, of Cheyenne, who was sent to look into the affair, turned back, for some reason, before reaching the ground; and it is the opinion of those who are best informed that the company has sufficient influence to block investigation. The Department may readily enough dissipate the belief by sending to Rock Springs an agent who will actually go where he is sent, will see with his own eyes what is to be seen, and will truthfully and fearlessly report on what he sees.

Much indignation has been expressed over the recent order of the Quebec Department of Lands, Forests and Fisheries, requiring the American guests and honorary members of fishing and hunting clubs to take out non-resident licenses. Formerly they were exempt. The reason given for the new rule was that under the old system there had been many abuses, though just what these abuses were was not explained. A general impression prevails that the true motive of the new rule lies in a desire to make the American visitors pay more money, and that the allegation of abuses was only a pretext. The required licenses call for a fee of $10 for fishing and of $25 for hunting, or for short terms at the rate of $1 a day for fishing and $1,50 a day for hunting.

The late John Bell, known to New York sportsmen for many years as a taxidermist, had been a companion of Audubon, and was given to relating incidents of their experience in the West. One of his favorite anecdotes was of an Indian of the party who was a successful deer hunter, but could get no wild turkeys; and taken to task by Audubon, he explained: "When deer see me he say mebbe Injun, mebbe wolf; but when turkey see me, he say Injun right off."

Progress is making with the project of establishing a national forestry reserve in northern Minnesota. A meeting of those who are interested will be held in Chicago this month, and an association will be organized to work for the accomplishment of the scheme. Details of the proposed reserve were given in our issue of May 6.

The Sportsman Tourist.

In Filibuster Days.—II.

A Story of the Walker Expedition.

My father finally took passage in a little coasting schooner from Jamaica with an English captain and a Jamaican crew of mixed blood, for Bluefields, sixty miles north, to engage in the business of getting out mahogany logs on the Bluefields River for shipment to the United States.

The crew of the Jamaican coaster was an odd looking outfit. The mate was a light mulatto with blue eyes, and the crew of various shades of black, but careful to speak of themselves as "Creoles"; and the blackest of the crew, with a skin like lampblack, took pains to inform me that he, the Creole, despised a negro above all things. Indeed, the odd-looking types resulting from the mixture of the blood of Spanish, Indian, English and negro races continually to be met in the streets of Greytown had proved an interesting study. One man of sanguine temperament, fair white skin, brown eyes and a heavy mat of crinkled wool, red as fire, thatching his head, was an object of much interest.

One thing on the deck of the little coaster struck me as passing strange when first we went on board—the wide space between the first and second toes of the bare feet of the motley crew, and which made them appear as types of another race. The great toes branched off widely apart from the others, and made their tracks the oddest looking things imaginable. When the voyage began and one of the black fellows was ordered aloft, the mystery vanished. The ratlines of the coaster were simply two ropes, about 1in. in diameter, with no crossing ropes for steps, and the agile black Creoles seized hold with their hands and caught the rope between the two first toes of their feet, and ran up the shrouds like monkeys up a grape vine; and this fashion of utilizing their feet had resulted in making their great toes stand apart from the others like thumbs from the fingers.

Nearing the end of our short voyage, a small canoe containing two negro boys of about ten and fourteen years was met, and the little fellows, who were fishing, came alongside the almost becalmed schooner, and upon request threw up on her deck some half a dozen half-grown cocoanuts, the milk of which was yet but like sweetened water, and the meat but a thin coat of spongy pulp. These they had brought with a lot of others in lieu of fresh water, and they proved to very very palatable. The younger boy acted as steersman, and the elder as harpooner. A slender spear with a single tine, and with a little reel fastened to the tip of the shaft, to which a slender cord like a fishline was attached, appeared to be the equipment of the little craft.

The little fishermen chatted merrily with the coaster crew, until the watchful eye of the harpooner detected a commotion on the surface of the water at some distance, which indicated the presence of a school of fish, and hurriedly casting off from the schooner's side they paddled rapidly away in pursuit, while a welcome breeze drove us onward toward our port, leaving the venturesome little black sailors alone "on the fierce rolling tide" further from land than most men could be hired to venture in such a craft for the wealth of Wall street.

The harbor of Bluefields proved but a poor affair, and the little coaster's passengers and cargo had to be taken ashore in canoes.

The pretty little town of Bluefields, which now became our home for some months, is situated on the shore of the mainland of Nicaragua, at the mouth of the river of the same, on beautiful rising ground at the edge of the great forest which covers the Atlantic coast of Nicaragua, and was then a charming village of about 1,000 inhabitants, consisting of Spanish, negroes and Mosquito Indians, with a very few Europeans. A lagoon some three miles wide intervened between the mainland and the long, low, forest-covered island which formed the ocean beach. English was the language most in use, with Spanish and Indian in the order named.

Here my father found the bank of the river and the shore of the lagoon dotted with mahogany logs rotting in the sun and rain, and was told that some years previous an American had sunk some thousands of dollars in the same kind of an enterprise he had planned to engage in, and that when the logs had been rafted down the river to the town the carefully considerate British Government, which had established a "protectorate" over that portion of Nicaragua and had formerly maintained a consul at Bluefields, who had been removed before our coming, promptly levied an export tax upon the mahogany heavy enough to prohibit its shipment, and all carefully arranged in the name of the cat's paw Mosquito "king."

The ruined American had quitted Nicaragua in disgust, and my father, warned by his experience to beware of British helpfulness, waited long for the conclusion of the war in the interior, or for some safe opportunity of engaging in legitimate enterprise before he finally concluded to return to the United States.

In the meantime my own opportunity came, and was immediately seized.

Deer were to be found upon the island, which came out to feed and play along the sea shore at night; alligators and fish swarmed in the waters, while birds—new and strange to my Northern eyes—were found in the forests; and as little or nothing now required my presence in the village, I promptly turned my attention to hunting and to exploration of the woods and waters, and the strange adventures to be met in this connection.

But in a land so strangely different from that of my own birth—which had not a mile of road in all its coast domain of almost interminable jungle, and where the canoe, sail and paddle were the horse, saddle and bridle of every inhabitant—the eager boy from the far northland, who would fain explore every nook and cranny of its coast line, must perforce take a few lessons in navigation.

As my brother took no interest in these matters, and my father had long outgrown his own boyish enthusiasm for the chase, and would give me but little aid in my unprofitable ventures, save the gift of my almost valueless time, I was thrown upon my own resources.

Borrowing an old water-soaked log of a dugout canoe, minus keel or rudder, I fashioned a crude affair of mast and sail, and hewed a paddle out of a cedar slab, and studied navigation alone on the surface of the storm-swept lagoon.

Presumably Captain Barr, in his handling of the new Cup defender, will not be in particular need of advice from me in the sailing of the new yacht; yet he, together with others of the scientific yachtsmen of America, may be interested in learning the quickest way to turn a sailing sloop around—"come about," they call it—which I invented, or rather most suddenly discovered, in the beginning of my nautical career on the Bluefields lagoon.

Observing that the canoemen of the village had a fashion of bringing the bow of the boat up into the wind when they tried to come about, I (who from childhood was nothing if not original) concluded that this crude method might be much improved; and seeing the fishing fleet coming in from the ocean, quickly planned to sail out to meet the smarest sailing canoe, which was far in advance of the others, and giving myself plenty of time and distance in which to come about, beat it in the race back to the shore.

It was a beautifully planned race—fine enough for a cup contest—and with the boom of the clumsy sail (or rather the rope attached to the boom) firmly lashed to the canoe, we came around in the spanking breeze—the canoe and I—some half a mile from the shore, with the stern of the boat to the wind.

It was a grand success! The water-soaked old canoe came around—as my father sometimes remarked—"with a whew to it!"

As I crawled out from under the inverted tub, and, blowing like a porpoise, came to the surface, I found upon attempting to right the canoe that the top of the mast of my yacht had been driven into the mud of the bottom of the lagoon by my own surprising seamanship, and all my efforts to free it proved unavailing. I could easily have swam ashore, and would rather have done it than face the quiet smiles that wreathed the faces of the negro man and boy who manned the leading canoe, now rapidly approaching, and who had been the amused spectators of the "Smart Aleck" performance; but the thought of the swarming alligators, one of which had some years before taken a child from the edge of the town of Bluefields itself, made me hesitate.

Tongue-tied with shame, I concluded to take chances with the alligators a little longer, until another canoe reached me before asking for help, but the good-natured negro sailor, who had now sailed past me, noticing my predicament by my struggles to right the canoe, came about, and like the gentleman he was, quietly assisted me to right her; and steadying her until I had crawled abroard and baled her nearly dry again, bade me goodby without word or look which could add to my deep confusion.

But the love of hunting which would not be denied, drove me to keep "everlastingly at it," and finally I learned something of the rudiments of the art of sailing; and when my father bought a fine new cedar canoe about 25ft. long, 4ft. wide and 3ft. deep, the boy came suddenly to the front as sailmaker, yachtsman and navigator, and fitting up the beautiful little craft, soon had a fine single-hander for his lonely cruises.

The memory of those joyous days and dreamily quiet voyages, when all alone I sailed among the islands and drifted along the shores of the long lagoon in search of game for the little rifle, and for a knowledge of the secrets of the tropical forest and the birds and animals hidden within its shadowy recesses, all so passing strange to my own untraveled eyes, lingers sweet in memory yet, and I only wish that the labor of penning the record of some of the things which came to me in that far-off sunny land—with fingers already stiffened with age—might bring to the readers of FOREST AND STREAM a tithe of the joy which came unbidden to the imaginative boy in the strange tropical land, where

> "The world was all before him, where to choose,
> And Providence his guide."

Wandering along the ocean beach I once met two negroes, and as I noticed just at that moment one of the ever-present alligators standing in the surf some rods from shore and some 50yds. distant, which had caught a fish by its tail, and which now hung pendant from the jaws of the reptile, struggling to free itself, while the alligator held his head aloft trying to shake the fish into position to be caught in his mouth, and the low waves of the ebbing tide only occasionally covered his head, offered a tempting target.

The recollection of my repeated failures prompted me to ask the negroes if they could be killed with the rifle. "Oh, yes," said one; "we sometimes kill them with coarse shot; when we can shoot them under the wing."

Aiming at the eye of the alligator, I fired, and to the surprise of the negroes and myself, killed him. This was the only one I killed, though the attempt was many times repeated. The pursuit of these creatures was interesting, and led to queer happenings.

As time began to hang heavily on my father's hands, he began accompanying me on my lonely trips, and on one voyage to the south end of the long island, some fifteen miles south of town, while sailing quietly along, I noticed far in advance the head of a very large alligator, directly in our course. The great head sank gently from sight, and nothing more was thought of him, until, with a shock as of a young earthquake, the big canoe rose in air, and for a moment seemed in imminent danger of being overturned, while the water beneath her boiled as the terrified saurian—which had settled to the bottom only to find that the lagoon at that spot was too shallow for both—felt the canoe sliding up on his back, tore his furious way out from beneath her with struggles which gave us as great a freight as his own.

Among the people of the town of Bluefields was a small number of Spaniards, who were among the most intelligent and respectable of its population, and of them was one who was known as the old turtle hunter, who seemed to be a representative man among them, and though his relatives were above the necessity of depending upon the old man's toil for their support, and though they remonstrated against his further exposure to the perils of the deep, he with the instinct of the true hunter who ceases to love nature and her wild denizens only when he ceases to breathe, still persisted in wandering off on his venturesome expeditions to the loneliest islands off the storm-swept coast of Nicaragua, in pursuit of the ocean turtle whose beautiful shell the fashion of long ago demanded for ladies' combs at any price.

For many years the old man had followed this strange sport, and now that age was creeping on, and one or two premonitory attacks of a kind of epileptic fit had come to warn him and his people against his further ventures, so absorbing was his love of the strange nocturnal sport, on the surf-beaten islands of the open sea, that no entreaty of friend or relative could restrain him, and loving ones awaited with a boding fear the time when the tiny craft and its strange occupant should not return.

On the loneliest islands of the coast, where the timid turtle crawled out in the moonlight to deposit her eggs in the sand of the beach, the old enthusiast built his little shanty—a mere shed to protect him from the sun and falling rain, and sleeping by day, watched by night for his prey, and when the wary turtles were seen to be far enough up on the beach the old man rushed down among them, armed with a hand spike, which he thrust beneath the fleeing creatures and threw them over on their backs, thereby rendering them helpless, when the valuable turtle shell of commerce became secure to his more leisurely toil.

This was the sport whose fascination had for him a charm beyond the claims of affection, upon which prayers and tears seemed wasted, and the pecuniary reward of which was dispensed to him with a liberality which more than supplied his simple wants, and offered a bribe for the consent or acquiescence of unwilling relatives who sorrowed for, yet could reclaim him.

One morning my father planned to accompany me in an expedition to the lower outlet of the lagoon, at the south end of the long island, where we could hunt deer on the beach, when we noticed the old turtle hunter making an early start on one of his voyages, and taking the same course as our own. We were unusually late at breakfast, and while seated at the table, one of the strange squalls so common on that coast came over the village and the lagoon, lashing its quiet waters to foam.

Some one mentioned the old turtle hunter, who had not been gone an hour, yet remembering his skill as a sailor we soon forgot him. The storm passed as quickly as it came, and we started from the village with a fine breeze blowing directly on our course, which drove our canoe along rapidly.

About three miles south of town a group of three little islands, lying close together, rose above the surface of the lagoon about equidistant from either shore. Our course lay between them, and as we rounded the end of the first one a strange looking log, smooth and white looking, and with rounded ends, was observed floating between the islands and surrounded by floating wreckage. As soon as my father glanced at it, he said: "That is the old turtle hunter's canoe, bottom upward, and those are his things floating around. I wonder if the old man is drowned?"

A careful scrutiny of the surface revealed no sign of the fated hunter, but a glance along shore of the island to our left detected a white, round object at the edge of the mangrove roots which lined the water, and as we approached it, we were horrified to see the white set face of the old Spaniard just above the surface of the water; while all the rest of the body was submerged, and no sign of life or motion appeared. Running the bow of the canoe into the roots near him, my father said: "Jump overboard, Orin, and lift him into the canoe."

Over into the waist-deep water I sprang, and in my endeavor to lift him into the canoe, found one of his hands gripped fast hold of a mangrove root, and it required all my strength to unclasp his rigid hold.

As I rolled him over into the canoe and laid him upon some bedding, which my father had spread to receive him, a faint shudder ran through the old man's frame, his rigid jaws unclasped, and an indistinctly muttered something which we interpreted to mean, "Thank you!" showed the old man to be still alive.

The wind blew cold and chill enough to defy all attempts to warm him in the open air; his dripping clothes had saturated the bedding beneath him, and there remained but the one thing to do—to get him back to town if possible while life yet lingered.

It seemed a race with death. Could we reach the village in time?

As the wind was now squarely in our faces, the sail was lowered, the mast unshipped, and we took to the paddles. About half a mile of the return trip had been accomplished when a canoe much lighter than our own appeared, coming from the mainland, and evidently on its way back to the village. It was paddled by three negro women returning from a trip to an outlying plantation, and was sailing 3ft. to our 2.

Feminine curiosity prompted them to see what our canoe contained, and, swerving from their course as they were passing, they came alongside, and looking over into our canoe the white, set face of the evidently dead Spaniard, well-known to each of them, met their curious gaze, and with a low ejaculation of surprise and awe they bent to their paddles with an energy that left us rapidly astern, and reaching the town far in advance of us spread the direful news that the white stranger and his boy were coming with the body of the drowned turtle hunter.

As we reached the shore, which was now covered with a crowd of excited people, my father quieted their fears with the word that the old man still lived, and a stretcher being hastily formed, the unconscious form was laid upon it, and the whole crowd following in rear of the bearers disappeared from sight among the trees bordering one of the two paths which ascended the hill in different directions from the little open spot on the shore where we had landed at the first opportunity.

My father had returned to the boat again and seated himself in the stern, and I had just turned away from watching the departure of the crowd of people as they vanished among the trees on the hill, when down along the other path to the landing sped the most beautiful Spanish girl I had ever seen, apparently nearly my own

age, with pale face and loosened hair, and rushing up to where I stood, with manifestly no sense of any impropriety whatever, laid her hand on my shoulder, and while her glorious black eyes shone through the mist of gathering tears deep down into my own, in the purest English panted out: "Where is my grandfather? Is he dead?"

The not unpleasant task of quieting her fears and reassuring her concerning the safety of her grandfather now became my own, and proved a more acceptable one than had that of the hard pull in the canoe back to town.

The only mischief was it proved all too brief, for, catching the word that the old man had just been borne up the hill by the other path, she turned from me, and with the grace—and almost the speed—of a frightened fawn, sped up the hillside, her long, black hair flying in a cloud around her shapely shoulders, and vanished among the trees; and the voice of my father calling the dazed and stunned boy back to earth again with the peremptory words, "Come, come! Gather up those things and get into the boat here!" sounded harsh beyond all need.

While the chronicler of this ancient history has never felt free to contend for anything beyond a partial recovery from this trying experience, on the part of the crazy boy, he is pleased to record the fact that the recovery to health and strength on the part of the old turtle hunter was complete and rapid.

When again able to converse with his friends, he explained to them that the sudden squall of wind had overtaken his little craft just as the first dread touch of the coming epileptic fit was felt, and both together just as he reached the narrow pass between the islands.

Beyond this he recollected nothing distinctly.

It was evident, however, that whether his canoe was overturned at the edge of the mangrove roots, or whether he swam to them, his last conscious act had been to seize a root at the water's edge, and as this was under the lee of one end of the island, the waves had not rolled over his head.

As soon as he was able to walk, though still weak and unsteady, he paid my father a visit, to express his thanks to the friendly stranger. His gratitude was pathetic. In badly broken English he tried to free the burden of his heart; and, thinking it might interest my father to know that he had been a soldier who had served with the "Washington of South America," the old man drew up his bent form, and with the dignity of a soldier, and something of the grace of the old Castilian, announced: "Me Columbia man! Me fight with Bolivar!"—all of which we ascertained to be literally true.

This last dangerous adventure, from which he had so narrowly escaped, ended the hunting career of the old Spaniard; and my father took care to add his own solemn remonstrance to the protestations of relatives against any further useless exposure of the old man's life.

ORIN BELKNAP.

Pioneer Days.—VII.

BY ROWLAND E. ROBINSON.

JOSIAH disposed of his betterments to Delaplaine on the terms proposed, and sold his oxen and all his belongings but gun and traps. The two pioneers drifted out into the wilderness, homeless, yet at home wherever they chanced to be, now hunters and trappers, now attaching themselves to the Green Mountain Boys in their raids upon the Yorkers, the most daring and reckless of their number, though without the cause and object of the permanent settlers, but through the love of adventure. Now drifting apart they, lost sight of each other for months at a time.

Josiah was still tarrying, toward the middle of spring, at a settler's some miles above the lower falls of Great Otter, after spending the winter between working enough to pay his board and trapping on his own account. He was hesitating between hiring out to the settler for the season and going down to the old colonies to take part in the events which were stirring the forming nation from its heart to its remotest extremities. It was not exalted patriotism that urged him to this, but what is so often mistaken for it, a desire for action and love for adventure, that the monotony of tilling virgin soil and every-day warfare with the giants of the forest could not satisfy.

He was impelled to leave the place by another and quite different motive. Charity Benham, the only daughter of the house of marriageable age, was impressed with the belief that her father ought to have a son-in-law, and to her mind there was no one whom she had seen who was so well fitted to fill the place as this sturdy young pioneer, but he seemed little inclined to mating. Yet Charity was tall, dark-eyed, dark-haired, good-tempered, and in all respects save in being a notable housewife so exactly the opposite to faithless Chloe that Josiah's pulses quickened when she cooed around him, that warned him that he might forget his forswearing of all womankind.

If he resisted her blandishments, which it was plain to see her father and mother favored, it would be very embarrassing, and could only end in incurring the ill will of all. But he was tired of wandering, and longed to rest awhile in this comfortable harbor. Thus he was inwardly debating near noon one day in May as he cut firewood at the door; and John Benham and his son, Sam, just come in from the field, sat on a log idly watching his sturdy strokes, while all waited the serving of dinner. An appetizing smell of boiled pork and greens came out of the open door, wherein Charity presently appeared and bid them to the board.

"An' I got tu tell ye, Mr. Hill," she said, casting an admiring glance upon Josiah, "you be the cutest hand to gather caow-slops! Why, the' wa'n't nothin' but clear leaves, an' 't wa'n't nothin' tu pick 'em over!"

"That's the sort o' man for ye tu git, Cherry!" cried her father, bestowing an impartial wink upon the two, under which they blushed hotly. "You want tu jest freeze tu him, gal!"

"Why, Pop, hain't you 'shamed! Who on airth——" She suddenly checked her simpering to stare out upon the road, whither the eyes of the others followed hers, and saw a strong, lithe man approaching at a brisk swinging pace.

"Why, it is Major Beach, from Rutland way!" Benham exclaimed, going out to meet the traveler. "Haow be ye, Major? You're jest in time for pot luck with us. Come right in."

"Not much time for me to eat or talk," said the other. Then lowering his voice, "Who is the tall chap you've got here? All right?"

"Josier Hill, ol' Dalrymple's pardner. Yes, he's true blue. What's the' up? Yorkers cuttin' up ag'in?"

"No; its' r'yal game this time. Nothin' less 'n the British lion in ol' Ti'. Ethan Allen takes the job. We meet tu the cove a mild north o' Ti', to-morrow arternoon."

John Benham's face grew very sober as he repeated the words, as if scarcely sure he heard aright. "Take Ti'! To-morrer night? That's mighty suddent, an' a ticklish job!"

"Why, I thought you was ready at a minute's notice! They've got you on the roll here," said Beach, running over a paper which he took from the pocket of the coat that hung on his arm. "But if you don't want to resk it, you'd better stay tu hum wi' the women folks," he added, with some scorn. Then turning to Josiah, from whom he had taken no pains to keep the secret after Benham's assurance, "How is it with you, my man? Are you ready for a whack at ol' Ti' under Ethan Allen, along wi' over ten hundred good men?"

"Yes, I be, an' 'll start wi' you naow," Josiah answered promptly.

"Why, sartinly, I cal'late tu go," Benham said in confusion, "but it come kinder suddent. Sartinly I'll go, an' so 'll Sam."

"All right," cried Beach, heartily. "An' naow gi' me that dinner quick, for I've got to pull foot lively."

He swallowed his dinner so hastily that there was little news to be got out of him, and then was away again, to the disgust of the mother and Charity, who thought him a most unsocial guest, not worth entertaining for what he gave in return. But to make sixty miles on foot that day left little time for talking.

A grand wolf hunt, a "surround" of a pack which had just been located, was the pretext given to the women for this grand turnout of armed men, and the good souls cheerfully spent the afternoon in cooking for the hunters.

Next morning these men set forth, Benham and his son armed with their long smoothbores, those handy guns which served equally well as fowling pieces or weapons of war; and Josiah with his favorite rifle, which he held to be the only proper arm for a man, and each carrying a blanket and two days' rations. Charity needs must have a tearful parting with Josiah, from which he withdrew with unlover-like haste, and was out upon the road before his companions.

"If ever you git him, you'll hafter du all the sparkin'," said Hannah Benham, "for he's the chicken-heartedest grown-up man ever I see."

"He hain't nuther!" Charity cried, resentfully. "He's as brave as a lion, an' I know the ugly creetur's 'll kill him as likely as not. Oh, dear!" and she gazed long after his tall figure, blurred and misty through tear-dimmed eyes.

The three volunteers trudged on at a brisk pace over the wretched roads, until they came to the better thoroughfare of Amherst's military road, from Number Four to the Clamplain forts. Now and then they fell in with other armed men, singly and in squads, all bent on the same errand.

"Hello!" hailed one. "You goin' wolf-huntin' tew? Wal, they du say it's a lion arter all, an' like 'nough tu scratch an' bite if his tail is trod on."

A little past noon the company, gathering as it advanced, came to a famous camping ground where a cool, clear spring bubbled out by the roadside and trickled through a cleared space. Here they halted for rest and refreshment, where many a company of rangers and red coats and bands of painted Indians had made camp in the days of the old wars and savage forays, and left traces of their brief tarrying.

Then resuming their straggling march, they soon crossed the slow, muddy course of the oddly named Lemon Fair, and so toward nightfall came to the rendezvous on the bank of a small creek. As they drew near they saw groups of men lounging in the lights of newly kindled camp-fires. Moving about among them, now dusky in shadow, now clearly revealed, the herculean figure of Ethan Allen; the no less commanding one of Seth Warner, and another restlessly alert, clad in a colonel's full uniform, which they afterward learned to be the brave, ambitious, unscrupulous and, later, infamous Benedict Arnold.

The fires shone out among the tree trunks upon the prows of a mixed flotilla of small craft drawn up on the shore or now and then on an incoming boat. Allen came out to meet the party, and discovering them to be his own people, gave them most cordial welcome.

"Ah, more of the chosen ones of Israel come up to fight the battles of Jehovah, and smite his enemies hip and thigh!" Then recognizing Josiah, "And you, tall son of Anak, have you come up so far out of the wilderness to do battle? Well done, and better if you thought to bring a vessel of those strong waters of Gaul," he added, smacking his lips at recollection of the flotsam brandy. "And your old, dried-up comrade—which way has the wind blown him?"

"I'm sorry, Colonel," Josiah answered, shaking his hand, "him an' the brandy hain't nary one on 'em here where they're both needed. But ol' Kenelm would be, if he knowed."

"Well, come in to the fires and rest ye. You've got your grub with you, of course, an' maybe we can scare up an underjawful of honest New England rum, and that is better than lake water." With that he led them to a fire, in whose cheerful glow they stretched themselves.

On the eve of embarkation, the Green Mountain Boys were moved to an angry protest, from commander to the humblest private, against Arnold's attempt to assume command of the whole force, by virtue of his commission from the Massachusetts Committee of Safety. When this claim was disposed of, half the troops, the boats being too few to transport more, were embarked and went forth silently into the darkness. Arriving on the western shore without mishap, they restlessly awaited the coming of the other half of the force. Their impatience grew with every moment when the eastern rim of the sky began to pale with the first light of dawn, and still no plash of oars broke the silence of the quiet waters.

Allen fretted and fumed, until at last he ordered the troops to fall in in three ranks, and briefly set forth the danger of the complete failure of the enterprise if they waited longer to be joined by their comrades, and proposed that they should move forward at once. No one who disapproved was asked to go; those who followed him would poise their firelocks. Every rifle, musket and smoothbore was slanted across its owner's breast, and the order to march was about to be given, when Arnold again made a violent assertion of his right to command. At the suggestion by one of Allen's captains that the two should enter the fort together, the dispute was settled, when another brief interruption occurred. Some one discovered a dimly defined object approaching upon the lake, which from the morning mists presently took the form of a tiny canoe occupied by a solitary figure.

"Who goes there?" the challenge was given in a guarded voice, and the answer came back as guardedly.

"A friend wi'aout the caountersign; but maybe some on ye knows Kenelm Dalrymple!" A subdued murmur of applause arose from the column.

The old man ran the tiny craft upon the beach, explaining as he stepped ashore, "I jest got back from 'mongst the hills a-pickin' up my traps, an' never heard o' this job till noon yist-d'y. I wouldn't ha' missed it for a fortin'." As he took a place in the ranks, and the column began to move, he continued his confidences in a whisper to the man beside him. "That 'ere milkweed pod won't kerry but one, so I jest put aout alone, an' here I be. The boats hadn't but jest got there when I started, an' the men was fairly b'ilin' for fear o' not gittin 'acrost in time. That canew's one I had hid tu the head o' the cove sen' last fall trappin', an' it come mighty handy, for I wouldn't 'a' missed hevin' a finger in this pie for a Gov'nor's right o' land. This is the third time I've been ag'in Ticonderoga; the first when Aunt Nabby Crumby run his pudden-head ag'in it, an' a terrible mess he made on't. Then when Amherst come sweepin' the French back intu Canerdy an' they blowed ap Carrillew afore aour face an' eyes. Lord! It jest rained fort for five minutes! An' not a scaout da'st go anigh for an haour! An' naow here I be ag'in, an' it's a-hopesin' we'll make a tidier job on't."

The garrulous old ranger ceased his whispered reminiscences when the bastions of the fortress arose gray and silent before them in the faint light of dawn. Then there was the click of a musket lock missing fire, a swift advance of the column through the narrow wicket, until the last man was inside the walls. The troops forming in two ranks on the parade, gave a lusty cheer, which the barrack wall bandied back and forth in quick reverberation that brought the suddenly awakened British soldiers staring out of the windows.

The peremptory summons to surrender quickly followed, and Ticonderoga, its garrison and invaluable stores passed bloodlessly into the possession of the Americans. Josiah Hill remained there for a time, a member of its insubordinate garrison, until upon the organization of the regiment of Green Mountain Boys he enlisted under Warner, and went to Canada. Thus he escaped the danger of falling a victim to the wiles of Charity Benham.

Down in the Meadow.

HOLYOKE, Mass., July 7.—*Editor Forest and Stream:* Believing that it may interest Pine Tree and other readers of the FOREST AND STREAM who have, in days gone by, fished for trout in the streams in the vicinity of Mt. Tom, to peruse a few lines from the pen of one who not only now dwells almost within the shadow of that mountain, but who has this season visited some of the neighboring streams recently mentioned in your columns, this brief epistle is submitted.

How thoroughly Pine Tree knows the territory from Springfield to Hatfield! From the old bed of the Westfield River, where, as a boy, he shot muskrats in the twilight, to Running Gutter Brook, with its speckled beauties, many and many a mile has evidently been traveled by him, as with dog and gun or with trout rod, or even a birch pole from the brush, he has reveled in the long walks which make glad the heart and keen the eye, store the mind with valuable information concerning nature's things and ways, and beget a healthy digestion and a freedom from insomnia.

But the Cowles Meadow Brook. Ah! here indeed is a spot worthy the attention of the enthusiastic angler. What must it have been years ago, when a daily catch of a hundred good trout was not unusual in quite recent days? The writer first visited this brook last year, and was rewarded on that occasion with a fine string of elegant trout. It was a difficult place to fish, and required both patience and dexterity, but the fish were certainly there. The only cover consisted of dense alders, which, in places, thickly lined the banks of the brook and seemed to have a special affinity for both hook and line; while in the open, one was obliged to stand well back in the slough amid the reeds and bogs, and cast with care, for the trout in Cowles' Meadow run large and are extremely shy. Not unmindful of the sport granted in Cowles' Meadow last year, we again made a pilgrimage to Ashfield this spring for the express purpose of fishing in this stream, but found to our chagrin that the entire meadow was not only posted, but actually guarded by a special policeman. It appears that a club has bought the exclusive right to fish the upper meadow, while that portion belonging to Senator Barrows is protected because the Senator has, at his own expense, recently stocked it with a large number of young trout. So we did not fish in the meadow that day, but contented ourselves along the little streams that make toward it, and although the catch was fairly large as regards numbers, the fish were small.

The Hatfield Brook—the one that runs down by the old saw mill, not far from the Williamsburg road, and is crossed by the railroad just north of the Hatfield depot—furnished two good strings of trout for our table this season. The brook is much fished of late, and a large catch is rare, but the careful angler can usually count on a few very nice trout in the meadow just above the saw mill. One morning this May the writer fished through this meadow only a short distance behind four other fishermen. The day was bright, and of cover there is here absolutely none. Three of the four fishermen ahead were certainly indifferent anglers, for here they did not capture a single trout. The luck of the fourth was not ascertained, but presumably it was not much better. Knowing the loca-

tion of the larger holes, and rightly judging the fish to be there mainly secreted, the writer crept carefully along, well back from the brook, and approaching the holes on hands and knees made long casts and patiently awaited the pleasure of the denizens of the stream. The result was that in this meadow alone nine as fine brook trout as one could wish for were taken, which, added to the half-dozen or so taken further up the stream, quite filled a 10lb. basket, and well satisfied the angler with his morning's effort. These trout had evidently "wintered" in holes and pools in the meadow, for the fish in this section have been very backward in "running up" from the deeper streams this year. For trout, they bit very slowly and demanded more than usual care and coaxing. The size of the largest one? Well, as usual, he broke the hook at the bend just as he was being lifted from the water, hence his weight can be given only approximately. He looked large enough and bent the rod enough to weigh fully 2lbs. And that is no joke, either.

As Pine Tree evidently surmises, the wealth of wild game, like that of virgin timber, has been sadly thinned along the Connecticut Valley in Massachusetts. Still, a remnant remains. Wild turkeys have long since disappeared from this locality, and to see a flock of wild pigeons would be quite as great a novelty in these woods as to meet a lion. Ducks, grouse, snipe and woodcock are by no means as plentiful as of yore, though in the springtime a few flocks of very wild ducks may occasionally be seen along the river, and later on a stray pair of mallards or wood ducks may be run upon in some secluded pond; while half a dozen grouse or as many woodcock would be considered a fair day's bag by the sportsmen of most near-by sections. The "big white rabbit" and the "little cottontail" may still be seen, though the former is now seldom secured this far south, and the poor cottontails grow noticeably fewer every year, owing to the infernal and lawless use of ferrets. Gray, red and chipmunk squirrels are still with us, and a few seasons ago we found, along Bachellor's Brook, a nest of flying squirrels, the only ones we remember to have seen in this section. Upland plover are getting scarce, and even the meadow larks and other song birds do not seem as plentiful as before. Among the birds the English sparrow alone seems to increase—and perhaps the crows are not much reduced in numbers. The duck hawk still nests among the rocks on the almost perpendicular western side of Mt. Tom, and also on Sugar Loaf Mountain.

Two years ago a deer was seen near Smith's Ferry, and last year one or two were seen just over the line in Connecticut. An occasional wildcat (bobcat or lynx) is seen or captured, as in the past. The fox still affords amusement to the breeders of hounds and shooters of 10-gauge guns. A few days ago, while driving along the road from Holyoke to East Hampton, one of these animals—of the "tow-haired" variety—ran leisurely across the highway just ahead of the team, his coat apparently the worse for wear. He looked much as though he had just got out of bed, or been to a wake, or something of that sort. He seemed to appreciate the fact that we had no intentions against his life, for he occasionally stopped long enough to "rubber" at us as he jogged along over a wooded knoll to the denser woods beyond. J. H. E.

On the Cumberlands.

IF any of your readers are "tired of city ways," longing for fresh fields and pastures new, blue skies, silvery brooks, life-giving air, health-giving water, wild, picturesque scenery with the never-ending charm of variety, let him—or her—come to Cumberland Mountains. The air here is a tonic equal to Ponce de Leon's fabled fountain. I know this to be true, for I am—well, on second thoughts I will not tell how old I am, but since being on the mountain I feel as if I were but twenty. Life has a charm that it never before had for me. It is a pleasure to be alive.

The scenery is wildly beautiful. The brooks are crystal clear, and there are myriads of them. To follow the windings of one of these little streams is a fascinating way of spending half a day. That is, it is a pleasure to some persons, but if one does not enjoy it any more than some do, one better not try it. For instance, one of a party of surveyors gave his opinion as follows: "Meanderin' a brook! Huh! I don't want any more meanderin' in mine! I heerd the fellers a-talkin' about meanderin', an' I had an idee it was somethin' purty nice to do, but this thing o' gittin' all among the ivies, fallin' over roots o' laurels, gittin' all scratched up with hangbriers, a-slippin' an' a-slidin' on the banks. No, I don't want any more meanderin'."

But to me this "meanderin' a brook" is a great pleasure. I try to find the head of the stream, and then follow "its winding way"—and how it does wind, turn back and wind around again. Here it glides so smoothly that you scarcely see a movement on its shining surface; there it breaks and runs and races and flashes into silver as it tumbles over the gray rocks lying in its way. Then it slips away beneath the low-hanging branches of glossy-green ivy, and is dark as ink among the dense shadows, and moans and sobs among the gnarled roots and shelving rocks that try to hold it captive. Breaking away it dashes on and on, now between low banks, fringed with emerald-green mosses, studded with the red berries of the tiny squaw vine; now between great gray rocks that rise far above it and throw gloomy shadows down on the brave little stream that runs musically on over and through all obstacles. Then I grow philosophical: This little stream typifies a human life—but you can follow out the comparison for yourself. I did.

When you tire of "murmuring streams" there are great gray cliffs which one can climb and from them look far, far away to lands that seem "fairer than this"; where the soft clouds bend down to kiss the slopes of the distant blue ridges; where the valleys spread out their verdant fields; where the wind comes straight from

> "Over the hills and far away,
> Beyond their utmost purple rim,"

and whispers strange stories of what it saw and heard before it came to sob and moan its weird tales to the sympathetic pines. I have heard some of its stories, and I did not wonder that the pines wailed and trembled with the horror of it all.

Then these woods are full of "ha'nts." You don't believe it? Just go any day, any time, out into the woods by yourself and you'll hear them. Hark! Hear that pack of hounds in full cry! Where is it? To the left? No. To the right? Ah—where? It is a ghostly pack led by some wild huntsman of the Cumberlands. I hear his horn often—a "horn of elf-land faintly blowing." Again you'll hear—so near that you stop and turn to see who rides so softly beside you, and you'll see—nothing. Nothing? How do you know that there is nothing—no one there? Can't you believe your ears as well as your eyes? Your ears surely heard the tread of a horse's feet, but your eyes see nothing. Some ghostly rider longing for human sympathy rides beside you. Were your eyes as sympathetic as your ears you might see the face of one long loved and lost; or, you might see that which would fill your soul with dread. Who knows? Ah me! Who knows?

You ask these mountaineers and they will tell you of "ha'nts" that have sent the bravest of them home in terror. There is a "ha'nt" in these woods whose mere presence makes the dogs creep to their masters, whining, and if the masters presume to continue their hunt, the "ha'nt" utters such terrible cries as it comes after them through the woods in the darkness, that the men take to their heels and rush home. I have talked to the young men who have been chased home by it, so, of course, this "ha'nt" is no fiction.

But to turn from the unseen to the seen. I have been fortunate since I have been on the mountains. I have seen deer, foxes, turkeys, pheasants, quail, rabbits, squirrels and coons, and heard of bears and wildcats quite near. A party of us were almost devoured in Daddy's Creek when on a hunt for a wildcat still. We had not yet found it when we forded the creek, so don't accuse us of not being sober. I must tell you of that trip another time, but I can't tell where that still is.

On Cane Creek is a favorite hunting ground. Several parties of hunters have been in camp there at different times this fall, and all have been successful in getting several deer and foxes and smaller game. The turkeys here must be the wariest of their kind, for though "the woods are full of 'em," I seldom hear of one being shot. Hounds and "dawgs" are used here to hunt with. I see no bird dogs, though where game birds are as plentiful as they are here this winter I should think a well-trained dog would be useful. The hounds are not very well trained. I think there are very few pure-bred fox hounds here. Anyone owning "a Kentucky hound" is envied by all his neighbors. Before the law was passed forbidding "foreigners" (i. e., residents of other States) coming here to hunt, the Kentuckians brought in a great many fine fox and deer hounds, and usually left a goodly number here, thus supplying the mountaineers with good hounds. My ambition is to own a black Scotch stag hound, and it is an ambition that very likely will have plenty of time to grow.

I was once promised a grand fox hunt if I would go on a certain day over on Cane Creek. I went. On our way over we heard the horn and the hounds behind us. We anticipated hearing a grand burst of music, and on reaching the cabin where we were to spend the day the hostess assured us that we'd "get enough of hearing the hounds." My share of the hunt was to sit in the cabin door and listen to the "hounds run" as they chased the fox up and down the creek. That is the only way women go hunting here. I sat in the door and listened—in vain. Finally our hostess suggested that we could go see Dripping Springs if we could not hear the hounds. We went down to Pine Orchard Branch, crossed it on the rocks that line its bed and stood under the huge rock from which the cool, clear water drips forever. No rise or fall of the Branch, no heavy rains or parching drouths ever affect the never-ceasing drip, drip.

The cabin which is called Sampson Post Office is two miles from my boarding place, and I go there three times a week, and often see game birds on my way there and back. One morning a lovely doe sprang up not far from me, and ran over the crest of the ridge. I was telling about it at the post office. A native stood leaning on his gun listening to me, and as I wound up my story he had his ready.

"Wall, I seed a deer this mawnin.' The queerest actin' deer I ever seed. I'd a got her shore if I'd a had jist a leetle more powder. I was a-comin' dyown the Branch, an' the dawgs was a-trailin' 'ryound, an' all at onct they begin a-barkin', an' I seed this deer a-stannin' an' a-lookin' at me. I up an' fired. After I fired, the deer kep' a-lookin' at me. The dawgs was on 'nother trail, and hadn't seen these 'ere deer. I loaded up an' fired ag'in, but the deer des laid down an' I begin a-sneakin' up to her, when Lee he seed it an' run a-barkin' at it, an' then it riz up, an' I went to load my gun, an' I hadn't but half a load o' powder, but I poured it down and let fly, but that air deer des went a-lopin' off with Lee at her heels, an' I knowed by the way she run that I hadn't teched her."

It is utterly impossible to describe the drawling, monotonous voice of this man. Face, voice and body were expressionless. Perhaps his gun was the same way and the bullet too slow and easy to "git thar."

These mountaineers are pleasant people to be with. My greatest difficulty is that they do not "take jokes" easily. I have an exaggerated way of telling things, and heretofore have been among those who took my exaggerations for "what they are worth." But now it is different. I have to be careful. I am careful, but quite often I see by the way my listeners look at me that I must modify my statements. I am afraid that in spite of all my care some of these people think I am "an awful"—what Ananias was. MINNIE W. ARMSTRONG.

A large crowd was collected at the Alder street wharf yesterday to view what many considered the largest sturgeon ever brought to this city. It was caught near Megler's cannery, at Brookfield, by a Russian Finn, who could not speak English and who sent a young man up here with the fish to sell it. It was 11ft. 6in. in length and weighed nearly 700lbs. It sold for about $20. It was a monster, and must, of course, have been very old, but it was impossible to count the wr' kles on its horns.—Portland Oregonian.

Natural History.

The Wood Rat.

YUMA, Ariz.—Among the rodentia hereabouts, the most common is the wood rat (*Neotoma intermedia gilva* Rhoads). They can be found on the desert and off the desert in almost any desired number. The brushy valley of the Gila River, near its confluence with the Colorado, seems, however, to be a favorite place with them, although they are drowned from their homes by high water nearly every spring. At such times they take refuge in the willows which grow on the river banks to the height of 20 and 30ft. These residence saplings are then stripped of their bark for food. It is chiseled off in strips about ¾in. wide. A small portion of wood is also taken off, apparently, with each bite. Just how long they can so live I have no means of knowing. The Colorado River overflowed its banks during the last week in April, and the country is still under water and will probably continue so for a month or six weeks more. The rats are still in the trees and in fair condition of flesh.

As there appears to be no special season for the females to bring forth young, the loss of life among the mothers must be out of all proportion to that of the non-bearing males. This loss, however, is provided for in the excess of females, which outnumber the males by about four to one. It is possible, but not probable, that this numerical difference in sexes is local and is due to the excessive death rate among females incident to a periodical flooding of their homes. The females do not appear to be in any wise prolific bearers. Three is the maximum number of young I have thus far found at one birth; more frequently it is two, and occasionally but one. Of the twenty-seven bearing females examined nine had three young each, fourteen had two, and four one each. Such figures, however, establish nothing beyond the time covered. A like period in another year would in all probability give a new set of figures.

A curious thing is the length of time the young attach themselves to the breasts of the mothers. Whether the mothers be living or dead, the young do not let go of the teats unless forced off till they are two or probably three weeks old. This same habit is likewise common to the desert white-footed mouse (*Peromyscus eremicus*). I had a female of this species with three young. When I first saw them they were small, naked and pinkish in color. Each had hold of a teat, and as the mother was well provided for the three soon exceeded the mother in weight. It was almost impossible for the little thing to move about with them. She made no effort to get away and evidently considered herself helpless with such weight hanging to her. Occasionally for experiment I have forced a young rat from the teat, but when again put to the mother they soon locate the missing "bottle" and hold to it as tenaciously as ever. All rats and mice are born blind, and do not quit the teats of the mother till at least a week after they acquire sight.

Rats, quite strangely, are subject to grubs in the throat. These grubs are located in a bloody sac, and if sufficiently matured the head protrudes through the skin and can be thrust out or drawn in at pleasure. Commonly there is but one, but I once saw a half-grown female with three, all in the throat. Occasionally I see rats that are entirely blind, and frequently blind of one eye. The pupils become white and apparently as hard as pebbles. The very old rats of both sexes are often battle-scarred to the extent of loss of ears and sometimes a portion of tail.

The nest commonly is a bulky affair, and where possible is piled against the base or root of a low, overhanging bush. They are an accumulation of the debris of the surrounding country—sticks, stones, mesquite thorns, cactus burrs, bones, or in fact any old thing they can get hold of. Generally they are from 1 to 2ft. thick and from 2 to 4ft. across. Size, however, depends much on the availability of material. The runways are always from a few inches to a foot or more beneath the surface of the earth, and vary in number according to the age of the nest and character of the ground.

HERBERT BROWN.

Skunks, et Al.

ESSEX, N. Y., July 2.—*Editor Forest and Stream:* The terrible drouth this spring has undoubtedly proved providential for the broods of young partridges, and from present indication the shooting will be better than for several years past; but the drouth also seems responsible for an unwelcome increase in the number of skunks and other predatory vermin. Some small animal, presumably a weasel, has made several raids on our young Pekin ducks, and more recently the skunks have sampled our broilers in the chicken yard. Last night I set a steel trap at the corner of the chicken yard, and about midnight one of the hired men roused me with the announcement that the skunks had arrived, and that a gun was needed, as there were more than one.

I took my .22-caliber rifle, as I did not wish to rouse the household with the report of a larger gun; but on reaching the back door I found the other hired man, and from the latticed window above the young lady who does the cooking was already beginning to give advice as to the plan of the campaign. My wife was awake, and there was only one other adult member of the household to be accounted for.

It was a calm night, and one of the men held aloft a lamp. I could see two skunks rolling over each other, locked in a fast embrace. One was caught in the trap, and the other, which was a much smaller skunk, was loath to leave it to its fate.

As soon as I could make out which was the free animal I fired at its head, and by a lucky shot succeeded in killing it. The other was not so fortunate in its demise. The first two shots hit it in the neck, and it retaliated by opening fire on us. Its shots went wide of the mark, but the resultant aroma was very evident to some city people in a cottage a quarter of a mile away, who knew the exact time the skunks were killed although they were too far off to hear the noise of the rifle shots. My ammunition was exhausted, and I had to go to the room of

the one member of the family who was still sleeping peacefully in order to secure more. I regretted that I had not used the shotgun and killed both skunks at one shot, for as things had turned out the family could not have been more thoroughly awakened.

The ammunition provided was of a kind I never shoot if I can get any other, as it leaves a residue that soon clogs a small caliber rifle. The first cartridge was a missfire. Withdrawing it from the gun left the bullet in the barrel. I bit the bullet out of another cartridge and pushed the shell in the barrel. The action would not quite close and the cartridge refused to explode. Meanwhile, the skunk was making the most of its time, turning its battery loose with the reckless prodigality of the Spanish sharpshooter, who is satisfied as long as he can make a noise, whether he hits or not.

I aimed at the skunk's head whenever it revolved into our circle of light and pulled the trigger, but the gun would not shoot. Tiring of this I lowered the rifle and napped the trigger. The very first time the hammer fell he cartridge went off, and by the irony of fate the bullet hit the skunk somewhere amidships and killed it. The young lady at the window remarked in her usual uthoritative way that it was a very good shot indeed, and received the compliment gracefully. In her next breath he stated that the skunk smell was "pretty strong," and s she is a connoisseur in perfumery I had to admit that er judgment was good. Bulletins from the scene of war were now called for from various quarters, and we red to announce the result.

Foxes are not so dangerous to the poultry yard as kunks and weasels, though they catch stray chickens om time to time. They, too, seem to be unusually umerous this year. In the past months I have seen ight foxes, of which five were half grown. One, which shot with a rifle, had the partially digested remains of n adult partridge in its stomach. Night before last I eard an old vixen fox calling for a long time in the rchard near by. This is the third occasion recently in hich I have heard foxes call. The sound has a sugestive, wild quality that is quite fascinating. I can think f no fitting way to characterize it. The cry is somehat suggestive of a deer's whistle, and there is also omething of the gray squirrel's bark and the martin's harl.

There is a full crop of nuts this year, and it ought to e a good squirrel year.

J. B. B.

Hogs as Fishermen and Hens as Mousers.

RAMONA, Kan., July 4.—*Editor Forest and Stream:* I n again up here near the old Santa Fe trail. The day as been almost as quiet as a Sabbath in New England, t this evening, as I write, there is just enough of celeation to show that the spirit of Young America is the me here that it is elsewhere.

But it is not of such things that I started to write, but a new trait I have discovered in the Kansas hog. I new he was, in his way, a keen hunter, for I have atched him in the shallow water turning over the stones r dobsons and such like, and digging for clams like a am digger; and sometimes I have found it necessary to ep close watch of my string of fish when fishing where gs are running loose. And now I have learned that they ll fish for themselves.

Many of they are kept in lots along the creeks and rivers. hile I was at Emporia one of my acquaintances set a rot line" on a riffle in the Cottonwood River opposite e of these hog lots. Some big catfish weighing as high 50lbs. and over are caught in the river. One morning was unable at first to draw in his line, and he thought had hooked the biggest fish in the river; but after **orking until almost used up,** he brought ashore a 150lb. g that had swallowed the fish and with it the hook. ey were obliged to give up fishing there, as the hogs rned to follow up the lines and take up the fish as far they would go. This is a true incident, and I have itten of it partly for the laugh there may be in it, and rtly to show what a ravenous brute the hog is. I am t interested in any game preserve, but if I were I would ner turn a drove of wolves loose in it than a bunch of gs, whether of German or American descent.

Kansas has continual surprises for me. One of them is t hens can catch mice. The mice are very plentiful e, and I have known of several hens that have grown be as successful mousers as any old tabby, taking up l using much the same tactics as the cats themselves.

PINE TREE.

Weight of the Raccoon.

HELDON, Vt., July 6.—If the other coon weights are all I will give mine. Mr. W. W. Macie, postmaster, storeper, trapper and fur dealer, of Sheldon Springs, Vt., ght a coon that, after being knocked on the head and l, weighed—not guessed at, but weighed—49lbs., and writer bought a coon skin taken from a coon whose ght was guessed at as being even heavier than that ed by Mr. Macie. Our largest coons are found in alities where there are "coon dens" and but few acorns hickory nuts.

STANSTEAD.

The Rattlesnake's Venom.

OSTON, Mass.—*Editor Forest and Stream:* The foling positive assertion has been made, and I would be l to hear through your columns if it is true: That the of the rattlesnake is simply fatal, in the extreme ning of the word, from late October till February. s means that any person bitten in that time must die hout exception.

FRED SKINNER.

One of the Charms.

goes from me to my brother, who is an incomparable angler, we both enjoy it very much. The chief charm of the paper is that which belongs to a good history—it narrates in pleasfashion actual facts, with but enough theory and imagination ve them from being dull, and with wit enough to "keep them t."

A. S. W.

W HAVEN.

e FOREST AND STREAM is put to press each week on Tuesday. espondence intended for publication should reach us at the t by Monday and as much earlier as practicable.

Game Bag and Gun.

The July number of the Game Laws in Brief and Woodcraft Magazine is now ready. See advertisement of it.

On the Platte River.

READERS who have been there need not be told of the past glories of duck and goose shooting on the wide-flowing Platte in Nebraska, but to those who have not hunted on the once famous river, a description of the stream, the country and the methods employed to bag the wary honkers may be interesting.

The Platte is a shallow, wide stream from one-half mile to one mile wide in some places, and the bottom is entirely of sand. In late April and in May and June it rises or gets on a "boom," as it is generally called. Then the water is from 3 to 6ft. deep in all the main part of the river, and in the main channel from 10 to even 15ft. in some particular places. A beautiful valley smooth and level as a floor stretches away for miles from both sides in some places, and in others only on one side, when the high bluffs come up to the bank. Beyond this level valley are the high sands, irregular lines of sand bluffs, and on the high table land beyond is the feeding grounds of the great army of geese and ducks that frequent the Platte every spring and sometimes in the fall. Geese and ducks are not as plentiful here now as years ago; while there are a good many birds here every favorable spring, there is not one to the fifty there used to be in years gone by. Ten and fifteen years ago fifteen to twenty geese were a common thing for one man to kill in one day, or even in a half-day's hunt. A friend claimed to have killed fifty-two geese one afternoon from 2 o'clock to sundown, and no one who knows the man or the numbers of birds doubts the claim. But these are past supplies, never to be seen on the Platte again. At the present time on stormy days, if a hunter is in a good place, he may be able to bag in the course of a day ten, or maybe fifteen or twenty, geese, and as many ducks. But these days and chances are indeed very rare. Very much oftener the hunter comes in with one goose and a few ducks, or if it be a bad day he comes in empty-handed.

I live within one day's drive of the river, and in the spring a party of four or five go to the old Platte for a two or three weeks' hunt and a general good time. Landing at the river about 4 o'clock in the evening, after a good drive of thirty-five miles, we are made welcome by an old friend who lives about forty rods from the river; we put up our team and then commence to pitch tent, for we come prepared to camp out. While working around camp we see long strings of ducks and geese come sailing leisurely in from their feeding grounds out on the bluffs and in the valley, old-time memories are revived and we all work with a vim to get the tent up and banked and ditched around; we carry hay to make our bed, and then get supper. When this is all done it is too late to do any shooting. Shells are gotten out, guns are examined, hunting suits are laid out handy, and everything is put in readiness for an early start in the morning. While all this was going on, ducks and geese have been lighting in the river, and several hundred geese are out on the sandbars, making merry music for our ears. The musical honk-a-honk is heard after it gets dark, as some tardy members come in to their roost on the sandbars.

We go to bed with the intention of having goose for dinner next day if Dame Fortune shall see fit to send a flock our way. We all arise next morning before daylight, eat a hasty breakfast, don dead grass color suits and with a dozen decoys each and a gun sally forth, going out where we know where they feed in a corn or wheat field. Arriving at the field we dig a pit, place the loose dirt where it won't be conspicuous, then put out the decoys, and settle ourselves comfortably and await the coming of a flock of honkers, or perhaps ducks. We are in sight of the rim, and pretty soon we see some rise up and start for the feeding grounds. We watch every movement made by the flock. They rise high up as they clear the river bank and head directly for us. We crouch low in the blind with guns in readiness, and goose call to our lips. They don't see the decoys, for it is not very light yet. As they come nearer they come down a trifle; yes, they see the decoys. The leader sets his wings and drops below the others, and they sail gracefully for the decoys. But alas, they turn, about the time we are sure we have a shot, and by a graceful sweep go by to one side out of range, and light just back of us about 150yds.

However, we settle down as we see another flock get up out of the river. They go up and start out on the same line with the other flock. They head directly for the other flock on the ground behind me, and reassured by seeing the others there, they drop down within 40yds. of the ground, and come almost directly over me. I rise with gun in hand, four reports in quick succession, and three noble conadas fall to the ground; and one other starts, then rises and starts on, but one more shot and he comes tumbling down to earth. The fun has started in earnest. The geese come out in small flocks and the guns are booming in every direction. In two hours the flight has ceased, and we gather up our geese and decoys and start for camp. We sum up at camp, four guns have bagged eleven geese and five ducks in the two hours' shoot.

The next day the wind blows hard from the north, and snow is falling in large flakes. It is cold; but we start out to try our luck about 2 o'clock in the afternoon. We separate and take up position in the willow thickets that abound along the river bank. With the river on the north of us, feeding grounds are a great deal closer on the south side, so contrary to their regular habits the birds come out with the wind, and come back flying low, but not in any certain line of flight. We changed places, but with no good results; so I concluded to get in a good sheltered place and wait for some to come over, if I had to wait all day. They flew on all sides, ducks and geese both, some barely clearing the ground. Just to the south of me was open ground for about 200yds., then a high bluff with some trees growing on the sides and rising above the table land above. My patience was nearly exhausted, when just behind these trees came a flock of mallards. I did not see them till they rose to clear these trees. As I stood in a thick stand of willows they never saw me, but came on just a little to my left about 40yds. high. They looked big and grand. I could distinguish all their fine colorings as they came closer. I rose up and made a double on two fine drakes that were nearest to me. Having retrieved these, I had not long to wait before a lone pintail came along, and I had a fine shot at him. Shooting was good until dark. I bagged seytnteen ducks and one brant. One of the other boys got sixteen ducks and the others all had a respectable bag of ducks.

We had another stormy day while on this trip, and these two days were my best, in fact the only days that we bagged very many ducks. We got geese almost every morning and evening, until our return home.

Ducks don't seem to decoy on feeding grounds here, but on some ponds of still water they decoy splendidly, and good bags may be made on any decent day.

INVISIBLE.

The Christian County Hunting Club

In the Sunk Lands of Arkansas.

FOR some time the Christian County Hunting Club had seen that game was growing scarce and that the deer was fleeing before civilization and the woodcutter's axe, and we decided that for sport we must look further from our old Kentucky hunting grounds. The hunting there was fast growing to be a thing of the past. The smoke of the busy threshers and the locomotive as it shrieks on its way now ascends where once curled the smoke of the camp-fire; the deer trails are now turnpikes; the virgin forests are now fields of waving grain.

We heard of the Sunk Lands, so we sent an advance courier to view the situation. In due time he returned, and like the Queen of Sheba reported "that the half had not been told." The excitment of the club was great, and at the appointed time we met at J. S. Parrish's elegant country home to spend the night before starting. He is a prince of entertainers and makes you feel at once at home; he is a typical old Kentucky gentleman, and that is about the best description I could give of him. We were very busy that night overhauling the camp luggage, getting it loaded into wagons, that we might make a ten-mile drive into Clarksville and there take train for Memphis and then cross the Father of Waters. Thence, with wagons, horses, dogs and darkies, we pulled through the swamp, canebrakes and wild woods in a northwest direction for about sixty miles, when we reached our destination. We pitched camp on a beautiful point on Little River, about two miles from where it empties into the St. Francis.

Our party consisted of J. S. Parrish, J. R. White, P. Glass, T. B. Burk, J. D. Ware, Ed. Drane, L. McComb, H. T. Drane, Wm. Craven, J. R. Candee, Chas. Jarrett, Walker Williams and Geo. Mills.

We soon had the tents pitched, horses tethered out, camp-fires lighted, and after a hearty supper, enjoyed as only a hungry hunter knows how, over our pipes we laid plans for the morrow. A native who straggled into camp gave such glowing accounts of game that we felt it would equal our old Kentucky grounds in their palmy days. The boys soon sought their couches, so as to rise early. The camp-fires burned low, stillness came upon us, and the moon rose on a peaceful scene.

By the time I had killed several big bucks in my dreams we were hustled out of bed for an early breakfast. The darkies had built a huge log fire and the horses, fed and saddled, stood ready. The leaves glittered under a heavy coat of white frost; the air was sharp and clear, and its tang and crispness made the blood tingle. Just as the sun was reddening the east we were in the saddle.

We stood the boys along Little River and Cap White and J. S. Parrish, two old veterans of the chase, made the first drive to see what promise Arkansas could give. They turned loose the dogs, which were as fine as ever gave tongue, and they were "bred in old Kentucky." The shivering standers were soon made happy by hearing the pack coming in full cry. The pack had divided and had five deer flying before them. Very soon the guns began to play, and four deer were the result. That ended the first day's sport. The next, a few days later on the same ground, proved to be successful. J. S. Parrish was in it in great shape that day. He drew stand No. 1, which is always considered a bad one. Soon after the dogs were loosed they brought three deer in full flight to Parrish. He let fly a right and left, and two dead deer were the result. One fell on the other. He slipped a shell in as quick as possible and took a long shot at the third one. A blood trail showed the result of that shot. While following the trail the dogs brought the king buck of Arkansas to Parrish, and he, equal to the occasion, gave him both barrels. He ran till he dropped dead within a few feet of the other two. When the assembly signal was blown and the boys rode up and saw that pile of meat a cry went up that would have put to blush the famous rebel yell. Three dead deer and the fourth badly hit in five minutes is an event that rarely comes to a hunter. The boys declared that was enough for one day, and that the old man needed a toddy, anyhow, so we pulled into camp.

In the next drive Ware and Burk each had to their credit a fine deer, and so it went on till almost everyone had venison. On another drive we heard Parrish shoot four times in quick succession, and we all thought that another bunch of deer had tried to run over the old man. We soon rode up and found that he had a fine buck. "Where are the others, Cap? We heard you shoot four times." "Well," says he, "I have not seen any deer like this buck in old Kentucky; I had to shoot him four times before he was willing to stop." The boys voted to keep the old man out of the woods, as he was too destructive to deer; but he got one more, anyhow.

The next day Henry Drane, who had never killed a deer, was put on what was considered a dead sure stand. Pretty soon we heard Drane's gun go off—both barrels—and such a yelling was never heard. Parrish, who was next to him, and thinking that Drane was in trouble, hurried through brush and bramble in hot haste to lend him aid, and found him executing a Sioux war dance

over the deadest deer in Arkansas, with his gun in hand, both triggers cocked. He asked if he had not better give him another pop. We thought someone would have to sit up with Henry that night. None of us ever forget our first deer.

The club has never had a better outing than that hunt; we never saw better duck shooting than we had on St. Francis Lake, and the fishing was fine. We killed all the game we wanted, but none to waste.

But we have seen that sportsman's paradise fade away. Railroads, the axe, the market hunter have about finished it. But we look back to those grand hunts with pleasure. Some of the dear comrades who were with us then have left vacant seats around our camp-fires. They are missed but not forgotten. C. L. BRADLEY.

CLARKSVILLE, Tenn.

CLARKSVILLE, Tenn., July 6.—*Editor Forest and Stream:* The forty-ninth annual meeting of the Christian County Hunting Club meets on July 11. We meet once a year, and spend the day together at some member's house, where we have a barbicue, and generally wind up with a pigeon shoot. This annual meeting of the club is looked forward to with great pleasure by the members. It is then we decide on the place of our next camp, and the date of going; we talk over our past hunts and plot and plan for the future; and so we spend a most pleasant day. The families of the members attend, and the families of the departed members, and when you date that back for over forty years you may imagine the number we have at our barbecues. C. L. BRADLEY.

An Indiana Quail Hunt.

NEVER having seen anything about the field sports of old Sullivan county, Indiana, I will relate some of the experiences of a party of us who hunted here a week last season.

The party consisted of two Chicago sportsmen, F. and R., one of the neighbor boys answering to the name of Clay, and last, the writer; and from time to time other neighbors joined us for a few hours.

Nov. 18 was to be a big day with the Odd Fellows of the county, and I was getting ready to go to the county seat to attend the ceremony, when a hack drove up to the gate and the Chicago men tumbled out. As it was only 9 o'clock, we started out for a little hunt before dinner. A cornfield was first tried and was drawn blank, the dogs covering the ground in fine style. F. had a liver and white setter, Queen; R. a black pointer, Nig, and I a lemon and white pointer, Dewey. The next field was also a cornfield, and soon Nig was found on a point, staunchly backed by Queen. Only three birds were raised, and one fell to the gun of R; the other two went to some weeds along a ditch, and Queen was the lucky dog, this time pointing one in a bunch of grass. R.'s gun accounted for it also. Going down wind, Nig found a scattered bevy in a hollow, both other dogs backing; results, four holes in the atmosphere and three sheepish-looking men, R. not having been close enough to shoot. Going down the hollow, Dewey pointed a single, which fell to my gun.

Clay and I went over on a posted farm to drive a gang that were in a patch of briers. Queen pointed and I got one on the flush, the birds going to a cornfield. Clay and R. followed them, scoring one apiece.

It being noon, we called the dogs to heel and went to dinner.

After dinner, going up a hollow grown up with briers and weeds, Nig was seen trailing a bunch. The birds flushed wild 50yds. in front of the dogs, and took to the woods. Some good sport was had for the next ten minutes; the scattered birds went to the corn; and while we were trying to raise them, another bunch was flushed. Everybody did some good shooting on these birds.

The next move was to a weed field, and here Queen did as pretty a piece of work as I ever saw. F. raised a bevy and killed one that fell on the opposite side of a ten-rail fence. Queen went over the fence, found the bird and climbed the fence with the bird in her mouth, bringing it to F.'s feet (cash value of the dog in F.'s estimation at that moment, $528). Following the birds, three more were killed.

It was during this evening's hunt that F. met with an accident. Coming to a branch about 18in. deep, Clay laid a plank across and walked over all right. F. weighed 225lbs.; he started across, and when he was about the center of the plank, it broke. It was getting so dark that we started for home, doing no more shooting. That night the count for the day showed forty-five birds; not a big bag, but enough to satisfy anybody of moderate desires.

After supper we all went down to hear Old Wilse play the fiddle, and the way he scraped out "Old Dan Tucker" and "Arkansaw Traveler" was enough to make a wooden-legged man want to dance.

Bright and early the next morning we started for Huff's Clearing. Dewey found a bevy along an old fence row, and of them we got four. One of the neighbors was with us this trip. Following this bunch six more were killed. Nig was seen making game in a bunch of weeds, and soon straightened out on a point, Dewey and Queen and Sport backing. Advancing, about twenty birds flushed, everybody scoring one each and R. making a double. The sport was good now for about an hour, and on going to the house for dinner the count footed up thirty-six.

After dinner F. challenged me to a match at ten clay pigeons, and beat me, 9 to 4. We again took the field. Going across a weed field a fine bevy was raised that scattered in the weeds. F. and R. did the only shooting on this bunch, F. killing six straight and R. five. Several fields were drawn blank before any more brids were found. Going along the edge of a cornfield, the largest bevy of the hunt was found. I got one on the flush. This bunch netted eight birds. Three more were killed on the road home, and the count for the day footed up fifty-eight.

Supper over, the time till bed time was passed by telling how this one was missed and what a pretty double that was, and in telling our experiences in former hunts.

The next day being Sunday, no hunting was done, and the dogs got a much-needed rest. Monday morning dawned clear and cool, and this was the best day's hunt of the week.

We started out over the route that we had been on when F. fell in the creek. Just beyond the creek we located a bunch of birds. F. was trying some of my shells, and pronounced them the best shell for snap-shooting he had ever shot; they were loaded to scatter. We scored five out of this bunch, and soon had another bunch scattered in some weeds. I started to follow two birds that I saw 'light, and before I got to them Dewey dropped to a point. Here was a chance for a grand-stand play. Quickly filling the magazine of my repeater full, I grasped it tightly, and in my mind's eye could see at least four of those birds falling before my aim. Advancing in front of the dog, the birds, fifteen or twenty in number, drove to the right of me, and made a circle around to my left and behind me. Here was my chance, and those four dead birds I anticipated increased to five, but as the old adage says, "Man proposes." At the first shot a plump Bob White hit the ground, and quickly yanking the lever, I jerked the head off the shell, leaving the body in the chamber and staved a fresh shell in on top of it. I saw one of the men that live on that farm a week after, and he said the cuss words had not quit falling up there yet.

The count at noon showed forty-three birds, one squirrel and two cottontails. F. said that he believed a man could kill seventy-five cottontails in a day here, they are so numerous.

After dinner I challenged F. to another pigeon match. It was the worst day I ever tried to shoot on. The wind had risen to a gale, and caused the targets to bob and skip in every direction. He scored three to my six.

We were only out about one hour in the evening, as it began to turn cold. Total score for the day, forty-eight.

The next morning it had turned so cold that it was very disagreeable being out, but about 10 o'clock we started, being reinforced by two more shooters, R. and G. Only fifteen birds were bagged up to noon, when we pulled in to G.'s for dinner.

The luck was better in the evening, several bevies being found, and F. doing the star shooting of the day. The round-up at night showed thirty-six birds and eleven rabbits (Clay having instituted a rabbit hunt on the side). This day ended the hunt, and that night gun cleaning was the order of the evening. The next morning we started for the depot, seven miles away.

With many hand shakings and promises to come again next year, F. and R. pulled out for the Windy City, followed by my best wishes.

CHICAGO AND THE WEST.

Hunting Knives and Old Times.

CHICAGO, Ill., July 7.—I was glad to receive this week a call from Mr. H. A. Jackson, of Greene, N. Y., who was passing through on a business trip to Wisconsin. Mr. Jackson has been very much interested in the talk about hunting knives which came up a few months ago in the FOREST AND STREAM. I don't know why it is that people keep on giving me things, but they do. Mr. Jackson's personal contribution to my armory came in the shape of yet another hunting knife, and this time another dandy. He gave it to me, he said, because he had no present use for it, and because he wanted to add it to my collection. This knife was made especially by an old English knife maker, a Mr. McMoran, who lives at Greene, and who has made perhaps a half-dozen of these knives to order. Mr. Jackson told me that the steel of this blade he had found quite equal to the task of cutting a tin can or anything else. The blade is 8in. long, without a ribbed back, the point being something after the old bowie lines, but with a good curve. There is a small guard to the handle, and the handle itself is a plain wooden one, built rather small, but large enough to give a good grasp. This knife would delight the heart of my friend Bobo, for with it he could both kill and cut up a bear. Mr. Jackson tells me that the chief beauty of this knife is the excellence of the steel, but he says the best tool of this sort was an old Cree knife made from an old steel file.

Mr. Jackson, by the way, is a bit of an old-timer. He was an Indian trader in 1883 at Rocky Point, Mont., on the Missouri River, and he knew most of the wild characters who made that region interesting, to say the least, in the early days. He tells me that in 1882 the Northern herd of buffalo was apparently still full, and nobody thought the end was so near. His firm handled about 30,000 hides in 1882, and he thinks that 150,000 to 200,000 were killed that year. He was on a steamboat which was stopped for four hours by a herd of buffalo which was swimming the Missouri. In 1883, as is well known, the buffalo were practically wiped out in that country. The deer and antelope were at that time too numerous to demand attention.

Mr. Jackson carried in his pocket a big bear tusk, and he told me he had kept it all these years because it came from a very large bear. This bear he himself saw weighed on scales at Rocky Point. It was a silver-tip, and weighed 1,100lbs. It was killed in the Bear Paw Mountains by a hunter called Deaf George. The skin was bought by a trader named Marsh, who intended to send it to St. Paul for tanning. Marsh threw the skin over a pole out in the air, and two years later Mr. Jackson saw it still hanging there, forgotten. Thus a magnificent trophy was wasted, and one which might set at rest some of the questions regarding the size of the silver-tip bear, which many persons think never reaches the weight of more than 600 or 700lbs.

I had quite a good time talking with Mr. Jackson, for it is with such men, who really knew something of the old West, that we get now and then a touch of the real flavor. "When I went out West," said he, "I stopped at Bismarck, and whisky was two bits a drink. Three years later when I came out from my Indian trading, I stopped again at Bismarck, and I saw an old-timer throw down a gold piece and ask the crowd up to drink. His eyes stuck out of his head, for he got back a hat full of change! To his surprise, he learned that whisky was only 10 cents a drink, and beer only 5 cents a glass." This was indeed the passing of the West.

Another caller at my office this week was Mr. E. E. Van Dyke, of Red Lodge, Mont. Red Lodge is entitled to great distinction as being a sort of rendezvous of old-timers, numbering among its citizens, for instance, my ancient friend, Liver-Eating Johnson, who is known to everybody who crosses the State of Montana. With Mr. Van Dyke himself I felt very well acquainted, for when was out in the Yellowstone Park the superintende Capt. Anderson, often used to tell me that Van Dy was one of the worst poachers he had to deal with, and simply pined to get his hands on him again. I mention these facts to Mr. Van Dyke to-day, and we had quite talk over such matters. "I will admit," said Mr. V Dyke, "that I did at one time hunt in the Park a go deal, but I never did kill but seven buffalo, and that w before the herd got cut down so low. At the time Ca Anderson caught me I wasn't doing anything at all b just fishing and having a good time. He said he wou hold me on general principles, and he did. He kept r pretty near a month. He asked me if I had not be killing Park game, and I told him I had not at the time was taken. As to the rest, he couldn't expect me to co vict myself."

Mr. Van Dyke told me that Ed. Howells, who was ca tured in the Park in the winter of 1894, was a sort of a prentice of his own, and had been a market hunter arou Cooke City. He thought Howells would have got abo $300 apiece for his heads if he had not been captured. M Van Dyke says the main market for Park buffalo hea used to be at Bozeman, and he says that the men sou and west of the Park killed most of the buffalo. says that he thinks there is very little poaching now the north and east side of the Park, and he puts the nu ber of buffalo in the park at about sixty, saying that th are about forty head over east, toward the Hoodo where the troops have not known there were any buff at all. Mr. Van Dyke now makes a living guiding hu ing parties, and I don't believe he will ever care to back to the old ways which at one time seemed to h justifiable. He is thoroughly acquainted with the coun east of the Park, and says he finds plenty of big game, cluding a good many bear. We had a nice visit togeth Mr. Van Dyke looking admiringly at the pair of ski wh I polished up in his country some years ago. How tin do change. Once Capt. Anderson and I were eager to the man who called on me to-day. Now Capt. Anders is away with his regiment, taking care of duties m congenial than Park patrol; and here was the man he o was after, sitting in my office very comfortably and h ing, I hope, as pleasant time as I did myself.

More Wild Pigeons.

The following letter from Mr. Joseph Irwin, of Li Rock, Ark., is brief, and I hope conclusive evidence t the wild pigeon is not a thing of the past, but may s be found in the realm of the Stars and Stripes.

"LITTLE ROCK, Ark., July 5.—I have just received letter from Major Jas. A. Buchanan, of the Fifteenth fantry, an old shooting friend of mine, in which he s that great numbers of wild pigeons are flocking into country near San Juan, Porto Rico, coming from So America. It has long been a question of what had come of the wild pigeon; so the lost is found."

Singing Mouse Number 16.

Mr. Ernest Seton Thompson, of New York city, is last of my friends at date to discover a singing mouse, this one I believe is No. 16 of my list. Mr. Thomp writes me:

"I have another singing mouse for you. We hav good many mice about the house, and we hear more less of them nearly every night. One day a month the chambermaid reported that she had several ti lately heard a mouse singing like a canary; at least supposed it was a mouse, because she heard it in the d closet about midnight, and canaries do not occur there any time, also because some of the squeaks were v mousy. She further added that the sound was not strong and loud as the canary's song.

"I tried to overhear the furry songster for myself, did succeed in part. Although I did not get the benefi a full rehearsal, I heard enough to justify the first m statement.

"P. S.—In your opinion is murine vocalization of er inception, or is it simply an expression of the exubera coexistent with superabundant alimentation? Grant the prior thesis, would not this presuppose a bim equinoctial or preautumnal periodicity which might considered of post-æstival incidence?"

In the words of the Swedish hired girl, "Ay tank neider."

Old Fort Pierre.

In the early part of this century Pierre Choteau b Old Fort Pierre, in what is now North Dakota, and u it as headquarters in his fur trading with the Indi It was thus in part that the basis of the Choteau fort of St. Louis was founded, and the Choteau family has l prized among its possessions a picture of this old p Recently they gave away a copy to a friend, which c has been seen by some of the very old-timers of the No west, who say that it exactly resembles the old stock and carries them back into that ancient day.

Minnesota Forestry Reserve.

A meeting of those interested in the Minnesota fore reserve plan will be held here this month; and the C gressional trip over the reserve territory is practic assured.

Iowa Prairie Chickens.

I spent a day this week at the beautiful little city Waterloo, Iowa, on the Cedar River, in one of the n thickly populated portions of that State. I had the nice talk with Mr. J. C. Hartman, one of the posted and most intelligent of the local sportsmen. tells me that for a long time everybody thought the pra chickens gone forever from that part of Iowa. All hunting dogs were allowed to die off, and no one went after chickens at all. Within the last few years, howe it was discovered that a few birds were left. The be class of sportsmen strove to have the law enforced. birds came back, and the bird dogs with them, as I h myself seen in Waterloo. Last year within a few mile Waterloo, bags of a dozen birds or so were not unc mon, and Mr. Hartman told me that if I would come next fall he would take me out in his buggy and would surely get a dozen birds or so. All of which g to prove that we can still have game if we really w game, even in so old a country as Iowa.

Along the Cedar there are no ducks of consequence any ore, but the quail are doing well, and there are still rab- s and squirrels. The Cedar is as beautiful a stream as I er saw, and I was glad to hear that it yields good takes bass and pike now and then. As we drove along the k during the afternoon, we saw a little party out fishing a boat, and one angler was standing up playing a fish. esently it was landed, and we could see it to be a kerel of perhaps 3 or 4lbs weight. Later I learned that s party was under the supervision of old Col. Page, the st noted local guide. As I watched, I saw Col. Page into use a very handy little appliance. He gave a l on his anchor rope, and I saw that the line passed r a little pulley wheel fastened at the stern of the t. The boat dropped down stream a little ways, when skipper loosed the line and the anchor again dropped etly and held the boat fast. For fishing a swift and llow stream like the Cedar, where frequent stops are ired, this little arrangement is very desirable and it is th remembering. E. HOUGH.

Didymus Appreciated in Florida.

MR. O. B. SMITH, a leading citizen of St. Augustine, es in the News of that city in approval of the letters of correspondent, Didymus, who, he says, "Contributes ries of vigorous articles to the FOREST AND STREAM upport of Florida's game laws, and incidentally gives 'exterminatory peregrinations' of certain would-be t 'sportsmen' a very well-deserved showing up. Men came to this State as sportsmen—save the mark!— ed with every appliance for the destruction of animal rode up and down our watercourses shooting our s of plumage, fish and alligators with no other wish to see them die, then went home and wrote books ting of their wonderful exploits." One of these effu- s happening to fall into the hands of Didymus, "he naturally very much incensed to use no harsher term, he was not slow in expressing his contempt for such butchers in language forcible, sarcastic and cutting." r. Smith says that Didymus "has been a sportsman ughout all the years of his long, noted and useful For proper purposes where game was plenty he has ired large quantities of it, having been in the past a l shot,' but from personal knowledge the writer can y he was never a 'butcher' nor one who could inflict ss pain on anything that breathes the breath of life. true he wounds the exterminatory peregrinators , but who shall say they do not deserve all they ved?" And he adds that our correspondent "has a good work for the State. The FOREST AND STREAM vedly stands at the head of all publications of its and in this sheet, which is not only circulated all this country, but all over the world, he says: 'I want press on any youth who may purchase of Coquina his in this year of grace, 1899, and may be stimulated to deeds of blood which he thinks to perpetrate in da, the solemn truth that he would find himself here wofully disappointed, and it would be better for o stay away.'"

Adirondack Preserves.

LONE, N. Y., July 5.—Since the acquisition by the efellers of two immense tracts of land in the Adiron- , there is much speculation as to how far their pur- s may be extended. Their present Adirondack hold- re well timbered, and several lakes and rivers add to value. Both tracts have been put into a private rve.

first purchase of the Rockefeller included some 28,- cres in the town of Santa Clara. On this property re erecting numerous cottages, guides' quarters and ouses, involving an outlay of three-quarters of a n dollars. The second purchase was the property n as the Debar Mountain Tract, comprising about acres. This property partly adjoins that of the ham Lake Hotel Company, who own several thou- acres.

reported here that the Rockfellers have made offers e entire Meacham Lake property, and also for the Smith property and forest lands. Nothing definite d to have been agreed upon. A year ago the ham Lake property was on the market at $80,000, is was before the new hotel was erected. Since stock company organized in Malone has acquired it. hin the Santa Clara preserve were numerous private gs and a small village known as Brandon. These ties have been largely bought up during the last few s, so that the Rockefellers now practically own the Should the Meacham Lake property be purchased, id the same policy would be followed in the town ane, which consists almost wholly of a sparsely farming commmunity. All the purchases so far een made in the name of William Rockefeller, of York, by Malone attorneys.—New York Times.

In Cuba.

. J. E. BLOOM, of New York and Havana, who has xploring the southern coast of Cuba, writes of the Cochinos: "In the winter months the fishermen atabanó come to this bay for large fish, which they the Havana market. There are now several herds of eer in the forest. In the spring many kinds of vl congregate in the 'sabanas,' among others the whose feathers the ladies wear, and which sell in ork at from $6 to $30 per ounce. Parrots are l and quite handsome in their combination of I brought several with me. The waters of the bay fectly clear and very beautiful, coral being plainly at the bottom. The sponge fishing in the bay is od."

mendment to Game Laws Wanted.

ROCKAWAY, L. I.—The section of the game laws to the rail family, especially the common meadow s been badly muddled for several years. By the n of a single word, the result of a stupid error, the hich remained in force until last year, permitted oting of meadow hens only during the breeding season. Last year meadow hens were included in the list of bay birds which may be shot after July 1. This, of course, is an improvement on the old law, but it will have to be amended. Many of the hens are still on their nests or caring for their young. In either case they may be caught or knocked over with a club. In several instances pot-hunters have blown them to pieces as they set on their nests. The meadow hen can hardly be considered a game bird anyway, but if they must be killed it should be only allowed during September and October. If they are fit to eat it is only during the fall months. Why permit the slaughter of these odd, ungainly creatures, the clowns of the meadows, useless and harmless, but still entertaining?

Several parties came down on the first Saturday and Sunday of the month to take advantage of the first day's shooting of bay birds allowed by law. Only a few birds were found, and they appeared to be birds that had nested on the beaches and meadows in this vicinity. An occasional large yellowleg was seen. There is but a slight chance of a flight of birds until there is a marked change in the weather. Many of our local sportsmen advocate the changing of the game laws so as to prevent the sort of piratical pot-hunting which is done early in July, when many of the young birds are barely able to fly and the old ones have not recovered from the exhaustion of the mating season. QUAHAUG.

An Adirondack Hound-at-Large Case.

THE two charges of deer hounding in the Adirondacks against Frank C. Ives, the ex-billiard champion, was decided against Ives by the Appellate Division on July 6 last. It was charged that a dog owned by Ives, and kept in the latter's camp, near Saranac Lake, was allowed to run at large in a region inhabited by deer, and that Ives used the same dog in hunting deer in the fall of 1897. The defendant claimed that the dog had never been used for hunting deer; that it was kept chained, and that if it was loose, it was without his knowledge. The finding of such a dog running at large in such places is deemed prima facie evidence of the violation of the law by the owner of the dog. The fine is $100 for each offense, and in this case the amount imposed was $318.06.

Quail on Long Island.

EAST ROCKAWAY, L. I., July 10.—I was startled yesterday morning by the clear, melodious whistle of the Bob White. I had supposed that quail was entirely extinct in this thickly populated district—only a mile or so out of Greater New York—and was delighted to have such tangible evidence that such was not the fact. I did not see the birds, but have no doubt they are the genuine Long Island quail, since no Southern quail have ever been turned out in this section of the island. If the shooting of these birds on Long Island could be prohibited altogether for several years, they would no doubt be preserved and become plentiful again. J. N. GRIFFITH.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

Toledo and Thereabouts.

Glimpses Into a Historic Sporting Country.

SOME few hundred years ago, the matter of one or more centuries not being material to the purposes of this article, the gradual subsiding of the waters about the head of Lake Erie evolved along its westerly shores a sportsman's paradise. In the deep waters of the lake, and in the channels of the rivers lying in the half-moon that curved downward from the currents of the Detroit River on the north to those of the Maumee on the south, swam all the fish that frequented the great interior chain of fresh water lakes; and where those waters shallowed to the shore thousands of aquatic plants and smaller forms of piscatorial life thrived and furnished food for their predacious kin and for the myriads of water fowl that frequented the coves and bayous. Still further inland the rising shores stiffened their broad backs to the burden of the primeval forests; and through these and the openings that intervened roamed the shaggy bison, the stately elk and the elusive deer. The headwaters of the lake lay in a great natural basin surrounded on every hand by its protecting sides, and so it was that it formed a vast shelter for all the fauna of the continent, where food and water were everywhere abundant, and where even the fiercest and most untiring hunters among the descendants of the lost tribes had not yet found their way down through the great northern wilderness that lay above it. And though the forests have disappeared, the great basin to this day is free from the rude storms that sweep the country above and below it, and its sheltered sides afford sustenance and protection for thousands of the human family.

Such was the territory over a portion of which the city of Toledo now extends its miles of paved streets and comfortable residences, and upon whose confines there are still to be found traces of the great banquet that nature here spread for her children in the long ago.

The Indians, at an early day in the historic ages of the vast Northwest Territory, came to recognize the richness of these varied hunting and fishing grounds, and their hunting camps dotted the shores of the Detroit, the Raisin, the Ottawa and the Maumee rivers, and their birch barks rode buoyantly on all their confluent waters. Here the whites found them, and here they contested valiantly against the aggressions of the pale-faced invaders who forced them back further and still further from their favorite haunts. The whites who had gained a precarious footing in this hostile territory soon found in the abundant resources of its woods and streams the most liberal reinforcements for an otherwise scanty larder. The meat of the deer and the wild turkey (the elk and the buffalo had long since begun to flee to the westward) proved most satisfactory and toothsome substitutes for beef and poultry, and in the place of the pork barrel the barrel of fish was an indispensable adjunct to every pioneer kitchen. Hence it came about that fishing to the early settler, in the Maumee Valley, for example, was a necessary and serious business, since it meant the procuring of a valuable part of the winter's supply of provisions. It is not the intention of these chronicles to set forth exaggerated tales to tempt the credulous reader into fruitless journeys in pursuit of the phantoms of long-departed fish and game. This is not a bureau of railway intelligence, nor is the writer connected with the passenger department of any of the leading railway lines of the country, nor yet indeed with the fish exhibit of the forthcoming Ohio centennial. But it is only sober truth to say that in those days when the appointed time came for doing up the family fishing, the pioneer quietly and unostentatiously hauled his fish barrels to the edge of the river or the lake and filled them, having first dressed and salted his catch. There was in those days very little hunting or fishing merely for sport; nor was it necessary to lie about the catch. In the season it was always liberal, both in size and quantity, and there was little left for the imagination.

The forests have disappeared, and with them the noble quarry that once roamed among their shades. The rivers have undergone a change, and the lake has shrunken in volume, yet the finny tribes, sole survivors of all the wild life of the region, still frequent their old-time resorts. But new conditions have come into the economic problem that is ever confronting the race. For most men it has become no longer convenient or expedient to pursue the denizens of the lake and stream to secure the household provisions, and the energies of the head of the family are turned into other channels. But even before this began an interesting phase in the evolution of the fishing instinct. Although no longer urged by the clamor of his hungry progeny to the casting of the murderous spear or the seductive hook, the habit had been so fostered that a desire grew in his breast which remained fresh and vigorous long after the necessity had passed away from the fisherman on the Maumee. Succeeding generations inherited the fishing proclivity, unmitigated by the practical element that had clouded the ardor of their ancestors' endeavors. Continual exercise has only strengthened the instinct, till at the close of the nineteenth century every able-bodied man on the Maumee is a fisherman in greater or less degree, from the oil operator who sends his steam launch every spring around the coast to the tarpon waters of the South, to the suburban butcher who hies him every second Saturday of the month to the marshy margin of the nearest creek. Both are actuated by the same mysterious but hereditary prompting which dates back to the time when their forbears sought their food beneath the surface of the adjacent waters. The instinct rises superior to any adventitious conditions of rank or social position, and hence you have only to penetrate the cuticle of a Toledo man, be he lawyer, doctor, merchant, banker, broker, teacher, preacher or ordinary citizen, to find a fisherman underneath. He may not, and probably does not, know why he is a fisherman, attributing his tendency in that direction to a mere propinquity to the waters, to accident or to the solicitations of his neighbor; but those who have made the matter a subject of philosophic inquiry know full well that the fishing habit in this locality is a hereditary development, produced along clearly established lines, as already indicated.

But man in Toledo and thereabouts is not only a fishing but a social animal, and with few exceptions seeks companions who may share with him the pleasures of his sport and listen credulously and sympathetically to the various inventions of his imagination. And so it has come to pass that numerous groups of men have banded themselves together in associations for the exercise of the fishing instinct and the promotion of the fishing habit, with its attendant manifestations of shooting and yachting. And it is the purpose of these articles to sketch briefly for the readers of FOREST AND STREAM some of the most notable of these organizations, whose repute in many cases has extended even beyond the borders of the good State of Ohio, in which they have had their birth. And without more ado we may begin with the story of

The Middle Bass Club.

It was in the early '70s that a number of Toledo gentlemen, some twenty in all, were canvassing the subject of a common rendezvous for recreation purposes, and after considering various locations associated themselves for the purpose of establishing and maintaining a boating and fishing resort on the banks of the Ottawa River (popularly known as "Ten-Mile Creek") some five or six miles north of the city. Their experiences during the first two seasons (1872-73) were not at all satisfactory, the location not proving well adapted to the purposes of the association, and in the spring of 1874 a meeting of those interested was held, which had for its object the selection of a better location and the securing of a more perfect organization. This meeting resulted in large accessions of members, the creation of a board of trustees, the adoption of a constitution, and the election of the usual officers. The new committee on location made careful scrutiny of a number of sites on Middle Bass and Put-in-Bay Islands, and recommended the leasing in perpetuity of a piece of land at the extreme westerly end of the former. The lease was subsequently effected, and contracts were negotiated for a club house to cost in the neighborhood of $2,500, to be completed in the early summer of 1874. The experiences of the rougher sex proved so enjoyable during their first summer on the island that it was decided to expand the club house into a summer resort for their families and guests as well. Two thousand dollars were thereupon raised by subscriptions of $20 each from the 100 members for the required enlargements and improvements, and in the spring of 1875 the club built a dock and boat house, put up a windmill and water-works, and made a considerable addition to the house itself. In the previous year (1874) several of the members purchased lots on the ground adjacent, and began the erection of the beautiful cottages which have become so attractive a feature of the surroundings.

In 1879 the association decided to purchase the fine grove surrounding the club house, as well as the leased ground on which it stood, and by this step it came into possession of some ten acres, surrounded on three sides by the waters of the lake, and on the fourth by a street parallel to the easterly front of the club house itself, and extending through to the lake on either side.

In 1880 the club was incorporated under the general

laws of Ohio as an association not for profit, under the name of the Toledo and Lake Erie Boating and Fishing Association, which legal title has not, however, replaced its former well-known cognomen in every day parlance. In 1881 the members pledged themselves to pay an extra building assessment of $100 each, and under a contract made in the fall of the same year a new and handsome club building was begun and completed in June of the year following. It includes a commodious office with a wide, open fireplace, for the comfort of the bass fishermen in the spring and fall, pleasant parlors opening on broad verandas which overlook the lake to the south and west, a dining room capable of comfortably seating 200 guests, and in the second story sleeping rooms for about one-half that number. The original building was moved to the rear and transformed into servants' quarters, kitchens, ordinaries, etc. Other valuable improvements since 1875 have included new and larger docks, boat and bath houses and kitchens more adequate to the increasing requirements of the association. An enlarged and improved water-works system, with steam pumping apparatus, and a substantial sea wall protecting the club property, have also helped to absorb a large part of the association's surplus receipts.

The club house itself is in charge of a superintendent (steward) employed by the trustees, and he in turn engages and is responsible for his own corps of assistants. A fixed schedule of rates is made by the trustees for the board of members and their families (with reductions for children and servants), and a somewhat higher one for invited guests, who may be introduced by members from Toledo or elsewhere without geographical restriction. No charge is made for lodgings in the club house, and the cottages of members are cared for without charge by the employees of the superintendent, and in the same manner as the rooms in the club house.

It was about 1890 that the ladies connected with the club decided that its religious welfare was being sadly neglected, and accordingly they turned their attention in that direction, with such excellent results that, with a little assistance from the masculine and more irreligious element, they erected a beautiful and commodious chapel, in which religious services are held nearly every week of the season by visiting clergymen of various denominations.

Upon private grounds to the eastward, and immediately adjoining the property of the club, a miniature village has sprung up, composed of the cottages erected by club members. There are now twenty-three of these summer homes, whose picturesque exteriors and tastefully-kept lawns greatly heighten the beauty of the scene. Some of these, in architectural design and interior furnishing, would do no discredit to much more pretentious resorts than Middle Bass. Adjoining the cottages the "Count" William Rehberg (the original owner of all the western part of the island, and the only honorary member of the club) has built a spacious dancing pavilion, and here the merry dancers and the light island wines circulate freely (but within the bounds of moderation) in the soft summer evenings, and here the "Saturday night hops" of the club are the culmination of the week's social gaieties.

Founded originally twenty-five years ago by a coterie of congenial Toledo gentlemen, the Middle Bass Club of to-day is an association whose membership comprises individuals and families from all portions of the Union, although Toledo still claims the lion's share. The maximum number of members is limited by the constitution to 200, and at present only four vacancies exist. A candidate for membership is required to deposit in advance a membership fee of $500, and in the ballot for his election the presence of three black balls is sufficient to cause his rejection. Once elected, he is required to pay a yearly assessment of $20, which may, by a majority vote of all the members, be increased to any sum not exceeding $50 for the current year. The price of a membership certificate does not seem high when it is stated that the property of the association, including the grounds, buildings and other improvements, represent to-day a cash value of over $100,000. Four of the club members hail from New York city; Chicago, St. Louis, Indianapolis, Denver and Louisville are all represented on its rolls, and among the Ohio membership are people from Cincinnati, Cleveland, Columbus, Springfield, Dayton, Akron and other thriving towns of the interior of the State. The Governor of the State, Senator Foraker and ex-Secretary of the Treasury Foster are members and frequent visitors, and during the spring fishing seasons of 1898 and '99 ex-President Cleveland was both a welcome and appreciative guest. With him this year was "Fighting Bob Evans" of the battleship Iowa, and other gentlemen scarcely less distinguished in the councils of the State and the nation. It is understood that Mr. Cleveland is of the opinion that the bass fishing about the islands in the westerly end of Lake Erie is not surpassed by any corresponding piece of water in the country, a belief in which he is heartily corroborated by many lesser but no less enthusiastic fishermen.

Taken all in all, the Middle Bass Club may rightfully be regarded as an excellent example of a successful social and piscatorial trust. JAY BEEBE.

TOLEDO, O., June 30.

Showing Off.

EDMUNDSTON, July 1.—Our lakes and streams now present a very pretty picture for the sportsman. Being out on waters near here for the past seven days, with Harry S. Brown, of the New York Herald, we had two days of the finest trout fishing we ever experienced; took all we wanted; gave away over 30lbs. One day while on the trip we had stopped at the mouth of a brook, as it was raining. Mr. Brown and wife were waiting inside a house. I cast a few times and hooked a large trout. The whistle of the locomotive told me the train was coming. As the track was in plain sight and close to me, the idea presented itself to show off, which I did by playing the fish very easily; and while the train was passing I stood with rod bent, the trout splashing, which must have made a feeling of envy in any sportsman who viewed the sight from the train. But alas, for my delusion, I paid dearly for it. Just as the rear car went round the bend my trout got free by the hook breaking, which shows that it don't pay to put on airs. R.

ANGLING NOTES.

Another Coincidence.

COINCIDENCES seem to be coming my way in these days, and I shall put one down now while it is hot. Last February a friend met me in the street and said he had just bought a salmon rod at a bargain. It was a Forest & Son rod, and from what he told me about it I concluded that it was a bargain, and regretted that it had not fallen to me. In March I wrote to the tackle dealer in New York of whom my friend bought his rod, and incidentally reproached him for not letting me know that he had had such a bargain in a salmon rod. I received no reply until to-day, and I simply glanced at the contents of the letter and put it on my desk, as a stenographer was waiting for me to talk to him on another subject than salmon rods. This evening after dinner I took up the letter to read that my New York friend had written me about another bargain in a salmon rod, and explained why he had not written before. As I was reading the letter, my home friend rang the door bell and was shown in to where I sat reading the letter, and he had his bargain in a salmon rod in his hand to show me. He had been in Florida since he bought the rod, and except for meeting him on the train as he was returning, I had not seen him more than one other time, to pass him in the street, since he made the purchase, and he knew nothing about my having any correspondence with the New York dealer until I told him this evening. If it is not a coincidence what is it?

Sturgeon for Finland.

The two last words in the above note reminded me of something the moment I wrote them. I received a cablegram from Helsingfors, Finland, in March, which read: "Possible ship impregnated sturgeon eggs. Hintze." Mr. Hintze is the editor of a fisheries journal in Helsingfors, and at first I did not know whether to take the words of the message for a question or a declaration, but finally decided to accept it as a question. I had serious doubts about shipping sturgeon eggs to Finland, or rather I doubted if they would arrive there unhatched and in a condition to be hatched, and in this I was confirmed by Dr. Bashford Dean, of Columbia University, who, more than any other man, has had experience in hatching sturgeon eggs. When I wrote the reply, saying the eggs could not be sent safely, and the operator told me the message would cost $2.43 a word, including address and signature, I thought I knew why the message I received did not say, "Is it possible," if it were meant for a question, or "It is possible" if intended as a declaration. My message was revised and the operator revised his rate and called it 43 cents a word.

There was no further question about the meaning of the first message, when Dr. Nordquish, Inspector of Fisheries of Finland, wrote to ask if I could procure for him either adult sturgeon of small size, as he understood such fish were caught in all waters and thrown away, or sturgeon fry, and ship them to England, where they could be met by a messenger from Finland. There is but one concern doing business in this country likely to be of vital assistance in such a matter, for as yet the propagation of lake sturgeon artificially is in embryo, but I thought if I could get the eggs from commercial fishermen, the United States Fish Commission would hatch them, as an attempt to ship adult fish would be extremely risky even if the fish of suitable size could be procured. Dr. Dean's experience with the river sturgeon had taught him that the fry would require fifteen days in which to absorb the umbilical sac, and it might be possible to get the fry across the sea and to their destination within that time if they were hatched to fit in with the departure of a fast mail steamer.

When I wrote to the United States Fish Commissioner I found that it had been decided to propagate the lake sturgeon this year, and by direction of the Commissioner Mr. Livingston Stone was then on the Great Lakes seeking to obtain ripe fish that would furnish eggs to be hatched at the Cape Vincent station, and with the courtesy that has become traditional in the Commission I was advised that if Mr. Stone was successful in his quest I would have some sturgeon fry assigned to go to Finland instead of being obliged to search for eggs myself. The last of May Mr. Stone wrote me from East Alburgh, Vermont, that he was getting plenty of sturgeon, but up to the time of writing no ripe eggs had been secured. Arrangements have been made with the North German Lloyd Steamship Company to transport the fry, so the experiment will be tried this year if ripe eggs are found to produce the fry.

"Speckled Beauties."

This is an expression that gets the blue pencil in its vitals in well-regulated newspaper offices of this day, for it was worn to a frazzle before the period of the cave dwellers, and yet there is enough life in it for a correspondent to use it three times on a half-sheet of note paper in a letter to me this morning. I never heard him use it in conversation, for when he talks about brook trout he says brook trout, or he may vary it by saying speckled trout. It cannot be an expression that he has just heard, for he has read FOREST AND STREAM since its first issue, and to my certain knowledge the expression appeared in these columns at least seven times back in the seventies, and why he should fire it at me this hot morning, as if it came out of one of those guns that are loaded through a funnel, as you would fill a jug, and fired with a crank, such as is used to squeeze music out of a barrel organ, and makes a target look like a sieve after two turns of the crank handle, I cannot for the life of me understand. If he had written it once, I would have made no protest, but three times and on one side of a small half-sheet of note paper! If there had been quotation marks I would have understood it as a rude joke played on a fellow fisherman when the thermometer stood at 94 degrees in the shade and he could not defend himself. There are no quotation marks, and I must assume that the writer was in a poetic frame of mind. Freckled beauties is not so hackneyed as speckled beauties, but how is one to tell whether either refers to a trout or a hen or a pointer pup, when shorn of the context. If one wishes real poetry with the dew on it, why not adopt that of my friend, Dr. Quackenbos, who says: "Golden tinctured sides, gemmed with the fire of rubies."

If that is too long, say brook trout, or speckled trout, or freckled trout, for every man, woman and child who has caught them knows that they are beauties without being told.

Dams and Fishways.

A letter has just come in in the evening mail that will fit right in here, for it pertains to a subject that it was my plain duty to call attention to in FOREST AND STREAM long ago.

The letter is dated Oneonta, N. Y., June 8, and is as follows: "

"I send you by this mail a copy of the Oneonta Star, giving an account of fish trying to leap a dam near here. The dam in question was constructed last fall by the Oneonta Electric Light and Power Company across the Susquehanna River, one mile east of this town. On the 6th I visited the dam, to find if the reports were true about fish trying to get over it, and found the circumstances as stated in the printed account. In ten minutes, by actual count, I saw sixty fish make the attempt, and fall back. Should there not be a fishway in this dam?"

Apparently there should be a fishway in the dam; furthermore the dam seems to have been erected illegally and is maintained contrary to law, subjecting the owners to a fine if such should prove to be the case. Here is the clipping from the Star:

"A sight which will give every fisherman the fever at once can be seen at the upper dam of the Water Power Electric Company each evening, from 6 o'clock until dark. Readers are, no doubt, familiar with the habits of many fish to go down the streams in the fall to deeper water, many going to the ocean itself, and returning in the spring. For the past few weeks large quantities of fish have been making their way up the Susquehanna, but when they have reached the upper dam of the electric company they have been unable to swim or leap it. The water sweeps over the top and down the dam upon planks which are inclined possibly 35 degrees, and then along another row of planks about 5ft. long, which are level. When the water passes off the second row it breaks against the bottom, making a very large wave. The fish, in swimming up stream and striking this large wave, attempt to leap over the dam and can only throw themselves a part of the way and fall back into the rapids. Frequently a dozen fish are seen in the air at a time, vainly attempting to make the dam. At evening more are seen, but at all times of day, for many days now, this novel sight has been seen. Suckers, bass, pickerel and others can be distinguished.

"This, of course, has resulted in a congestion of fish below the dam, and it is said to be a conservative estimate that 2,000 suckers alone have been captured there. One fisherman, anchored in a boat in the center of the stream, in one day is said to have captured ninety-six suckers."

The fishway law of the State, now, and for seven years past, in force, is as follows:

The Fishway Law.

Sec. 260. Commissioners to be Notified of Construction of Dam.—No dam shall be constructed by the State or any person upon any stream more than six miles in length inhabited by fish protected by this act, until the person about to construct, or the officers having charge of the construction of the same shall give written notice to the Commissioners of such intention, together with a statement of the name, length and location of said stream and the size and general description of such dam, and the purposes for which it is to be erected, together with a diagram thereof.

Sec. 261. Authority of Commissioners to Direct Fishways.—The Commissioners are authorized in such cases to direct the construction of suitable fishways by an entry on their minutes and service of a copy of such order on the person constructing or officers having charge of the construction of such dam, and the person so constructing shall at his own expense, or the officers having charge of the construction shall, out of the funds appropriated for the construction of such dam, comply with such directions, subject, on application on notice as on a motion, to the right of the Supreme Court to affirm, reverse, modify or alter such directions.

Sec. 262. Owners to Comply with Directions of Commissioners.—Such fishways shall be properly maintained by the owner or person in possession of such dam, and shall be subject to examination and inspection on behalf of the Commissioners, who may direct such repairs and alterations as they may deem necessary, subject to the order of the Supreme Court, as in case of construction.

Sec. 263. Commissioners to Recover for Construction and Penalty.—In case of failure, refusal or neglect on the part of any person to comply with the directions of the Commissioners as to building and repairing fishways, the Commissioners may cause such fishways to be constructed or repaired, and the expense thereof may be recovered by the Commissioners in an action against the owner or person in possessioon, or both, in the name of the people, and shall, in addition to the personal liability of such owner or person in possession, be a lien upon the premises upon which such dam is situated. The person refusing or neglecting to comply with such directions of the Commissioners as to construction or repairs shall also be liable to a penalty of ten dollars for each day during which they neglect to obey such direction, which penalty may be recovered in like manner in the same or separate action.

Sec. 264. No person or persons, association, corporation or company shall build, place or maintain any rack, screen, weir or other obstruction across any of the creeks, streams or rivers of the State inhabitel by fish protected by law that will prevent the passage of fish from one point to another point in said waters except as provided in Sec. 143 of the fisheries, game and forest law. Whoever shall violate or attempt to violate the provisions of this section by placing, maintaining or causing to be placed or maintained any rack, screen, weir or other obstruction to prevent the passage of fish as aforesaid shall be deemed guilty of misdemeanor, and in addition thereto shall be liable to a penalty of $ for each rack, screen, weir or other obstruction built or maintained in violation of this section. (Added by Chap. 408 of Laws of 189

The exception in Sec. 143 relates to the maintaining of eel weirs in certain waters.

I have examined the applications made to the Fisheries Game and Forest Commission for permission to erect dams, that have been filed for the past two years at most, and find no application from the Oneonta Electric Light and Power Company. When such an application is filed with the Commission, it is usually referred to the State Fish Culturest for an examination of the dam, and his report upon it, and I am quite sure that no application for permission to build this dam has been referred to him. It is not strange that this dam should have been constructed without compliance on the part of the owners with the provisions of the fishway law, for repeatedly we have found that those about to build dams knew nothing about the law, so that there was no intention on the part to evade it. One of the first cases of this sort that I knew about was of a dam being erected by a lawyer who was attorney for a pulp company, and who was probably saturated with legal information in regard to water powers, dams and water privileges generally, and when

told him of the fishway law he was a surprised lawyer. The publication of the law in FOREST AND STREAM may bring it to the attention of people who would otherwise never see it.

The general fishway law quoted above was approved in 1892, and in addition to that law there is a special fishway law applying only to St. Lawrence and Franklin counties, and is Chap. 498 of the laws of 1895, and is printed in the Fisheries, Game and Forest Laws for free distribution.

Fishing in Lake George.

Mr. Harry W. Watrous, president of the Lake George Association for the Protection of Fish and Game, called upon me one evening lately, and we talked of the fishing in the lake. Mr. Watrous had been at his summer place on the lake but a few days, and I had not visited the lake this season, so the discussion was chiefly about information that had come to us at second hand. He had heard that the lake trout fishing was not particularly good, although it had been good early in May, when the trout were at the surface, and wondered why it was no better when the lake was so well stocked with young trout every year.

At the time Mr. Watrous was here there was a letter on my desk from Mr. E. Burgess Warren, owner of the fast steam yacht Ellide, inviting me to fish with him for lake trout in Lake George, in which he said: "I have fished two days for lake trout and got 36lbs. Thursday and 55lbs. yesterday. Largest, 9, 8, 7, 6¾ and 6¼lbs. respectively. We had eleven trout Thursday and fifteen yesterday." Certainly that is good fishing, and any one who wishes for better it would be difficult to please.

There are fishermen and fishermen, and when one man is successful it does not follow as a matter of course that all who fish will be equally successful, and, too, success means to one fisherman a few good fish fairly caught after a good fight, while another fisherman is not successful unless he catches more fish than three men should in decency kill. The lake trout fishing is not as good in the lake as it would be if there were less whitefish in it. Since the Great Lakes whitefish were planted by the National Fish Commission in 1887 they have fairly swarmed in the lake, and none are caught except the few taken as bait fish, so that not only is a vast quantity of the best food going to waste for lack of means to take it, but the whitefish are eating a great quantity of food which should go to the young trout. There is no finer food fish than whitefish, and the place to eat them is where they are caught, and I venture to say that nine out of ten who could have whitefish and lake trout placed before them on the tables freshly caught from the water, would prefer the former. The "Otsego bass," so highly prized as a delicate table fish, is a whitefish, and there is a special law to permit their capture in nets. The same section of the Fisheries, Game and Forest Law, namely, 149, says that: "Frostfish, whitefish, catfish, sunfish, pumpkin seeds, bullheads, perch, suckers and sturgeon may also be taken with nets from inland lakes not inhabited by brook trout during such period, and in such manner and under rules and regulations as the Commissioner of Fisheries, Game and Forests may prescribe." If the Commissioners would license some nets to take whitefish in Lake George, the lake trout fishing would be improved and the people would have such a choice table fish that they would wish to remain there for an indefinite time to enjoy them.

Black Bass.

Mr. W. H. Faxon, of Chestertown, N. Y., writes me under date of June 22: "Cannot something be done to prevent the wholesale slaughter of young black bass by taking the old fish off their beds?

"I understand that the closed season for black bass was off in this section June 15. The bass are not yet off their beds, and there are parties here who take twenty to twenty-five adult bass daily, and yet I suppose it is within the bounds of the law no black bass should be taken from the waters in this vicinity before July 1 to July 10."

That is all true enough, and everyone who knows anything about the matter must know it is true, but I have harped on this subject for so many years in FOREST AND STREAM that I expect the editor turns purple every time he reads the words "black bass" in my handwriting.

The only thing to be done to remedy the condition complained of is to amend the black bass law and make the closed season cover the breeding season and the time thereafter that the young bass require the protection of the parent. That is the only thing which will preserve our black bass fishing, for bass cannot be hatched like trout and shad, and they need all the intelligent protection a State can give them. Spawning in the lakes, the young bass are the prey of countless enemies, in spite of the watchful care of the parents, and the parent bass has been known to devour its own brood after watching over it during the hatching period and days which follow, and the fry devour one another when they begin to feed (a few days ago I went into a baggage car on the Delaware & Hudson River Railroad, where a messenger of the Fisheries, Game and Forest Commission had 6,000 young big-mouth black bass in cans going to the Hudson River, and I asked him why he looked so troubled, and he said because the bass were beginning to eat one another, and he wanted to get them in the river before the practice spread), so that altogether too much care cannot be exercised to protect the fish so far as just laws can protect them. The Fisheries, Game and Forest Commission has ceased to distribute the small-mouth black bass, although some big-mouth fry are sent out to certain waters where the same species is native, and nothing but a law to cover the spawning and rearing season will preserve the black bass. Every time it is suggested in Albany to lengthen the close season until July 1, there is such opposition to it that the amendment fails; but the time must come when a sufficient number of people will realize the importance of such an amendment to secure its adoption, and it is to be hoped that the time will come before it is too late to save the fish for generations to follow us.

Pacific Salmon.

Mr. J. H. White, of Buffalo, N. Y., writes me about Pacific salmon as follows:

"I read your article in FOREST AND STREAM regarding Pacific salmon, which interested me greatly, and I wish to add my testimony to your position on the question of said salmon taking the fly.

"I resided on Gray's Harbor, Wash., from the spring of 1890 to the fall of 1892. Said Gray's Harbor empties into the Pacific Ocean about forty miles north of the Columbia River. During all the time I was in Washington I was a devotee of the rod and line, and never heard of a salmon being taken on the fly, although I was fortunate enough to be in the boat on three separate occasions when we hooked salmon, but the others fellows held the line. Twice we hooked the fish on a spoon and landed them, and once we took one on salmon roe, which we procured from net fishermen, and were using for salmon trout, so called there, but more likely sea trout" (this fish is the steel head now introduced into Eastern waters and also called salmon trout on the Pacific Coast. This year it bred in the fresh-water ponds of the U. S. Fish Commission at East Oakland, Maine). "I was informed by men from Tacoma that they had great sport at times on Puget Sound taking salmon on small spoon and light rod and line from moving sailboats. Kipling, speaking of 'Chinook' salmon, would indicate that he was fishing in the Columbia River, as the Chinook is only found in that stream, except on rare occasions, when one net fisherman would get one. You know the salmon vary in different rivers, some species being found only in one stream, vide Quinault, found only in the river of that name coming out of the Olympic Mountains, and the most delicious eating of them all. You may rest assured that the Columbia River salmon found in Eastern markets is more like others than the Chinook, and probably never saw the Columbia River."

I think Mr. White must be in error about the Chinook being found only in the Columbia River. It has various other names, such as King salmon, Quinnat salmon, Sacramento salmon, Tyee salmon, Tchaviche, Saw-Kwey and Tschawytscha, and its range is put down as "Alaska, Oregon and California. Southward to Ventura River, and to northern China, ascending all large streams, especially abundant in the Columbia and Sacramento rivers, where it is the principal salmon."

The Quinault salmon is new to me, and I wonder if it is not the Quinnat, another name for the Chinook or King salmon. It is more than likely that I have written in this column of the catching of salmon in Puget Sound with spoon and artificial minnows, for during the residence of a brother in Tacoma for several years he sent me photographs of catches of salmon made with both lures, and Gen. Ripley, of Rutland, Vermont, wrote me on one occasion from Tacoma, I think, of a day's fishing in Puget Sound when he killed a number of Pacific salmon on an artificial minnow and with spoon as well.

A. N. CHENEY.

In Camp on Back Creek.

WINCHESTER, Va.—*Editor Forest and Stream:* I have been intending for some time to write the story of a camping trip made by my friend Steimann Snapp and myself on Back Creek, fifteen miles from this city. We had been planning this trip for some time, and each of us, being tied down to business, looked forward with a great deal of pleasure to the day when we should start. It was the night of a warm, sultry day, and we made the start about 11:30 o'clock. It clouded up shortly after we left town, which made driving somewhat difficult, and we did not reach our destination until about 5 o'clock the next morning. However, we arrived all safe, and selecting for a site on which to pitch our tent a slight elevation about 20yds. from the creek, we soon had the white canvas stretched. The next thing on the programme was to have breakfast. This was my first camping trip, and I had never cooked nor helped to cook anything in my life; but my friend had been there before, and the breakfast was all right. We next visited a straw stack nearby, and carrying several large armfuls to the tent, proceeded to construct some sort of a bed, which proved to be very comfortable.

It had cleared off beautifully by 9 o'clock, and the water in the creek was clear and smooth, and had we only known that a hard rain was in store for us in the evening, we would very likely have put in most of the day fishing. Instead, we explored around our new quarters, hunting good fishing holes, wood, etc. Well, along about 5 o'clock in the afternoon the rain came down in torrents, and at one time things looked rather serious for us. We hadn't pegged our tent down very securely, and the wind which accompanied the rain came very near carrying it away. However, it stood the storm, and we were happy in the thought that we had it pitched on dry ground. When darkness set in things looked rather gloomy around camp. A drizzling rain was falling, and the darkness outside was inky. Another thing also came into our minds, and that was the fact that there would be no bass fishing on the morrow. The creek had risen very high, and was rushing past below us with a wild roar. About 8 o'clock several young farmers strolled down to our tent, and they were very welcome visitors. Snapp and myself had brought banjo and guitar along with us, and I suggested that we have some music to liven things up. We played several selections for our visitors, who in turn favored us with several "coon" songs. The night passed off very pleasantly, and it was after 12 o'clock when we rolled into our bed of straw.

The next day dawned clear and bright; but oh! the water was so muddy. After breakfast we overhauled our out-lines and got them in readiness to set in the afternoon. Right down below us was a barbed wire fence running clear across the creek, which looked as if it might have been used at one time for a water gate. Well, the water was right deep along here, so we just strung our out-lines right along the wire. About 4 o'clock in the evening Snapp took his gun and went out to try his luck on some doves, which seemed very plentiful in this section. In less than a half hour he came back with five nice, plump doves for supper. Broiled dove, corn cakes, fried potatoes, coffee and good old country milk—what more could two campers want? After supper we got out our Powhatans and talked over what we intended to do later—of the bass we were going to catch and the hauls on our out-lines. About 12 o'clock that night we looked at our lines. I was the first one down to the creek, and noticed something tugging to beat the band on the third line from the shore.

Snapp hurried down to where I was standing, waded in and soon had struggling in the air an immense eel, his white belly showing up under the glare of the lantern which I was holding. We had to get the boat to go out to the rest of the lines. After we had examined all the lines we had six eels and five bass. We went to bed that night with the assurance that we wouldn't go hungry in the morning. There are some people who wouldn't eat an eel if they almost starved; but they don't know what's good. We ate them and enjoyed them, too; but Snapp is an unusually good cook, and may be that had something to do with them tasting so delicious.

The next day the water began to clear, and our main thoughts were of those big bass which we were going to catch. In the afternoon we got our minnow seine out and went down to where we had thrown the refuse from the eels we had caught before, and caught a nice bucket of live bait. Putting the bucket out into the stream just far enough so that the water would cover it, and placing a large stone upon it, we left it there until the next day. We had been down the creek a good piece, and had discovered some excellent-looking sheets of water and had also seen some fine bass disporting themselves therein. It was agreed that we should make an early start the next morning and try our luck. We were up at 5 o'clock and off for the fishing place. As we were walking along I noticed a quiet, deep eddy, into which the water rushed from a slight elevation, and after going round and round dashed on upon its never-ceasing journey. I put on a fly and made a cast right into the middle of the eddy. There was a rush through the water just as the fly touched the surface, and away he went down to the bottom. In a few seconds he started again. I called a halt then by giving the line a sudden jerk. The hole in which I was fishing was not more than 15 by 20ft. Well, sir, that fish made the water in that eddy boil. Around and around he went, sometimes skirting around the edges, and now and then throwing himself clear out of the water. I let him have his fun, for I didn't wish to risk my rod trying to land him while he was in this bad humor. My friend had not yet made a cast, but was standing near by watching the excitement with keen interest. The struggles of the fish were becoming weaker, and I slowly began to reel him in. I had no trouble landing him, for he was pretty nearly worn out; but he had fought hard and had given me more exciting pleasure than I had experienced for a long time.

"Isn't he a dandy! He'll weigh at least 5lbs., won't he?" said Snapp.

"Yes, he'll weigh every bit that much, and I believe there are some more of them in here. Bait your line and make a cast just behind that rock. I just saw a ripple in the water there."

He put on a minnow and threw in, and balancing his pole on a stone on the bank, came over to take another look at the fish I had just caught.

"Look out, there!" I cried. "Something's got your line!" And just as he rushed to the spot his rod had slid over the bank into the water. Snapp is a true sportsman, from the crown of his head to the soles of his shoes, and without a word jumped right square into the water after that fish. I couldn't help but laugh at him as he splashed and made a grab for his rod. The water caught him up around the waist, and after bracing himself he commenced to work on that fish. The reel on his rod was buzzing like a saw mill. The bass had struck out and had gotten out of the eddy into the riffles below, and was going down stream as fast as he could go. Luckily, Snapp had about 150ft. on his reel, and he let the fish run. Well, that bass kept on going, and Snapp was getting nervous. He only had 15ft. of line left. "Al," he said, what must I do? I have only 10ft. of line left, and I can't stop that bass."

Ramming my hand down into my pocket, I picked out a silk line, and rushing up to him in the water, snatched the end of his line, which was hanging out about 11in. from the end of the reel, and tied mine to it. I was not a minute too soon, for away went the hemp, followed by the silk. This was an unusually long run for a bass. He did not stop until he had gone fully 200ft. Then he slowed up. I ran down below the riffles, jumped into a boat and rowed to within 30ft. of the fish and grabbed the line and commenced to pull him in. It would have taken some time to reel him in, and then he might have taken the idea into his head to start off again. I got him safely into the boat with the assistance of a landing net, rowed to the shore and presented him to Snapp as his prize. He was a little bit larger than mine and weighed probably 5½lbs. Thus ended one of the most exciting bits of sport with the bass I exer experienced. We were very well satisfied with our two big fish and started on our way back to camp. It was very near dinner time, and we were very hungry. We met a farmer, who admired the bass very much, and said they were the largest he had seen caught around this section for some time.

There was a house about 200yds. from us, up through a lane of locusts. We must return our thanks to the people of this household, for they were certainly kind to us. They gave us milk and eggs and told us to help ourselves to anything in the garden we needed.

I got up quite early one morning, and taking my fishing rod strolled down the creek to catch some perch. In an hour or so I had caught a very decent string. The perch you catch in these waters are about as big as your hand, and when fried nice and brown make an excellent dish. I had stopped fishing and was lying on the ground enjoying the cool morning breeze, when suddenly I smelled the faint odor of coffee. Snapp was getting breakfast, and the gentle wind was bringing the sweet fragrance of that old, battered and burnt coffee pot right down the creek. I jumped up, and getting my fish together started for camp at a double-quick gait. I couldn't stand the smell of that coffee pot, and every step I took toward camp the odor became stronger, and presently I detected the noise made by the frying pan.

Our time was growing limited; we only had two more days left before starting back home. We put in all the time possible fishing, so as to have some fish to carry back with us. When we counted our fish the evening we left we had thirty-two all told. With reluctant hands we

pulled down the tent and loaded our wagon. It was nearly dark when we were ready to start, and with a last adieu to the place where we had had such delightful pleasure pulled out for Winchester.

ALF. T. CLINE.

New England Fishing.

BOSTON, July 8.—Pickerel fishing is constantly in favor with those who can hardly find time to go for trout or salmon fishing further from home, and indeed there are sportsmen who have a great liking for capturing the spiteful fresh-water demons. Mr. E. C. Stevens, of Boston, is fond of fishing for pickerel in Lake Dunmore, Saulsbury, Vt. He had as his guests, over the Fourth, Mr. Edward Thayer, Mr. Edward Hardy, Mr. W. F. Scott and ladies. Though the weather was hot the fishing was not badly neglected. They took over 60lbs. of pickerel and trout. One pickerel, a monster, weighing 9lbs., was taken by Mr. Hardy. It was immediately shipped to Boston and shown in Appleton & Bassett's window, where it attracted a good deal of attention. Though called a pickerel, sportsmen are inclined to regard it as not of the same class as the smaller pickerel of our ponds and rivers, being much lighter in coloring and without the yellowish tinge peculiar to the ordinary pickerel. Perhaps the FOREST AND STREAM will throw some light on this question.

Bass fishing continues in vogue. Mr. Frank N. Gannong and Mr. A. J. Fassit, of Boston, spent the Fourth fishing for bass on a pond in Northfield. They had good success, taking one bass that weighed almost 4lbs. They found the sun very hot most of the time. Fishing for pickerel or perch was unsatisfactory. On the Maine lakes and ponds bass fishing continues very satisfactory, especially the Belgrade and Winthrop ponds. White perch fishing on the same waters is nearly due. The close time of several years on white perch on the Monmouth Pond is ended this summer, and the fishing promises to be excellent.

Senator W. P. Frye, of Maine, has returned from his salmon fishing trip to the Restigouche. He succeeded in capturing seven salmon weighing nearly 20lbs. each, and what is even better, he got absolute rest, not a letter reaching him while at the salmon waters. Col. Convers J. Smith, of the U. S. Treasury, has recently been on a trip to the Pacific Coast, under instructions from Secretary Gage to look into customs affairs. He reached the Catalina Islands about May 1, and after looking after business till about the 10th he took a day off for fishing. He caught seven or eight big sea bass weighing 38 to 40lbs. each, and a lot of "yellowtails," so called—he does not have the scientific name handy—weighing 15 or 20lbs. each. The Colonel considers that he had a great day's sport. The tackle used by himself, Special Agent Graham and the boatman, Hugo, consisted of 20ft. salmon rods and the regulation salmon reels and lines. Much depended upon the strength of the tackle and the skill of the fisherman. At the best, some monsters would get away.

July 10.—Fishing at the Rangeleys continues better than usual after hot weather, although there is some complaint that the trout do not rise to the fly as readily as in former seasons. Still there has been some fair fly-fishing at the Upper Dam, the Middle Dam and other points. Last week some fair catches were made at the Upper Dam. Mr. L. O. Crane is back in Boston, from an enjoyable outing at the Upper Dam. He took but few large fish, though having fair success with small ones. Mr. T. B. Stewart, of New York, is fishing there as usual, his record being over many seasons. He loves that spot. Mr. R. N. Parish is also fishing there, and Mr. Rowe, Mr. Dougherty and Mr. Bearse have just been there. One has only to be a fisherman and go to the Upper Dam when Mr. Stewart or Mr. Parish are there to be pretty sure of a fine trout to take home, even if he does not catch one himself. These gentlemen put their fish into the "common stock" if above 3lbs.—under that size they are allowed to escape, unless injured in capturing—and if they are not needed for the table, the unlucky sportsman is expected to take one or two home. The record recently opened at the Upper Dam includes no fish under 3lbs., and no fish not taken with the fly is allowed to be entered. This record is as follows: June 9, T. S. Potter, salmon, 4lbs. 12oz.; 15th, Eugene Lynch, salmon, 5lbs. 4oz.; 15th, T. A. Pratt, salmon, 5lbs. 13oz.; 16th, John M. Niles, salmon, 5lbs. 8oz.; 17th, Eugene Lynch, salmon, 6lbs. 8oz.; 17th, R. N. Parish, trout, 3lbs. 5oz.; 19th, H. A. Pratt, trout, 3lbs. 1oz.; 20th, William Tureh, salmon, 4lbs. 8oz.; 21st, T. B. Stewart, trout, 4lbs. 4oz.; 21st, H. A. Pratt, trout, 4lbs. 4oz.; 26th, R. N. Parish, salmon, 4lbs. 3oz.; 29th, R. N. Parish, trout, 4lbs. 3oz.; 29th, J. H. Dougherty, salmon, 3lbs. 3oz.; 29th, R. N. Parish, trout, 3lbs.; 30th, T. B. Stewart, salmon, 3lbs. 13oz.; 30th, R. N. Parish, trout, 3lbs. 6oz.

Mr. and Mrs. George B. Bearse, of Lewiston, Me., have been at the Upper Dam, and at other points among the Rangeleys. A part of the time they were accompanied by Mr. and Mrs. H. W. True, of Boston. They had some very fair fly-fishing. J. J. Leviseur, of Boston, and Otto M. Stanfield, of New York, have been on quite an extended fishing trip to the Rangeleys. Mr. Leviseur is reported to have caught over thirty trout in one day from the Richardson Ponds. If the report is true, he has had the best success there of any fisherman this season. Others are finding the fishing there very poor.

At the Rangeley Lake House, Rangeley, Me., a record of the salmon taken is being kept this season. From May 14 to June 25 the record was sixty-four salmon, aggregating 303lbs., average weight 4lbs. 12oz. The largest salmon weighed 10lbs., and was taken by Mr. Eugene Atwood, of Williamantic, Conn., June 2.

Reports from the Rangeleys suggest that the test case of Mr. Elmer Snowman is pretty sure to be brought before the Maine courts, on the question of the constitutionality of the guide license law. It will be remembered that Mr. Snowman has persisted in guiding without a license, though twice arrested for the same and brought on trial. His cases have been appealed to the full bench. Mr. Snowman is a gentleman and an honest, straightforward citizen of the town in which he lives. As a guide he is universally liked. I know of men who have employed him for years with great satisfaction to themselves. He believes that he has a right to earn his living as a guide without any interference from the State or Fish Commission. He has the sympathy of almost every one of the guides of his section, and they have contributed such sums as they are able to aid him in carrying forward his case. A Maine daily paper of good authority says:

"The Rangeley Lakes Guides' Association has as yet taken no action in his behalf, but before long President Freeeman Tibbetts will call a meeting for such purpose. It is understood on both sides that if Snowman holds his present position and does not weaken, every guide in the Association will contribute $5 to pay lawyers' bills and support him during enforced idleness. This means a matter of $200."

Outside of Rangeley, papers are in circulation for the relief of Mr. Snowman. Sportsmen of means have also contributed to aid him. The Maine Fish and Game Commissioners are much interested in the outcome of his case, since it decides the constitutionality of the whole guide license business.

SPECIAL.

CHICAGO AND THE WEST

Western Angling Season.

CHICAGO, Ill., July 7.—The Western angling season thus far has been a disappointment, this fact being due largely to a season of great high water and many storms. Our bass season for this immediate section is now practically over, or rather we might naturally expect it to be over at this date, though really there has been no definite bass season at all worth mentioning. The trout season is to be considered past its prime by the first of July, and I presume we shall not hear of much heavy trout fishing until the grasshopper days of August. I am inclined to think that Michigan has furnished better trout fishing this spring than Wisconsin, the latter State having been visited with a series of freshets which ruined some of the best streams. Our three varieties of game fish most prized are the bass, trout and muscallunge, and of the three I am disposed to think the latter has made the best showing this year thus far. I have heard of some few nice fish being taken in Wisconsin, and think the average weight greater than it has been for two or three years in that section. July we do not call a good fishing month, but thus far the weather has been cool and cloudy, about what the middle of May ought to show, so I think the spawning will be late this year for the bass and would not be surprised to hear of very decent bass and 'lunge fishing in this despised midsummer month.

Movements of the Anglers.

Mr. I. D. Belasco and Mr. H. Greenwood are recently back from Cedar Lake, Ill., where they had but indifferent success with the bass. This lake is right at the edge of Lake Villa, one of the greatest summer resort points along the Wisconsin Central line, and it is fished so much that it is a wonder even these two skillful anglers could get much return.

Mr. H. H. Miner and Mr. W. La Parle returned a few days since from a trip to Two Rivers, Mich. On one day they took forty-six bass, many of them small-mouths, and on the whole they report a very pleasant trip.

Mr. H. W. Perce will leave next Monday for Hudson Lake, Mich., where he will remain for six weeks or so and have his fill of angling for bass. There are some small-mouths in those waters.

Mr. John Watson and Mr. William Haskell spent the Fourth at Maksawba Club, on the Kankakee River. Mr. Watson caught one wall-eyed pike which weighed 7lbs., a very fine specimen. He also caught while casting frog for bass, four blue catfish, whose total weight was over 25lbs. Bass were scarce and but few were taken, though Mr. Haskell had some sport with wall-eyed pike. These gentlemen report the Kankakee River overrun with carp.

Two gentlemen, by name of Boden and Kreuger, of Horicon, Wis., had good fortune at Fox Lake, Wis., recently, taking twenty-nine black bass, six pike and three pickerel. On the same lake there has been considerable heavy fishing this season. Friend Hitchcock, of the Representative, states that Dr. Forbes on one day caught forty black bass on Fox Lake. John Lauermann on one day caught 104 bass and pickerel. Dick Hoover caught fifty-seven black bass on one day, and others claim catches of sixty to eighty. One of these days anglers will say Fox Lake used to be a good fishing place.

Messrs. Fred Gardner, W. C. Gillett, E. C. Smith and L. G. Stiles, all of Chicago, left Friday a week ago for an extended exploitation of the muscallunge waters of Wisconsin. They have not yet returned, but will soon be back, and I should expect them to report good luck.

Messrs. H. L. Stanton, Frank Willard, James Hall, Col. Young and Mr. Marble, all of Chicago, are recently back from a couple of weeks' trip after muscallunge on Squirrel Lake, Wis. They had very good luck, taking all the fish they cared for and more than they cared to keep. They had them in weights of 28lbs., 22lbs., 18lbs., 16lbs., and so on down to 7lbs. They put back a great many small fish. Of bass they took a great many, on one day twenty, which averaged 3½lbs.

Mr. and Mrs. Schaffer, of the Colonial Hotel, Chicago, have returned from a fishing trip to Plum Lake, Wis., where they had very fine success. Their heaviest muscallunge were 15 and 16lbs. They caught all the bass they cared for.

Mr. J. E. Strong, of Selz, Schwab & Co., is just back from a trouting trip to Wisconsin. I have not seen him, but understand that he reports rather poor success.

Mr. Edward G. Taylor has returned from his long stay on the Prairie River, Wisconsin. He reports the season rather a failure, owing to long continued high water.

I presume the happiest man in town is Mr. F. N. Peet, whose proposed trip with his friends, Chadwick, Hascall, Smith and Tinthoff, I mentioned some weeks ago. They went to the Pere Marquette, in Michigan, and Mr. Peet saw his dreams come true. He landed a 3¾lb. rainbow trout, and so accomplished a great ambition of his life.

To-day Mr. George Murrell, speaking of these rainbow trout of Michigan, said: "They are not rainbow trout at all, but are the Mt. Shasta trout, a very much more gamy fish." As to this I cannot say, as I have never angled for the Michigan rainbows or been along when any were taken of any great size.

We have had within the past few weeks a number of distinguished anglers in this portion of the country. Hon. George D. Meikeljohn, Assistant Secretary of War, outfitted here for an extended fishing trip on Lake Winnebago, Wis., where he was at last accounts this week.

Mr. J. Edward Addicks, sometimes irreverently termed "Gas Addicks," of Claymont, Del., outfitted here heavily with guns and fishing tackle, preparatory for a long trip in Arizona, where he contemplates purchasing a large body of land.

Mr. Charles W. Deering, of this city, has been for several months at Glenwood Springs, Colo., shooting and fishing, and continually sends back for more tackle. He seems intent upon having a busy summer with the trout.

Poison in the Fox.

The factories along the Fox River have been discharging poisonous waste into that stream, and great numbers of bass and pike have been killed, wagon loads of them having been gathered along the banks. Yesterday the State Fish Commissioner visited the town of Batavia to look into this matter, and it is to be hoped the abuse will be corrected.

A Long Felt Want.

I presume all good and truthful anglers have time and again beeen pained by the incredulity of friends to whom they have told stories of the large fish that got away. A great many really truthful men have had scorn and contumely heaped upon them while they were in the absolutely defenseless position of having no proof to support their assertions. All such men have long felt the want of some sort of appliance to record the weight of the fish which got away. I am pleased to observe to-day that my friend, William Schmedtgen, head artist of fthe Chicago Record, is able to record the discovery of such an apparatus as that above indicated. The credit for this discovery belongs, according to the advertisement, to no less a person than Mr. A. Hirth, who runs the tackle department at Spalding's. The apparatus is described as below:

"Mr. Hirth, it is said, worked on this instrument for twelve years. It was the outgrowth of his vexation at being pestered with his friends' stories about the big fish which escaped after having been hooked. Being naturally bright, he succeeded in completing a most delicately constructed automatic scale, which will tell the weight of a fish at once, if it is on the hook but a second—in fact, if he only strikes and misses. The scales will also show when a weed has been caught. A spiral spring runs through the center, with space at the top for a number of pellets. When a bass weighing, say, 15lbs., is struck, the spring gives to the proper section and lets one pellet fall into the compartment marked at 15lbs. The fisherman may have many strikes during the day, and if he has several of the same weight the compartment will contain as many pellets as there were strikes. The scale does not register any fish under 10lbs., as Mr. Hirth in all his experience in listening to his friends never heard of a lost bass which did not weigh more than 10lbs. The scale is about 2in. long and is to be tied on the line just above the hook and cast out with the bait. Mr. Hirth is having the scales turned out as fast as possible, as there is a great demand for them."

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

"Fish Stories."

BALTIMORE, July 5.—*Editor Forest and Stream:* Referring to "Fish Stories," by Mr. Henry Talbott, in your issue of the 8th inst.: Yesterday, July 4, wishing to celebrate our national holiday in true sportsmanlike manner, I went a-fishing on the Susquehanna River for bass—small-mouth black bass—with a companion whose patriotism ran in the same direction. We had indifferent success, but a large amount of piscatorial experience, of the which I am about to relate, and will verify.

Noting that portion of Mr. Talbott's letter where he quotes Jesse Middleton's experience on the Choppewamsic, I think the experience of two of my friends will discount Jesse's. First, my companion in the boat with me had a wicked strike, and giving the fish a few moments to pouch the live bait, he struck, and the line came back with leader and snell, but minus the hook. On examination we came to the conclusion that the wrapping fastening the gut snell to the hook was defective. A half-hour after he caught a bass, and on disengaging the hook noticed what seemed to be a thread of silk such as is used for wrapping the hook to the gut snell. We were not so sure of this until we dressed our fish—this we always do on the stream, trout, bass or any other fish—when we found the hook and the bait in the stomach of the fish. It had swallowed the bait and the hook; and after being placed on the "string" and was none the worse for the dose, as it was very much alive and kicking.

Another remarkable catch occurred within hailing distance of our boat the same day. Two men were fishing, one of whom had two rods out; the one who had two rods had a strike, and hooked the fish. While playing it it ran over toward the second line, and immediately there was a strike on that rod. He called to his companion to take the second rod until he could land his fish. His companion did so, and they landed the same fish. The bass had taken the first bait, gorged it and then run over and taken the second bait. Both hooks had fastened, one far down on the throat and the other in the mouth. The bass was not a large one, possibly 1lb. or over; and it occasioned great merriment when they found they were playing the same fish.

Who will now say that the small-mouth bass is ever satisfied with the food it has in its stomach?

E. S. Y.

Fishing at Betterton.

BETTERTON, Md.—At the point where the Sassafras River enters Chesapeake Bay is a favorite fishing ground for Philadelphia and Baltimore anglers, for white perch and other species. It is reached by the Ericsson Line of steamboats, which ply between the two cities; and Mr. Clarence Shriver, agent, 204 Light street, Baltimore, sends out an attractive illustrated booklet showing the points of interest on the route.

Trout Fishing in Pictures.

"THIS is the season of the year," said the Truthful Angler, "in which the calendars should contain the italic line 'Now read trout stories.'" The Truthful Angler is not only an enthusiast, but ranks as an expert also, for he goes away for three days when the season opens and returns with trout "from a little stream back of Copake" he says by way of explanation.

"It's not so much the stories I mind," says the Truthful Angler, "for no person ever really lies about fish, even though a justifiable expansion may in some instances be practiced. But it is the pictures. Such consistent misrepresentation cannot be the result of accident and ignorance. I am convinced that there is somewhere a school of impressionist fishing in which the first canon is to shun everything that is natural. Look at the pictures of men fishing for trout and take them as they run. Most of them have the angler fishing the wrong way of the stream. A good many take pains to outline the man's shadow fairly over the one likely spot for a trout to lie. But the saddest of all such art, for it must be art, since it cannot be illustration, is the series of pictures which claim to depict fly-casting. Invariably this dainty art is portrayed in one of two ways; sometimes both are combined. Commonly the angler is shown in the act of brandishing his rod in the firm grip of both hands. Another strongly accentuated feature is the position of the elbow. Generally that is represented as on the level of the shoulder, and as far away from the body as is possible. Frequently these two remarkable attitudes are shown in combination by bringing the left arm across the face and stretching the wrist far enough to allow the hand to grasp the rod. Now I don't pretend to be much on art, but I do claim to be able to put a fly where it will do the most good. When I was a youngster and first left off worms and began to fish in that brook I know at the back of Copake, these were all the rules I ever got for casting: 'Use only one hand; keep your elbow digging into your ribs until the fish is landed.' Just about one in a hundred of these pictured fishermen is making a real cast. What the others are doing I don't know, unless maybe it's this golf game under moist conditions. I believe they hold some of their Scotch shinny sticks that way."

LLEWELLA PIERCE CHURCHILL.

Newfoundland Fishing.

ST. JOHN'S, Newfoundland.—The rivers all around the island teem with salmon and sea trout, and any angler on pleasure bent, who wants to get his fill of first-class angling and at the same time who wants to enjoy a cool, pleasant climate for a few weeks, can find no better place in the whole world than in Newfoundland about the month of July.

I have had many inquiries from American sportsmen as to the climate, cost of travel, hotel rates, etc., and replied to most of them. For the information of the readers of FOREST AND STREAM, I'd like to repeat that the climate in summer is bracing, seldom going over 75 or 80 degrees. Hotel accommodation for sportsmen is cheap, rarely exceeding a dollar per day. Of course, parties camping out can live much more cheaply than that, and the finest grades of necessaries for outfit can be had in St. John's nearly as cheaply as in New York. Guides can be had in abundance, and cost about a dollar per day, except an arrangement be made for a trip, when it probably would not cost much over half that figure. There is a tri-weekly connection with the continent, and through tickets may be had in New York, Boston or any of the large railway centers for a very reasonable amount for the round trip. The palace steamer Bruce plies tri-weekly between Sydney and Port au Basque, and the railway system of the island is now equal to best American service. All things considered, the sportsman who is anxious for sport, and who wants to enjoy a few weeks of bracing, health-giving enjoyment with a short sea voyage (six hours it takes for the run from Sydney to Port au Basque), and all at moderate cost, can get them all in a summer trip to Newfoundland.

W. J. CARROLL.

Like Cleopatra.

CHARLESTOWN, N. H. July 1.—*Editor Forest and Stream:* I have written for FOREST AND STREAM occasionally, for so many years, some twenty-two or twenty-three, as I remember, that I quite feel as if I belonged to it, and am pleased and honored to be recognized as one of its "stand-by" contributors. The first thing I do when I get the paper, as I now do regularly Thursday morning, is to look over the signatures to the letters, and if I find Rowland E. Robinson, Shoshone, El Comancho, Podgers and Didymus among them, I am sure of two or three days' enjoyment, for I read the paper leisurely, and pass it on to some boy friends the next Wednesday, so as to be ready for the coming number. I miss H. P. U., Wells, O. O. S. and others very much; but you have some good new correspondents to fill the gaps, and I enjoy the letters of Messrs. Avis, Spears, Hastings and Mrs. Churchill very much, as well as those of Messrs. Price and Talbott. I wish we could hear oftener from Kelpie, Kingfisher and Mr. Wingfield, and I should like to hear again from your Central American correspondent, Mr. Lyman. "Take it all in all," to quote Shakespeare, FOREST AND STREAM is like Cleopatra, "Age cannot wither, nor can custom stale, its infinite variety."

To say that it is as fresh and good as ever is a truism. To say that it is better, seems impossible, and I watch for its weekly visits as eagerly as ever.

VON W.

Long Island Fishing.

QUEENSWATER, L. I.—Messrs. Meyer and Son deserve the honor of having captured the first kingfish of the season. They went out from Benny Moliter's place, and the total catch was five kingfish, six weakfish and a variety of other fishes, such as fluke, bass, etc. The big bluefish have arrived, and make lively fishing outside. They are averaging from 6 to 10lbs. each. The largest catch for one boat was sixty-two caught last Friday.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

That Maine Fishing Record.

Editor Forest and Stream:

In your issue of July 8, under the heading, "Angling Intemperance," I find an allusion to my catching 701 trout in one day on the meadow grounds in the Seven-Pond region, and your correspondent describes this as particularly brutal sport. It is a fact that I caught 701 trout in one day all on a fly, and my diary shows that 693 were returned to the water immediately, with the utmost care to avoid injuring them. The eight remaining were cooked for lunch. As I went over the same ground the next afternoon and found no dead fish, I think comparatively few were seriously hurt. It is also true that during eleven days' stay in the Seven Ponds region, I killed only sixty-nine fish and ate them, and I did not take away with me a single fish. It happened that with two exceptions the fish weighing 1lb. or more were caught in the afternoon, and none of these were killed, as we returned to camp for supper.

If your correspondent will take up the matter of plug fishing in the larger Rangeley Lakes, he may help to discourage a real abuse. In the present instance he is jumping on the wrong man. My guide, Matt Carr, or Mr. Grant, the proprietor of the Beaver Pond Camps, will substantiate my statement, and they will bear testimony to the fact that I killed fewer fish than probably any guest at the camp this spring—and there wasn't a "fish hog" there. It is now illegal to fish in the Seven Ponds region with anything but a fly, and the abundance of trout there this year is the best evidence that no abuses in killing fish have prevailed for some years past.

J. S. SEYMOUR.

Nag's Head Fish and Game.

NAG'S HEAD, Dare County, N. C.—*Editor Forest and Stream:* While canoeing down three of the big sounds in North Carolina—the Albemarle, Pamlico and Roanoke—we discovered the most delightful place for a sportsman it has ever been our lot to visit. Nag's Head is situated just east of Roanoke Island. The hotel is a very comfortable one, kept by Mr. Charley Grice. But how to begin to tell my brothers of the sport to be had with rod and gun I am at a loss. These sounds are literally filled with all kinds of salt-water fish, including sheepshead, sea trout or weakfish, bluefish, hogfish, spots and crokers. Near the hotel there is a fresh-water pond which contains more large-mouth black bass, white and speckled perch and pickerel than any sheet of fresh water I ever saw to its size. It is about one mile long and half a mile wide. Mr. James Hathaway, of Elizabeth City, N. C., took yesterday a large-mouth black bass weighing 11¼lbs., with twenty-three others ranging from ½ to 6¾lbs. It is a very peculiar lake, or pond, completely surrounded by mountains of sand.

The bay bird shooting here is equal to what it was on Cobb's Island and the rest of the Virginia coast ten years ago. While there are a few New Yorkers, including the Rev. Thos. Dixon, who know by experience the sport to be had here, I feel that all who are fond of the rod and gun should also know, especially the readers of FOREST AND STREAM.

MORE ANON.

The Tuna Record.

AVALON, Santa Catalina Island, Cal., July 4.—*Editor Forest and Stream:* At 10:30 last night a sensation was created by the arrival of Col. C. P. Morehouse with a monster tuna which smashes all previous records for this wonderful game fish. It weighs 251lbs., and is a most beautiful specimen, perfect in every part. The fight lasted three hours and twenty minutes, and was exciting throughout, the night being dark and a heavy sea running. The fish did most of the fighting on the surface, and many times leaped straight into the air, making a most spectacular play.

The great fishing tournament is now well under way. Yellowtail, barraconda, mackerel and all kinds of fish which abound here are being caught in great numbers.

Recent tuna catches are: Col. Robt. A. Eddy, of San Francisco, one of 117lbs., caught in two and one-half hours, and one of 75lbs., caught in thirty-six minutes. E. L. Doran, one of 131lbs., caught in thirty-two minutes. M. A. Earlcliffe, one of 180lbs., caught in five hours and thirty minutes (boat towed twenty miles). F. V. Rider, one of 153lbs., caught in two hours and forty-two minutes, and one of 175lbs., caught in two hours and twenty minutes. Col. Eddy took a 227lb. jewfish in thirty-five minutes. All these were taken on rod and reel.

A Fund for Miss Crosby.

MR. E. C. FARRINGTON, Secretary and Treasurer of the Maine Sportsmen's Fish and Game Association, is sending out an appeal in behalf of Miss Cornelia T. Crosby (Fly Rod), who has been for some time in a Portland hospital in consequence of a knee injury. Mr. Farrington writes: "She was compelled to leave the hospital with debts which are a constant worriment to her and a drawback to her recovery. Our object in this appeal is to place in her hands sufficient money to remove this burden. As Secretary and Treasurer of the Maine Sportsmen's Fish and Game Association, and with advice of others, and unknown to her, this method is adopted to accomplish the object in view." Remittances may be made to Mr. Farrington at Augusta.

Ontario Fishing.

CEDAR PARK HOTEL, Charleston Lake, Charleston, Ont., June 24.—There are quite a large number of American guests here enjoying the celebrated trout and salmon fishing.

LEVI SOUTHWORTH.

NOTICE.

THE New York Clearing House has adopted new regulations governing the collection of checks and drafts on banks outside of the city. This entails a collection expense on those who receive such checks. Our patrons are requested, therefore, in making their remittances to send postal or express money order, postage stamps, or check or draft on a New York city bank or other New York current funds.

Continental Field Trial Club's Derby Entries.

NEW YORK, July 8.—*Editor Forest and Stream:* The following is a list of entries for the fifth annual Derby of the Continental Field Trial Club, to be run at Newton, N. C., in December. The entry is nearly double that received by the club last year, numbering in all fifty-nine puppies and forty-one setters and eighteen pointers.

SETTERS.

Trixie—O. D. Stuart's o. and w. bitch, March, 1898 (Kingston—Duke's Ruby).

Bona—Hobart Ames' b., w. and t. bitch, April, 1898 (Tony Boy—Christena).

Hurtsbourne Cricket—N. T. Harris' b., w. and t. bitch, June, 1898 (Tony Boy—Cynosure).

Minnie W.—A. C. Waddell's b., w. and t. bitch, January, 1898 (Dude B.—Miss Bess).

Pride—James McKay's b., w. and t. dog, February, 1898 (Cincinnatus Pride—Brown's Queen Vic).

Pontiac—Avent & Duryea Kennels' b., w. and t. dog, May, 1898 (Count Gladstone IV.—Hester Prynn).

Sioux—Avent & Duryea Kennels' b., w and t. bitch May, 1898 (Count Gladstone IV.—Hester Prynn).

Ute—Avent & Duryea Kennels' b., w. and t. bitch May, 1898 (Count Gladstone IV.—Hester Prynn).

———Mrs. H. B. Duryea's b., w. and t. bitch, March, 1898 (Count Gladstone IV.—Tory Luna).

Solos—Edw. H. Osthaus' b., w. and t. dog, August, 1898 (Cincinnatus Pride—Gleam's Nellie).

Kalmia Doll—Robert Kelly's b. and w. bitch, May, 1898 (Cincinnatus Pride—Maud III.).

Oakland Rex—E. C. & T. R. Hoyt's l. and w. dog, April, 1898 (Belton Bob—Noble's Vick).

Della's Sport—H. K. Devereaux's b., w. and t. dog, January, 1898 (Marie's Sport—Della K.).

Dewey—S. A. Smart's b., w. and t. dog, October, 1898 (Harwick—Queen Esther).

Luna Belle—John M. Watson's b., w. and t. bitch, May, 1898 (Tony Boy—Lena Belle).

Bob Acres—George Crocker's o. and w. dog, July, 1898 (Tony's Gale—Minnie T.).

Miss Meadows—George Crocker's b., w. and t. bitch, July, 1898 (Tony's Gale—Minnie T.).

Miss Bangle—George Crocker's b., w. and t. bitch, July, 1898 (Tony's Gale—Lightfoot).

Queen Lill—George Crocker's b., w. and t. bitch, July, 1898 (Tony's Gale—Lightfoot).

Chadwick—George Crocker's b., w. and t. dog, July, 1898 (Tony's Gale—Lightfoot).

Rajah—John A. Wilson's b., w. and t. dog, August, 1898 (Cincinnatus Pride—Antonia).

Honest Joe—John A. Wilson's b., w. and t. dog, August, 1898 (Cincinnatus Pride—Antonia).

Eldred Lark—Eldred Kennels' b. b. bitch, August, 1898 (Cincinnatus Pride—Antonia).

Max Gladstone—Leon Ernest Seay's b., w. and t. dog, June, 1898 (Greenway—Buena Vista II.).

Glen Noble—H. B. Hollins' b., w. and t. dog, May, 1898 (Glen—Lem Gladstone).

Don Noble—J. R. Blake's lem. and w. dog, February, 1898 (Don P—Jessie).

Buccaneer—Henry Pape's o. and w. dog, March, 1898 (Antonio—May Win).

Harwick Boy—C. I. Shoop's b., w. and t. dog, June, 1898 (Harwick—Spot's Girl).

Harwick, Jr.—C. I. Shoop's b., w. and t. dog, June, 1898 (Harwick—Spot's Girl).

Harwick Girl—C. I. Shoop's b., w. and t. bitch, June, 1898 (Harwick—Spot's Girl).

Lady Harwick—C. I. Shoop's b., w. and t. bitch, May, 1898 (Harwick—Miss Tony).

Count Hunter—C. I. Shoop's b., w. and t. dog, March, 1898 (Count Gladstone IV.—Hunter's Queen).

Gailor—P. Lorillard, Jr.'s, b., w. and t. dog, January, 1898 (Eugene T.—Gloster's Girl).

Pet of Rancocas—P. Lorillard, Jr.'s, b., w. and t. bitch, January, 1898 (Eugene T.—Gloster's Girl).

Geneva—P. Lorillard, Jr.'s, b., w. and t. bitch, May 1898 (Tony Boy—Lena Belle).

Miss Lee—P. Lorillard, Jr.'s, b., w and t. bitch, July, 1898 (Eugene T.—Trinket).

Misfortune—W. Gould Brokaw's b. and w. bitch (———).

Fairview Bonne—W. Gould Brokaw's b., w. and t. bitch, April, 1898 (Belton Booz—Queen Vick).

My Nellie S.—Arthur Stern's b. and w. bitch, March, 1898 (Antonio—Robin's Cora).

My Sue S.—Arthur Stern's b., w. and t. bitch, March, 1898 (Antonio—Robin's Cora).

Luna—Charlottesville F. T. Kennels' b., w. and t. bitch, April, 1898 (Tony Boy—Christena).

POINTERS.

Braun—Dr. M. F. Rogers' l. and w. dog, April, 1898 (Von Gull—Baby Ruth).

Croxie Kent II.—W. N. Lipscomb's b. and w. bitch, May, 1898 (Rip Rap—Croxie Kent).

Frank F.—L. C. Clark's l. and w. dog, January, 1898 (Gamester—Sallie).

By Jingo—Jas. S. Crane's l. and w. dog, March, 1898 (Jingo—Dot's Pearl).

Dot's Daisy—Jas. S. Crane's l. and w. bitch, March, 1898 (Jingo—Dot's Pearl).

Good Enough—Geo. E. Gray (deputy) b. and w. dog, April, 1898 (Rip Rap—Pearl's Dot).

Dot's Rap—Geo. E. Gray (deputy) l. and w. dog, April, 1898 (Rip Rap—Pearl's Dot).

Miss Williams—E. C. & T. R. Hoyt's l. and w. bitch, March, 1898 (Baldy Williams—Belle of Archdale).

Rip—Geo. F. Nesbitt's l. and w. dog, ——— ——— (——— — ———).

Fairview Tom—W. Gould Brokaw's l. and w. dog, March, 1898 (Sir Walter—Van's Pride).

Fairview Tibby—W. Gould Brokaw's l. and w. bitch, March, 1898 (Sir Walter—Van's Pride).

Fairview Patty—W. Gould Brokaw's l. and w. bitch, April, 1898 (Prince Boy—Fanny Davenport).

Bootsie S.—Arthus Stern's lem. and w. bitch, June, 1898 (Young Rip Rap—Dolly Jingo).

Dervish—Charlottesville F. T. Kennels' l. and w. dog, May, 1898 (Tippoo—Queen Kent).

Mahdi—Charlottesville F. T. Kennels' l. and w. dog, May, 1898 (Tippoo—Queen Kent).

Khartum—Charlottesville F. T. Kennels' l. and w. dog, July, 1898 (Rip Rap—Toxic).

Soudan—Charlottesville F. T. Kennels' b. and w. bitch, July, 1898 (Rip Rap—Toxic).

Bedouin—Charlottesville F. T. Kennels' b. and w. bitch, June, 1898 (Rip Rap—Queen III.).

THEO. STURGES, Sec'y and Treas.

Points and Flushes.

From Benson county, N. D., we have a query concerning breeders of Chesapeake Bay dogs. No one advertises the dogs, hence we conclude that there are none for sale.

21. Taunton, club run, Taunton, Mass.

A GREAT deal is being published concerning Shamrock in the American papers, but a mere fraction of the alleged information is plausible and still less is reliable. Thus far, though, half a dozen different sets of dimensions are given. It is not known which, if any, is correct, the beam ranging from 22 to 24ft. and over, and the draft from 19ft. to as high as 26ft. On July 8 the yacht was out under sail in the Solent for her first trial, sailing from Southampton down to Yarmouth, east as far as Osborne and back home. She is described by some correspondents as a great success, and by others as a failure, on the strength of her alleged observed performances on this occasion.

It is not a little surprising that the daily papers will pay for cables and special correspondents and publish stuff whose quality is apparent even to the inexpert. As a sample of the special news of this sort is the information that Shamrock's boom is as long as her taffrail, whatever that may mean; that the sound of her chain cable indicates that she is of metal and hollow inside, and that her mainsail makes a noise when it slats in the wind. From the work of the foreign correspondents thus far it would appear either that they know nothing of yachting and are making an honest display of their ignorance, or that they are giving away nothing that can be of use to American yachtsmen. The wonder is that live newspapers continue to be fooled themselves or to fool their patrons with such trash.

CONSIDERING the small size of the attendant fleet at the first meeting of Columbia and Defender, the conduct of some of the boats gives small promise of a clear course for the Cup races in October. Over the whole of the first leg the two yachts were followed by the press boats, four or five tugs hanging closely to Columbia's starboard quarter. Most of these burned soft coal, so that to the spectators on such yachts and steamers as kept at a proper distance nothing of the race was visible, merely a dense cloud of black smoke, blowing aside at times and disclosing a big blue flag with the name of a daily paper on it. One big tug with two stacks was specially conspicuous. The police boat Patrol was present, and whistled constantly with no effect whatever. It might be well in the future to arm her force with putty blowers for bombarding offending boats that disregard her noisy but pacific protests. The city fireboat, Robert A. Van Wyck, followed the race, prepared to extinguish fires in any tall buildings that might be floating about the course, or even to look after old Ocean himself, if the speed of the yachts should set him on fire.

Now that Shamrock is under sail, new rumors are afloat as to trials with other yachts, but none of them are reliable. It is said that she will sail several races with Britannia, and also that the Emperor William has offered Meteor as a trial boat. The latter yacht arrived at Cowes last week, but this fact may be either the origin or the confirmation of the rumor. There seems little use in again bringing to this country an untried and undeveloped boat to meet a yacht chosen after such a series of trial races as are now on between Columbia and Defender. A few sails against Britannia, a smaller boat, and one whose present form is an unknown quantity, can do no good whatever in working up Shamrock to racing form. It would have been worth minutes to the new boat if Sir Thomas Lipton had at the outset purchased or chartered Valkyrie III., put his skippers and crew on her early in the season and worked her up to racing form, now making up a second crew and racing Shamrock and Valkyrie together for a month. Such a course of experiment, which is practically what the American boats get and what Valkyrie III. missed in 1895, and Shamrock will miss now, is absolutely necessary to the perfecting of the yacht. Short of this, the next best thing is a series of races with Meteor, a boat of about the same size, and now in racing condition.

ACCORDING to the latest reports, the trials between Shamrock, and Britannia will begin this week, but will be so cleverly and adroitly conducted as to disclose nothing which may be of value on this side of the water. The only result of this cost of over-smartness in yachting, as has been repeatedly proved, is to fool and mislead the perpetrators themselves.

In this matter of trial races a very wise policy has been followed in this country from the time of Puritan and Priscilla down to the present year in sailing the trials as honestly and earnestly as though the Cup itself were the direst stake. Whatever their personal opinions of their adversary have been, Gen, Paine, Mr. Iselin and others in similar positions have invariably assumed that they had to meet something far superior to any yacht yet floated; and they have left nothing undone to produce a still faster yacht. As the chief means to this end, they have sailed the trial races just as though they were the end instead of the means.

No one who saw the races between Puritan and Priscilla in 1885 will doubt that Boston was out to beat New York, cost what it might, and in the years immediately following these were local and other rivalries which made the trials most thorough as tests of all the boats. In 1893 and again in 1895 there were keen personal feelings between the partisans of different boats, which lent additional interest in the races.

There have been times before the trial races when the "foxy" idea has prevailed and owners have sought to hide the true merits of their boats, but the result has been almost miserably the same; they have fooled themselves. An example of this course was seen in 1893 when the two Boston boats, each sailing marvelously fast by herself in the first trial trips, deliberately neglected an admirable opportunity for a real test against each other. As it afterward transpired, each boat was a failure through defects which might certainly have been detected and possibly remedied had they sailed a series of private races together before coming to New York to meet the others of the class.

As for the races now on between Defender and Columbia, the friends of Shamrock can make up their minds confidently that Mr. Iselin is not towing a hawser for the purpose of giving Defender a string of cups; that Mr. Butler Duncan is not wasting his time on Defender merely to make added glory for those connected with Columbia; nor are the rival skippers each holding back his own boat to help the other. As for the crews, the fight of Yankee and Scandinavian is as fierce and bitter as though it were waged with Mauser rifles and six-pounders, instead of halyards and spinaker booms.

The results of this racing, in the material improvement of both boats, may be confidently foretold from similar experience in past races; and on the other hand there is ample dividence of the folly of such sham racing as is proposed between Shamrock and Britannia.

It will make no difference on this side whether Shamrock beats Britannia by five minutes or fifty; the latter possibility has been discounted long ago, and the effort made to meet it by leaving nothing undone that might increase the speed of either of the American boats. If any further chance of improvement is discovered in the next two months, it will be utilized whether Shamrock promises to be a great success or a virtual failure.

ACCORDING to a report cabled from London on Tuesday morning, Shamrock was compelled to go into dock instead of racing with Britannia. It is said that she is leaking, as the result of the grounding on her first visit to the Solent.

Corinthian Y. C. Cruise.

FLAGSHIP MAY, Corinthian Y. C., July 5.—General Orders No. 3:

1. The fleet of the Corinthian Y. C. will rendezvous for the annual cruise at Glen Cove, Long Island, N. Y., on the afternoon of Friday, July 28, 1899.

2. A meeting of captains will be held on board the flagship at 8 P. M.

3. The routine and rules contained in the Club Manual will be observed during the cruise.

4. Yachts, when in squadron, will take their ship's time in striking bells from that of the flagship, and in no case to anticipate it.

5. Squadron runs and races: Prizes have been offered for port to port runs for yachts in cruising trim, and when four or more start, a second prize to be awarded.

Saturday, July 29.—Race from Glen Cove to Oyster Bay for cups presented by Capt. R. J. W. Koons.

Sunday, July 30.—Fleet to remain at anchor at Oyster Bay.

Monday, July 31.—Race from Oyster Bay to Morris Cove for the Commodore's cups.

Tuesday, Aug. 1.—Race from Morris Cove to Shelter Island for cups presented by Capt. William R. Ellison.

Wednesday, Aug. 2.—Race from Shelter Island to New London for cups presented by Capt. J. G. N. Whitaker.

Thursday, Aug. 3.—Fleet to remain at anchor. Gig and dinghy races for yachts' crews will be held in the afternoon.

Friday, Aug. 4.—Race from New London to Newport for cups presented by Capt. A. N. Chandler.

Saturday, Aug. 5.—Disband. Capt. Richard P. White offers a cup to be awarded to the schooner, and a cup to the sloop, cutter or yawl winning the greatest number of runs.

6. Glen Cove may be reached by the Long Island Railroad from Thirty-fourth street ferry, East River, New York. A boat will convey members and their guests to Glen Cove on Friday, July 28, leaving Adams Express Company's wharf, Pennsylvania Railroad, Jersey City, after the arrival of the train leaving Philadelphia at 1 o'clock, via Pennsylvania Railroad.

7. Captains intending to join the cruise will kindly notify the fleet captain, No. 511 Bullitt Building, Philadelphia, at as early a date as possible.

By order of the Commodore.

CHARLES H. BROCK, Fleet Capt.

Burgess Y. C.

MARBLEHEAD—MASSACHUSETTS BAY.

Tuesday, July 4.

THE Burgess Y. C. sailed a race on July 4 in a fresh S.W. breeze, the times being:

Raceabouts.

	Elapsed.	Corrected.
Jilt, W. O. Gay	2 00 04	. . . .
Tunipoo, J. L. Brenner	2 01 31	. . . .
Sintram, W. P. Fowle	2 01 54	. . . .
Colleen, H. M. Sears	2 02 37	. . . .

Spry, W. L. and E. I. Cropley	1 50 49
Opitsah, S. H. Foster	1 59 58
Class III.	
Polly, E. Wadsworth	0 47 19
Cyclone, F. G. Macomber, Jr	0 53 50

Stamford Y. C. Annual Regatta.

STAMFORD, CONN.—LONG ISLAND SOUND.

Monday, July 3.

THE Stamford Y. C. sailed its annual regatta on July 3 over the regular club courses. The day was clear, with a good S.W. wind. The times were:

Windora	2 51 20	Spray	3 43 01
Spindrift	3 01 44	Maine, Jr	3 43 50
Qui Vive	3 07 12	Loyalty	3 45 24
Mynah	3 08 04	Gosbird	3 47 30
Kittie	3 08 25	Hornet	3 53 57
Kazaza	3 15 30	Syce	4 03 53
Vera	3 21 30	Kestrel	4 77 01
Captain	3 22 55	Acushla I.	4 36 57
Indianola	3 26 19	Eurybia	4 43 55
Skylark	3 42 36		

Cutters—51ft. Class—Start, 11:40.

	Length.	Elapsed.	Corrected.
Syce, F. M. Hoyt	50.86	4 23 53	. . . .
Kestrel, J. B. Mills	48.37	4 47 01	. . . .
Cutters—43ft. Class—Start, 11:45.			
Eurybia, Charles Pryer	42.00	4 58 55	. . . .
Sultan (yawl), C. S. Somerville	37.93	Disqualified.

Spray, G. R. Holly	22.92	3 48 01	. . . .
Skylark, F. Bishop	14.80	3 47 36	. . . .

The winners were: 51ft. class, Syce; 43ft. class, Eurybia; 36ft. class, Acushla I.; knockabouts, Spindrift; cabin catboats, 30ft. class, Windora; 25ft. class, Qui Vive; open catboats, Mynah. Kestrel lost her topmast on the first round.

YACHTING NEWS NOTES.

Fra Diavola, steam yacht, E. S. Stokes, was run into and sunk almost instantly on the evening of July 7 by the steam lighter Hustler. The yacht had on board Mr. Howard McNutt, a brother-in-law of Mr. Stokes, with his wife and a party of friends, including five ladies. They had been down the Bay, and were just coming up the North River to land at Pier 6, when the lighter came across the river. Signals were exchanged, but in spite of them the lighter crashed into the port quarter of the yacht, cutting clear through her. The lighter stood by and took off the passengers and crew, the last persons leaving the yacht just as she sank, about 200yds. from the New York shore.

Sprite, sloop, owned by Perry Waite, of Toledo, struck on a sunken obstruction in Lake Erie while bound on a cruise to Lake St. Clair, and sank in a short time. All on board were saved.

New York Y. C. Special Match.

COLUMBIA—DEFENDER.

Thursday, July 6.

THE long looked for match between the old and new defenders at last took place, after two postponements, on Thursday, July 6, resulting in a victory for the new boat, but by a small margin, the amount of which will not be known for some time to come. In accordance with the popular policy of concealment and mystery, the yachts have not been officially measured, and though the measurement of each is doubtless known to those directly connected with her, it will not be made public until later in the season. The allowance of Columbia to Defender is thus an unknown quantity, and where the finishes are close it will not be known which wins. The race was for a $250 cup, offered by the club to signalize the first formal meeting of the two famous yachts. The conditions were:

Start.—The start will be off Sandy Hook or Scotland Lightship, as will be signaled. The preparatory signal will be made at 11:30 A. M.

Courses.—No. 1. (Letter B.) From the starting line around a mark fifteen miles to windward, or leeward, and return, leaving the mark on the starboard hand.

No. 2. (Letter T.) From the starting line, ten miles around a mark; thence ten miles around a second mark, and thence ten miles to finish line, turning the marks on the outside of the triangle, to port or starboard, according as the yachts are sent around.

Starting and finish lines, which will be between a point on the flagship Corsair, indicated by a white flag, and the mainmast of the lightship, will be at right angles with the outward and home courses, respectively.

Compass courses will be set before the preparatory signal is made, and will be kept flying until after the start. The signals for Course No. 2 must be read beginning forward.

Marks will be floats displaying a red flag with white stripe.

Starting Signals.—Preparatory. A gun will be fired and a red ball hoisted.

Signal for the Start.—Ten minutes later a second gun will be fired and another red ball hoisted.

Handicap Time.—Two minutes later a third gun will be fired and both balls will drop.

Should a signal gun miss fire, a prolonged blast of the whistle will be given.

Recall Signals.—A yacht crossing the line before the starting signal is made will be recalled by a blast of the whistle and the display of her private signal.

Postponement.—If the start is postponed, a preliminary signal will be made by displaying the yacht ensign at the fore ten minutes before the preparatory signal. The directions for starting will be similar to those already stated, with the exception that the signal for the start will be made five minutes after the preparatory, instead of ten.

If toward 6 P. M. it becomes apparent that the finish will be much delayed, the race will be called off, through mutual agreement between the Columbia and the Defender.

Sandy Hook Lightship.—(Club Code)—T. Q.
Scotland Lightship.—(Club Code)—V. C.
Start Postponed.—(Club Code)—S.
Race is Off.—(Club Code)—L.

The conditions contained one clause that is peculiar and unusual. The preparatory interval was to be ten minutes if the race started promptly on time, but in the event of a postponement necessitating an extra preliminary signal as well as the ordinary preparatory signal, the preparatory interval was cut down to five minutes. This made a complication which led Columbia into a late start.

The two yachts towed from New Rochelle on the afternoon of July 5 and anchored off Tompkinsville for the night, getting under way just before 9 o'clock next morning. The tide was just full when they started; a mist hung over the water, and there was but a very light air from S.W. Each took a line from a tug and started out the Narrows and down the Ship Channel, setting mainsails on the way. It was nearly 11 o'clock when they cast off the towlines near the Scotland Lightship, where a fleet of steam yachts, tugs and several steamers, the club boat Cepheus and some public boats were awaiting them. It was some little time later before the handsome new flagship, Corsair III., came steaming down with the signals set for a start from the Sandy Hook Lightship. The wind was about south, very light at times, in fact a light shower about 10 o'clock had killed it for the time; the sky was cloudy and threatening, and there was a roll to the sea, the result of some offshore disturbance. Some time was spent in setting the clubtopsails to the satisfaction of the respective skippers and in getting over to the starting line between the flagship and the Sandy Hook Lightship. A little after noon the regatta committee, Messrs. S. Nicholson Kane, Chester Griswold and Irving Grinnell, decided that it was safe to trust the freshening southerly wind, and the signals were set for the triangular course, the first leg lying in toward the Jersey beach off Seabright. The courses were: S.W. by S. 10 miles, naut., ½ S. 10 miles and N.N.W. ½ W. 10 miles; making 30 nautical miles in all. The course was nearly the same triangle as that sailed by Defender and Valkyrie III. in the last race of 1895, in which Defender was disabled.

The first gun, at 12:43, was the preliminary, a mere notice to look out for the preparatory in another ten minutes. The second was fired at 12:53, and shortly after Columbia crossed the line in the course of her maneuvers for a weather berth, apparently assuming that she had the full ten-minute interval to dispose of. She stood on for the five minutes while Defender, near the west end of the line, luffed around the mark within twenty seconds of the starting gun, at 12:58:20. Columbia now had to return, crossing the line at 1:00:02, with a handicap of two seconds and a berth well astern of Defender.

After crossing on the port tack, Defender made a short leg on the other tack, and then came about as Columbia crossed, planting herself square on the weather bow of her big sister as both headed in for the beach. There was a moderate breeze by this time, with an old sea that rolled the boats about. It was soon evident that Columbia was doing the better work, pointing a little higher and footing as well, and for the first fifteen minutes she overhauled Defender. After a little time, however, it did not appear that she had gained much, and within the half-hour it was plain that whatever difference there was must be credited to Defender. There was no question that the old boat, with better fitting canvas, was standing up more ably to her work and taking the seas better than Columbia. The latter's sails, especially the staysail and clubtopsail, were not in the best of shape. She showed a very decided angle of heel as compared with Defender, and she did not take as kindly to the moderate sea. They made several tacks, keeping close company, but by the time the middle of the leg was reached, Columbia was full in Defender's wake. As they came closer in shore, the water was rather smoother and the wind lighter, and Columbia began to gain, but she was still in a poor position when the two went on starboard tack just after passing the two masts of the wrecked steamer Macedonian off Seabright. In the effort to get by, Columbia made several short tacks inshore, Defender tacking each time to cover her, until at last the leader was close to the first mark and well able to weather it. Here Columbia tried another hitch inshore, which Defender refused to follow, standing for the mark with sheets lighted. With a lucky puff to help her, Columbia held on for a couple of hundred yards inshore, came about, and with lifted sheet ran down for the mark, through Defender's weather. Though she had been overtaking the older boat for some time, the greatest part of the gain was made in the course of a few minutes. The first mark was timed:

	Time.	Elapsed.	Gain.	Lead.
Columbia	2 38 33	1 38 33	0 02 25	0 02 25
Defender	2 39 18	1 40 58	.. ..	.. ..

The sky was dark with an electric storm in the south, and the wind was freshening, as both set their No. 1 jibtopsails, Defender's being handled very quickly. That of Columbia was sent up with the sheet fouled about the stay, but it was very quickly lowered and reset. The squall now struck the fleet, with heavy rain and some lightning, the two yachts driving along at a high speed. The wind worked more to the west, so that they finally came to the second mark with booms almost squared to port, the times being:

	Time.	Elapsed.	Gain.	Lead.
Columbia	3 38 01	0 59 28	0 01 33	0 03 58
Defender	3 40 19	1 01 01	.. ..	.. ..

They jibed over and set baby jibtopsails as the wind, though varying from time to time, was hauling ahead. It had been expected at the start that this leg would show the boats under spinakers, but as it happened they were on a close reach for a good part of the distance. Near the finish Defender brought up in a bit of breeze that greatly lessened her distance from Columbia, the final times being:

	Time.	Elapsed.	Gain.	Lead.	Total Elapsed.
Columbia	4 47 55	1 09 54	.. ..	0 03 33	3 47 55
Defender	4 49 48	1 09 29	0 00 25	.. ..	3 51 28

The vagaries of wind and weather made the race less interesting and exciting than it at first promised to be; at the same time it was well worth seeing, and several important points were brought out. As to the old boat, she has, in her enlarged rig, a fine suit of canvas, and she is well handled, both at the wheel and about the deck. Her crew worked smartly all day in handling sails. It is impossible to say just how she compared with her 1895 form, but all the probabilities are that she is sailing decidedly faster. Measured by her, Columbia is not as stiff and feels the sea more. Thus far her sails are by no means perfect, and her crew is not at its best, but these defects will doubtless soon disappear under the skillful management that worked Vigilant and Defender up to racing form. As to stability, she doubtless has ample reserve, and any tenderness at small angles, if at all serious, can be remedied by a small reduction of sail and weights. While she failed to run away from Defender, and the old boat put up a brave fight for first honors, it is certain that in a little while Columbia will be the faster by some minutes under average racing conditions. Whether she will invariably win in a breeze and sea is another and an open question.

Larchmont Y. C. Special Match.

COLUMBIA—DEFENDER.

Saturday, July 8.

THE Larchmont Y. C. has been very anxious to secure a meeting of the two great cutters under its flag, but there was always a reluctance to race Defender in the Sound, and now there are still deeper reasons why Columbia prefers the open sea. The efforts of the club, however, aided by the generous offer of a $300 cup by Com. Postley, at last succeeded in bringing about a match. The date was July 8, and a special triangle was laid off on the Sound, the base being the usual leg from Larchmont to the Prospect Point mark. The other two sides were eight miles long, the apex being a red dory with the Larchmont ball, anchored off Greenwich in the middle of the Sound. As ordered, the first leg was E. ¾ N., 8 miles, the second S.W. by W., 8 miles, and the third N.N.W., 3 miles, making 19 nautical miles in all. This course was to be sailed twice.

Saturday morning was dull and foggy, with no wind, but at noon there was a prospect of a race, and a little later a nice S.S.W. wind came along, bringing the two yachts over from their moorings at New Rochelle. The preparatory signal was given at 12:30 and the start at 12:40, Defender going over first, within forty-one seconds of the whistle, as the result of some clever maneuvering; Columbia being twelve seconds astern. They passed the mark with all hands on main sheet on each yacht, Columbia luffing at once for Defender's starboard quarter, while the old boat would have none of it, but hauled up sharp from her course down the Sound, and was soon heading across for Hempstead Bay. Both carried clubtopsails and small jibtopsails, and with a freshening breeze they moved very fast. Columbia failed to get by, and the two edged off a little toward the course, but were soon at it again, with sheets hard in and Matinnicock Point ahead. In the middle of the Sound they fell in with a tug and a long string of barges, bound east, a moving obstruction nearly a quarter of a mile long. Defender paid off a little and sailed parallel to and just clear of the line of barges, Columbia following; they moved faster than the tow, and finally were able to luff by it and head again for the Long Island shore. There was more luffing and bearing away, Defender still holding her lead. Finally Columbia sighted a dory anchored in the Sound and headed for it, believing it to be the mark, Defender following. It proved to be *a* mark, but not *the* mark, being one of the Riverside Y. C. dories with red and blue disks, set for the Riverside annual regatta, under way at the time. Neither yacht paid any attention to the fact that the signal was not the familiar blue and white ball of the Larchmont Y. C., but *a* very different one, nor could the continued whistling of the committee boat attract their attention to the mistake. Before it was reached Columbia made another bold rush for Defender's weather, but the latter ran up her small jibtopsail again and held her place, turning the mark first. As the race was really sailed with this as one of the marks, the times were taken:

	Time.	Elapsed.	Gain.	Lead.
Columbia	1 18 10	0 37 17	0 00 02	.. ..
Defender	1 18 00	0 37 19	.. ..	0 00 10

Defender luffed sharp about the mark, and started for the Prospect Point mark on port tack, while Columbia turned inside and consequently to leeward of her. A fresh breeze now roughened the water, and Columbia had all the sail she wanted. After a few minutes in company on the port tack, she came about and crossed Defender's wake, standing on until she could fetch the next mark. On this tack and the following one under the Long Island shore she gained on Defender, so that when they next met the old boat passed well astern of the new one, soon after going on port tack for the mark. There was some fine sailing on this long leg, the two at their best, under a clear summer sky, with a whole-sail breeze and practically smooth water. Columbia just squeezed by the mark, the times being:

	Time.	Elapsed.	Gain.	Lead.
Columbia	1 54 08	0 35 58	0 02 02	0 01 52
Defender	1 56 00	0 38 00	.. ..	.. ..

Spinaker booms were dropped to port, and the big sails broken out smartly, Defender's being set but a few seconds after Columbia's in spite of the difference in turning. The wind was forward of the port quarter, the spinaker guys being well slacked off. At the end of the round the boats were hailed and notified of their mistake and ordered to sail the correct course; but they paid no attention to the notice, and again headed for the Riverside buoy. Under the circumstances, as the same error was made by both and the race was otherwise satisfactory to all, it was decided to accept the course actually sailed as official. The two long legs were each about six miles instead of eight, so that the total distance was estimated at thirty miles, instead of thirty-eight, as originally intended. The times at the end of the first round were:

	Time.	Third leg. Elapsed.	Third leg. Gain.	Third leg. Lead.	Round. Elapsed.
Columbia	2 05 06	0 10 58	0 00 05	0 01 57	1 24 13
Defender	2 07 03	0 11 03	.. ..	.. ..	1 26 22

Spinakers were stowed and booms jibed over at the mark, the pair trimming in for a reach down the Sound with the wind about on the starboard beam. This suited Defender, and she was soon overhauling the new boat, holding up to windward all the time. When she came to the Riverside mark Columbia again turned it, Defender, of course, following. The times were:

	Time.	Elapsed.	Gain.	Lead.
Columbia	2 33 30	0 28 24	.. ..	0 00 50
Defender	2 34 20	0 27 17	0 01 07	.. ..

Columbia luffed by the mark, hardened her sheets, and stood on for a short distance on starboard tack, then came about and headed for the next mark. Defender luffed around the mark slowly, losing a little time before she swung over and started on port tack. The wind was more southerly and stronger. Defender carried a small jibtopsail, but Columbia had only the two lower headsails; as it was, however, she heeled well at times. The short hitch on starboard tack enabled her to clear the next mark easily, while Defender had to squeeze for it. The times were:

	Time.	Elapsed.	Gain.	Lead.
Columbia	3 08 12	0 34 42	0 02 13	0 03 03
Defender	3 11 15	0 36 55	.. ..	.. ..

Defender handled her spinaker smartly, while Columbia not only took a long time with hers, but when it was set the stops refused to break on the upper part, and the sheet broke away and let the sail over the stay. A small jibtopsail was set to help the spinaker. A thunderstorm was hanging about, but the yachts missed it, though they caught a part of the attendant breeze. The finish was timed:

	Third leg. Time.	Third leg. Elapsed.	Third leg. Gain.	Third leg. Lead.	Round. Elapsed.	Round. Gain.	Course. Elapsed.	Course. Gain.
Columbia	3 24 09	0 15 57	.. ..	0 3 13	1 03 06	0 1 06	2 43 16	0 3 13
Defender	3 27 10	0 15 55	0 00 02	.. ..	1 04 12	.. ..	2 46 29	.. ..

The race was managed by the regatta committee, J. F. Lovejoy, H. W. Coates and Frank Hardy, the tug Pulver, the tender of Valkyrie III. in 1895, being the committee boat. A number of yachts were under way in attendance on the racers. After the finish the two yachts ran into New Rochelle under headsails, Defender making her moorings just before Columbia. As the latter came up her masthead shroud caught the end of Defender's boom, the steel one carried in 1895, and bent it very badly, almost at right angles at the main sheet strap. The bent portion was cut off next day and the two parts were sent to Bristol on the St. Michaels, for repairs. The work may take some time, so that it is uncertain when the next race will be sailed. The two are scheduled to meet off Newport on July 20 and following days. By July 15 the new steel mast for Columbia will be ready to step. If the statements as to its weight are true, the saving being estimated at nearly one ton over the present wooden spar, there will be a decided improvement in her stability.

Mosquito Fleet Y. C.

ATLANTIC CITY, N. J.

Friday, June 30.

THE Mosquito Fleet Y. C. of Atlantic City sailed the first of a series of races on June 30, in a fresh south wind. The times were:

	Start.	Finish.	Corrected.
H. B. Leeds	3 09 29	4 38 39	1 29 10
Undine, W. B. Loudenslager	3 10 12	4 40 48	1 30 36
Nan, Edw. Evans	3 10 34	4 34 55	1 24 21
Ada, B. H. Bullock	3 11 07	4 37 38	1 26 31
Spray, S. C. Hinkle	3 11 27	4 41 07	1 29 26
——, Stewart Shinn	3 12 28	4 40 05	1 28 00

Seawanhaka Corinthian Y. C.

International Cup Trials.

OYSTER BAY—LONG ISLAND SOUND.

July 3, 5, 6.

THE fifth series of trial races for the selection of the representative of the Seawanhaka Corinthian Y. C. in the races for its international cup took place last week over the regular courses off Oyster Bay which have become so well known through the many trial and cup races sailed over them since 1895. The races this year, as in 1897-8, are in the 20ft. class and under the same rules and conditions, with the exception of the limiting of the over-all length and the minimum angle of the bow. The effect of these restrictions has been merely to make the boats uglier than the best looking of the class, Glencairn I. and Challenger, and in no respect to improve them. They are just as costly and generally useless as last year, though of somewhat less fragile construction than Seawanhaka, Challenger and Cicada.

This year but three boats entered the trial races, Constance, Algonquin and Palm. Constance was designed by C. H. Crane and built by the Spalding-St. Lawrence Boat Company for Messrs. R. H. Post, E. M. Post and E. R. Thomas. She is of the standard waterline and sail area, 17ft. 6in., and 500 sq. ft., and about 8ft. 6in. beam. The model is practically the same as Challenger, but as already noted, the nose is snubbed in abruptly to gain all the inclined length possible on the maximum over all length. The construction is simpler and heavier than the Crane boats of last year, the frames and planking are stouter and the use of bicycle tubing for bracing has been abandoned in favor of wood. In the first race she was steered by H. M. Crane, with Sherman Hoyt, R. H. Post and Joseph B. Thomas, Jr., as crew.

Algonquin was designed by B. B. Crowninshield for a syndicate of Bridgeport yachtsmen, Messrs. T. H. McDonald, W. Herbert Jennings, Devere H. Warner, C. M. Gilman and Gen. T. H. Watson. She was built by the Lawley Corporation, and is of the same dimensions as Constance, but in place of the heavy composite board of 400 to 500 carried by the Crane boats she has a board of rosewood ballasted with but 60lbs. of lead. The deck has a high crown at the mast, flattening out toward the ends. She was steered by Mr. Jennings, with Messrs. E. F. Menard, of Bridgeport; John Champion, of the Pequot Club, of New Haven, and John Sherwood, of Southport.

The new Huntington boat, Palm, is a departure from Akabo and Keneu, a fin-keel of but 5ft. beam, with a high crown to the deck and a tumblehome to the topsides. She is well built, of light frame, stiffened by piano wire ties, a light skin of wood and a covering of canvas. Like the previous Huntington boats, she has a low, broad sail plan. She is owned by Mr. Clark Miller, who has made three plucky attempts in this class, with Keneu in 1897, Akabo in 1898 and the present boat. Mr. Miller sailed in her, with "Leff" Huntington at the stick and Messrs. Phil Howard and Charles Miller as crew.

The race committee, Messrs. C. W. Wetmore, C. A. Sherman and Ashton Lemoine, were on board of the steam yacht Radha, Gen. Samuel Thomas.

The first race was set for Monday, July 3, a fair, bright day, but with no wind at noon. The breeze came in, however, from the southwest, enough to warrant a start, and it freshened to a moderate force. Following the custom introduced by the Royal St. Lawrence Y. C. in its trial races of 1897, the work of the day was divided into three separate rounds of the four-mile course, with intervals between. The first was started at 1:45 P. M., the course for the day being to leeward and return. Starting under spinakers, Algonquin led at the lee mark, while Palm lost by a poor course inshore, Constance being eleven seconds astern of the leader, and Palm forty-seven seconds. On the beat home Constance took first place, while Palm was a very poor third.

In the second race, started at 2:48, Algonquin led, while Palm started with her boom on the wrong side, and had to shift over. At the lee mark Algonquin was seven seconds ahead of Constance and one minute forty-one seconds ahead of Palm. The two leaders had a hard fight to windward, Constance finally winning by a few seconds.

In the third race Palm was first away, but Algonquin was eight seconds ahead of Constance and ten seconds ahead of Palm at the lee mark, gaining on the windward work in a fresher breeze, while Palm beat Constance. The official times were:

	Outer mark.	Finish.	Elapsed.
First Race—Start, 1:45.			
Constance	2 08 21	2 35 14	0 50 14
Algonquin	2 08 10	2 35 31	0 59 31
Palm	2 08 57	2 39 33	0 54 33
Second Race—Start, 2:48.			
Constance	3 10 55	3 38 26	0 50 26
Algonquin	3 10 48	3 38 28½	0 50 28½
Palm	3 12 29	3 40 52	0 52 52
Third Race—Start, 3:49.			
Algonquin	4 07 02	4 34 19	0 45 19
Palm	4 07 10	4 34 53	0 45 53
Constance	4 07 12	4 35 02	0 46 02

On July 4 Constance and Algonquin met at Larchmont, the former winning.

The trial series was resumed on July 6, the triangle being sailed, one and one-third miles to a side. The day was fair with a light S.W. wind that freshened during the afternoon. C. H. Crane, the designer of Constance, replaced his brother at the helm, setting up the rigging before starting out and using a cotton instead of a silk jib, the result being a greatly improved showing for the boat. In the first race Palm led over the line, and on the broad reach to the first mark, but on the second reach she fell to third place, with Constance in the lead. On this leg the two leaders wasted time in a long luffing match, Constance holding her place and improving it greatly in the beat over the last leg.

The second race was started at 1:27, in a fresh S.W. breeze. Palm again led over the line, and improved her position on the reach, but fell to last place on the second leg. Constance did particularly well to windward and won very easily.

The final round was started at 2:52, by which time the three were glad to reef. Palm made a good start and held first place over the first part of the second leg, when she was passed by Constance. When they came on the wind she was forced to give way to Algonquin also, and she finished a poor third. The times were:

	1st Mark.	2d Mark.	3d Mark.	Elapsed.
First Race.				
Constance	12 26 33	12 42 45	1 16 07½	1 01 07½
Algonquin	12 26 34	12 42 53	1 18 52	1 03 52
Palm	12 26 18	12 42 59	1 20 45½	1 05 45½
Second Race.				
Constance	1 38 19	1 49 26	2 15 22	0 48 22
Algonquin	1 38 15	1 49 09	2 19 11	0 52 11
Palm	1 37 45	1 49 28	2 23 27	0 56 27
Third Race.				
Constance	3 05 06	3 15 14	3 43 12½	0 50 12
Algonquin	3 05 36	3 16 50	3 45 55	0 52 55
Palm	3 05 00	3 16 05	3 47 47	0 54 47

The third day was a poor one for racing, with rain at times, and very little wind. Palm did not come to the line, leaving Constance, still handled by C. H. Crane, and Algonquin to fight it out. After two races had been sailed over the windward and leeward courses, Algonquin leading easily off the wind, but being badly beaten to windward, she declined to sail the third race. The times were:

	1st Mark.	Finsh.	Elapsed.
First Race.			
Constance	1 30 35	2 43 42	1 33 42
Algonquin	1 26 57	2 48 13	1 38 13
Second Race.			
Constance	2 59 10	3 39 42	1 06 42
Algonquin	2 58 21	3 43 06	1 09 06

While no official decision has been announced, as a matter of course Constance will be selected as the challenger. By a recent arrangement between the two clubs, the first of the cup races on Lake St. Louis will be sailed on July 27, instead of July 24. The defending yacht has not yet been selected.

The Canada Cup.

Chicago Y. C. Trial Races.

CHICAGO, Ill., July 8.—At this writing but little actual progress has been made in determining the winner in the preliminary competition for the Canada cup, only one race having been sailed, and that of to-day being postponed on account of heavy weather, the wind blowing half a gale and a very lumpish sea running outside, which in the opinion of the judges made it advisable to set the second race on for Monday, July 10, at noon.

The first race of the series was won in very hollow fashion by Genesee, July 4, the crack Rochester boat leaving a very strong impression in local minds that she will be the winner of the series, though it is a bit early to be altogether confident of it. Certainly the first test was decisively in favor of the Hanley boat, for she led the second boat by two miles, and sailed the course of twenty-one miles in 3:17:57. She was first across the line, admirably handled by Mr. Davis, and was not caught from start to finish, coming home with saucy maneuvers which showed her confidence. Prairie, the handsome boat designed by Mr. W. P. Stephens, and built at Ogdensburg, N. Y., was second. This boat has but recently arrived at her new quarters, reaching here June 22, and her owners have not yet gotten her tuned to the satisfaction either of themselves or of the boat. It seeming that the weight of lead, over 9,000lbs., was too much to bring the boat to her lines, Mr. Charles Thorne took off some 2,500lbs. from the keel with serious effects on the stability. The owners of Prairie were anything but happy when last seen. Had they gone out to-day in the stiff wind they would very probably have wished a bit of lead back under her. It is to be hoped that this boat will improve on acquaintance, and that she will crowd the Rochester flyer satisfactorily enough to make the latter work a trifle harder than she did last Tuesday. Genesee is handled ably and seems fit as possible. Josephine, the Chicago cutter, was anxious to have the race of to-day pulled off, as she thought it was her sort of weather. She finished third on Tuesday. Bald Eagle, the Racine fin-keel, was dismasted early in the day, and did not enter the race at all. At this writing she is not yet in commission, though work is advancing on her and she may enter for two or three of the trials. The unhappy Veva, of course, is permanently out of it, and Briar, Mr. Peare's new boat, is still on the stocks and can hardly be here within a week, so that it would seem unfair to ask the Rochester men to wait till she is ready to enter the contests. There remain, therefore, at best, but four boats, and more likely only three, a centerboard, a cutter and a fin-keel, and should the weather favor, these should have it pretty well argued out by the close of the following week, Genesee being now favorite at any sort of odds wanted. Following are the data of these boats:

Briar, No. 1.—Type, fin-keel; length over all, 45ft.; length, load waterline, 27ft.; beam, 8ft. 6in.; designer, Joseph Myers, Chicago; builders, Miller Brothers, Chicago; owner, George Peare; skipper, George Peare.

Genesee, No. 2.—Type, centerboard; length over all, 45ft.; length, load waterline, 27ft.; beam, 11ft. 6in.; designer, Hawley, Quincy Point, Mass.; builder, Hanley, Quincy Point, Mass.; owners, Rochester Boat Club Company; managing owner, Charles Van Voorhis; skipper, Charles G. Davis, New York; crew, Charles Van Voorhis, M. A. MacDuff, J. E. Burroughs, James McDonell and one professional.

Bald Eagle, No. 3.—Type, fin-keel; length over all, 46ft. 6in.; length, load waterline, 27ft.; beam, 9ft.; designer, George Warrington, Chicago; builders, Racine Boat Manufacturing Company, Racine, Wis.; owners, George Warrington, F. K. Ball, R. T. Robinson, F. Robinson; managing owner, George Warrington; skipper, E. P. Warner.

Prairie, No. 4.—Type, cutter; length over all, 45ft.; length, load waterline, 28ft.; beam, 9ft.; designer, W. P. Stephens, New York; builders, Spaulding-St. Lawrence Boat Company, Ogdensburg, N. Y.; owners, F. W. Morgan, Charles H. Thorne; managing owner, Charles H. Thorne; skipper, Charles H. Thorne; crew, B. P. Hinman, Robert Wilber, N. C. Cook and two professionals.

Josephine, No. 5.—Type, cutter; length over all, 45ft. 6in.; length, load waterline, 27ft.; beam, 10ft. 6in.; designer, George Webster, Hamilton, Ont.; builder, William Barnum, Muncie, Ind.; owners, Burt H. Whitely and A. J. Whitely; managing owner, Burt H. Whitely; skipper, Burt H. Whitely; crew, D. D. Griffiths, William Avery, Douglas Putnam, Richard Wilcox and Abe Burrell.

Prairie and Josephine carry each about 1,500 sq. ft. of canvas. Bald Eagle carries, or was planned to carry, 2,000ft., but the great spread snapped off the mast and she is *hors du combat* for the time at least.

First Race, Tuesday, July 4

In the race of last Tuesday the boats were called to the line at 10:30, and sent off at 11. Genesee was over at 11:00:03, Josephine 11:00:04, Prairie 11:00:06. Bald Eagle lost her mast at the hounds just before the start. The weather was lowering and rainy, the breeze a light one and no sea running of consequence. Prairie seemed not stiff enough even under these conditions, and heeled heavily, not driving well. Josephine set her topsail and led away from Prairie, both dropping astern of Genesee. Prairie experimented with several of her many sails (she is admirably fitted with a full suit for all manner of weather), and finally storing her jibtopsail began to pick up on Josephine, but did not overtake her until half-down the second leg, Prairie having trouble after breaking out her spinaker at the first stake.

Genesee made the first leg, seven miles, in just one hour, rounding the stake boat at 12:00:03. Josephine rounded at 12:04:00, Prairie 12:05:00. On the second leg Genesee said good-by to her companions, and appeared at least a mile and a quarter in the lead. The wind now fell, and for ten minutes all were more or less becalmed, but a stiff breeze soon thereafter sprang up, and the rest of the course was more to a sailor's liking. The time at the second stake boat was Genesee 1:20:00, Prairie 1:35:00, Josephine 1:37:00. The time at finish was Genesee 3:18:00, Prairie 3:44:00, Josephine 3:54:00. The course was triangular, seven miles to the leg. Messrs. John Berryman and J. B. Crawford acted as judges, using the Sentinel as their craft.

The yacht Genesee makes a good impression here, both boat, crew and commander, the latter being evidently a sportsman and wanting to win if at all on the merits of his boat. He is disposed to wait as long as possible for Briar to get into commission, and says he will sail her any time she is ready, as he wants the best boat to go to Canada for the contest.

Since the first race of these trials was sailed under conditions perhaps more favorable to Genesee's model than to those of her rivals, it may be a little early to decide what will be the relative performances of the boats under varied weather conditions. It is to be regretted that the wind did not abate this morning sufficiently to allow the boats to start, for then we should have had two races, one in light wind and one in stiff weather, and so might have had opportunity for a juster estimate of the boats. However that may be, the ensuing week will no doubt bring forth conclusive data, and the event is looked forward to with very great interest, alike by Chicago yachtsmen and the Chicago public.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

The second race was sailed on Monday in a fresh breeze, being almost a repetition of the first. Genesee covered the course in four hours five minutes, Prairie in four hours 21 minutes and Josephine in four hours twenty-three minutes. Bald Eagle, after being fitted with a new mast, started, but withdrew from the series. The third race was set for July 11.

Riverside Y. C. Annual Regatta.

RIVERSIDE—LONG ISLAND SOUND.

Saturday, July 8.

THE Riverside Y. C. sailed its annual regatta on July 8 with rather a small fleet of starters. The two principal entries, Syce and Kestrel, were absent, the latter being at Bristol for a new topmast. The morning was calm and foggy, but it cleared by afternoon, with a moderate S.W. wind, which continued to freshen. During the race Possum lost her bowsprit, Windora sprung her mast and Albicore tore her balloon jibtopsail when in a leading position. Vorant II. sailed a private handicap match with Lorelei, steered by F. Bowne Jones, and won by twenty-three seconds. The official times were:

	Length.	Elapsed.	Corrected.
Cutters—51ft. Class—Course, 15 Miles—Start, 1:35.			
Liris, T. J. McCahill	48.00	2 26 50	2 26 50
Yawls—43ft. Class—Course, 15 Miles—Start, 1:35.			
Albicore, Seymour J. Hyde	41.00	2 38 05	2 38 05
Sultan, C. T. Somerville	37.93	2 39 34	2 36 11
Sloops—36ft. Class—Course, 15 Miles—Start, 1:35.			
Vorant II., H. F. Whitmore	34.00	2 43 42	2 43 42
Possum, J. R. Maxwell, Jr	35.00	Did not finish.	
Acushla, C. T. Wills	34.00	2 42 24	2 42 24
Anoatok, Oswald Sanderson	....	2 31 35	2 31 35
Special Handicap Class—Course, 15 Miles—Start, 1:35.			
Esperanza, H. O. Havemeyer, Jr.	30.00	2 30 35	2 30 35
Windora, W. L. Ward	30.00	Did not finish.	
Sloops—30ft. Class—Course, 15 Miles—Start, 1:40.			
Lorelei, Alfred Peats	....	2 54 24	2 54 24
Cats—25ft. Class—Course, 10 Miles—Start, 1:40.			
Qui Vive, Geo. A. Freeth	24.87	3 30 00	3 30 00
21ft. Racing Knockabouts—Course, 10 Miles—Start, 1:45.			
Indianola, L. R. Alberger	....	1 47 50	1 47 50
Robin Hood, George Gartland	....	1 51 16	1 51 16
Open Cats—20ft. Class—Course, 10 Miles—Start, 1:45.			
Kazaza, T. J. McCahill, Jr.	20.00	1 54 50	1 54 50
Psyche, H. B. Stephens	19.00	3 03 57	3 01 51

The winners were Liris, sailover; Sultan, Anoatok, Esperanza, Lorelei, sailover; Indianola, Kazaza and Qui Vive, sailover.

The regatta committee included Messrs. George B. Clark, Edward Binney and George B. Huffington.

Jubilee Y. C.

MARBLEHEAD—MASSACHUSETTS BAY.

Tuesday, July 4.

THE Jubilee Y. C. sailed a handicap race on July 4 in a fresh S.W. wind, the times being:

	Elapsed.	Hdcp.	Corrected.
Black Cloud, T. H. Gilliott	1 34 08	scratch.	1 34 08
Elf, Chas. Prescott	1 36 20	2 00	1 34 20
Ada, John Claflin	1 41 48	4 00	1 37 48
Wanda, E. S. Foster	1 44 43	4 00	1 40 43
Nixie, S. J. Connolly	1 47 43	4 00	1 43 43
Spurt, Geo. Stamper	1 43 50	scratch.	1 43 50
Vager, Whitney and Kent	1 51 38	6 00	1 45 38
Brownie, Williams Bros.	1 53 48	4 00	1 49 48
Emen, W. H. Southard	1 53 58	4 00	1 49 58

Atlantic Y. C. Annual Cruise.

PURSUANT to the programme, the fleet of the Atlantic Y. C. met at the rendezvous, Larchmont, on the afternoon of July 3, lying over during the Fourth. On the morning of July 5 the fleet started on the first squadron run, from Larchmont to New London, which was made in good time, with the aid of a fresh southerly wind. The times were:

	Finish.	Elapsed.
Class 1—Schooners in Racing Trim—Start, 10:20.		
Amorita, W. G. Brokaw	2 00 40	3 40 40
Class 2—Schooners in Cruising Trim—Start, 10:20.		
Lady Evelyn, J. C. Ackerman	2 24 18	4 04 18
Katrina, R. E. Todd	2 10 30	3 50 30
Ramona, B. Whitlock	2 09 10	3 49 10
Sachem, F. T. Adams	2 04 00	3 44 00
Class 3—Yawls Over 43ft.—Start, 10:10.		
Huron, E. S. Hatch	2 19 38	4 09 38
Class 4—Sloops Over 43ft.—Cruising Class—Start, 10:10.		
Penguin, Geo. Brighton	2 16 00	4 06 00
Eclipse, L. Callanan	Disabled.	
Daphne, Geo. Copeland	2 16 10	4 06 10
Class 5—Racing Sloops—Specials—Start, 10:10.		
Ondawa, W. J. Roberts	2 22 00	4 12 00
Awa, T. L. Arnold	2 23 52	4 13 52
Class 6—Sloops 43ft.—Cruising Class—Start, 10:10.		
Zenobia	2 19 58	4 09 58
Eidolon, L. Wier	2 49 00	4 39 00
Bonito	2 49 00	4 39 00
Bonnie Ghint	Not timed.	
Wabasso	Not timed.	
Narika	3 07 00	4 57 00

The winners were Amorita, Katrina, Huron, Penguin, Ondawa and Zenobia. Eclipse lost her topmast and put into Cold Spring Harbor for a new one.

On July 6 the second run, from Bridgeport to New London, was made, the times being:

Schooners—Cruising Class—Start, 10:35.

	Finish.	Elapsed.	Corrected.
Colonia	5 25 50	6 50 50	6 38 34
Amorita	5 24 15	6 49 15	6 14 10
Lady Evelyn	6 24 42	7 49 42	7 38 53
Katrina	5 34 32	6 59 35	6 21 54
Ramona	5 31 12	6 56 12	6 56 12
Sachem	5 40 45	7 05 45	6 50 53
Sloops—Over 43ft.—Start, 10:25.			
Ondawa	6 15 50	7 50 50	7 50 50
Awa	6 59 19	8 34 19	8 31 37
Sloops—Under 43ft.—Start, 10:25.			
Eidolon	7 04 45	8 38 45	8 38 45
Bonito	Not timed.		
Narika	Not timed.		
Wabasso	Not timed.		
Bonnie Ghint	Not timed.		
Zenobia	6 04 25	8 19 25	7 48 36
Sloops—Special Class—Start, 10:25.			
Penguin	6 14 45	7 49 45	7 00 47
Wenonah	6 23 35	7 58 35	7 58 35

The winners were Amorita, Ondawa, Zenobia and Penguin. Colonia lost her foretopmast and Sachem lost hers, as well as tearing her maintopmast staysail.

On July 7 the fleet sailed across to Shelter Island, Amorita again winning. After lying at anchor until July 10, a part of the fleet started at noon from Ramshead Buoy, in Gardiner's Bay, to race outside Long Island to Sea Gate. The starters were:

	Length.	Allowance.
Schooners.		
Coronet, John I. Waterbury	114.80	scratch
Ramona, B. F. Whitelock	105.84	0 12 39
Sachem, F. T Adams	90.61	0 58 00
Katrina, Robert E. Tod	73.00	1 57 20
Cutters.		
Daphne, George W. Copland	51.00	. .. ..
Awa, Tom Arnold	46.88	0 29 44

Jamaica Bay Y. C.

ROCKAWAY—JAMAICA BAY.

Tuesday, July 4.

THE Jamaica Bay Y. C. sailed a good race on July 4 in a fresh south wind, the times being:

	Finish.	Elapsed.
First Class—Cabin Cats—25ft. and Over—Start, 2:20.		
Dorothea, Walsh & Christopher	4 38 52	2 18 52
Frank, W. C. Vincent	4 40 47	2 20 47
Orca, F. S. Lafond	Dismasted.	
Second Class—Cabin Cats—20 to 25ft.—Start, 2:25.		
Louise, L. R. Jagger	4 47 20	2 22 20
Lulu, M. H. Christopher	4 49 31	2 24 31
First Class—Open Cats—20 to 25ft.—Start, 2:30.		
Mavourneen, E. C. Wood	4 36 55	2 06 55
Mildred-Myrtle, C. W. Hay	4 49 05	2 19 05
Alta, F. G. Bush	4 49 25	2 19 25
Ella B., J. L. Brainerd	4 56 20	2 26 20
Second Class—Open Cats—17 to 20ft.—Start, 2:35.		
Eunice, C. T. Kraus	5 08 20	2 23 20
Josie P., C. P. Frey	Withdrew.	
Lucy A., F. H. Andrews	Disabled.	

Orca was leading her class when she carried away her mast.

On July 8 the third race of the dory class was sailed in a half-gale from S.W. with a heavy sea. The times were:

	Finish.	Elapsed.
O, F. S. Lafond	4 21 24	1 11 24
B, Dr. L. Pflug	4 28 15	1 18 15
S, W. W. Scheffler	4 52 35	1 42 35
A, W. G. Gallagher	Dismasted.	

The standing in the series to date, counting 5 points for first place, 3 for second and 1 for third, is as follows: F. S. Lafond, 15; Dr. L. Pflug, 6; W. W. Scheffler, 4; W. G. Gallagher, 1; G. Kimball, 1.

The fourth race in the series will be sailed on July 15.

Newburgh Canoe and Boating Association.

NEWBURGH—HUDSON RIVER.

Tuesday, July 4.

THE Newburgh Canoe and Boating Association sailed its third race on July 4 in a moderate south wind, the times being:

Unlimited Class.			
Dazzler	3 22 16	Viola M.	3 18 48
Cruiser Class.

Carrie	3 23 32	Gull	3 30 07
Madrene	3 23 35		
Lark Class.			
Mary	3 30 18		

The record of the three races is as follows: Unlimited Class, Viola M., two firsts; Madrene, one. Cruiser Class, Madrene, two; Sappho, one. Lark Class, Pancake, one; Gull, one; Mary, one.

Western Yachts.

Cavite Beats Yankee.

CHICAGO, Ill., July 8.—It was the unexpected that happened on White Bear course, Minnesota, on July 1, when the doughty Yankee was forced to lower her colors to Mr. F. M. Douglas' Cavite, a new boat, and not at first supposed to be a dangerous rival of the White Bear favorite. Cavite, however, won by a margin of but 50yds., narrow enough to leave a defeat with no overwhelming quality to it. All classes were sent over the course at once, Aurelia and Akela appearing for the 23-footers; Falcon, Jennie and Pastime in the 21ft. class; Mudhen and Gypsie for the little fellows. In the 20ft. class were Yankee, Cavite, Mahto and Keewaydin. Yankee, with L. P. Ordway at the stick, led over the line, followed by Keewaydin, steered by H. A. Merwin; Mahto, J. H. Skinner, and Cavite, F. M. Douglas. Cavite gradually overhauled Yankee after leaving the other two astern. Falcon made a good start, her helmsman, H. Van Vleck, crossing two minutes ahead of her rivals, and she increased this lead to ten minutes at the finish. Akela carried away her jib near the finish, which increased the extent of Aurelia's lead. The times were:

	Start.	Finsh.	Elapsed.
Yankee	3 40 07	4 58 13	1 18 06
Cavite	3 40 47	4 58 00	1 17 12
Mahto	3 40 47	5 00 22	1 19 35
Keewaydin	3 40 18	5 05 32	1 25 14
21ft. Class.			
Falcon	3 31 15	5 07 25	1 36 10
Jennie	3 32 20	5 17 14	1 45 44
Pastime	3 34 00	5 18 26	1 44 26
23ft. Class.			
Aurelia	3 45 38	5 10 50	1 25 12
Akela	3 47 22	5 16 15	1 28 53
Larks.			
Mudhen	3 50 18	4 43 52	0 52 34
Gypsie	3 50 45	. .. ..	. .. ..

The first decisive race of the Pistakee Y. C., of McHenry, Ill., on the Fox Lake Chain, was sailed July 5 and won by Pistakee, Henry L. Hertz, in the first class. In the third class Fortune Teller, A. E. Seyl, was first. Racing will continue during the ensuing week.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

American Y. C. Annual Regatta.

MILTON POINT—LONG ISLAND SOUND.

Wednesday, July 5.

THE annual regatta of the American Y. C., following closely the regattas of the New Rochelle, Stamford and Larchmont, had but four starters, the times being:

	Length.	Elapsed.	Corrected.
Cutters and Sloops—51ft. Class—Start, 1:35.			
Kestrel, J. B. Mills	49.46	1 37 52	1 37 52

Sloops—Special 30ft. Class—Start, 1:05.			
Esperanza, H. O. Havemeyer, Jr.	30.00	1 53 56	1 53 56

Sea Cliff Y. C. Annual Regatta.

SEA CLIFF—LONG ISLAND SOUND.

Friday, July 7.

THE annual regatta of the Sea Cliff Y. C. was sailed on July 7, the wind falling before the start until the race was only a drift. Out of thirty-eight starters but thirteen yachts finished. The times were:

	Finish.	Corrected.
Special 30ft. Class—Start, 12:05.		
Esperanza, H. O. Havemeyer, Jr.	6 10 34	6 05 34
Acushla, I., C. S. Wills	Withdrew.	
25ft. Cabin Cat Class—Start, 12:10.		
Phi Kappa Psi, J. I. Bergen	2 40 05	2 37 21
Hannah, R. L. Crooke	2 16 07	2 16 00
Qui Vive, G. A. Freeth	2 13 51	2 13 51
Oconito, R. W. Haff	2 35 28	2 34 31
Win or Lose, J. S. Appleby	2 15 32	2 13 50
21ft. Open Cat Class—Start, 12:10.		
Spunk, C. E. Silkworth	2 42 38	2 42 20
Ox, R. Bavier	2 52 20	2 52 20
18ft. Open Cat Class—Start, 12:10.		
Kazaza, T. J. McCahill, Jr	2 45 12	2 43 50
Dunlea, C. S. Dunning	5 13 05	5 13 05
Special 15ft. Open Cat Class—Start, 12:10.		
Coot, A. D. Prince	3 13 21	3 08 21
Helen, A. Rae	3 08 39	3 08 39

The winners were Esperanza, Win or Lose, Spunk, Kazaza and Coot.

Duxbury Y. C. Open Race.

DUXBURY, MASS.

Saturday, July 8.

THE Duxbury Y. C. sailed an open race on July 8 in a fresh S.W. breeze, the times being:

	Elapsed.
Third Class—Start, 10:35.	
Geisha, W. T. Whitman	2 25 21
Halcyon, Sanford C. Winsor	2 25 59
Scamper, Edgar Reed	2 29 03
Fourth Class—Start, 10:40.	
Lobster, C. C. Clapp	1 11 13
Bobolink, L. B. Goodspeed	1 11 59
First Special Class—Jib and Mainsail—Start, 10:45.	
Grace, M. S. Weston, Jr	1 16 43
Dolphin, N. Morton	1 21 29
Second Special Class—Start, 10:50.	
Veritas, Alex. Holmes	1 29 21
Kittawake, H. M. Jones	1 31 40
Scrap, A. B. Holmes	1 31 55
Frolic, J. C. Dawes	1 33 29

The winners were Geisha, Lobster, Grace and Veritas.

Wood's Holl Y. C.

WOOD'S HOLL, MASS.

Tuesday, July 4.

THE Wood's Holl Y. C. sailed a race on July 4 in a fresh S.W. wind, the times being:

	Elapsed.	Corrected.
Spritsails.		
Emma, A. M. Ferris	1 09 25	1 08 25
K. T., W. M. Ferris	1 11 03	1 11 03
Carrie, H. K. Dyer	1 13 32	1 12 20
Isabell, J. J. Veder	1 13 32	1 13 32
Catboats.		
Mary E., A. Crowell	1 08 02	1 07 20
Frolic, R. Veeder	1 09 22	1 08 27
Maud S., R. Veeder	1 09 20	. .. ..
Scup, J. Rogers	1 18 00	1 11 47
Knockabouts.		
Captain, A. M. Ferris	0 50 20	0 50 05
Bob, H. K. Dyer	0 52 12	0 51 10
All Right, H. E. Hibbard	0 52 20	0 52 20

Emma wins the challenge cup. Captain wins the Dyer cup. Owing to a mistake over the course, the catboat race will be resailed.

WOOD'S HOLL, MASS.

Saturday, July 8.

THE Wood's Holl Y. C. sailed its third race, the first club championship, on July 8, in a strong south wind, accompanied by heavy hain. The times were:

	Finish.	Elapsed.
25ft. Knockabouts—Start, 1:15.

Oct. 23-28.—Nashville, Tenn.—Belle Meade Gun Club's tournament; targets and live birds; $500 added. W. R. Elliston, Sec'y.

First and third Fridays of each month.—Watson's Park, Burnsine, Ill.—Semi-monthly contest for Montgomery Ward & Co.'s diamond badges.

Brooklyn Gun Club.—Third Saturday of each month, Francotte gun contest. Fourth Saturday of each month, Grand American Handicap free-entry contest.

1900.

June —.—Tournament of Ohio Trap-Shooters' League, first week in June. J. C. Porterfield, Sec'y.

DRIVERS AND TWISTERS.

The programme of the third annual midsummer tournament, to be held at Ocean City, Md., July 26 to 29, inclusive, can now be obtained on application to Mr. James R. Malone, the manager, Baltimore, Md. The first two days will be devoted to targets; last two to live birds. The management has arranged to get reduced rates from the steamboat and railroad companies, and also a $1.50 rate with the hotels. The programme sets forth the facilities offered for boating, fishing, shore bird shooting, etc. There are thirteen events on each of the target days, at 10, 15 and 20 targets, 185 in all; entrance $1, $1.50 and $2; $5, $7 or $10 added to each event. Three moneys in 10-target events; four in others. There also will be $25 average money each day in target events; $15 to the three high averages, and $10 to the two lowest averages. There are three events on the live-bird programme on the third day. No. 1 is at 5 birds, $5 entrance, three moneys. No. 2 is at 7 birds, $7, three moneys. No. 3, is at 10 birds, $10. Birds are included in the entrance of each event, and each is high guns. Miss-and-out events, $2 entrance, will follow. The last day has the Ocean City handicap, 20 birds, $15 entrance, birds extra, class shooting, 50, 30 and 20 per cent. division, handicaps 25 to 32yds. Miss-and-out events, 2 entrance, will follow. Guns, ammunition, etc., may be shipped to John Kelley, Ocean City, Md. Boats leave Light street wharf, Pier 4, at 7 A. M. and 4:10 P. M. daily. Those who come via Pennsylvania R. R. can change at Wilmington, Del. Congress Hall and Atlantic Hotel will be headquarters for the sportsmen. The members of the tournament committee are Messrs. G. H. Gent, A. H. Fox, J. C. Hicks and J. M. Hawkins. The members of the reception committee are Drs. Brook and Lupus and Messrs. Richardson, Merriken, Wilson and Ducker.

The programme of the St. Paul Rod and Gun Club's tournament, July 14 and 15, can now be obtained of the secretary, Mr. A. E. Perry, care of Powers Dry Goods Co., St. Paul. There are eleven events on the first day's programme, 10, 15 and 20 targets, a total of 175, with a total entrance of $17.50. In each of these events, excepting No. 1, $10 is added. The programme for the second day is similar to that of the first, excepting that there also is the State championship for the silver cup, open only to Minnesota shooters. This event is at 25 targets, $1 entrance. There are seven merchandise prizes in addition to the cup. To each of the ten high averages there is a cash prize of $5. To the five next there are merchandise prizes. The grounds are situated at Kittsondale, reached by the St. Paul and Minneapolis interurban cars. Targets will be thrown from expert traps, Sergeant system. Targets 2 cents. Manufacturers' agents are barred. In 10-target events, three moneys; in 15 and 20-target events, five moneys, 30, 25, 20, 15 and 10. Dinner will be served in club house.

The monthly shoot of the Brooklyn Gun Club, Saturday afternoon of this week, besides having the usual pleasant attractions, is likely to have a warm two-men team competition to determine who is who, and how and why. This came from a remark made by Mr. L. Harrison, who said, in a far away tone of voice that he and Harold Money could beat any two shooters about New York. The result was that Messrs. Banks and Remsen, Carl von Lengerke, and C. W. Dudley, Dr. A. A. Webber and W. Hopkins and Capt. Money and J. B. Hopkins announced that they were anxious to know all about it; so they will shoot at 200 targets per team, and John S. Wright, with his customary beneficence, declared that he has a $10 bill for the winning team.

Under date of July 8, Mr. John Parker, of the Peters Cartridge Co., informs us that he will hold his eighth annual international tournament in Detroit, Sept. 19 to 22, inclusive, at live birds and targets. Five hundred dollars cash will be added by Peters Cartridge Co. besides several international trophies. He adds: "I would like to hear from Indianapolis, Dayton, Cincinnati, Nashville and Chattanooga, and arrange a circuit of shoots to follow mine, one week after the other, as was talked of last year.

Mr. J. W. Todd, of Charlotte, N. C., was a visitor at Lyndhurst, witnessing the contest for the championship of New Jersey between Messrs. Money and Morfey, last Saturday. He was quite regularly in the tournaments as a competitor at one time, not so very long ago, and in the programme events of the afternoon showed that he retained his old high skill, though shooting a strange gun. He acted as a judge in the championship contest.

On Saturday, July 15, the White Plains Gun Club will hold a target shoot, commencing at 10 o'clock, at the Oak Tree Hotel grounds. There are twelve events at 10, 15, 20 and 25 targets, entrance, 50 cents, $1 and $1.50. No. 11, at 25 targets, has $3 entry. To event 12 $5 will be added. Those who wish may shoot for targets only. Stages to and from grounds.

The Vincennes Gun Club, of Vincennes, Ind., has given two handicap shoots this season, merchandise prizes, and they evoke a high degree of interest among the members. Vincennes is in the midst of a great game region, and was the scene of a great field trial in 1880, and is only a short distance from Bicknell, Ind., where many good field trials have been held.

In a match at 100 live birds, $100 a side, July 7, at Lyndhurst, N. J., on Tom Morfey's grounds, Mr. Aaron Doty defeated Mr. H. M. Heflich by the excellent score of 93 to 85. The birds were a rare good lot, and as the grounds are exceptionally hard, the boundary being under 50yds., the score is first class.

Mr. Harold Money defeated T. W. Morfey for the championship of New Jersey and the E. C. cup in the contest for it, held at New Jersey last Saturday, by the score of 49 to 44. He shot in admirable time and precision, and had the honor of making the highest score yet recorded in the competition for this popular trophy.

The famous representative of the Hunter Arms Co., Mr. Harvey McMurchy, made a short visit to New York last week, and was the recipient of the glad hand among his many shooting friends in Sportsmen's Row during the visits he made in that section on Thursday and Friday.

The impetus in trap-shooting matters, particularly in the West, is a most gratifying sign in the trap-shooting world. The contemplated movement toward a central trap-shooting point around which all can try conclusions is most commendable. There is no reason why it should not be a success.

Mr. Aaron Doty, of Paterson, N. J., and Mr. Harold Money, of Oakland, N. J., have arranged a live-bird match, $100 a side, 100 birds, the contest to take place at Lyndhurst, N. J., on Friday of this week.

Aug. 15 to 17, inclusive, are the dates fixed upon for the ninth annual tournament of the Arkansas State Sportsmen's Association. The prospects are set forth in another column by Mr. Paul R. Litzke.

Mr. Fred Hoey, who at one time was one of the most active and skillful of live-bird shots, has been appointed manager of the New York Base Ball Club.

Mr. Noel Money is expected to arrive in New York some time the latter part of this month, thence goes to England a few days thereafter.

The members of the Oneida County Association will hold a handicap shoot on each Saturday, the prizes being small sums of money.

The shooting programme of the Country Club for 1899 can be obtained of Messrs. Daly & Chanfrau, Long Branch, N. J.

The Belle Meade Gun Club, Nashville, Tenn., has fixed upon Oct. 23-28 for its tournament; targets and live birds.

BERNARD WATERS.

SHERBROOKE GUN CLUB TOURNAMENT.

IN NEW JERSEY.

Hudson Gun Club.

JERSEY CITY, N. J., July 3.—The scores made to-day in our club shoot follow: In a match at 25 targets between C. Dudley and F. Hansman the former scored 21 to 16. In the return match Hansman won; score, 20 to 19. In a mtach at 15 Dudley's score was 12, Hansman's 10:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

THOS. KELLY, Sec'y.

New Jersey Central League.

South Amboy, N. J., July 8.—Four teams competed in this contest, the Reservoir Gun Club, of New Brunswick, coming out first, with a total of 86 out of a possible 125. This was a better score than appears on the face, for the conditions were hard, the targets being thrown very hard and a 4 o'clock flukey wind adding to the difficulty. The Raritan Bay was the background. Some extra shooting, by way of warming up, was engaged in, mostly 10-target events. The Dunellen team, usually on hand, failed to appear to-day. The next contest takes place on July 22, on the grounds of the Reservoir Gun Club, New Brunswick. The contest to-day was on the grounds of the Columbia Gun Club, of South Amboy. The score:

Reservoir Gun Club, of New Brunswick.	
J C Belloff	22
McDowell	18
Bissett	17
R Applegate	15
H Smith	14—86
Columbia Gun Club, of South Amboy.

Keller, Jr	6—70

Doty Defeats Heflich.

Lyndhurst, N. J., July 7.—The contest to-day between Messrs. Aaron Doty and A. Heflich was something of a surprise in its results; not in that one would beat the other, but in the high score which Doty made and the decisive defeat which it signified. The birds were a picked good lot. The quality of them is shown in a way by the fact that out of the lot there were but 2 sitters, and they lagged but momentarily. Out of the 7 Doty lost 4 died out of bounds, while Heflich lost seven out. The match began at 2:46 and took about two hours' time from start to finish. Doty shot in fine time and with great accuracy. The veteran Capt. A. W. Money handled him. Each shot Trap shells, 1¼, No. 7; Doty, 3½ drams E. C.; Heflich, 3½ drams Schultze. Following are the scores, each man standing at 30yds.:

Trap score type—Copyright, 1899, by Forest and Stream Pub. Co.

Extra events were $3 miss-and-outs; all stood at 30yds., save in No. 4, in which the first two rounds were at 33yds., the rest 35yds.:

East Side Gun Club.

NEWARK, N. J., July 4.—The live-bird shoot of the East Side Gun Club, held on Smith Brothers' grounds, attracted a small attendance to-day. The performance of Feigenspan rather surpassed that of his competitors, though none of the shooting was up to the capabilities of those present. All stood at 28yds. Results are tabulated below. A side affair was a match between Messrs. Feigenspan and Koegel at 8 birds, the former winning by 1 bird; score 6 to 5. Each stood at 28yds. The scores:

Events:	1	2	3	4	5	6	7	8	9

Feigenspan .....10111011—6 Koegel .....10111010—5

Championship of New Jersey.

July 8.—The contest for the E. C. cup, emblematic of the championship of New Jersey, was a competition well worth seeing, for in it were two men quite as distinct as well could be imagined, in that one was a seasoned, well-tried hero of many struggles, the other a youngster, comparatively, who had shown a racing stride, had won a few hot competitions, but had not been out often enough to satisfy all that the inquisitive critic would care to know. One was slim and fairly tall, with youth which many might envy; the other had a breadth of shoulder which could easily have carried Atlas and his load. The one was Mr. Harold Money, the challenger; the other was the hero of many struggles and many victories, Mr. T. W. Morfey.

As to the former, he smashed 49 out of the 50 targets in a manner which suggested a pleasant stroll among pleasant landscapes. His time was excellent, and the targets were in the center of every load except one, the unfortunate third, which lost the honors bestowed on its fellows, and was the only one which escaped.

The race began about the middle of the afternoon, quite an audience being assembled to witness the contest, each gladiator's "rooters" having bouquets of reasons why his own choice should win in a walk. Morfey missed two out of his first three; Money missed one, and thereafter refused to consider misses, going straight to the finish, and shooting in a form which would have engaged the closest attention of the best masters of the gun in the world; for, be it known, the breaking of targets on Tom Morfey's grounds is not of the easy nature of breaking eggs for breakfast.

Capt. A. W. Money acted as referee, the judges being Messrs. J. W. Todd, of Charlotte, N. C., a mighty man with the shotgun, and Ed Banks, secretary of the E. C. & Schultz Co.

The light was the soft subdued kind coming from a veiling of clouds, so that there was an even light, regardless of the nooks and corners of the background. In this respect the condition was favorable for good scores. On the other hand, the swift, lively targets, flying high, low, sharply right and left, and all as it might be, required a high degree of skill to negotiate without bumping against a goose egg. The following score tells the story of how Mr. Harold Money took the cup under his arm and figuratively walked off with it:

T W Morfey.....0101111111111011111111111110—21
1110110111111111111111111—23—44
H Money.....1101111111111111111111111—24
1111111111111111111111111—25—49

This event was No. 5 on the programme. Sweepstakes were shot as follows:

Events:			1	2	3	4	5	6	7	8	9	10
Targets:	10	25	25									
H Money	10	18	20	14	11	14	..	49	13	25	13	13	15
Morfey	7	..	23	12	13	10	14	44	14	23	14	13	14
Banks	..	23	22	15	14	15	15	..	16	21	15	12	13
Capt Money	..	19	18	12	9	12	14	..	10	23	12	12	12
Todd	..	16	23	14	14	15	14	..	12	21	12	13	14
A Doty	..	..	13	14	12	11	14	..	11	21	14	..	..
Moffett	..	..	18	12	7	9	9	..	11	17	12	..	..
Waters	..	..	18	9	14	12	9	..	11	17	..	..	..

In event No. 4 Morfey, Banks, Capt. Money, Todd and Doty made the squad record of the grounds, scoring 71 out of a possible 75. In five of the programme events Banks missed only one target in 75, though Todd was pressing him close on general results.

Freehold Gun Club.

Freehold, N. J., July 8.—The regular semi-monthly shoot of the Freehold Gun Club took place on Friday, July 7, at targets.

In the following event Hance was first and Laird second:

C. C. SNYDER, Sec'y.

ON LONG ISLAND.

Brooklyn Gun Club.

Brooklyn, L. I., July 4.—The Brooklyn Gun Club was in evidence in the diversion of the day. There were quite a number of ladies present, so that each man stood in more graceful pose at the score, with chest expanded, as was becoming the day and the event. John Wright was present in person, and managed matters in his usual good form. A team race was an enlivening feature, which resulted in a win for each, the talent composing the teams being very near even.

Team race, five men on a side, 15 targets:

Dr. Creamer's Team.

Creamer	101010101101110— 9
Webber	111111111101011—13
Schoebel	101111011100111—11
Wright	001000000000001— 3
Milliken	000111000010101— 6—42

Dr. Kemble's Team.

Kemble	101101110101110—10
Waters	101111110101111—12
Lane	0101110111111100—10
David	0100100010000001— 4
Paterson	100111100010111— 9—45

Second team race:

Creamer	100111111101011—11
Webber	0110111111111111—13
Schoebel	111101011110010—10
Wright	000001001001000— 3
Milliken	011111000011000— 7—44
Kemble	011111011101111—12
Waters	001111111101011—11
Lane	000100111111110— 9
David	010100111101010— 8
Paterson	000000000001000— 1—41

Prize shoot, handicap, misses as breaks, 30 targets; prize gun case:

Webber, 4	111111111111111111000010111111—29
Schoebel, 6	011101111111101110000011011111 -28
Creamer, 8	110111111101101101111101101111 30
Kemble, 4	111001011111111001110110111110—26
Waters, 4	111001111110011111011111111101—28
Lane, 10	101111111111111111011101111111—30
Milliken, 14	001010010111001101011100101101—30
Wright, 14	010000100010010011101111001001—27

Shoot-off:

Lane, 10	110111011111111000010010011011 29
Milliken, 14	001011111011011001010101100101—30
Creamer, 8	101110111110111111101011101011—30

Creamer and Milliken tied. Milliken withdrew. Creamer won.

Sweepstake events were as follows:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	15	10	*	15	Targets:	15	10	*	15
Dr A A Webber	11	9	8	13	Paterson	10	..	..	..
Dr Creamer	11	7	4	10	Milliken	..	1	3	..
Dr Kemble	10	5	7	9	Wright	..	..	6	..
Schoebel	11	8	4	11	Lane	..	..	..	9

* Five pairs.

July 8.—There was a fairly good attendance and some good shooting in the different events. There is a noticeable cutting down of handicaps, as the season advances. The shooting was varied, there being more novelty and more events at doubles in to-day's shoot. The prize shoot, handicap, was won by Dr. A. A. Webber, who is shooting a marvelous gait, considering that he is a beginner.

The scores in the prize shoot, handicap, are as follows:

Creamer, 4	111111111101001101101101—23
W Hopkins, 4	010110110111111111111111—25
Kemble, 3	111111111111111110111111—25
Ben Ali, 4	101110111111111111111111—25
Webber, 3	111111111111011111100111—25
Lane, 7	110000111011110111010111—24

* Five singles and five pairs:

No. 5 was a walking match. No. 6 was rapid-fire, one after the other. No. 7 was 15 singles and 5 pairs:

GEO. B. PATERSON, Sec'y.

Portsmouth Gun Club.

THE Fourth of July shoot of the Portsmouth (N. H.) Gun Club was one of the leading local events of the Fourth. It was attended by shooters from Boston, Haverhill, Dover and York, besides a large delegation of sportsmen from this locality.

It was a fine day. The heat was intense, but a good breeze swept across the field all day and a large tent afforded shelter from the sun's rays.

The Boston delegation, including Miss Kirkwood, the Messrs. Kirkwood, Leroy, Woodward and Andres, together with a squad of Haverhill shooters and their ladies, arrived first. They were met at the depot by Herbert E. Philbrick, vice-president of the club, and escorted to the electric car, which conveyed them within a short distance of the grounds. A little later a party of seventeen came, most of them from Dover, with a few York representatives. This party included a half dozen ladies.

Arrived at the club grounds a cordial welcome was received from the local sportsmen, who were present in goodly numbers, the ladies of the club doing their best to make the visitors feel at home and as comfortable as the heat would permit.

It was a matter of much regret that the members of the Exeter Club were unable to be present, a shoot on their own grounds preventing.

At 10:30 the shooting began, continuing until late in the afternoon.

Some fine scores were made by the out-of-town experts, Miss Kirkwood, as usual, breaking her targets with precision and skill, and on her score of 15 straight receiving hearty applause.

Leroy, of the Boston Gun Club, who represents the Du Pont Powder Co., shooting U. M. C. shells in a Remington gun, was high gun for the day, breaking 105 out of 115 shot at. Miskay was a good second.

At 1 o'clock dinner was served under the big tent and was a fine spread, including quite an elaborate menu, served in first-class manner by the ladies of the club.

The team shoot was a most spirited contest between the representatives of the clubs present. The friendly rivalry resulted in some excellent shooting and the Boston Club carried off the honors, President Newick, of the local club, leading the cheers which greeted the victors. The complete scores of the team shoot were as follows, being at 15 targets, thrown at unknown angles:

Boston Gun Club.—Leroy 14, Horace 13, Miskay 15, Williams 10, Andres 9. Total 61.

Haverhill Gun Club.—Tozier 13, Griggs 10, Graffam 10, Miller 9, F. Manson 7. Total 49.

Dover Gun Club.—Wentworth 12, Beard 12, Corson 12, Haley 8, Stevens 8. Total 52.

Portsmouth Gun Club.—White 10, Weston 12, Lewis 9, Newick 12, W. Philbrick 14. Total 57.

The scores for the day follow, the eighth event being the team shoot. Events alternated from regular to unknown angles:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	10	15	10	10	15	10	15	10	10
Leroy	8	10	13	9	9	14	9	..	9	10

It was a day greatly enjoyed and to be pleasantly remembered by all present.

W. I. PHILBRICK,
Of the Portsmouth (N. H.) Gun Club.

WESTERN TRAPS.

Montgomery Ward Diamond Badge.

CHICAGO, Ill., July 7.—The tenth contest of the series for the Montgomery Ward diamond badge brought out-to-day the smallest entry which has yet been seen in these events, only nine men appearing at the score, although the weather was fine and the birds very good. Ar fresh wind blowing to the left from the score helped to make matters interesting, and there were only two straights—Shaw and Amberg, each of whom needed his handicap allowance. Dr. Shaw has been in tie for first place seven times out of nine contests, but again to-day he was defeated in the ties, losing 2 birds out of his first four. Amberg killed his 4 straight and won the medal, Dr. Shaw winning high average again. Sturdevant was alone with 14, and White won the ties on 13. The winning of Mr. Amberg to-day makes the list of winners eight in number. Sturdevant and Roll have won the medal twice each. Alabaster, Leffingwell, Elias, O'Brien, Nelson and Amberg have won it once each. The final shoot-off will be held August 4. Below are the scores of to-day:

W B Leffingwell, 30, 1.....2021120210211122 —13
Dr Shaw, 30, 1.....1122212111221101 —15
J B Barto, 29, 2.....1110211212200012 2 —13
J M Gillespie, 29, 2.....2202011221111 0010 —12
R Simonetti, 28, 3.....0110110221111122*10—13
J L White, 30, 1.....0111221210112012 —13
J H Amberg, 30, 2.....1122222210111*2212 —15
E Sturdevant, 30, 0.....1121222*2122222 —14
Geo Roll, 30, 0.....202220222122*21 —12
Dr Shaw, 30, 0.....10*2 J H Amberg, 30, 0.....1112

Following the above a short sweep was shot, as below:

J B Barto.....10022 W B Leffingwell.....01111
Geo Roll.....01222 J L White.....02101
E Sturdevant.....20200

Howlett—Von Lengerke.

Among other visitors in Chicago this week is Mr. Alfred Ames Howlett, president of the Lefever Arms Co., Syracuse, N. Y. Mr. Howlett is now on his way East after a long visit on the Coast, where he spent the winter and had a most enjoyable time. Mr. Howlett had a taste of the good hunting of the Western slope, but it does not seem to have injured his zest in the sport of the traps, although he has done little shooting at the traps for some time. To-day he and Mr. O. von Lengerke shot a friendly race at Watson's—25 birds per man. The birds were very good and the scores of both men are good ones, the Chicago man proving victor by a margin of 3 birds. Mr. Howlett goes East to-morrow evening, after a stay in Chicago which we all wish might be longer. The following are the scores of the little race above mentioned:

A A Howlett.....0211202112020012 11*222011—18
O von Lengerke.....2022222022222222222222200—21

Following the above a few gentlemen shot for a time together, with the results below:

Dr Shaw.....22222 J M Gillespie.....01
J L White.....2112221221 W B Leffingwell.....2202021
Howlett.....1202111022 R Simonetti.....02

Fourth at Belle Meade.

July 8.—From advices just at hand, courtesy of Mr. W. R. Elliston, Nashville, Tenn., there would seem to have been a very warm day at famous Belle Meade Park on the Fourth. It was live birds and targets, but chiefly live birds, and the scores show very high. In a field of 19 Mr. Legler had to go to 20 before the winner was determined. In the race for the State championship cup, between Mr. Elliston and Mr. De Bow, both men killed 47 out of 50. They shot off at 10 birds and again tied. In the second string of 10 Mr. De Bow lost a bird and Mr. Elliston killed straight, winning the cup. The latter was then generously put up again by Mr. Elliston, and shot for by Messrs. Elliston, of Nashville, and Frank and Neely, of Memphis. It was won on this occasion by Mr. Neely, who killed 25 straight. In the targets our friend Devine, of Memphis, showed first in two events; Vance, of Memphis, first once; Frank, of Memphis, first once, and Messrs. Campbell and Green, of Franklin, each first in one event. High average on targets was won by Campbell. 91 out of 120; second average by Green, 90 out of 120. Following are the scores and summaries, each of the six events at 20 targets:

Vance, of Memphis, 18; T. A. Devine, of Memphis, 19; T. A. Devine, of Memphis, 19; A. H. Frank, of Memphis, 19; J. C. Campbell, of Franklin, 20; Ed. Green, of Franklin, 20.

No. 7.—Miss and out; live birds; $3 entrance; birds extra; 50, 30 and 20 per cent.

Belle Meade Gun Club claims dates for Oct. 23, 24, 25, 26, 27 and 28, for a big tournament, with $500 or more added, first three days targets and last three days live birds. Information regarding this shoot can be had of Mr. W. R. Elliston, at Nashville, or Jack Parker, manager Peters Cartridge Co., Cincinnati, O. From all indications this will be one of the best of the entire fall circuit, and it is worth bearing in mind for future reference.

Event No. 6, 25 targets: H. Shaw 8, W. R. Morgan 17, O. J. Buck 18, J. L. Jones 12, H. B. Morgan 17, Cunningham 18.

Event No. 7, 15 targets: W. R. Morgan 9, J. L. Jones 10, H. B. Morgan 14, H. D. James 10, O. J. Buck 12, H. D. James 10, J. L. Jones 10, H. B. Morgan 15.

July 8.—This was anything but a perfect day for target shooting. The wind blew very hard—left-quartering—making the birds jump in every direction. The scores are not up to usual. As the magautrap broke down we had to go to the five-traps, which is quite a change.

Cunnyngham won Class A, Dr. Miller won Class B, R. B. Mack won Class C, Dr. Morton won Class D.

Garfield Gun Club.

Chicago, July 1.—The weather was essentially fine, although a strong wind blew from the southwest across the traps, making the flight of targets erratic and the shooting consequently difficult. Dr. Shaw carried off the honors of the day with a straight score of 25 in the trophy event.

In the ninth trophy shoot, 25 targets, Dr. Shaw won in Class A with 25 straight, Nusley won in Class B and J. Fanning in Class C. The scores:

Kehl.....1010100101000100100010110—10

CHICAGO, July 5.—*Editor Forest and Stream:* Inclosed please find scores of Garfield Gun Club made on July 4, on pigeons and bluerock targets.

The trophy event, 10 pigeons, for an elegant silver (gold-lined) cup, valued at $75, resulted in four ties and ten straight kills. T. P. Hicks, Dr. Shaw, M. H. Shaw and Dr. Meek tied, and agreed to shoot it off in next event. Hicks had the misfortune of losing his first bird, a dark-colored strong-flying left-quartering outgoer, which, although struck fairly well with both barrels, went over the fence. After this event was finished the other contestants concluded to finish the contest on a miss-and-out, as only a few birds were left. They continued shooting steadily and killing cleanly until all had killed 24 straight, when Dr. Meek went to score on his 25th, and made a beautiful kill of a swift cinnamon-colored bird with his first barrel. Dr. Shaw, who followed, also killed his with his first barrel. M. H. Shaw lost his 25th, making Drs. Meek and Shaw tied for the cup and only one more pigeon in the traps and none in the coops. As a result the doctors agreed to divide the money and toss up for possession of cup for the year. Dr. Meek won on the toss.

The birds were an unusually good lot for summer birds, only two birds being shot on the ground, as refusing to fly in the whole lot of 500.

After the pigeon shoot came dinner, which, on account of rain, was set in the club house instead of under tents on the lawn, as always before; and it was well the precaution was taken, as before dinner was half over it rained heavily. The ladies had provided an abundance of ham, chicken and tongue sandwiches, salads, cakes, etc., etc., and the way they disappeared among a crowd of about sixty hungry shooters was conclusive evidence of their quality.

After all had eaten all they could the target traps were put out and a prize shoot indulged in under a handicap arranged on percentage plan, in which Kehl won first, Dr. Royce second, Northcott third, T. Eaton fourth, S. Palmer fifth.

In spite of the rain, which fell almost continually all day long, we had a splendid time, and all went home satisfied and glad they had braved the weather and come.

July 8.—Herewith please find scores made by Garfield Gun Club to-day. The weather was fine, but quite windy, making the shooting in the early part of the afternoon quite difficult.

Dr. Meek, T. Eaton and Mrs. Dr. Shaw tied on a score of 21 in the trophy event, and decided to cast lots for the trophy instead of shooting it off. Mrs. Shaw was the lucky one in the game of chance, and is consequently credited with winning the medal.

The small attendance in the trophy shoot to-day—only nineteen members participating—is accounted for by the July 4 shoot, an all day affair, coming in the same week. The scores:

No. 4.—Team shoot, 15 targets:

Richards' Team.		Graham's Team.	
Richards	11	Graham	11
Dr Meek	11	Dr Shaw	13
Northcott	13	Mrs Shaw	11

Mr. Henry J. Beer, president of the Blue Island Gun Club, Blue Island, Ill., informs us that Mr. G. F. Simmons, secretary of the Illinois State Sportsmen's Association, has never given his club its half of second prize in the tournament of 1898, though often asked to do so. The club protests against the unsportsmanlike treatment, and thinks that the sportsmen of the State of Illinois should know the facts. Mr. Beer incloses a copy of a letter to Mr. Simmons, under date of May 22, which reviews the case and Mr. Simmons acts in connection therewith, with a demand for payment.

Under date of July 7, Mr. George N. Thomas, of Trenton, N. J., writes us: "The Walsrode Gun Club was organized in this city on above date and the following officers elected: President Chas. G. Cook; Vice-President, Frank J. Eppuer; Secretary George N. Thomas; Treasurer, James I. Woolverton. Board of Governors: Wm. B. Weidmann, Edward Titus, Chas. O. Lutes Field Captain, Wm. L. Mickel. Committee of Club House and Grounds: George N. Thomas, Jas. I. Woolverton. The object of the club is to promote the sport of target and live-bird shooting."

Trap Around Reading.

READING, Pa., July 4.—Of all open target tournaments ever held on the South End Gun Club's grounds, the shoot to-day was the most successful, and all who contested in the events were pleased, not only by their good shooting, as good scores were made, but also highly pleased with the hospitable treatment at the hands of the South End Club's members. The shooting began at 9 A. M. and continued until 12, when the dinner hour adjournment went into effect. Promptly at 1 P. M. the magautrap was again started and continued running until near dark. The principal event of the day was the shoot for the club's medals, and as some dark horses had been entered some of the members expected big surprises. Matz, of Class A, retained his medal with a straight score of 25. The same way in Class B—President Miles retained his medal by breaking 21, while Class C medal was awarded to Fornoff, with 16 breaks to his credit. The scores of the club shoot follow, 25 targets per man, for Class A, B and C shooters of members only:

Class A, gold medal: Capt. Yost 22, Essick 11, G. Miller 16, Shaaber 24, Rhoads 19, Gerhard 17, Eshelman 14, Ball 18, Matz 25, Jones 21.

Class B, silver medal: Schultz 18, Miles 21, Texter 19, Gicker 20.

Class C, bronze medal: Fornoff 16, Willson 3.

DUSTER.

Auburn Gun Club.

AUBURN, Me.—July 1 being a pleasant day, the attendance was large at the Auburn (Me.) Gun Club's weekly shoot. A strong westerly wind was blowing, making the targets somewhat uncertain, but the shooting was fast and furious, thirty-seven men facing the traps. A first trial was given the magautrap which the club has recently purchased. The scores were very good and the trap was unanimously voted a success. In the regular 25-target match for the gold badge, six men were tied for it. Francis won first on the shoot-off.

Following are the scores for the afternoon:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	10	25	15	10	15	15	10	10
Brunnewell	10	9	21	13	8	..	..	10	..

L. A. BARKER, Sec'y.

Fort Smith Gun Club.

FORT SMITH, Ark., July 6.—The attendance was small at the regular weekly shoot Thursday—too much Fourth of July and the excessive heat being, no doubt, the causes.

The traps and trap boys had also evidently had too much Fourth, for they proceeded to break birds with great success; 1,000 birds were used in an attempt to run off the shoot, 50 per cent. of them striking in the traps.

Matthews won Class A medal on 38 out of the first 50 birds he shot at, and Bob Hunt won Class B on a score of 23 out of the same number. The poor shooting was largely due to the breaking of the birds in the traps, a shooter having in many instances to pull a half dozen times before he would get a bird to shoot which is very trying on the nerves. Following are the scores:

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
Matthews	70	53	.760	Miller	20	8	.400
Smith	70	46	.660	A W Boyd	50	19	.380
Allen	70	39	.560	Trobridge	50	19	.380
Hunt	70	31	.440	Mulraney	50	13	.260

SECRETARY.

Trap at Red Hill, Montgomery Co., Pa.

RED HILL, Pa.—The following scores were made in a contest for a live deer. The conditions were 3 live birds, then miss and out. There seventy-two entries. The score:

G. M. Welker 2, C. F. Miller 2, C. F. Miller 3, Geo. Hansell 1, L. C. Petrie 1, C. F. Miller 3, C. Hunsberger 3, S. J. Croll 2, H. E. Buckwalter 3, L. W. Mazurei 0, G. M. Welker 2, M. S. Brey 2, H. E. Buckwalter 3, E. Emmers 3, C. F. Miller 2, M. S. Brey 3, L. C. Petrie 3, H. E. Buckwalter 2, D. B. Clack 1, E. Emmers 3, S. J. Croll 1, Geo. Hansell 3, Ed. Emmers 2, C. Hunsberger 3, J. Hildebutel 2, J. Hillegass 3, H. W. Benning 3, M. S. Brey 2, O. Hacker 2, C. F. Miller 3, J. Hildebutel 2, S. J. Croll 2, L. C. Petrie 2, A. P. Geist 2, M. S. Brey 3, H. W. Bening 2, J. C. J Hillegass	111110	— 5	HW Benning	1111111111110	—12
M Brey	11111111110	—10	O Engleman	10	— 1
C Miller	11111111110	—10	C G Heist	110	— 2
Buckwalter	11111111111111	—16	J L Rehrig	11111111111111111	—16

Rehrig and Buckwalter divided second money.

C. F. KRAMLICH.

Arkansas and the South.

Cincinnatti Gun Club.

LITTLE ROCK, Ark. —It is becoming universally customary all over the country for the gun clubs to celebrate Independence Day with a shoot, so it is but natural that so progressive a club as Cincinnati can boast of should keep up with the drift of time. Mr. Theo. Foucar, a local boniface, has recently donated the club a very handsome sup for competition, and the directors decided to hold the inaugural contest on this date. The conditions were 100 targets, handicap event. This showed nineteen entries, of which three made a possible total—Dreihs, Waddell and Heikes, with handicaps respectively of 17, 22 and 5. Heikes made the highest total, scoring 95 out of his 100, which enabled him to get in the tie, but Dreihs won in the shoot-off. None of the other contestants scored 90 without their handicap. Squires, with 89, was the nearest approach to this. The trophy is subject to challenge, and Arthur Campbell, the hustling superintendent of the club, is the first one to shy his castor at the holder.

Kentucky Gun Club.

At Louisville the shooters of the city and State were also transacting business with the targets on the Fourth; in fact, this club has done this annually on this date for the past six years. The principal factor in the crockery challenge act was R. L. Trimble, with his Winchester gun, Leader shells and Du Pont powder. In the language of the gamin, "he didn't do a thing to 'em" but break them all in the championship event, which means 50 straight, and which also made his third win in these contests. Thereby he can now retain the trophy permanently. Furthermore, Trimble also made the highest average of the day.

Arkansas State Sportsmen's Association.

At a meeting of the Capital Gun Club last night, under whose auspices the ninth annual meeting and tournament of the Arkansas State Sportsmen's Association will be held, it was decided to claim the dates of August 15 to 17 for disposing of this event. The attraction, as heretofore, will consist of added money for all, and trophy for the State shooters on the side. It is fair to suppose that this shoot will be on a par with the previous one given by this Association; at least every effort will be made to accomplish this. The contingent of State shooters should be especially large on this occasion, for most of the smaller towns in the State can this year boast of very active gun clubs.

At the two previous tournaments of the Association, the sum of $500 was added to the purses, and the local club will endeavor to duplicate this at the forthcoming shoot, or its equivalent. It has been the custom in the South to charge 3 cents for targets at added money tournaments; but the local shooters, realizing that this is becoming unpopular, have decided to charge only 2 cents hereafter. The present plan is to add $100 each day and set aside $50 for average money. This tournament will be open to amateurs only, but there will probably be a purse hung up for the trade representatives to compete for.

PAUL R. LITZKE.

Du Pont Trophy Contest.

DENVER, Colo., July 1.—Complying with the request of Mr. Paul Litzke, I beg to inclose you the scores of my match with J. A. R. Elliott at 100 birds for Du Pont trophy. The birds were very fast for the first 30, when it commenced raining, and in consequence from that on they were not so good; but all through they were an exceptionally good lot:

J A R Elliott	2022222222021112212122222	—23
	1222222222222222222222222	—25

A. B. DANIELS.

Pawling Rod and Gun Club.

PAWLING, N. Y., July 4.—The attendance was light, although the programme was attractive. The great amount of shooting offered everywhere on July 4 no doubt split up the shooting support into fine parts. There were twelve events on the programme, with a total of 190 targets and $15.05 entrance. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	10	15	20	15	20	15	10	15	20	10	15	25

Sheffield Gun Club.

LORAIN, O., July 5.—A very good afternoon's sport was enjoyed on Tuesday, July 4, shooting commencing at 1:30 P. M. and continuing until dark. Several of our best and most regular shooters were unable to be with us, but their places were well filled by Messrs. Lola, Gold Dust, W. T. and St. Clair, of Cleveland and Glenville gun clubs, who paid us a surprise visit.

Our magautrap, thanks to a new eccentric kindly supplied by the Cleveland Target Co. at the last moment, worked as we have never seen it work before, only 15 birds out of 1,800 being broken by the trap.

The most noticeable performances of the afternoon were two straight 15s by Dr. Trombley, one by G. Freeland; 9 out of 10 doubles by W. Freeland and 6 straight doubles by Gold Dust, whose rapid manipulation of his "pump" surprised those who were not acquainted with the speed possibilities of that weapon.

Below will be found full scores. Events Nos. 5 and 6 were handicap sweepstakes; Nos. 7, 10, 12, 15 and 18, scratch sweeps, and No. 17 a scratch sweep at 10 double rises:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18

We hold shoots every Thursday afternoon from 3 to 7, or later if light permits, and are delighted to welcome any sportsmen who care to pay us a visit. We shall be pleased to arrange a few home and home matches with any clubs that will favor us with a challenge.

H. G. WARDALE, Sec'y.

Fitchburg Rifle and Gun Club.

FITCHBURG, Mass., July 7.—The Fitchburg Rifle and Gun Club held a very successful all-day shoot July 4. The day was fine, though too hot for comfort. Only twenty shooters turned out to enjoy the sport. Some very good scores were made, though some of the shooters to whom we look for good work were somewhat off-color. E. R. Wilbur was easily high man, both morning and afternoon. He shot in a way that made the others realize they would have to get on their shooting clothes to keep in sight of him in the future. He retained the captaincy of Team 1, the only one thus far having the honor twice in succession.

Russell and Cutler, who have just returned from a two weeks' fishing trip in Nova Scotia, seemed to be still dreaming of fish, which may account for their poor showing at the traps Tuesday, while Converse was somewhat unnerved by their reports, as he is about to spend ten days in New Hampshire. Others had to fall back on their old familiar excuses—open guns, poor ammunition, etc. The scores are as follows:

	Team 1. 10 Regulars.	10 Unknown.	10 Reverse.
Wilbur	1111111100	0111100111	0111111011—23
Putnam	1001111111	1011110111	1110000001—20
Cutler	0100100100	1011001101	1101111101—17
Russell	1111100101	0001119001	1001000110—15
	Team 2.		
Converse	1111101011	1000111101	0011110100—19

Events 1, 2, 4, 6, 9, 11, 13, 14 and 17, regulars; events 3, 5, 7, 10 and 15, unknown angles; events 8, 12 and 16, reverse; event 18, unknown traps and angles.

C.

Rahway Gun Club.

RAHWAY, N. J., July 6.—The Rahway Gun Club, which was organized several months ago with a membership of twenty-eight, had its second shoot at clay birds on its handsome new grounds, opposite the New Jersey State Reformatory, on the Fourth. Each of the six men composing the two teams shot at 25 birds. It was a close contest, as the following score will show:

Team No. 1:

L Crane	1111100011011101111110011—18
A Gowams	1100111111111111101100111—20
J Housman	0101010011011110010101110—14
M H Acken	1110001111001001101101111—16
J Urmston	0001011000000011111000000— 8
J Gibson	0101010010001001110111100—12—88

Team No. 2:

G Wilson	1100010001110101111011011—15
S Potter	1101100111110110001011000—14
W J Browne	1010001111101010101001001—13
F Acken	1010110011110100010110011—13
E Mayes	1110101111111101101110110—19
J Mead	0101001001001010011110010—11—85

FRANK G. BROWN.

Catchpole Gun Club.

WOLCOTT, N. Y., June 28.—The following scores were made this afternoon by our club. The wind blew strongly and made the targets fly rather difficult. Mr. J. N. Knapp, of Auburn, N. Y., was present and shot in his usual good form:

Wadsworth	1111111110111101111111001—21
Knapp	1011010101011011111111110—18
Fowler	1101100111111010011111010—17
Burk	0011110101101010000111011—14
Wadsworth	0011111111110110111111101—21
Knapp	1011111011110110111111110—20
Fowler	1111101111111111111111100—22
Wadsworth	111101101101111111 —14
Knapp	0011111111101111011 —13
Fowler	101111110100001 — 9

The following scores were at doubles:

Wadsworth	01	01	01	00	00	11	11	11	00	10
Knapp	01	11	11	10	11	10	10	11	10	10
Fowler	11	11	11	11	10	01	11	11	10	11

E. A. WADSWORTH, Sec'y.

The Sherbrooke Tournament.

THE Dominion Day shoot at Sherbrooke, July 1, was an enjoyable one to some thirty-five who took part.

Several tournaments lately held across the line, and others coming in the near future, interfered with the attendance in a marked degree. However, those who came say they don't regret missing the others, as everything is always so pleasant at Sherbrooke.

The programme was begun sharp on time at 8 A. M. The merchandise match was a great attraction; so much so that, as will be seen by the scores in the regular events, shooters were often waiting for a chance to get a "12 straight" instead of being on hand for the regular matches. No less than 204 entries and re-entries were made during the day.

There were eighteen prizes, from $16 in value down to $1, and only about thirty-five people to divide them among. Straight 12s were hard to get during the forenoon. Shortly after noon Barrett, of Montpelier, did it, and that stimulated things. Oddly enough, his fellow townsman, G. B. Walton, was the next to get a straight, but as the wind and sun got lower the number of straights increased.

Of professional shooters—that particularly welcome class which is composed of the nicest fellows one could wish to meet—there were only three: B. H. Norton, of New York, representing the Hazard Powder Co., and Messrs. Dickson and Gallagher, of the Robin Hood Powder Co. Mr. Norton has always been a welcome visitor, and the club hopes the merry men from Winnipeg will also come again.

A pleasant interruption occurred during the forenoon. Two deer, full-grown, handsome creatures, came trotting across the hill scarce 600yds. away. The shooting stopped, and the crowd stood in amazement, looking at the beautiful sight. The deer looked across the river for a few moments, and then wheeled, and half-trotting, half-loping, disappeared over the hill from whence they came. Then the visitors made use of expressions which must have caused the bosoms of the good sportsmen of Sherbrooke to swell with pride. Only in localities where the game laws are held in holy reverence are such sights to be seen. The visitors were assured that it was not at all uncommon to see deer within the limits of this city of 12,000 inhabitants.

The scores in the regular events are given below. Besides those named, a large number shot in only two or three events, while several devoted their energies and powder entirely to the merchandise traps:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17

The individual trophy match for the Quebec cup was shot under very hard conditions. The hour was 1 P. M.; the sun, in its usual position at that time, was unusually bright and hot, and a strong wind at the back of the shooters made the targets fly fast and far:

	20 known.	20 unknown.	5 pairs.	Total.
Goodhue	15	14	4	33
Cameron	17	12	5	34

Goodhue's gun failed him, one of the triggers suddenly going wrong, and later in the day compelling him to retire. The scores are the lowest in the history of the cup, but the match was interesting, the scores at no time varying more than 2 birds. Cameron is noted for being a hard man to beat, be the scores high or low.

The expected team match did not come off, owing to the much, regretted absence of Ottawa. A little three-men affair with Montreal, Westmont and Sherbrooke in it, was won by Sherbrooke.

The merchandise prizes went to the following, in the order named: C. O. Barrett, Geo. B. Walton, W. L. Cameron, A. W. Westover, C. Aubin, straights; followed by C. D. White, T. M. Craig, C. G. Thompson, N. G. Bray, A. W. Moreau, W. B. Neil, H. Hibbard, R. Lewis, E. C. Eaton, J. B. Goodhue, W. E. Loomis, Vincent, B. H. Norton, Galbraith, Williams.

The weather was fine—Sherbrooke always has fine weather on tournament days. But it was a hard day to shoot. No extra fine shooting was done. Better can be seen at almost any practice; but the interest kept up throughout the day, and all enjoyed themselves.

The ladies were out in agreeable numbers; not so many as to rattle the timid ones, but just enought to look nice and be so.

The club extends hearty congratulations to all winners and cheerful sympathy to every loser, and hopes all will come again and bring their friends.

The Fourth at Sheldon.

SHELDON, Vt., July 6.—Among those who assembled at Sheldon Junction, Vt., July 4, to compete for the N. P. L. Co.'s cup, and to participate in several other trap-shooting events, were: R. B. Hutcheson, President of the Montreal Gun Club, Montreal, Que.; C. O. Barrett, Montpelier, Vt.; B. H. Norton, New York, etc. The arrangement of the traps was a puzzler to the local shooters, though everything passed off pleasantly, with a single exception: that of the bursting of Mr. Selby's new gun, which fortunately did not injure either Selby or others of the squad who were near by when the accident occurred. Below we give the scores:

Events:	1	2	3	4	5	6	Shot		
Targets:	10	20	21	24	15	12	at.	Broke.	Av.

Minneapolis Gun Club.

MINNEAPOLIS, Minn., July 6.—The feature of the afternoon's shoot at the Minneapolis Gun Club yesterday was Parker's straight score in the club badge competition. He broke 10 singles and 5 pairs out of a possible 20. This is the first time that that score has been made on the grounds this season. Other good scores were also made.

The club will discontinue its Saturday afternoon shoots until further notice, as the St. Paul Rod and Gun Club will hold its annual tournament on Friday and Saturday, July 14 and 15, at Kittsondale, and a large number of the Minneapolis Club will be in attendance. The following are the scores of the day's events:

No. 1, Val Blatz diamond badge, 15 singles, unknown angles: Gillfillan 12, Parker 11, Mrs. Johnston 8, Morrison 8, Woolf 8, Johnston 10, Kennedy 8, Stone 8, McKay 14, Cooper 5, Hays 9, French 9, Black 9, Nelson 8, Sully 13, Neeley 11.

McKay and Sully shot off and the former won the badge.

No. 2, Schlitz diamond badge, 25 singles, unknown angles: Sully 20, Black 12, Hays 14, Stone 18, Morrison 15, Parker 20, McKay 16, Mrs. Johnston 17, Johnston 19, Neeley 21, French 15, Kennedy 16, Woolf 16, Gillfillan 6, Nelson 18, Dr. Bill 15, Cooper 13, Shattuck 14.

Sully won badge.

No. 3, challenge diamond badge, 25 singles, unknown angles: Sully 17, Black 15, Hays 19, Stone 17, Morrison 10, Parker 20, McKay 19, Mrs. Johnston 18, Johnston 18, *Neeley, 22, French 21, Kennedy 17, Woolf 20, Gillfillan 14, *Nelson 16, Brown 17, Shattuck 23.

* Birds only.

Woolf, handicap, 4.

Shattuck won badge.

No. 4, club badges, 10 singles, 5 pairs, unknown angles: Sully 13, Black 14, French 15, Stone 15, Morrison 10, Parker 20, Mrs. Johnston 14, Johnston 14, Neeley 10, Brown 12, McKay 17, Kennedy 12, Woolf 8, Nelson 14, Shattuck 14.

Parker won senior badge, French won junior badge, Stone won amateur badge.

Omaha Gun Club.

OMAHA, Neb., July 5.—Herewith are scores made July 4 on the Omaha Gun Club grounds. Mr. Brucker's win of the Meyers trophy was a very popular one. Shooting is on the boom all over the West:

ROBERTS.

Brockton Gun Club.

BROCKTON, July 1.—Herewith find scores of to-day's shoot over our new magautrap. It was a success in every way. Leroy's work was a pleasing feature. He only missed two of the 100 shot at. His eye finds them, and the Remington does the rest. Visitors from Haverhill, Hingham, Wollaston, South Weymouth, North Easton, Stoughton and Rockland all did good work. Miskay and Horace, of Boston, shot well. Friend Miller, of Haverhill, thought it dead easy over the new trap. One man, "who was an onlooker," wanted to look into the muzzle of the trap to see a bird come out. Oh, my!

Our next shoot will be July 15.

Targets:	10	10	10	10	20	5p	10						Extra H	H

Boston Gun Club.

WELLINGTON, Mass., July 7.—The close proximity of a holiday seems but to augment the Boston Gun Club crowd, and July 5 was no exception. A very pleasant gathering made the most of a very hot afternoon, but Wellington was cooler than most places, so the usual events were discussed with but little delay. Mr. E. C. Ferriday, of the Laflin & Rand Powder Co., New York, paid the club a visit, accompanied by Mr. Leavens, of the home office.

Mr. Leroy, of Du Pont fame, thought the targets small at 21yds. in the first seven events, so he tried the last four at 16, with the result of averaging exactly the same at both distances. In the novelty event, from no yards rise, Leroy and Howard monopolized the honors, with 100 per cent. Horace grasped the first score in prize match, with targets to spare. Other scores below:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	10	10	10	10	10	10	10	10	10	15	15	15
Gordon, 17	3	9	3	6	8	9	8	8	6	12	15	12

St. Paul Rod and Gun Club.

ST. PAUL, Min., July 3.—Herewith is score made at our shoot Saturday afternoon. The attendance was fair, considering that our best shots were attending the Crookston tournament. We shot 2,150 targets. Our club is young, but is growing in popularity, and we hope to be a strong club next year, although trap-shooting has been quite dead in St. Paul the last few years. Wilkinson won the senior badge in the shoot-off with Mark, and C. Hauser the junior.

Score, badge shoot, 25 atrgets, Sergeant system:

Perry	011111111111011111110001111—20
Chief	011110110010000101010101O—12

W D Damon	..	..	..	..	..	14	14	..	..
Dr E. W Knight	..	..	..	..	..	22	20	4	42

On shooting the tie for first prize off H. H. Fassett won. C. H. Gibson won second prize, J. W. Flint third prize and M. H. Ray fourth prize.

Our treasurer, E. A. Norwood, one of our best shots, by the recommendation of his physician, has taken a vacation.

C. H. GIBSON, Sec'y.

Made While You Wait.

In "Our Dumb Animals," May number, is an article on "Pigeon Shooting from Traps" which sets forth the following:

"In view of the great pigeon-shooting matches recently in New Jersey, near New York, we publish the following:

"Chas. Green recently shot a pigeon that had escaped from a pigeon-shooting match without being shot, with nine pins stuck in various parts of its body. The heartlessness of pigeon-shooting sport can be better realized when it is known that at shooting matches pins are stuck in various parts of the bird's body and in the bottom of its feet and up its legs the entire length of the pin. By this method the pigeon is so tortured that it will fly rapidly from the trap when freed. If they escape, as a number of them do, they do not live more than a month at the farthest; the pins shrivel their legs and cause them constant suffering until death comes to their relief. Another method of torture which is frequently used in addition to the pins is to cut the bird's toes off, pull their feathers out, and bite the bird's neck enough to hurt it severely.—Elmer (N. J.) Times.'"

Nothing could be more maliciously false than the foregoing. Nothing could have more intangible grounds on which to make such a sweeping charge. The rules of all reputable clubs, and the sentiments and acts of all reputable pigeon-shooters, are emphatically against all acts of cruelty, the findings of one Charles Green to the contrary notwithstanding, backed by equally intangible assertion. The gentlemen whose names are to be found in the list of trap-shooters of America are not to be taught humanity by any suburban amateur newspaper writers. The foregoing charge savors too much of making a case against good men while you wait.

Rifle Range and Gallery.

Cincinnati Rifle Association.

THE following scores were made in the last regular competition by members of the Cincinnati Rifle Association, at 200yds., off hand, German ring target. Payne was high on the champion target, with 209. He was also high on the honor target, with 68. Weather conditions were fair and cool:

Champion score:

Gindele	14	19	21	23	22	20	22	21	13	18—195
Drube	24	20	13	22	17	21	17	19	9	18—180

Constant Reader, Rochester, N. Y.—We do not answer anonymous queries.

PUBLISHERS' DEPARTMENT.

Flies in Colors.

MR. JAMES F. MARSTERS, the well-known sporting goods dealer of Brooklyn, has evolved a new idea in his fishing tackle catalog which has just been issued. Contained therein are reproductions in natural colors of eighty-nine of the best known trout and bass flies so numbered and labeled as to be easily identified. This will prove a great convenience to the angler who orders his flies by mail. Terms for obtaining the catalogue will be found in Mr. Marsters' adv. in another column.—*Adv.*

The Hires Picture Book.

THE Charles E. Hires Co., of Philadelphia, have hit upon the happy thought of sending free by mail a beautiful picture book. The intent, of course, is to make known the merits of their famous root-beer; but the book of pictures has merits of its own, and may well be asked for by a postal.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1899, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR, 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JULY 22, 1899.

VOL. LIII.—No. 4. No. 346 BROADWAY, NEW YOR

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

Carp is a fish of which I know not what to determine. Franciscus Bonsuetus accounts it a muddy fish. Hippolytus Salvianus, in his book "De Piscium Natura Præparatione," which was printed at Rome, in folio 1544 (with most elegant pictures), esteems carp no better than a slimy watery meat. Paulus Jovius, on the other side, disallowing tench, approves of it; so doth Dubravius, in his book on fish ponds. Frietagius extols it for an excellent wholesome meat, and puts it amongst the fishes of the best rank; and so do most of our countrey gentlemen, that store their ponds with no other fish. But this controversie is easily decided, in my judgement, by Bruerinus. The difference riseth from the site and nature of pools, sometimes muddy, sometimes sweet: they are in taste as the place is, from whence they be taken. In like manner almost, we may conclude of other fresh-fish.—Burton's Anatomy of Melancholy (1621).

SUMMER.

WHEN we are in the midst of the desolation of winter with the muffled whiteness spread far around us, the nakedness of trees on every side, far and near only gray and white, and above us the cold steel-blue of the sky, no songs of birds, no lap of waves on shores, no tinkle of running brooks, no cheerfuller sound anywhere than the mournful baying of hounds awakening the echoes among the silent hills, summer with all its gladness and brightness seemed as far away and unattainable as the red and golden glory that mocked us in the sunset cloud.

Yet, like the swift, unaccountable shiftings of a dream, we have seen the transformation from white and gray through almost imperceptible changes to drearier dun, to the green flush of sunny slopes, to purpling of woods with swelling buds, then sprinkling of tender green, then to full leafage with tints as varied as autumn's hues, and the broad fields all green with lush herbage, dappled with bloom. And again we have heard the rush of free brooks and the wash of waves on pebbly shores, and the songs of all the birds and the droning of the vagrant bumble bee.

The summer that but a little while ago seemed so far off is here. Sunbonnets and straw hats bobbing above the herdsgrass and daisies, with bobolinks in arrested flight scolding musically over them, give token of ripe strawberries. Busy robins flock to the cherry trees to claim the first fruit. The incessant chirr of the mowing machine comes from a distant meadow, like the voice of some gigantic locust, and, mingled with it, the old midsummer music of the whetted scythe. The first raspberries are ripening in the fence corners, the apple branches stooping to the weight of growing fruit, and the squirrels are making middens heaps under the pear trees.

There are days and weeks of drought, when corn leaves droop and curl, and even the sturdy weeds wilt; the cropped pastures grow sear and dusty under the hoofs of the hungry flocks and herds; the babbling rivulets are silent, dry gullies, and the noisy rivers are shrunk to attenuated threads that crawl among the boulders of their beds with scarcely strength enough to stir their shallow pools. Distant thunderstorms growl unfulfilled promises of rain. For a little while the red, rayless sun is veiled with clouds; the shifting breeze brings the wholesome fragrance of moist earth, and the parched ground is tantalized with a patter of great raindrops, and then the red sun blazes forth again, fierce and relentless.

But one night we awake to hear the steady patter of rain upon roof and leaves, the drip of eaves, until the thirsty earth drinks its fill, and the replenished brooks overflow and comb the meadow grass down flat and straight upon their banks.

The sportsman has his bout at the woodcock in the swamp—doubtful sport when one considers being smothered in the murky heat and the torrent of mosquitoes. Yet it is good to feel the familiar weight of the gun again, and to find that eye and hand have not forgotten their cunning.

Along the shaded stream or rock-bound shore of lake the angler invites the capricious bass with various lures, or trolls for pike and pickerel in winding, rush-paled channels where white squadrons of anchored waterlilies are tossed on his boat's wake. The plash of his oars frightens a wood duck and her half-grown brood to flight, tearing out of the sedges with a prodigious flutter and a clamor of tremulous squeaks that makes one's heart beat as quick as their vibrant wings, in anticipation of glorious autumnal sport. A startled bittern with an unmistakable expression of disgust at the intrusion springs awkwardly from the weeds, and a great heron breaks from statuesque repose and sags away on laboring pinions, until he is a wavering speck against the sky.

Wandering in neighboring woods where dwarf cornel dapples the hemlock shade with its white blossoms and scarlet berries, the summer idler may get a shock of the nerves by the sudden outburst of a pack of grouse from a quiet bramble thicket, the half-grown birds almost as strong of wing as the old, and already shaking thunder from their swift pinions sounding another promise of autumn's glorious days.

As swiftly as the spring went, the summer passes; the bobolink has donned his sober coat, and gone; the plover chuckles his farewell to Northern uplands; the swallows congregate in grand council, considering migration; the last flame of summer is kindled in the cardinal-flower's bloom; presently we shall see the first glow of autumn's many colored fires.

SNAP SHOTS.

Of the numerous classes of those who did not mean to do it, one which is coming into growing prominence is that of the defenders of gardens and orchards, who shoot to frighten and not to kill. When one of these persons kills the raiding small boy he pleads that the event was a pure accident. It is a lame excuse and not a justification. Firearms are deadly weapons, and their use carries a responsibility which may not be evaded by the accident plea. Once a bullet is discharged, even though the weapon be not aimed at the victim, one cannot control nor foresee the flight of the projectile. In two cases currently reported it was shown that the bullet ricochetted; while this of course goes to prove something as to the intent of the shooter, it is not a full extenuation, for it is perfectly well known that bullets do ricochet, and the shooter who aims in the vicinity of a victim has good reason to believe that he too may make a ricochet. The people who have recourse to firearms to frighten off small boys are usually those who have had little or no experience in the use of firearms. For this very reason perhaps they fail to realize the perilous nature of their random shooting. Only a proved William Tell should imagine himself a marksman qualified to shoot to scare and not to kill. There is a story going the rounds, of some sportsmen in Maine, who, to have revenge on a game warden, shot at him from across a stream, sent their bullets whistling about his head in order to frighten him into flight, and then shot close to him as he fled and as long as he was within range. If the story has any basis whatever it is not a tale of sportsmen, for those who are accustomed to the use of arms realize most sensibly the hazard of any such practice as that described, and would be the last ones in the world to commit such criminal folly. As for the fruit garden shooters, there are other ways to protect property.

Young America's characteristic mode of celebrating the Fourth of July has been attended this year with so many accidents resulting in lockjaw that the newspapers have referred to them as an epidemic. In almost all cases the disease has been caused by wounds received in the careless handling of firearms, so that the newspapers have spoken of toy pistols and blank cartridges and other forms of ammunition as the specific causes of the disease, much after the manner that the specific germ is referred to as being the cause of yellow fever or other germs diseases.

There is in this something of careless definition or at the least of loose reasoning. In temperate climates and in nearly all cases tetanus, commonly called lockjaw, results from a wound, and it matters not whether the wound be produced by a rusty nail, a sharp stick, a knife or a firearm. If the tetanus bacillus is by the wound admitted to the body tetanus supervenes; the wound, not the instrument which made it, is the essential beginning. Scientists maintain that tetanus is a germ disease, and there are certain sections of country, together with conditions of temperature, which are more favorable to its development than others; for example, there are parts of Long Island which have an unenviable notoriety for the prevalence of tetanus from wounds caused in various ways. A humid temperature also is considered as a favorable condition, and this is one which has prevailed largely since the Fourth of July in those regions where the disease has been most commonly reported. If the boys, old and young, throughout the United States had celebrated the Fourth by eating watermelons as universally as they did by making a noise with toy pistols and blank cartridges, enough of them might have cut themselves with knives or punctured themselves with forks to have produced another so-called epidemic of tetanus, quite as general as that which has been caused by firearms. For, it may be repeated, it is the wound which gives the starting point for the germ, and the disease under favorable conditions for its development follows. Any wound, particularly if an irritating foreign substance enters, may result in lockjaw, regardless of the implement which makes the wound. We are inclined to believe then that the suggestion which has been made that there is something peculiar in the composition of the shells used for blank cartridges is fallacious; the number of cases of lockjaw following the celebration of the Fourth may be fully accounted for by the ordinary wounding quite apart from any peculiar composition of the ammunition itself.

The reports which come from Pine Ridge Agency in South Dakota of a threatened "uprising" of the Sioux are manifestly of the usual exaggerated summer Indian scare type; and in so far as another Indian war is predicted, they will be received with the usual nonchalance. Under existing conditions we can never have any more Indian wars in this country, but it is well worth while to note that the trouble, such as it is this year, grows out of the conventional cause of all such affairs in recent years, a lawless hunting expedition. For several weeks, according to the press dispatches, the Sioux have been killing game in Wyoming, and when they were confronted by the sheriff they resisted, defied the posse, and set out for the Bad Lands. There is but one way to prevent these annually recurring Indian troubles which are caused by hunting parties, and that is to restrain the Indians on their reservation. The responsibility here rests primarily with the agent, who should have refused the people under his charge permission to go on a hunting expedition.

In what manner, except by actual experience, shall one arrive at the truth about the ouananiche as a game fish, when out of a dozen anglers who repair to the Northern waters to make test of the fish, six return with reports which tax the English language to find adjectives fitly to describe its strength, agility and game qualities, and the other six refer to the much-lauded species as a little lower than the bullhead in the anglers' list? Your ouananiche enthusiast on occasion appears to be possessed of a fine frenzy in his glowing description of the mighty tussle with his fish; and then comes another fisherman, who was perhaps lured by the eloquence of the first one, to denounce the ouananiche as a fraud and fishing for it a tame delusion. Where lies the truth? or are there two separate and distinct fish? We commend the subject to the attention of the ichthyologists.

A Washington correspondent has discovered at Atlantic City a mode of fishing which consists in letting down hooks from an ocean pier and jigging fish out of a pound in which they are confined; and being a good angler he expresses himself as naturally perturbed at the sight. The practice, he thinks, is one which reflects upon the sport of angling and tends to degrade it. Possibly it does; but a more reasonable view might be that the Atlantic City pier jigging has no remote connection with angling, and cannot be confounded with angling nor in any way held to discredit angling. Grown folks who indulge in catching fish in this way are either perverts in a class all by themselves, or else they are persons who, in every day life being reasonable and sane, become possessed of a spirit of idiocy when they visit a sea shore resort and indulge in antics which if perpetrated at home would set one down as *non compos mentis*.

The Sportsman Tourist.

In Filibuster Days.—III.

A Story of the Walker Expedition.

(*Concluded from page 48.*)

AT the risk of outraging all the conclusions of the scientific fellows, I say that the cobra de capello is found in Nicaragua. My brother and I were one day following a path into the forest on the mainland, back of the town of Bluefields, in search of a stick of hardwood, of which to make a crank for a grindstone. When coming to a small open space of soft, wet ground, across which the trail ran, near its edge we noticed a snake, new and strange to us, and some 30 in. in length; and we stopped to examine it.

Its first move was to retreat, but this being prevented, it coiled for war, and as we teased it with a stick we saw with amazement the skin of the neck immediately below its head widen to more than double the width of the head, and a mark of coloration, in shape identical with the eye of an old-fashioned "hook and eye" of the ladies' dresses, grew plainly apparent upon the widened skin of the arching neck.

Having read of the "hooded serpent of India," I thought of it instantly I saw the strange reptile; but supposing that the word hooded could only be applied to a creature with something on the head itself which could suggest the name, I dismissed the fancy; and not until I had read more carefully concerning it did I conclude that we had really seen a genuine cobra. The snake grew frantic with rage, and dropping its coil advanced to the attack. As it was crossing the spot of wet ground the head of the axe was dropped upon its back, driving the middle of its body into the mud several inches below the surface, but with the raising of the axe it popped up, more eager for fight than ever. Its movements were strangely quick, and the possibility of it yet reaching us caused the edge of the axe to be used to finish it. The townsman to whom we told the story looked grave, and informed us that it was regarded as exceedingly deadly, adding that had we been bitten we could scarcely have lived to reach the village.

When my father had finally concluded to return to the United States it became necessary to return to Greytown in order to meet one of the only line of American steamships then running to that port, and which would land us in New York. The captain of the only avilable coaster, learning how important it was for my father to reach Greytown by a certain date, charged an exorbitant fare, many times more than that of the Jamaican coaster which had brought us to Bluefields, and my father cast about to find a way to defeat the avarice of the unprincipled navigator. Learning that the mail for the British consul formerly resident at Bluefields had for years been brought in a canoe from Greytown by two old negro sailors, he sought them out, and hired them for the voyage; and having hired two Mosquito Indians reputed to be skillful sailors, to navigate the canoe which I had fitted for a hunting boat, planned to send a young man named Henry Reeder (who had lived with us since our coming from Greytown) and myself in the boat, and under the care of the Indians, while the others rode in the canoe of the negroes.

Bidding good-by to the beautiful village and its kindly inhabitants, we sailed out of the harbor before a gentle breeze, and the canoe of the negroes proving so much the better sailer, we in the lagging canoe lost sight of it as it sped away toward Monkey Point, a mountainous headland twenty miles south of Bluefields; and our Indian steersman used the last of the dying breeze to make a wide offing in the hope of finding another. As we lay becalmed on the glassy sea, some five or six miles from land, while the long, hot hours of the afternoon wore on, the lazy Indians chewed sugar cane and whistled for the wind. "Coom, breeze! Where are you, breeze?" they droned monotonously, while Hank Reeder and I fretted and fumed at the delay, wondering why the listless creatures did not take to their paddles. They had been hired to navigate the craft, and we were under their orders.

Finally, when the afternoon was half-gone, a long line of low hanging cloud rose above the horizon to seaward and rapidly approached the land. A breeze came before it which rose quickly into a gale, and as the canoe had not sufficient keel it drifted rapidly sideways toward the lee shore, while making but small progress ahead.

Still the gale rose in power, yet so stolid were those stupid fatalists in charge of the boat that not until we were in the edge of the breakers themselves, half a mile off the sandy shore—where the water deepened so gradually that the breakers now had the canoe in their teeth—did they try to take in the sail which was drifting us to destruction.

An attempt to unship the mast was defeated by the gale and the raging sea, and the frightened Indians furled the sail as best they could, and seizing their paddls bent all their strength to the task of forcing the canoe seaward in the teeth of the gale.

Still we drifted on toward the land, while the low cloud to seaward raced swiftly toward us, and from the set face of the frightened steersman came the earnest cry, "Strong paddle! "Strong paddle!" as Reeder bent to the work by assisting them; and while the canoe and its scared occupants were furiously "rocked in the cradle of the deep," I seized a big gourd shell used in bailing and paid almost continuous tribute to Neptune in bilge water and the different parts of my internal economy, which the raging sea was now fast shaking loose inside.

The ride over the waves was sublime! Fortunately the sickness—which is said first to make one afraid he will die and afterward afraid he won't—that now had me under full control, had almost robbed the sea of its power to affright, and as we rose on the crest of a towering wave to somewhere near the sky, and for an awful moment balanced, where sea and sky and land rose into view—and the grandeur of old ocean's rage seemed momentarily fit, not only to hold in abeyance the dreaded sickness of the sea, but almost imperative enough to call back the dead to life—and then, with a tilt of the bow toward China, raced down the frightful steep into and under the crest of the next oncoming wave, which promptly rolled half a barrel of brine over our bow, my mission in life appeared to be to bail fast enough to free the canoe before we met another.

In the very midst of this struggle for life and sea room, while we were in the trough of the sea, a shark that looked to be 15ft. in length, sprang free from the wave at our stern, and not ten rods distant from the canoe, and with his entire length momentarily free in air plunged into the oncoming breaker, while the only Mother Carey's chicken I ever saw fluttered along the crest of a towering wave and dipped its tiny feet into the brine.

Just when our fate seemed sealed, and when we looked to be within forty rods of the beach, the cloud overhead raced by, and the wind, no longer drawn under its edge, sank to a gentle breeze, and this to a dead calm, so quickly that I have never seen it equaled.

Out beyond the breakers we paddled, and down past the rocky face of the first cliff of Monkey Point, into a vast cave of which the waves still ran and raged and thundered appallingly, and in the last rays of the sun's departing light were guided to the beach on the lee shore of an island off the Point, by the flapping sail of the beached canoe in advance, now being waved by my father to attract our attention. Here we slept until midnight, when the voyage was resumed; and with beautiful weather and favoring breeze we easily reached Greytown before sunset.

The harbor of Greytown was thronged with vessels. The whole British West India fleet had assembled at this point of rendezvous before taking their different stations in West Indian waters. One vessel was destined to take the place of the Eurydice, which, to the joy of all on board, was soon to return to England. One line-of-battle ship and one frigate drew too much water for the harbor entrance, and so lay at anchor outside.

Target practice went on almost continuously among the frigates and gunboats inside, the long, slender cape of Point Arenas offering a fine range. Two handspikes were planted in the sand, and a piece of canvas some 6ft. square, on which was painted a black bullseye about the size of a barrel head, was stretched between for a target. The vessels lay at anchor in the harbor, from one-third of a mile to a mile and a quarter distant from the target. Day after day the firing went on, and I never knew the target to be struck but once, and then one of the handspikes was carried away with a cannon shot. It seemed like a small boy throwing brickbats.

On landing my father was met by an old man named Mooney—"Old Uncle Ben Mooney," as he was known to his friends—with whom he had become acquainted when first he came to the coast, and who had lived in Greytown for many years, and now, with the courtly grace of a Spanish Don, he insisted that my father should forthwith take possession of the old widower's house, which, with all it contained, should be his as long as he remained on the coast. My father was still hampered by possession of the mill bought in St. Louis, which had remained stored on the wharf in Greytown since our first landing; and as Uncle Ben noticed that my father's appearance of rugged health had changed for the worse since first they met, and learning of his purpose to return to the United States as soon as possible, and realizing also the danger of fever on the sickly coast to which he long ago had become acclimated, though loth to lose the society of one who seemed a congenial spirit, said to him:

"Mr. Belknap, go you down to the harbor and pitch that mill over into the harbor and say, 'Mill, go you to the devil!' and you get back to the North again as quickly as you can!" However, the mill was traded for a stock of groceries, and Mr. Reeder, who had been with us since our landing in Greytown, and who was a wheelright by trade, now engaged with its new owner to accompany him into the interior, there to build and equip a mill for him, while my father planned to return to New York by the next monthly steamer.

And so for a time we swung in Uncle Ben's hammocks and listened to his stories of early days in Greytown. Dear, quaint Old Uncle Ben! How charming were his tales of the old days among the turbulent foreign element of the population of Greytown, where he had been a leader, and where he had become involved in a feud with another adventurous character, and the quarrel growing into one in which most of the foreign element in the port took a part, the Americans siding with Old Ben formed a quasi-military organization for his defense, and now, when the whole affair had faded into history, the old man's eye would kindle as he recounted to us the adventures and pictured to us the ancient military splendor of the formidable "Twenty-six Ben Mooney Guard."

And now I myself, the boy who seemed proof against peril and sickness, was stricken with the "Panama fever," and recovering barely in time to take the steamer upon her arrival, was sent aboard with my brother to go to the home of relatives living in Ohio, via New York, while my father remained in Greytown until the coming of still another steamer, as the groceries had not been sold. Our return voyage to the United States was a safe and uneventful one, and of little interest to the reader.

A night or two after our departure the streets of Greytown resounded with a midnight babel of confused shouts and cries, and in the morning my father learned that a large alligator on its way to cross from the lagoon to the harbor, near the center of the town, had been met by a startled negro, who promptly gave the alarm, and a swarm of natives gathering before the frightened saurian could regain the water, it was surrounded, and after a furious fight, dispatched with matchetes and axes.

On board the British fleet, which still remained at Greyfield, were two large Newfoundland dogs, which were highly prized by the officers of the vessel which carried them; and as a party of officers were one day strolling along the shores of the lagoon a few days after our departure, one of them, forgetful of the danger from alligators, threw a stick into the water for the dogs to bring out. While swimming along at some distance from the shore one of the dogs suddenly sank from sight and never reappeared. It had been taken by an alligator.

Plans for vengeance were promptly formed. A long slender cable chain was brought ashore from the fleet, and while one end was fastened to a small tree growing on the bank near where the dog had been taken, the other was fastened to the center of a short piece of handspike some 30in. in length, and then one end of the stick was brought round and very lightly attached to the chain, while to the other end of the stick was very firmly fastened a large piece of meat for a bait, and the whole affair was left in the edge of the water.

A morning or two afterward word was passed through the town and the fleet that an alligator was caught. A big fellow 17ft. in length, which my father said "looked as big round the belly as a four-year-old beef critter," had swallowed the meat, stick and chain, and when it attempted to retreat the light fastening of the stick gave way, the stick came around squarely across and behind his jaws, and there he was. A big crowd soon assembled and the furious brute, lashing the water to foam in his struggles to escape, was snaked out on the bank, and after a most exciting struggle, thrown upon his back; a spar was laid lengthways along his belly, and one by one the feet and the slashing tail were lashed securely to it; and a handspike being placed crosswise in his mouth to keep the great jaws apart, a sailor ran his arm to the shoulder down the throat of the savage saurian, now gentle as Mary's lamb, and turned the stick lengthways of his throat, when it was withdrawn from his mouth. A rope was now fastened to the jaw of the creature, and a long line of jolly tars laid hold and gave him a free ride on has back through the sandy streets of the town to the harbor, where he was hoisted aboard the Eurydice to be taken back to England. The trap was again set and another alligator, somewhat smaller, was caught, which was killed on the shore.

And now the long-dreaded fever seized my father, and for a time his life was despaired of. Dear Old Uncle Ben Mooney proved the Good Samaritan who cared for him like a brother, sold his remaining stock of groceries for him, and when the steamer finally came, placed him, more dead than alive, on board, and bade him good-by—fully expecting, as did all others who saw him, that before the steamer could reach New York he would be buried at sea. But the captain of the steamer, seeing his condition, gave him one of the cabin apartments on the upper deck, where the ventilation was perfect, and with the first blessed breath of the cold air of the rugged North, new life returned to him, and the voyage homeward was one of rapid recovery.

When my father was placed upon the bed in the steamer's narrow bedroom, the door was left wide open for the securing of all the fresh air available, and as he gazed wearily forth with half-closed eyes at the crowd of returning Californians who swarmed upon the steamer's deck, he saw a fine looking young man of about thirty years passing back and forth before the open door quite often, and each time looking earnestly at the apparently unconscious form upon the bed. As the stranger noticed finally that the sick man's eyes were open, he stepped into the room and said: "Old man, can I do anything for you?"

"Yu may get me a drink of water, if you please," replied my father.

"Look here, old man, I see that you are alone, with no friend to care for you, and I want you to let me take care of you. I am returning from California, and have nothing to do on the voyage homeward, and you will oblige me by letting me care for you on the journey."

"Very well, if you wish it," replied my father, who afterward told me that no mother ever kept more sleepless vigil over a beloved child than did the young and kindly disposed stranger over him: anticipating his every want, caring for him with brotherly kindness, and rejoicing finally with him over his recovery. Just before reaching New York my father offered money to him, as a slight return for his kindly services. The young fellow laughed merrily, "Why, old man," said he, I have more money now than I know what to do with!" whereupon he told his history. He had been a poor boy in the East, where he had the fortune to win the affections of the lovely daughter of the most wealthy man in that part of the country, and when the willing girl sent him to learn his fate from her father, the paralyzed Crœsus nearly fell over backward at the outrage to his dignity. Such assurance! The old man nearly had a fit. Returning to the girl he told the story of his ill success.

"Well," said she, "I cannot marry you without my father's consent, for I am not of age. I promise you, however, that I will remain true to you until I am of legal age. If I live until then, and you still wish it, I will marry you."

In the hope of bettering his fortune, and with the full consent of his betrothed, he then set out for California. "And," said he, "I went—and from the hour I landed everything I touched turned to gold. About the time the girl became of age I wrote her that I was deeply involved in business ventures, and that while I stood ready to come at the hour if she insisted, if I were obliged to sell at any certain date I feared it would be at a sacrifice, and if she would wait a year or two longer I hoped to retire with flying colors. She replied, 'Stay just as long as you deem necessary, and come home thereafter as soon as you can.' A short time since I sold everything out at a grand figure, and am now on my way home. And the strangest part of the whole affair is that while waiting in San Francisco for the coming of the steamer I received a letter from the girl, stating that in some gigantic speculation carried on unknown to his family her father had lost all his property and was now reduced to poverty. And now," added the young man, while his eyes twinkled merrily, "I am going home, and I am going to set the old man up in business."

At New York my father bade good-by to the generous young stranger, with best wishes for his health and happiness; and continuing his journey to Ohio, the family was once again united. This was just as the air was resounding with the shouts of excited and angry citizens bandying the epithets, "Abolitionist!" and "Copperhead!" while howling orators furiously saved the country from the unspeakable wickedness of the other fellows—their neighbors—in the fierce Buchanan-Fremont campaign, so typical of the career of the sometimes turbulent but ever glorious Republic. In the tumult and the confusion, the far-away land of the bread-fruit, the banana and the palm; where the alligator basked in the hot sunshine among the reeds, and the cobra coiled at the rustle of coming feet;

where, oblivious of storms, canoemen rocked on glassy seas, and in swaying hammocks señoritas slumbered in the siesta; all this faded off into dreamland, misty and ethereal, leaving only a dim and shadowy picture in the hall of memory.

ORIN BELKNAP.

VALLEY, Washington.

The World's Greatest Explorer.

BY CHARLES HALLOCK.

Editor Forest and Stream:

For thirty years I have known Dr. Robt. Bell, F. R. S., Chief of the Geological Survey of Canada. To his personal canvass FOREST AND STREAM is largely indebted for its early prestige and strength in the New Dominion. This month he is starting out on his forty-third year of continuous field work in British North America, his destination being the Great Slave Lake in the Mackenzie River Basin, N. W. T., lat. 63 degrees, of which he is to make a topographical and geological survey. The lake is 300 miles long and 3,000 miles off, though now accessible nearly all the way from Ottawa by rail and steamboat.

Although fifty-seven years of age, and exposed all these years to the rigors of high latitudes, he writes me that he is in perfect health and vigor, and able to get about as well as ever. This fact he attributes to a knowledge of how to take care of himself. "No matter how tired I am," he says, "I see that I always have a comfortable and dry bed of brush or some substitute, every night. I always dry my clothes, or change to dry ones if I can have a change, and do not go without more meals than I can help." He has always followed the simplest methods in his out of door life, carrying no tent or impedimenta in the shape of camp furniture; his habit being to "go light" and live off the country. Where fish or game was not to be had, he has subsisted on the plain common food of the voyageur, and taken no alcoholic drinks. He is up to all sorts of expedients in emergencies, and does not believe in "accidents" and misadventures; and has never had any, because he knows how to avoid them. Old campaigners of this ilk never think of exploiting their sufferings and hairbreadth escapes as evidences of heroism worthy of plaudit. On the contrary, they would be mortified to admit them. Yet I find in an official publication like the U. S. Geographical Magazine for June fulsome congratulations for a callow adventurer who visited the country north of the Great Slave Lake in 1892-3-4, upon being "able to live where earlier explorers starved and froze," and the reviewer parades his manifold "survivals from starvation and storm, from wounded animals and treacherous natives, from desperate exhaustion and insidious freezing, from engulfment in muskeg pools and hidden ice crevices, from wrecking in rapids and capsizing in surf," as not only the natural incidents and concomitants of voyaging in high latitudes, but as credit marks for heroism and endurance! Quite likely these recitals might impress the home members of travel clubs, but to my own mind, to glory in what one has suffered through inexperience or awkwardness would seem to be about as sensible as to boast how many rod tips a man had broken in a season on a salmon stream, as evidence of prowess in handling big fish.

Nevertheless many of our popular scientists with official endorsements are able to scoop a moiety of honors for so-called discoveries which were old before they were born. Like Schoolcraft, for instance, the pioneer of this guild, who claimed the credit of discovering the sources of the Mississippi (officially), while employing as his guide an old woodsman named Morrison, who had trapped all over that region for thirty years previously; or like students of Bowdoin in 1896, who exploited the discovery of high falls at the head of Ivuktuk Inlet, in Labrador, which were described in 1836 by factor McLean, of Hudson's Bay Company's post located close by!

Puerile summer outings like these pale into nonentity beside the stupendous life work of explorers like Dr. Bell and William Ogilvie, of the Dominion Survey, which cover almost the northern half of this continent. Already the published reports of Dr. Bell alone comprise more than 80 titles on a great variety of scientific subjects, yet so quietly and unostentatiously have his duties been performed that the public is not cognizant of them, nor perhaps ever heard of him, while plaudits attend the high roller who has compassed the earth in eighty days, or perchance outlined a rapid transit trip to Mars or the moon. Meanwhile, immense geographical areas have been mapped and charted and districted and divided into Territories and Provinces and settled, which had been *terra incognita* until this indomitable surveyor first set foot on them. And up to present date no abstract of these researches has ever been published. Modesty or preoccupation has intervened, though he has been often importuned. But at last I have procured from him the subjoined enumeration, which reads like Revelation, and for which I am sure you will congratulate me and your numerous readers.

Beginning in 1857, as a youth of fifteen, under the late Sir W. E. Logan, Director of the Geological Survey, he served for the first three years as assistant to the principal members of the staff, and has continued as the head of parties in the same work ever since. Commencing on the east side of the continent, his surveys comprise the Gaspé Peninsula from Percé to Rimouski, and from the St. Lawrence to the Baie des Chaleurs, and thence to Quebec, the eastern townships, the Saguenay and Lake St. John region, the north shore of the Gulf of St. Lawrence, the west coast and the interior of Newfoundland and parts of Nova Scotia and New Brunswick. He has coasted all around the Labrador peninsula, from the Saguenay, via Bellisle, its eastern or Atlantic coast, its northern coast, which forms the south side of the Hudson Straits, and its western coast, which is the east side of Hudson and James' bays, besides some of the islands lying near off this coast. Dr. Bell has computed the area of the Labrador peninsula to be 560,000 square English statute miles, or considerably more than the combined areas of Great Britain and Ireland, France, Germany, Belgium and Holland.

In 1897 our friend made a survey of most of the southern coast of the great Island of Baffinland, opposite Greenland, and which is only exceeded in size by this ice-covered island and by Australia, being 1,100 miles in length. Besides surveying its southern coast, he made an exploration of the interior, as far as the large lakes, only one of which had ever before been seen by a white man.

He has visited some of the large islands at the north end of Hudson Bay, that great inland sea of our continent, which he described more than twenty years ago as the Mediterranean of North America. He has in different years explored and, in fact, surveyed the whole east coast of Hudson Bay, except a few miles in the north part, from the Straits south to the head of James' Bay, also parts of the west coast of this inland sea from Marble Island to Moose Factory, at its southern extremity. Instrumental or, in some cases, good track surveys have been made by him of the rivers flowing into James' Bay from the southeast, south, southwest and west. The largest of these is the Noddawai—a bigger stream than the Ottawa, and which drains an area exceeding that of England. The great west branch of the Noddawai had no recognized name, and by common consent it has been called Bell River, in honor of the man who first called attention to its existence and made an instrumental survey of its entire course. In connection with this work, he also surveyed a chain of lakes from the Waswanipi to the Ruperts River, and mapped out the whole of this great region, heretofore a blank.

The other principal rivers mentioned as flowing into James' Bay are the Moose and its larger branches (Mattagami, Missinaibi, etc.), the Albany to its source and its branches (Kenagami, Kabinakagami, Ogoké, etc.), the Ottawapiskat—the next river north of the Albany, 400 miles long and as large as the Rhine.

Further north he has done the Hayes, Steel and Hill rivers, Oxford Lake, Knee Lake, etc., as well as the

DR. ROBERT BELL.

whole of the Nelson—one of the great rivers of the world—which drains the continent west to the Rocky Mountains, besides some of its tributary streams, also the Great and Little Churchill rivers.

Coming back to more southern latitudes, his geological work comprises the Ottawa River from its mouth to its extreme source, including surveys of the Gatineau, the Upper Ottawa and some of the streams east of Lake Temiscamingue, the Montreal River and the country to the north and south of it, the country north of Lake Huron to the watershed, Lake Nipissing and Mattawa River, the French, Spanish, Missisagi and White rivers to their sources; Blind, Thessalon and Garden rivers, also Lake Temagami, Lady Evelyn and surrounding lakes; Temagami and Sturgeon rivers; and all the geographical as well as geological features in the Sudbury mining district. He had visited every square mile of the several islands of the Manitoulin chain before any township surveys had been made or a single settler had gone there. His purely geological labors comprise the western or lake peninsula of Ontario, while on the north side of Lake Superior, besides the geological work, he surveyed nearly all the rivers, Nipigon Lake, the uppermost of the Great Lakes of the St. Lawrence; Nipigon River, Long Lake and Pic River, and the country northward of these to the Albany, and most of the thirteen rivers flowing into Lake Nipigon, together with their lakes. Westward of Lake Superior he has explored all the wooded country to the prairies and made the first passably good map of the Lake of the Woods (published in 1881). In the northern parts these extended operations included Minnietaki Lake, Lonely Lake (100 miles long), and Lake St. Joseph or Osnaburgh Lake, nearly as large, the English River and its chain of lakes, Shoal Lake and Red Lake, and its river. The international boundary line was examined geologically from Lake Superior westward to Lake of the Woods, including Rainy Lake and River.

A track-survey was made of most of the shores of Lake Winnipeg; Lake Manitoba and the boat route from it to Lake Winnipeg were explored, as well as the "mountains" along the west side of the Winnipeg Basin, and a track survey, showing the details of the course of Red River from Winnipeg City to the lake of the same name. Further west the Assinnaboine, Swan and Qu'Appelle rivers were explored, as well as considerable portions of the North and South Saskatchewan, also the prairie region between these streams, and thence southward to Montana. Two routes were explored from the North Saskatchewan to Clearwater River, and a good track survey made of Lac la Biche and its river to the Athabasca, as well as of this stream itself all the way to Athabasca Lake, and of the waters around its western extremity, Lac la Loche, Clear Lake and Isle à la Crosse, Beaver River, Green Lake and the route thence to Prince Albert.

The above enumeration Dr. Bell has put down hastily from memory, but it does not by any means mention all the geological and topographical work which has been personally accomplished by him. He is also fairly entitled to credit for additional work performed under his immediate superintendence by field assistants whom he has trained and specially equipped for each particular survey. Some of these which we recall are the Megiskun and Waswanipi rivers and connected lakes, a route south from Lake Mistassini toward Lake St. John, God's Lake, Island Lake, various rivers on the east side of Lake Winnipeg, Pine River from Cross Lake, on Nelson River, westward to Moose Lake and the Saskatchewan, and this river itself, two routes from this stream northward to Reindeer Lake, this large lake itself; Wollaston Lake and route thence to Athabasca Lake, this lake and the chain of lakes forming the upper Churchill River, Black Sturgeon Lake and River, Cat Lake and River, with the connected lakes, the Abitibi River and numerous other important features in various regions.

Dr. Bell was on all the steamship expeditions sent by the Canadian Government to Hudson Straits and Bay. In addition to his duties as geologist and naturalist, he was medical officer on the Neptune and Alert expeditions, but on the Diana expedition of 1897 he was obliged to leave the ship in order to make his surveys by means of a yacht and boat, so that it became necessary to take out another medical man.

At the close of his field operations in 1880 he sailed by the Hudson's Bay Company's barque Ocean Nymph, from York Factory, on the west side of the bay, to London, and had a long and very stormy voyage. He has passed through Hudson Straits nine different times, and having studied the navigability of these waters is considered an authority on this subject.

On account of the length of time he has devoted to the work, together with the fact that the expenses were defrayed by the Government, and with a great capacity for physical endurance, Dr. Bell has been enabled to accomplish a greater amount of geographical and geological work than any other man in America, or probably in any other country. As most of this work was in heretofore unknown regions without many distinctive names, he has been obliged to give a vast number of such names as a necessity for the sake of identification and description. Mr. George Johnson, the official Dominion statistician, who has paid great attention to this matter, calls him the principal place-name father of Canada.

More of the above work was done by canoes with Indian and half-breed voyageurs than by any other method, but the coasts of Hudson Bay, Lakes Superior, Winnipeg and Manitoba were explored by means of boats. His work on the prairies and plains was all done before treaties had been made with the Indians, before there were any mounted police, and before the international boundary line was run—when horse-stealing was considered a virtue and buffalo were abundant. Under these circumstances he had many very exciting experiences and adventures.

Before closing this brief outline of Dr. Bell's career I might add that any part of his time which was not required for actual official work he utilized to study and graduate as a bachelor of science, a doctor of medicine and master in surgery, to study practical chemistry under Lord Playfair and others in the old country, to travel in Europe in different years and to become a professor for five sessions in Queen's University, which conferred upon him the degree of LL.D. He is a fellow of many learned societies, among them the Royal Society of London, which is the highest distinction for scientists in the British Empire. He married an accomplished Scottish lady, and his daughters, who were educated in Germany and France, and the eldest of whom was last year presented to Queen Victoria, are noted for their talents.

While making his extraordinary record of geological and typographical survey and exploration Dr. Bell has had more adventures and thrilling experiences and more hardships from fatigue, wet and other discomforts, lack of provisions, etc., and has seen more of the game and fish, the real wild Indians and Eskimos and the Hudson's Bay Company's people of all ranks than any other white man, or any Indian that ever lived. He has improved his unequaled opportunities to map out the geographical distribution of the forest trees of Canada, has collected the folk-lore of the various Indian tribes and of the Eskimos, has taken great numbers of photographs in the far-away regions, and has made extensive geological and botanical collections, and observations on a variety of subjects. He has a rare genius for telling his experiences, and although he has never written them out from his field notes, the original records in his possession would fill many most entertaining and useful volumes. As the author of this running biographical sketch I am proud of the distinction of first making public this record of marvelous achievements.

A Mother Bass.

NEW YORK, July 10.—*Editor Forest and Stream:* Perhaps some of your readers would be interested in a little fish story, which, by the way, is quite true. While on a short stay at Lake George I discovered a large black bass about 10ft. from our dock, where she had her bed and hatched out the largest brood of young ones I ever saw at one time. Other fish seem to annoy her, and I have seen her chase a pickerel twice and three times her size.

One of the small boys while fishing off the dock hooked her, and Mrs. Bass gave him quite an exciting time, until finally some of the men came to his rescue and succeeded in landing her on the dock, where we took the hook from her mouth and put her back to take care of her young. She is now so tame that the children throw her worms; and it is very interesting to see one of the gamest fish that swim eat her meals to the satisfaction of young and old.

G. O. WAKEMAN.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Hunt, Hunt, Anyway.

FEW are the pleasures in this world that are more alluring, more fascinating and more exhilarating than the wholesome pleasure enjoyed by the sportsman who takes to the woods for "all there is in it." By that I do not mean the one who goes in, rough shod, bent wholly upon wanton slaughter and a big "bag," but I mean the sportsman who goes for the lasting, the substantial, benefit derived from an outing in the woods, by one bent on recreation.

One can scarcely call it recreation to go into the brush and from early morning till sundown plod hither and yonder, reckoning on naught but o'ertaking his game. At the close of a day's outing of that description, the hunter finds himself jaded and weary; his clothes are sticky with perspiration, and the evening air is apt to chill him so that when he wakes next morning he finds he has contracted a cold which might prove serious. All he has is a bag of game, perhaps a meager one, at that. And if he has no game at all—oh, my! He can tell you nothing about that hunt save that he was deucedly tired when he reached camp. He, perhaps, has enjoyed the diversion from the business cares, but he is not refreshed. His day was fraught with violent exertion and many briar wounds.

With the sportsman who seeks recreation and goes hunting for "all there is in it," it is different. He returns to camp sorry that the day was so short; slightly fatigued though not jaded, but just tired enough to enjoy a smoke and a little chat by the camp-fire before retiring for a peaceful, refreshing sleep. Whether his quest of game proved futile or not, he can relate incidents of the day that will interest his listeners. He has been an observer of the many things of interest with which his way was strewn. He has been studying nature in nature's own open volumes, and has learned something new in regard to the habits or diet of some one or more of the natural occupants of the woods. He may even have corked up in a discharged shell some strange species of worm or insect which arouses his curiosity. When he empties his game bag he may be more choice of some little plant, or flower, or rare specimen of bark, or of some peculiarly deformed berry, or bud, or some other little rare work of nature that is concealed in one corner, than he is of all the game it contains. His hunger for a better acquaintance with nature is more ravenous than is his hunger for game dinners. He can always find food for that mental hunger though the hunger for game may not be readily appeased; therefore, the sportsman who, hunting for "all there is in it," hunts the nature of the woods as well as the game of the woods, is sure to be gratified in one way at least.

Many abandon the idea of enjoying the benefits of a week or two in the woods as soon as it is thought of simply because they are behind in marksmanship, thereby losing good food for a tired over-worked brain; for the study of nature's open book is not irksome; on the contrary, it discloses something new at every turn.

CHAS. H SMODELL.

Pioneer Days.—VIII.

BY ROWLAND E. ROBINSON.

WHEN Ethan Allen was dispatched on his mission of "preaching politics" to the Canadians, Josiah was detailed as one of his guards, and so chanced to be with him in the unfortunate attempt to capture Montreal. Major Brown failing unaccountably to co-operate with Allen, the latter was forced to surrender, but Josiah managed to slip away and secrete himself in a dry ditch, from which he saw Allen attacked by a gigantic Indian, and Allen seizing a British officer by the shoulders swung him around as a shield between himself and his assailant until the latter was compelled to desist.

At nightfall Josiah made his way to the south shore and searched for a boat. Turning a shoulder of the shore, he came upon two Indians engaged in baling a canoe; their guns leaned against a tree at a little distance behind them. He got between them and their arms; and then, with his rifle cocked and aimed at them, demanded their surrender, to which there was nothing for them but to submit very sullenly. He placed the guns in the boat and set forth, making with all speed to a light on the other shore. The Indians ran yelling along the shore in quest of another boat to pursue him, but he had no further trouble from them; and making the passage safely, after dropping the captured guns in midstream, he continued his retreat until daylight, making frequent detours from the bank of the Richelieu, which was his guide, to avoid houses, forts and small detachments of troops which he now and then fell in with.

At dawn he secreted himself in the woods, where he lay all day, suffering hunger, thirst and weariness, and frequent chance of discovery.

At nightfall he ventured forth, and coming to a house made a reconnoisance through the window. There was no one in the room but a woman and a girl; the table was set for supper, with a brown loaf, a piece of pork and a bottle of whisky, en esprit; so, going to the door, he entered without ceremony, seized the eatables and the bottle and made off, while the frightened inmates shrunk into a corner, crossing themselves and calling on all the saints to protect them, and then uttering shrieks of alarm, which presently brought half a dozen jabbering habitants upon the scene and into speedy search for the bold Bostonais. Fortunately for him, they hunted in a pack, and kept up such a continual jabber that he easily eluded them.

When at a safe distance he sat down and made a hearty meal, and then, refreshed by a draft of fiery liquor, he continued his perilous journey until daybreak, then lay by again till night.

Once, as he lay at dusk in a grain field, one of a searching party actually stumbled over him, but before he could make an outcry Josiah was upon him, gagged and bound him, and wormed his way out of the field without discovery. Another time when he was reconnoitering a house in hope of getting food, he succeeded in getting the capote of the owner, which afforded him so good disguise that he joined a searching party on his own pursuit, and got well on his way during the day. "The holy Bostonais is more cunning than a fox," said one of his pursuers whom he came face to face with. Josiah's bad French betrayed him, and as the habitant hissed out a long-drawn "ah!" and opened his mouth to give the alarm, Josiah's gun barrel crashed down upon his skull. Safety demanded that he should be given his quietus, but the Yankee's heart was too tender yet for such outright murder, and he contented himself with taking his tobacco, pipe and steel, which he was greatly in need of, and then, gagging his adversary, left him to recover his wits at leisure.

At last he came to where the Richelieu draws the waters of Champlain to its channel, and here he began searching for a craft of some sort. He found a pirogue drawn up on the shore, and was groping in and about it for a paddle, preparatory to launching it, and already was exulting in an easy escape by the open way of the lake, when his blood was turned to ice by a voice demanding in English:

"Stand and surrender!"

He turned about and was confronted by a dozen armed men, who seemed to have arisen from the earth, so silently and suddenly had they appeared. He threw down his gun in vexation and despair at being taken just when deliverance was within his reach.

His captors now gathered about him, and he experienced as great a revulsion of emotions when he discovered in the dim light that they wore the green uniform of Warner's Rangers.

Explanations followed, and he was filled with disgust when he learned from the scouting party that St. Johns had surrendered, and that for all these anxious days and nights he had been dodging detachments of Americans and posts that were already in their hands.

Having thus rejoined his regiment, he served with it until the expiration of the term of enlistment, when he returned to the new commonwealth of Vermont.

Old Nag's Head.

Editor Forest and Stream:

I am glad to see reference to Nag's Head in your last issue. Once it was a famous resort, two generations back. Its natural attractions combine all that Cape May, Atlantic City and Long Branch afford, besides wild fowl shooting and fishing there and in the vicinity, such as your unsophisticated readers never dreamed of, while two miles or so across the Sound, at Roanoke Island, is one of the most unique historical spots along the Atlantic coast—full of novelties and natural freaks, besides comprising the site of Sir Walter Raleigh's lost colony of 1587, Gen. Burnside's headquarters in 1862, old Confederate breastworks, mammoth grape vines covering acres, shifting sand domes which have already buried acres of pine forest 60ft. deep, negro self-governing communities, Disciple churches, tropical verdure, old windmills, hard shell clams, and other articles of virtu. And the air is as cool there all summer long as it is at Long Branch or Martha's Vineyard, without being humid or foggy, while it is only a holiday jaunt to reach there at a minimum cost of traveling expenses.

I wrote up this region, partially for the FOREST AND STREAM'S issue of Jan. 14, 1892, and could add an interesting supplementary chapter on the Kingdom of Manteo, if worth while, which would set cloyed summer sojourners on the *qui vive*. There is no coast region like Nag's Head, while all along the outer beach there is a cordon of life saving stations, lighthouses and banker settlements of a salty and quite primitive character, where wild beach ponies range in herds on the intervening salt marshes and dig in the sand for water to quench their thirst. In August the animals are rounded up, assorted and put on the market, while the colts are branded and turned out to grass again and to the mercies of the winter storms. Many of them are used by the beach patrols.

CHARLES HALLOCK.

Critique of a New Reader.

Editor Forest and Stream:

During dull spells of business this spring and summer for pastime I have been reading FOREST AND STREAM. I read it all, advertisements first, generally, as I want to see what people have for sale. Then I read the contributed articles. I find them all interesting, especially the reminiscences of the older people. The majority of your contributors seem to be men of matured minds, with sufficient literary ability to portray past and present experiences in glowing words that make unbidden tears flow from our eyes and a great big choking lump come up in our throats, as we think of youthful pleasures in forests filled with furred and feathered creatures, and streams well stocked with finny tribes. They all tell of the happy experiences and incidents of early days, boyish pranks and pleasures, or fishing and hunting excursions. It seems that as we grow older we all become retrospective, living in the past as far as our happiness is concerned. Nothing seems so joyous as boyish delights, when we were free from care; no food tastes as good to us as that in the old home, when, after roaming the woods or following the streams, we came home with ravenous appetites, "'most starved to death."

So many regard the fisherman as a lazy lout, the hunter as only a buther, whose feelings are hardened by slaughter of the game he pursues. But I don't see that it has that effect on your contributors. Finer feelings I have never seen portrayed, more affecting pathos exhibited, more genuine love shown for the old home and the old folks there, than by writers in FOREST AND STREAM as they relate their boyish experiences and maturer adventures when away from the everlasting grind of modern business. The nearer we get to nature, the better we are. Shooting game and catching fish to supply our wants should not have any more hardening effects than does the raising of sheep, cattle, hogs and poultry on men who are engaged in doing so.

I have been a fisherman ever since, as a ten-year-old youngster, with a peeled elm sapling for a rod, a towstring for a line, a bent wire for a hook, and a white grub for a bait, I made my first cast into the creek that ran through our Ohio farm. There was a jerk on my line; thought I had hooked a whale; landed a big white perch over my head into the meadow beyond; was so scared that I started for home, and never stopped until I dragged pole, line and fish into the house, for fear the whole outfit would get away. In maturer years I have fished the upper Mississippi River for black and white bass, jack salmon, pickerel and channel cats; Lake Ponchartrain for crabs; Mobile Bay and Aransas Pass for sharks when the tide was going out, many years ago. Now I won't die happy until I go South again and catch a tarpon.

In a woods abounding with foxes, squirrels, coons, possums, ground hogs, blacksnakes, quail, pheasants, wild pigeons, owls and smaller birds, were made my first attempts at shooting with a long musket that had done duty in the Mexican war. It was so heavy that I had to rest across a rail in shooting at quails trailing through the corn field in autumn, or prop it in the forks of a sapling while aiming at wild pigeons in a dead tree. With supreme delight I brought home what game I could hit, while my big brother walloped me for wasting so much of his powder and shot.

SENEX.

Natural History.

Some Curious Nesting Sites.

IN his search for birds' nests, the oologist often meets with disappointment; but the nests which he does find are frequently in such position, as to surroundings, and of such material in construction, as to cause the collector to wonder if his feathered friends are not possessed of superior intelligence.

Among all breeding birds known to me, I find few as changeable in their nesting habits as our own Lay's phœbe. This bird that "nests naturally on rocks," adapts itself to its surroundings, and builds its nest almost anywhere.

In the foothill region of this locality, or along the eastern front range of the Rockies, there are numerous abandoned mineral and farming claims, on which there is usually a deserted cabin and "prospect hole" or well, ranging in depth from 10 to 30ft. The walls of these wells remain in position for years without support, partly from the nature of the soil, but more from the fact that very little rain falls during the year. From the erosions that occur little pockets are formed in the sides of these holes and wells, and our phœbe finds suitable support in them for its nests.

Down the mouth of these wells the birds may be seen in early spring carrying material for their nests; grass with little pellets of dirt attached, old rags; anything handy is utilized, until sufficient has been collected to make a substantial nest; the whole is lined with sheep's wool, cotton or cattle hair, and on this soft bed four or five pure white eggs are laid, sometimes three and even two; rarely six eggs form a set complement. But while the well is occupied the cabin is not forgotten, and another pair of phœbes may be building a home for their prospective young in some little nook of the building.

Frequently a suitable place for the nest is found under a bridge, or a culvert is chosen; and I have found them nesting in a crevice of a limestone ledge, or an arroya.

In May, 1896, a pair of phœbes built a nest in an outhouse on one of these abandoned farms near here, in which four eggs were laid, but for the lack of sufficient support the nest fell from its position, and the eggs were consequently ruined.

The birds came to my home and built their nest on a projection under the eaves of the house, and here raised their young in security. The following year, 1897, they returned to the old buildings, constructing their nest, of the usual materials, on a shelf inside the cabin, entering through a broken window pane; depositing two eggs as a full set. These were taken, but were immediately followed by a set of five, placed in the same nest.

Last year they returned and built a very bulky structure, composed largely of bright colored rags with an empty bottle as a foundation, and on the same shelf on which the previous one had been built.

This year a pair of phœbes, possibly of the same family, are rearing a brood of five young in another room of the cabin.

The picture in the Osprey of a year ago, of the European robin's nest, built in an old tea kettle, brings to mind a peculiar nesting site of the Western lark sparrow. In 1889 I flushed a female of this sparrow from her nest, built in a fruit can which had been thrown out upon the hillside. The nest completely filled the can, which was lying on its side, and contained a fine set of five fresh eggs. This bird often builds its nest, for protection it would seem, in the midst of the thorny cactus bushes so common to Colorado.

A nest of the red-shafted flicker was found between the walls of a building in the year previous. The parent bird had chiseled an entrance through the outside wall, and descending to a depth of 3ft., had laid her eggs, seven in number, on a brace between the studding. No nesting material was used. The eggs, well advanced in incubation, lay scattered over the rough timber, in such manner that the bird could have covered but two of them at a time without drawing them together.

A king bird near here found an odd position for a nest on the top of a fence post. The center of the post had rotted away, leaving a cavity barely sufficient for the materials necessary to construct a warm nest. Four eggs were taken from the nest, and the parent birds immediately began the construction of a new nest in an oak near by, in which they brought to maturity three young, one bird having died.

The spring of 1899 brought the same birds, presumably, back to the fence post in which the customary set of four has been laid. I once knew this bird to build its nest on the dead branch of an apple tree, the bleached material of which the nest was constructed blending so nicely with the moss-covered bark that the nest was seen with difficulty. Another case of protective color in bird architecture.

Brewer's blackbird often has freaks in its choice of nesting sites, usually building on the ground or in a bush, and occasionally well up in large trees. Two years ago I found a nest in a fence corner, concealed from view by posts and poles, and not 50yds. from their nest

another one was built on the end of a log under the eaves of a shanty once used as a chicken roost. The past spring a pair of these blackbirds built their nest in the cavity of a pine stump near where I was at work, and which had been used formerly by woodpeckers and sparrow hawks, before the wood had rotted away from the outside, rendering it unserviceable. Here their first set was destroyed by bird enemies, but after the lapse of several days another set was laid in the same nest, which nothing thus far has disturbed.

We might mention other as peculiar positions as those already related, but enough has been written for the purposes of this article. P. L. JONES.

BUELAH, Colo., June 23.

Age Attained by the Right Whale.

Correspondence London Field.

IN the Field of May 27 is a note by Mr. Harting, in which he alludes to the fact of a harpoon having been found embedded in the body of a right whale killed in Bering Sea, which there is evidence to show had been carried by the whale between thirty-six and forty years, and he raises the question as to the age attained by these cetaceans. Many instances of the finding of harpoons embedded in the flesh of whales are recorded by Scoresby, Eschricht and Reinhardt, Dr. Brown and others, and I may mention two recent occurrences of the sort. In 1889 the Windward killed a very large bull whale in the Greenland Sea, the longest slip of whalebone of which measured 11ft. 8in. Embedded in the blubber was found a harpoon of a fashion which was introduced about the year 1850, but, being found inferior to the usual pattern, was soon discarded. This harpoon must, therefore, have been carried by the whale little short of forty years. In 1894 the Terra Nova killed a very large whale, with 12ft. whalebone, in Lancaster Sound, in which was found an old harpoon bearing the name of the Jean, of Bo'ness. As this vessel had been lost in the ice thirty-seven years before, the harpoon must have been carried something like forty years. There is a curious similarity of time in many of these instances. It appears that the harpoons become encysted in gristly substance, and are often quite bright when recovered.

But it is the concluding portion of Mr. Harting's note which raises a point of great interest, and one with regard to which very little is known, viz., the age attained by these giant cetaceans. That it is very considerable I think there can be no doubt; but, as might be expected, there is very little direct evidence; and from the nature of the case it can hardly be expected it should be otherwise. Judging from analogy, an animal which requires twenty-seven years to arrive at maturity would probably survive under favorable conditions to at least 100 years.

Florida Egrets and Steamboat Shooters.

BUT incomparably the handsomest member of the family (I speak of such as I saw) was the great white egret. In truth, the epithet "handsome" seems almost a vulgarism as applied to a creature so superb, so utterly and transcendently splendid. I saw it—in a way to be sure of it—only once. Then, on an island in the Hillsborough, two birds stood in the dead tops of low, scrubby trees, fully exposed in the most favorable of lights, their long dorsal trains drooping behind them and swaying gently in the wind. I had never seen anything so magnificent. And when I returned, two or three hours afterward, from a jaunt up the beach to Mosquito Inlet, there they still were, as if they had not stirred in all that time. The reader should understand that this egret is between 4 and 5ft. in length, and measures nearly 5ft. from wing tip to wing tip, and that its plumage throughout is of spotless white. It is pitiful to think how constantly a bird of that size and color must be in danger of its life.

Happily, the lawmakers of the State have done something of recent years for the protection of such defenseless beauties. Happily, too, shooting from the river boats is no longer permitted—on the regular lines, that is. I myself saw a young gentleman stand on the deck of an excursion steamer, with a rifle, and do his worst to kill or maim every living thing that came in sight, from a spotted sandpiper to a turkey buzzard! I call him a "gentleman"; he was in gentle company, and the fact that he chewed gum industriously would, I fear, hardly invalidate his claim to that title. The narrow river wound in and out between low, densely wooded banks, and the beauty of the shifting scene was enough almost to take one's breath away; but the crack of the rifle was not less frequent on that account. Perhaps the sportsman was a Southerner to whom river scenery of that enchanting kind was an old story. More likely he was a Northerner—one of the men who thank heaven they are "not sentimental."—Bradford Torrey in Atlantic Monthly.

Hens as Mousers.

WE need not go to Kansas to find a mouse-catching hen, Pine Tree! Come right back to the Pine Tree State. Thirty years ago I lay in a burrow on the haymow with my head out, and that buried in the tale of "Heavy-hatchet, the Bold Scout"—did you read it, P. T.? Near me a small black hen roamed across the hay, singing and making darts. A big, dark grasshopper (?) sprang from a hollow and after him ran the hen, with feet twittering over the straw and wings half-opened. The pace was too hot for the hopper. The hen seemed to turn as swiftly as he, and presently he took a headlong dive for the floor, some 12ft. or more below. Well, that hen went right after him. A hawk couldn't have made the swoop professionally better than she, with wings half-closed. Before she struck the floor I was in the air after her—why I didn't break something Heaven only knows—and as she scudded toward the hen house I ran too, to see what her prey was, and it was a big surprise to me to find it a good-sized mouse. I guess Maine hens can do as well today, on a pinch. J. P. T.

A well-known ornithologist and author of books on birds writes: "I have read with much satisfaction a contribution from Didymus and editorial comment on a reply thereto in late numbers of FOREST AND STREAM."

Game Bag and Gun.

The July number of the Game Laws in Brief and Woodcraft Magazine is now ready. See advertisement of it.

New Brunswick Notes.

Your correspondent, Special, whose preference for facts is well known, seems to have picked up an odd specimen of fiction when he says that "Mr. L. Dana Chapman, of the Megantic Fish and Game Club, has positive information that the Canadian Government has decided to open September to the hunting of moose, caribou, deer, partridges and other birds." The Canadian Government has no jurisdiction over the subject of game except as it comes within the scope of the customs laws. The game laws in vogue in Canada are the product of the cheerful ignorance of the respective provincial legislatures. None of these laws in any way resemble each other. Nova Scotia, for instance, prohibits the shooting of "American elk," while the solons of New Brunswick offer a bounty of $5 per head upon non-resident wolves!

Possibly Special has reference to the New Brunswick game law, which was amended at the last session of the Legislature and then put on the shelf. The big game season here for the past two years has opened Sept. 1 and closed Jan. 1., and such is the law this year. In 1900 it is probable that the opening will be changed to Sept. 15. An argument which has been used in favor of the change is that in the great majority of cases the horns of moose, caribou and deer, especially those of the younger bucks, are in the velvet until after Sept. 1. It is also pointed out that the aquatic habits of moose and deer in the warm weather months render them too easy a mark on that date. A further contention is that if the opening were later fewer carcasses would be rendered valueless by hot weather.

When the bill now before the Canadian House of Commons enabling visiting sportsmen to take out the carcass, or any part thereof, of game animals killed by them is passed, and when the section in the New Brunswick law requirinb the sportsman to take his oath on a $100 bill that he will not break the law is repealed, there will remain few, if any, legitimate grievances on the statute books of Canada with regard to the visiting sportsman. Doubtless the hunting grounds of Canada would be more popular if no licensing system existed; yet I trust this will not under present conditions be repealed. So far as New Brunswick is concerned, the license has kept the slaughter of game within bounds, insomuch that moose, caribou and deer are now found in localities where they were formerly unknown. It has enabled nine out of every ten sportsmen who have visited New Brunswick during the past three seasons to go home with a halo of antlers instead of adjectives. It has helped to provide a game protection fund whereby invertebrate game officials have been replaced by men who are determined to enforce the law. If the principal or only game of the Province were deer, no license would be required, as none is now required for this kind of game. But the moose—an animal whose habitat is becoming more contracted year by year—is too valuable to be exposed to the slaughter that would follow the abolition of the license system. There are now probably ten moose in New Brunswick where there was one twenty years ago, owing to the license and other restrictions placed upon big-game hunters.

The stalwart Adam Moore, of Scotch Lake, has pursued every known species of game in this country, from the reminiscent ground hog to the monarch moose. His 10-bore cannon has rung the requiem of many a scudding teal and lifting snipe. His opinions in the matter of sport are entitled to respect, and Adam says that running the rapids on the head of the Nepisiguit in the spring of the year, dropping anchor now and then to pick up a bear, is good enough sport for him. This was Adam's first experience in bear trapping, and there were twenty pelts in his pile. Three of the specimens are remarkably fine, and will be mounted and added to the collection of game birds and animals in the Crown Land Department.

A fishing party composed of Dr. Norris and friend, of Philadelphia, returned the other day from the Nictau country delighted with their outing. They caught plenty of trout, though none of the big 7lb. lakers that were in evidence earlier in the season, and thirty-five moose in their wanderings, in addition to a goodly count of deer and caribou. The Doctor is going up there in September.

J. H. Holmes and Prof. Brown, of Buffalo, relate weird tales of their experience in the Long Lake county, up the right-hand branch. One evening, at Mud Lake, nine moose and four deer were sighted on the lake shore. The next morning a cow moose chased by a bear ran through the tent yard and demolished a fiddle belonging to the guide. In the course of his travels, extending over a period of four weeks, the Professor tallied fifty-four moose, thirty-two deer and six caribou in the Trousers Lake and Long Lake country. He, too, will return when moose are ripe.

There is a game country heretofore unknown to sportsmen, unless of the strictly hayseed type, in the vicinity of Grand John Lake, at the head of one of the branches of the Nashwaak. It is reached by an excellent portage road only six miles long from Upper Keswick station. Moose and caribou are numerous and the cottontails flicker in the gloaming on the ridges. The country is open, interspersed with lakes, ponds and barrens—a goodly show in every way for the man who wants to get his moose without sweat or swearing. Woe is me that I should reveal it.

I suppose if all the incredible things that really happen in the woods were chronicled, the late Ananias would be canonized as a saint. While fishing at one of the Keswick lakes last week your correspondent hooked at his first cast and brought to net three trout whose aggregate weight was 4¼lbs. In the remainder of the day's fishing, though he stood upon the ramcat and flogged springholes many hours, he got only five more fish. On the following day his companion, Harry McLeod, at the same spot, just below the lilypads, hooked at his first cast and brought to raft three trout whose combined weight was precisely 4¼lbs. Yet during the residuum of that day Mr. McLeod fished with strenuousness and only caught five more fish. Three things no man can understand: How the bull moose walketh off without a sound, how the caribou fatteneth his ribs on the dry, white moss, and the ways of the lake trout in summer.

FRANK H. RISTEEN.

FREDERICTON, N. B., July 11.

Self.

PORTLAND, Ind.—*Editor Forest and Stream:* Of late I've been studying the subject of self. Though not a subject, strictly speaking, it is the root of many evils, uprooting, in point of fact, money, said to be the root of evil. Webster says: "The word self signifies personal interest or love of private interest; selfishness;" and quotes from Watts thus: "The fondness we have for self furnishes another long rank of prejudices;" and from Pope as follows: "A man's self may be the worst fellow to converse with in the world." Observe that Pope says "may be." I believe we can converse with self with perfect safety and derive much benefit, if we have within what I shall denominate a regulator. But if we have not a regulator within, the animal nature will surely lead us into excesses. Of course, the law steps in, and first cautions, then demands of the conscienceless sportsman (?) that he restrain himself. 'Tis pity 'tis true, but so long as there are men without regulators there will be use for the law. Here self asserts itself. Without a regulator it devises ways and means to make the law inoperative, except as to the other fellows. Instead of saying, "Brother, come up and I will show you fine sport; but bear in mind, we kill only what we can readily consume," he says to himself, "I want these deer and trout; that license fee of $25 will keep the other fellows out; there won't be anyone up here to watch me, and I can hound and jack as I please. The market will be better, too." This is self as Pope saw it. The legislators of Indiana said, "Fish may not be taken in any of the streams or lakes during the months of May and June;" but self (without the regulator) comes into the State from Chicago to fish in Bass Lake in the fore part of June.

Laws are sometimes not made so much for the protection of game and fish as they are in the interest of a class of men. I've been thinking about this, and I can't see but what the poor game is being compelled to jump "out of the frying-pan into the fire." A duty on lumber stimulates the destruction of our forests, and, naturally, the game. The wealthy lumberman cares not for the game, and his friend, the lawmaker, has it run into his private park, where he and his friends can enjoy the chase with none to molest nor make afraid. These are men who converse with self, but have no regulators.

I have asked myself, When will this thing end? Will the States that have game take some interest in the protection of it before it is all destroyed? Will they continue to protect a class of influential men, and incidentally all men within the State that have no regulators, or, seeing the beginning of the end, will they open the doors and say: "Take it; kill and sell"?

I have stopped by the roadside a few times lately and gone into small wood lots with my gun in the hope that I could find a fox squirrel. I struck an eighty-acre lot on my brother-in-law's farm near the Ohio line last Saturday. The wood was grown up in brush on the high ground, and with tall coarse grass in the swales. My ten-year-old boy, who is a pretty good shot, was with me. We hunted that wood all over and went through two other more likely looking pieces of wood, but saw only one pine squirrel and one young fox squirrel. We got the fox squirrel, but I let the boy try for the other until he lost it in the branches of a tall tree. He had a target rifle and I had my .38 Winchester. We had to fight our way through swarms of mosquitoes, and I was surprised to see how the little fellow went through the ordeal. Later in the day he got a pine squirrel off a tree by the roadside. At another place he called my attention to two young rabbits sitting among some brush inside a wood that was posted: "No hunting on this farm until you see ———"

When I think how scarce game is here now (except rabbits and quail), and that back in the old home of my ancestors—Viriginia and the Carolinas—game is more plentiful than here, I am impressed with a kind of nightmare feeling, as though time was turning backward, and that I might yet experience some of the things told me in childhood. Would it not seem strange to go back East to hunt a century or more after my people left that country and followed in the wake of the Indians as they were driven westward before advancing civilization? Back there to find game we can't find here any more? Here there is no waste land. Year by year the country is being more improved. We burn natural gas for light and fuel over a large area. We have graveled highways in every direction. There is on an average not more than 100 acres of uncultivated land in each section, or square mile. Less than seventy years ago this was a wilderness infested with wild game and Indians. My people lived on the Virginia border in Simon Girty's time. My father had a great aunt who with a babe in arms was taken captive by the Indians. Her arms were pinioned behind (so the story goes) and her babe placed on her hands in front. She became exhausted, and an Indian took the babe and dashed it against a tree. Later Girty bought her liberty. Though a renegade, he must have had a better regulator than some people who converse with self these latter days.

"I have just received No. 25, and I read in "Chicago and the West" items this: "Mr. Geo. Murrell and his friend Mr. Crosby, of this city, have gone to Bass Lake (Ind.) again after big mouths." This little boy of mine thinks it wrong to violate the law. He has fretted a good deal because he can't go down to the little muddy Salamonie and catch little pot-bellied mud cats. Prior to May 1 the little fellows spent all the time allotted them along the creek; but I have heard of no fishing in this State since then, except as reported from Chicago. So I've been thinking about it. I've commenced with self, and I have concluded that the rich man should be held amenable to the law as well as the poor urchin. He should not be allowed to violate the law and escape through friendship or the payment of a nominal fine.

But I have about concluded that game laws do not protect game so much as they favor a certain class of sportsmen at the expense of a class more conscientious and less favorably situated. G. W. CUNNINGHAM.

CHICAGO AND THE WEST

The Minnesota Forest Reserve.

CHICAGO, Ill., July 14.—As indicated briefly last week, we can report distinct progress in regard to the proposed Minnesota forest reserve, the first mention of which in the sporting press was made in the FOREST AND STREAM May 6. The progress has been made along the lines indicated at that time, and meantime several important steps have been made which practically remove all doubt of the success of at least the preliminary work. That is to say, there will be an organization of prominent and responsible Western business men chosen from several States in the Middle West. The name of this organization will be short, simple and significant. It will be called

"The Itasca Association."

This organization is not yet perfected, but a list of names is now in preparation by Col. J. S. Cooper and certain of his friends, and the preliminary meeting will be called in all likelihood for some day next week. The matters which have been transacted thus far unofficially will then be put in official form. The Association will then issue a formal invitation to every member of the Congress of the United States to join in an expedition of investigation which shall cover the territory in question. It is thought that the best time for this expedition will be in the first week of October, and that is the date which will probably be chosen. It is believed that at least fifty members of both houses of Congress will meet at the rendezvous in this city. The party will go west from Chicago in special trains provided by the Chicago, Burlington & Quincy Railroad, that road having offered to take the party without charge. A similar magnificent courtesy is extended by President Jas. J. Hill, of the Great Northern Railroad, which will take charge of the party from St. Paul north. There will be probably two dozen different camps laid out in different portions of the Minnesota wilderness. It is the intention to distribute the distinguished visitors in such way that each may gain a thorough idea of the whole region, and may yet have a satisfactory taste of the sport which that region offers. Guides, boats and entertainment will of course be free to the members of Congress who shall be present, and provision has already been made for this magnificent piece of hospitality, which is undertaken by President Hill, of the Great Northern Railroad.

It will appear to everyone connected with this expedition that this is not a junket, not a scheme, not a land boom, and not a railroad enterprise. It is a straightforward, impersonal and useful attempt to secure a great popular benefit. There is not the first touch of personal interest, of personal advertising, of axe-grinding or log-rolling in this enterprise from its start to its finish, and when this is distinctly understood it is believed that a good share of the members of Congress will be glad to lend the dignity and encouragement of their presence. They will be able to see the region for themselves, and it will be left to them to decide what, if any, shall be the size of the proposed forest reserve.

To take so large a party into so remote a country and to do it properly is considerable of an undertaking. It is to be said that Col. Cooper and his generous railroad friends seem to have arranged for this in a most satisfactory and practical manner. The whole enterprise is one of Western enterprise and magnitude, and in view of its unimpeachable motive it is sincerely to be trusted that it may meet success. The Minnesota wilderness is at our doors. It can be visited by ten people where the Yellowstone Park can be reached by one. The State Health Officer of Minnesota could find no finer sanitarium ground. The president of the Forestry Commission could devise no better means than that proposed for the preservation of the remaining Minnesota forests—that last tract which is in such imminent danger of being ruined by the lumbermen, as were the forests further East. The United States army could have no better training ground or resting ground than this national reserve. For it should be remembered that this would be and should be a national reservation, under the guard of the national troops and under the control of the national laws.

The Opposition.

It is rarely that one sees any enterprise which has received more favorable mention from the leading journals of the territory concerned. The Chicago Times-Herald and the Chicago Tribune both indorse the project and give it extended mention. The Associated Press is doing as much. The Pioneer Press, of St. Paul, one of the leading journals in the State most interested, is in favor of the enterprise, but points out that there will be serious opposition from several sources, so that it questions whether the matter can be accomplished.

Perhaps the two greatest factors of the opposition hinge on the Indians and the lumbering interests. Many ask of Col. Cooper: "What are you going to do with all the Indians on those reservations which you intend to include in the forest reserve?" Col. Cooper's reply to this question is noteworthy: "Do with them what has never been done before—let them alone." That is it precisely. There is no robbery of the Indian proposed in the measure. If the Indian reservations were included under the broad protection of the national reserve, and if the lumbermen and the squatter, the worst enemies of the reservation Indians, were excluded from the confines of that reserve, the Minnesota Indians would be in a better position than they have been since the white men first came among them. At Cass Lake there is a little straggling pine woods town already built on the land of the Indians. It is a straight case of steal, and the Indians know it; but what can they do? If this forest reserve were established the territory of the Indians would be kept clear from white settlement. The Commissioner of Indian affairs will in all probability soon remove these adventurers from the soil which they have stolen; but under the old order of things we could only expect that they would move their towns to some other reservation, and that the lumbermen would continue their regular theft of the pine timber from the reservations, as they have been doing to the anger and chagrin of the Indians for years. The establishment of this reserve would settle at once one of the gravest questions which has arisen under the Minnesota and United States judiciary—that of the clashing of the whites and the reds over the timber lands.

This calls up the main opposition—that of the great timber barons. These men want those pine lands, and they will fight for them. They are in a political position to make some trouble. It is thought that this trouble is perhaps magnified in advance, and that these interests can be reached by argument, or at worst by compromise. It is too soon to cover ground of that sort at this writing. On these several heads I may offer the comment of a Minnesota gentleman who has the widest personal acquaintance of every portion of the great tract of land which is sought to be included within the lines of the proposed reserve, and who is an authority in forestry matters. This gentleman writes from Itasca, Minn., to Col. Cooper as below:

Details from the Spot.

"Ten years ago the forest reserve proposition was attempted in Minnesota by joint resolution of Congress as an expression to the Minnesota Legislature. The Duluth iron interests, the Minneapolis lumber interests, railroad immigration interests and the Lake of the Woods and Rainy Lake settlements inaugurated an opposition which was proportionate to the whole State, and the measure was promptly dropped. Since that time there has been the greatest difficulty in the attempt to save to posterity even the immediate surroundings of the source of the Mississippi. The lumber interests and the city of Duluth seem to be the greatest opponents of forest reservation in Minnesota. Both have been energetic in defeating any measures which remotely or otherwise might curtail their economic interests. Active members of Congress represent them. The whole Mississippi River, from Itasca to Minneapolis, is a private highway for logs. North of Brainerd every tributary is in possession of the lumbermen, intent on the utter denudation of forest holdings as soon as possible. The Ojibway timber, at Leech and Cass lakes, is a ripe plum for which the lumbermen are watching.

"My first idea is to preserve the Ojibway timber as the nucleus of a great future park. When that timber is cut and shipped out, forest fires will complete an untimely destruction."

This same gentleman gives from his great acquaintance with that region the following advice as to the posting of the camps in case of the Congressional visit:

"Distribute parties from Grand Rapids, or possibly Leech Lake. Push up the river, and not down. The elevation is greater, water purer and timber less cut off. The best camping grounds are: Winnebigoshish Dam (dam now out and rebuilding); mouth of Turtle River; north shore of Cass Lake; west end of Cass Lake—a beautiful spot; Bemidji Lake and the Mississippi below it; Itasca Lake (wagons from Park Rapids); Bottle-Neck and Greater Mantrap lakes; north shore of Leech Lake—islands and points; north end of Bemidji Lake, near Turtle lakes; Cut Foot Sioux to Bow String (a wilderness); mouth of Leech Lake and Ball-Club Lake; Potato, Eagle and Island lakes, near Park Rapids and Big Sand; Little Mantrap Lake—out of season, though deer are plenty."

The same gentleman again writes to Col. Cooper, after seeing something further regarding this proposed movement described in the Minnesota papers, and in this recent letter there is much worth preservation, chief of all those golden words where he, perhaps unwittingly, gives utterance to a sentence which ought to be placed high in the teachings of every American school—that one quoted later regarding the time it takes to grow a tree and the ease with which that tree may be destroyed. The writer of this letter is an old man, and thinker, and he has spent many years in an unselfish labor at preserving the native forests of his State. He goes on to say:

Keep the Reservation Timber.

"Since writing you last I have spent an entire week among the Ojibways. There is an intense feeling among them because of the dastardly attempts to rob them of their pine timber at Cass, Leech and Winnebigoshish lakes. I had a long talk with Leading Feathers (Flatmouth) and Ne-sho-tah (Rev. Dr. Wright), the two head chiefs, and met in a friendly way 500 other people of the tribe. Now, the Ojibways are in my opinion an absolute necessity to the success of a park in this region. No person has any right, title or claim to ownership of the reservation forests except the Indians. Therefore no infringement of rights can exist if the United States reserves the region for gradual denudation and reforestration, say after the lapse of twenty-five years, at which time the timber will have become more valuable and the economic uses more scientific than the present wholesale lumbering and utter annihilation now in vogue, followed by tremendous forest fires, which leave only a black, burned waste of stumps and tree tops.

"Of the Ojibway timber in the proposed reservation there is about 900,000,000ft. The Nelson bill of 1889 fixes the minimum price at $3 per thousand, in the aggregate $2,700,000—a small item for the National Government to assume, when so vast benefits to the people are to ensue.

"I elaborate on the reservation question because the Indian lands are a prime necessity to a successful park. If the 900,000,000ft. of timber is allotted for immediate cutting, then the exact center of the proposed reserve goes to irrevocable and untimely destruction. A TREE—SUCH GRAND ONES AS WE HAVE HERE—CAN BE FELLED IN TEN MINUTES. TO REPRODUCE ITS COUNTERPART REQUIRES 300 YEARS.

"Let the Indians remain right where they are; pay them for the timber, restrict them to lawful and regulated occupancy, and they will consent. You will find that by the treaty of 1855 the solemn pledge was made to them, as ratified by the United States Senate, that they were forever to remain where they now are. * * * Now the Ojibway is armed and ready for a rebellious outbreak if the fraud is concluded.

"The people of Minnesota are entitled to a peaceful solution of this vixed pine-land reservation question now pending with the Indians here, and the considerate procedure presents itself, of vast benefit to all, of the John S. Cooper proposition to preserve the headwaters of the Mississippi as a national park. Pay the Indian for his land, then preserve it for the whole people, instead of turning it over to a lumbering syndicate for immediate destruction, the latter a class proposition, which converts a vast domain to the interests of a few individuals, the rights of the Indians to the contrary notwithstanding.

"I cannot urge upon your attention too strongly the absolute necessity of centering your reserve at Cass, Leech and Winnebigoshish lakes. Pay the Indians there and preserve the timber. Then you will have a magnificent resort, with available surroundings east, west, north and south."

The Organization.

I have earlier mentioned Mr. Chas. Cristadoro, of St. Paul, as one of the very earliest enthusiasts in this movement toward the Minnesota reserve. Mr. Cristadoro was in Chicago this week, and while here met Col. Cooper and the writer and had a long talk over the matter. Mr. Cristadoro is an enthusiast whose ardor does not cool, and has done a great deal and is in a position to do a great deal more toward furthering the ends of this movement. It seems that our mutual friend, Mr. W. B. Mershon, of Saginaw, Mich., has also thus early set his hand to the plow. Both these men are in the lumber business, but they are also in the business of being thoughtful citizens. They are of the type which seems to be rallying in most unexpectedly great numbers already about this standard for forest preservation and for national playgrounds where nature may be seen unhurt. Such men are not easily turned aside. It would be a folly unworthy of them, and one to which they will not be susceptible, to underestimate the difficulties which lie between this stage and ultimate success, but it may be submitted that what these men have already accomplished puts this grand work far beyond the realm of chimerical or self-seeking effort. It must be repeated, not one of these individuals has an axe to grind or a log to roll. There will be nothing hidden. There is not one selfish purpose in all this. The intention is to do a worthy and unselfish deed, of great extent and of great popular benefit; to secure to the people of America a portion of their heritage before it is too late. Now let us see if the people of the United States and the Congress of the United States will back an enterprise thus conceived. The principle is this: It takes ten minutes to destroy the tree, and it takes 300 years to replace it. That wonderful region of Minnesota, the greatest sporting ground left anywhere in the entire Middle West, is too beautiful, too valuable to deserve the ruin and desolation which threaten it. It is no unworthy idea, no unworthy call which says: "Let us save this wilderness in its wildness, and do this thing before it becomes forever too late."

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Jackson's Hole Elk.

JACKSON, Wyo., July 7.—*Editor Forest and Stream:* My attention has been called to a scandalous communication from this place, dated May 31, and signed R. M. W. As I have before had some correspondence with FOREST AND STREAM, and believe it to be generally fair and impartial, I ask the privilege of commenting briefly upon this cowardly stab at the people of this valley.

Ordinarily, anonymous slanders condemn themselves, but since you have seen fit to publish and editorially mention this spiteful fabrication, it may be well to disabuse the minds of your readers who are ignorant of the local conditions and unacquainted with the people.

R. M. W. assails his own neighbors viciously and indiscriminately because of the presumptive guilt of two residents whom he charges with having sold elk tusks.

All that I know of the elk tusk matter is hearsay. My information is, I believe, more reliable than the turgid vituperation of R. M. W. I have heard—and believe—that fifty pairs of elk tusks were sold by S. L. Adams to James S. Simpson, deputy postmaster at Jackson. Strange, is it not, that R. M. W. failed to mention the name of the buyer, who—if there has been an offense committed—is fully as culpable as the seller?

Mr. Simpson has been buying elk tusks for some time—as many other persons, resident and non-resident, have done; and whoever had tusks to sell has sold them, as Mr. Adams did. There is nothing new, startling or clandestine about these transactions. Several persons here have openly and without concealment taken pains to collect elk tusks; some for sale, others merely to possess a unique collection. Many elk are lawfully killed here, many die naturally, and it has been, and is yet, reasonably easy to collect a good many elk tusks legitimately. There have been many violations of the game law—some gross, some slight, some by residents, some by non-residents—but I have never yet known or even heard of any one killing elk solely for tusks.

I am no apologist for Mr. Adams. If there is proof of his having killed elk for tusks, no punishment provided by law is severe enough.

The facts are these: This case has been investigated by the officers, and those persons relied upon to come forward and substantiate rumors have utterly failed to furnish the proof. Adams claims that he purchased forty pairs of tusks; that he lawfully collected ten pairs, and has never attempted any concealment of the transaction. As to H. F. Davis, connecting his name with this hypothetical case is malice, pure and simple.

The only section of our game law under which the officers could act in this case, is Section 5, which provides that officers may seize "any part" of a game carcass when found in actual possession of a person during the close season.

If I am not mistaken as to the identity of R. M. W., the animus of his villainous and cowardly attack upon his neighbors is easily understood. When a peanut politician is thwarted in his ambitious schemes, and then incontinently kicked out of his home club, it is but natural that his dwarfed and distempered mind should conjure up every conceivable slur and slander, in the futile effort to "get even" with his betters.

This is the only answer or explanation which the wholesale and maliciously false denunciation of the gun club and the people of this community deserves or requires.

Allow me to call your attention to just one little "mix-

up" in the reckless statements of R. M. W. He says that "it is a well-known fact that two-thirds of the settlers in the Jackson Valley have in some way violated the game and fish laws," and then, in conclusion, complacently announces that "public opinion is in favor of a strict enforcement of the law in the Jackson Valley country." This slight contradiction is only a sample of his ignorance and prejudice. D. C. NOWLIN.

The Pamunkey's Game Tribute.

ON the banks of the Pamunkey, in King William county, about twenty-five miles from Richmond, Va., dwells a community of 110 Indians, the lingering remnants of the nation which met the English colony with friendly greetings when it arrived on the banks of the Chesapeake Bay. The records of those times refer to Powhatan as "the emperor of the Potomac," and from the "relation" of Capt. John Smith we may judge that he had about 2,500 warriors under his command. By the last census they were reduced to ninety-three, and since then the birth rate has been so much greater than the death rate that they have increased their total by seventeen. The place where they live is a little peninsula, a bottle-shaped neck of land comprising about 800 acres, of which 250 acres are under cultivation. The remainder is thickly wooded with virgin forest, swampy and uninhabited. It abounds in game, which is one of their chief sources of subsistence. This tract is secured to the Pamunkey Indians by an act of the Colonial Legislature. They hold it in common, are prohibited from alienating the title and are exempt from taxes, although under an ancient law they are required to supply the Governor of the Virginia colony annually with a certain amount of wild game. This practice still continues, and during the shooting season, spring and fall, they are in the habit now and then of sending the Governor, by the conductor of the train, a bunch of wild ducks or a haunch of venison.—Chicago Record.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

ANGLING NOTES.

From the Restigouche.

NOT for one moment have I ceased to regret that I was unable to fish this season for salmon in Canada, and now that the first week in July is past and salmon fishermen are returning to their homes with reports of indifferent fishing, the longing increases. It does not follow that to be absolutely happy one must kill a great number of salmon, for a very few fish will go a long way to put one in a very comfortable state of mind. I often recall the pose and expression of a friend who was fishing with me after he killed his first fish of that particular year. He was seated on a log only a few feet from his canoe; one of his men was bending over at the water's edge washing the fish, which weighed something between 20 and 25lbs., and he was lighting a cigar. As he held the lighted match at the cigar's end and puffed contentedly, his eyes peered over his glasses, not at the match, but at the fish. He said, his face as well lighted with a serene smile as his cigar with fire: "I am (puff) ready to go home (puff) now." Under date of July 1 Mr. Mitchell writes me, en route for home: "I left the river on the morning of the 29th and have half an hour at my disposal while waiting for a train to take me home, and use it to let you know how the fishing was up to the time I left the river. To make a long story short, this has been the poorest season I have ever experienced on the Restigouche. The drawback, first, last and all the time, has been the great scarcity of fish. We had two rain storms, which gave a few inches rise of water each time, and the water was in fine condition for angling all the time we were on the river. Many fishermen came, cut their trip short and returned home clean; others killed one fish, some got two; still others as high as four or five; but up to the time of leaving I heard of no one who made what might be considered a real good score. Why the fish should be so scarce this year is a conundrum that is pretty hard to answer. The last of Camp Harmony Club left on June 22 and closed the camp. The Messrs. Sage gave me a very agreeable surprise. They called the day before they went home and gave Mr. Ayer and myself the privilege of fishing the whole of their water for the balance of the season. Up to that time Ayer had not arrived. We then had over five and a half miles of river to cast our flies on. We could not half fish it, but for once in our lives we had plenty of water, if not many fish. Up to the time I left Ayer had killed seven fish—12, 18½, 9, 21½, 14, 8½ and 9lbs. He intends to remain on the river until about July 7, and I think he will get fair fishing for the remainder of the time, for he has plenty of water to fish on and there were indications of more fish being in the river when I left than at any time since the opening of the season.

"I have heard of an octogenarian fisherman, but never met one until this year. Mr. W. W. Habersham, of Savannah, Ga., was fishing a pool he owns on the Matepedia and Mowat waters. He had hooked a large fish on the Mowat water, but was unfortunate and lost it in the gaffing. We invited him to come and fish the Alford and Grog Island waters while Ayer and I gave our attention to the Camp Harmony pools up the river. Up to the time I left Mr. Habersham had several rises, but had not killed a fish. He is eighty-two years old this month and is a most remarkable man. He is full of fishing experiences and never tires of talking about them; he says he never felt better in his life, and I wish you could meet him, for you would enjoy his conversation; but he makes you feel that he belongs to a past generation of anglers. He has owned some of the best pools on the Restigouche, but has nothing on that river now. He stands in the canoe and fishes all day, never letting one of his men cast for him. Just think of it—a man of his years coming all the way from Georgia alone to fish for salmon on the Restigouche! This is what angling does for a man if he only begins it early enough. My score was thirteen fish—22, 12½, 25½, 26, 30, 7, 24, 19½, 10½, 21½, 9, 11 and 26½lbs.; total, 245lbs., an average of 18.11-13lbs. By leaving out the five small fish my score looks better, as it gives me eight fish with an average of 24⅜lbs."

A Big Black Bass.

It is doubtful if a fisherman ever actually regrets catching a big fish, but I came very near to it once, or more strictly, perhaps, I came near regretting that the weight and species of the fish got into the newspapers. The fish was a black bass of the small-mouth species, and it was caught the morning of Aug. 1, 1877, and weighed 8¼lbs. Why I came near to the point of regretting it was that I was called upon periodically for a term of years to prove it. One friend wrote: "Knowing Cheney well, I cannot doubt that it was a small-mouth, for I know that he fully understands the difference, and I am perfectly satisfied that he would not make a wrong statement about the weight; but the weight is remarkable, and I cannot help wondering if the scales were correct."

That was mild to some of the things which were said by people who did not know Cheney well. Not until 1884 was I able to send a fish of exactly the same weight to Blackford's Market, in New York, for exhibition, and to wire to FOREST AND STREAM to send all doubters and skeptics to the market to weigh and examine the fish for themselves. FOREST AND STREAM weighed it and measured it, and recorded it, and then I was really glad that I caught the first one seven years before, although I did not catch the second one. When I sent this bass to Blackford's I asked Mr. Blackford to send it on to the National Museum in Washington after it had been exhibited, and thereafter, when anyone doubted the weight to which the small-mouth would grow, I always said: "Go to the National Museum and see for yourself a small-mouth that weighed, or did weigh, 8¼lbs." Finally, someone told me the fish was not at the museum, and once when in Washington I looked into the matter. Mr. Barton A. Bean said the fish was probably in alcohol somewhere, but he could not locate it, and there the matter rested. Jun 28 of this year Mr. Bean wrote me: "I have just found what I take to be the fish you were looking for years ago. It is No. 37,232, and was collected September, 1884. It weighs 8lbs., is 21.5in. long and 7.5in. deep. It is a genuine *Micropterus dolomieu*. Can you tell me whether it is a Glen Lake fish, as the locality is not entered on our book? The bass is preserved in alcohol and is in a good state of preservation." The bass was caught in Glen Lake by Edward Reed, the present postmaster of Glens Falls, in September, 1884. FOREST AND STREAM of Oct. 2 the same year gave the weight of the fish, as weighed in New York, 8¼lbs., which was exactly what it weighed when I shipped it. The dimensions given in FOREST AND STREAM were: Length, 22½in.; girth, 18½in. "The length was from nose to fork in tail."

All this is ancient history, and I have since the time mentioned seen a small-mouth that weiged 10lbs.; but I wish to get it on record finally that the Reed bass is at the National Museum, where I have said scores of times that it might be found by the curious who may still doubt that the species weighs upwards of 8lbs.

Marston Trout.

The week that my note appeared in FOREST AND STREAM about the Marston trout Mr. Charles H. Wilson returned from the St. Bernard Club, in Canada, bringing with him a trout strange to him and other members of the club. He thought it might be a Sunapee saibling, and very kindly brought it out, that I might see it; but I was not at home, and did not see the fish until about a week after it was caught, and then it was eviscerated and dried and in doubtful condition for identification. It had very red sides and belly, which the Sunapee saibling does not have at this season, and it lacked the milk-white band on fins which the Sunapee trout does have at all times. Everything about the fish, so far as it could be examined, pointed to its being a Marston trout, and that is what I believe it to be. The trout was caught in Lac Saccoma, on the St. Bernard Club preserve, and the same species of trout are found in three other lakes belonging to the club and in one lake belonging to Mr. Charles Simpson, of New York city. Mr. Wilson could tell me little about the fish, but that little indicated that they were Marston strout. Mr. Simpson had a man engaged last fall catching these fish to take the spawn for artificial propagation, and from him I hope to learn more about their habits. They are reported to be lake fish and found, in the spring, at least, in deep water, where they are taken with bait. They have never been observed in the streams flowing into any of the lakes they inhabit. They have been taken up to 3lbs. in weight, but the one Mr. Wilson brought to me was a fish of about ½lb., as was another caught with it. Once I had a single specimen of this fish sent to me in a roundabout manner and in ruinous condition, and it was months after before I could discover where it came from, and then its habitat was not made as clear as I could wish; but from what I have since learned I am inclined to believe that it came from Mr. Simpson's preserve. Anyway, a fish that did come from Mr. Simpson to Mr. Blackford, and presumably from his Canadian preserve, was sent to Dr. Bean, who called it *Salvelinus rosse*. Heretofore it has been difficult to obtain more than a few specimens of the fish from the lake where the Marston trout were first found or from the St. Bernard Club; but it is now hoped that a sufficient number of specimens may be obtained from Mr. Simpson or members of the St. Bernard Club to settle definitely the question of species. In my note on the Marston trout in FOREST AND STREAM of June 17 I said the first and only specimen I had seen of the fish came from Lac de Morbre. I should have said that other specimens were sent to me—six in one lot—but arrived in such condition that they were beyond examination, and the same may be said of a lot sent to Prof. Garneau; and but one lot came in good condition.

A Mink on a Hook.

A friend, who is a physician, was at his camp on a lake in this State to spend the Fourth of July with some companions, and was annoyed by a mink that carried off fish from under their very noses. His hiding place was under a rowboat dock, and he seemed to be lost to all sense of fear of man, for once he seized a pike in his mouth which was too large for him to take to his lair, and when one of the men rushed down to the dock to rescue the fish the mink spit at him like a cat and held his ground and the fish until he saw the man meant to take the fish even at the expense of a dead mink. The Doctor finally became so exasperated that he determined to capture his minkship and make his skin into something; but there was no trap nor firearm on the islands; but the Doctor is a good angler, and he angled for the mink by watching at the hole where he came out from under the dock with a hook and line; but the hook was not baited, for it was to be a jigging match. After a time the mink was hooked, and there was snarling and spitting and probably bad words in the mink language, and all the skill the Doctor could bring to bear with the rod that held the mink on the hook. The hook did not have a good hold, and after a struggle the mink escaped and apparently left the island, for no more fish were stolen; but while the hook held the mink gave more fight than a black bass.

Mascalonge.

Several times a year I am either asked why I spell the name of this great pike "mascalonge," or I am taken to task for not spelling it some other way. If my memory serves me, I have once explained in FOREST AND STREAM why I spell it as I have at the head of this note, but now a friend sends me a clipping from the New York Sun and asks the usual question, and another one—How large does the fish grow?—and with a pen calls attention to certain statements in the article. I spell the word as I do for the reason that some years ago there was a controversy about the spelling, and a New York journal wrote to the U. S. Fish Commission to decide the question. Dr. T. H. Bean was then the ichthyologist of the Commission, I think, and edited its publications, and he wrote a letter in reply saying the word should be spelled "mascalonge," and I at once adopted it, and have stuck to it consistently, except when the FOREST AND STREAM printer has taken the matter entirely out of my hands and made me spell it "muscalonge." though the U. S. Fish Commission publications have not. The largest mascalonge of which I have any knowledge was speared some time in the '50's in Sandusky Bay by the late Dr. Elisha Sterling, of Cleveland, O., and it weighed 80lbs. If I mistake not this fish was named in FOREST AND STREAM "Big Fish Records," the first draft of which I prepared a year ago or such a matter, and since that time no larger fish has appeared in the record. See the record for big fish of various species; it is in FOREST AND STREAM of Feb. 29, 1897.

In the very article sent to me and not marked is this: "Divided into three schools of 'mascalonge,' 'muscalonge' and 'muskellunge,' the lovable and loving scientists have been chewing one anothers' hair for fifty years." The headline writer of the Sun takes an inning on his own account and gives the article a head which reads "The Game Muskallonge," showing that he divides himself into a fourth school and flocks by himself. One only of the marked paragraphs will I quote. Accounting for a period when the mascalonge do not bite, the writer says: "Guides and hotel proprietors say that this is because of 'bloom' on the water, which is a pollen shed in July and August—mostly in July. The mascalonge is no botanist and cares nothing about bloom. The fish does not bite in July or August because he cannot. At some time in these two months he sheds his teeth, just a deer once a year sheds his horns. If a mascalonge be taken by accident late in July or early in August his remaining teeth, if he have any, may be pushed out with the thumb nail."

This is not new, and I believe it to be the real cause why mascalonge do not bite at certain seasons.

A friend, Dr. T. I. Henning, asked me why sunfish filled themselves with sand at the spawning season, and I said very frankly that I did not know, and as he asked me only last evening, I do not know yet. He tells me that he caught a sunfish once, dissected it and found the stomach and intestines filled with sand; and he did not know but the fish had taken the sand aboard as ballast to enable the fish to remain close to the spawning bed at the bottom of the lake without effort. Never having examined the inwards of sunfish that I can remember, and consequently never having found sand, as the Doctor did, it was something new to me. I have found sand in the stomach and intestines of trout, and perhaps the sunfish got the sand as the trout did, from eating the larvæ of the caddis flies; for that I am satisfied was the way that the trout got the sand to line their stomachs. Some caddis cases are made of sand and some of other matrials; but the fish take the whole thing—worm, case and all—and let nature do the rest. The Doctor's idea of sand for ballast is ingenious, but I do not think it will work in this case; but perhaps some of the FOREST AND STREAM readers can throw light on the sand question in fishes.

Dobson.

At times I have had a pleasant fling in FOREST AND STREAM at the misinformation dealt out by the daily press on matters pertaining to angling, fishes and fish-culture, and now I have another case; but it is not the daily press this time. A searcher after information in an angling magazine—at least that is what its title says it is—asks how to gather dobson for bait, and the magazine replies by describing the larvæ of the dragon fly and where it is found, and how to pick it; but the dobson is quite a different bird. The man who wrote of the dragon fly larvæ—for the reply in the magazine is quoted—knew exactly what he was writing about; but there is nothing to indicate that he had the slightest idea that he was writing about anything but the dragon fly larvæ, for that is what he calls it, and that is what it is. The dobson is the larvæ of the horned corydalus (*C. cornutus*), a night-flying insect larger than the dragon fly, and one that is rarely seen unless special search is made for it, or it is found under an electric light dead or injured. The only common name I have heard for the "darning needle" larvæ is "What is it?" Certainly it is not called the dobson.

"Tailing Trout."

A correspondent asks: "What kind of trout are tailing trout?" My friend has evidently been reading an English book or newspaper, for the tailing trout is a product of Great Britain, and means a trout that stands on its

head in the water to feed at the bottom, generally on the larvæ of insects. In this position, with tail above the head, it is called "tailing," and is supposed at such times not to take food at the surface as readily as at other times when it is not "tailing." A. N. CHENEY.

Fishing Up and Down the Potomac.

The Anglers' Club House.

The Anglers' Association of Washington has its summer home on the banks of the Potomac a dozen miles above the city, on the Maryland shore, two and a half miles below the Great Falls.

It is a substantial building, cozily arranged, with a general sleeping room above for members and bedrooms for their wives on the first floor. The reception room is hung with pictures of game and reproductions of Kilbourne's fish. The most valuable souvenir is a picture of a Restigouche salmon, presented by Mrs. Surgeon-General Baxter. The fish, weighing between 40 and 50lbs., was killed by the lady, with a single leader, its outline traced life size on a great sheet of birch bark and colored by herself.

A splendid pair of elk horns adorns the walls. An odd incident is related in connection with these. A nervous huntsman, trying his shells before going out, was warned by his companioins of the danger, but its only effect was to confuse, and a moment later a load of shot struck the deer head squarely between the horns.

The club is incorporated, owns about seven acres of ground, with a membership limited to forty. The house is prettily located on the Highlands, and from the verandas occasional glimpses may be had of the river far below.

A short walk down the hill brings one to the Chesapeake & Ohio Canal, where in a little cove are moored two or three boats.

If one's destination is the river, a couple of strokes puts the boat across, and a few rods below is the club fleet, of a dozen strongly built boats heavy enough to stand grinding on the rocks. To one who has watched the voyageur or half-breed handle the delicate bark canoe Potomac boating seems a very crude science.

This of necessity, since it is not a trade, and in spending a summer of holidays on the river one is sure to be poled by men who have never learned to handle the boat or who are making their first trip for the season. And instead of a 50 or 75lb. boat, one uses a scow that weighs between 200 and 300lbs., not far removed from a raft, and as an unskillful driver sends it down a rapid of 4 or 5ft. squarely on a hidden rock, which one can hear grinding the bottom of the boat as it swings broadside and ships a bushel of water, he is inclined to wish that the boat was twice as big and the boards 1ft thick.

It is a convenient enough form of boat for bob-fishing, as a forest of rods may be put over the sides and ends, and three or four men may fish from the same boat comfortably; but when one attempts the fly, more than half the fishing water is lost. Going up stream the boatman stands in the stern, with a long pole, and as he pounds the rocks at the bottom and scrapes the rocks at the surface, or gets out to wade and pull or push the boat, as he sometimes does, the bass in the vicinity, if they do not take to the woods, it is because they have grown partially accustomed to the commotion, and they are at least no longer asleep; and when a bass is thoroughly awake he does not dine—he watches.

Some day a fisherman will come along with a tiny craft and an expert to manage it, and will fill it with the fish these heavy boats cannot approach.

There are some beautiful canoes occasionally on the Potomac, and creditably handled, but you can hire neither the boats nor the boatmen. Then there are a few professionals at points on the river who have such a reputation for skill with the Potomac scow that they are engaged for every high-day and holiday that the river is clear, so a stranger does not get to test their ability.

Some years the river is hardly clear for the whole season, and nearly all the anglers on the river use bait, which requires little more of a boatman than pushing the boat to a pool somewhere within a mile or two, so it is little matter of wonder if boats are built for safety and comfort rather than quiet and progress.

Just above the boat landing is an island, and between this and the Maryland shore is the backwater, a turbulent chute when the water is high, but through which the water scarcely trickles when the river is down. This quiet cove, a half mile long, is a favorite spawning place for the bass, crappie and other fish, and so great is the variety found here that the upper pool has been appropriately named the Aquarium.

In the main channel at the head of this chute the river is divided by a great stone, and the rapids on each side are called respectively the Virginiia and the Maryland chutes.

Opposite, on the Virginia shore, a cleft in the dense low woods marks the mouth of Difficult Run, whose tributaries still furnish a few native speckled trout; stragglers are occasionally caught here in the Potomac. The club register records the taking of one or two here by its members. Below the mouth of Difficult, on a bench 20ft. above low water, but subject to overflow by spring floods, is the Black Pond, a pool fed by springs, clear and cold, full of bass and crappie of exceptional excellence. It is private property, but permission may be had of the owner to fish.

There is fine boating water, and plenty for the wader, both above and below the club house. Any evening the leaping bass will convince the most skeptical of their size and plenty. If one goes over the ground with a member whose experience is large enough and memory good, to say nothing of his imagination, every rock and grass pud, every riffle and eddy, every deep hole and bar, will have its legend of some tremendous bass which it has yielded, and one feels it is only necessary to throw a line to get a rise.

The better water, however, is below, and one of the favorite spots is Calico Riffles, so called from the variegated color of the stones on the bottom. Another point, too, a quiet pool, has yielded its frequenters such reward they fondly call it the Honey Hole.

One of our friends here, who had been wading in knickerbockers and low-quarter rubber-soled cloth-topped shoes, on his way along the margin of the river stepped on a large water moccasin, and it resented the attack by putting its teeth through his shoe.

Thoroughly frightened, the unfortunate hurried to the club house and absorbed all the antidote that could be found, and then raced home as fast as his horse could carry him. Two tiny red spots showed where the upper teeth of the snake had brought blood, but no swelling of consequence followed; however, he was too rattled or something to sleep. He found some sympathizing companions, and they laid in unlimited supplies of wet goods and a dozen decks of cards, and spent the entire night in alternately saying "That's good." The next day he was entirely cured so far as his foot was concerned; the other end was somewhat swelled, a consequence his companions shared with him. He cannot be convinced that the water snake is harmless, but is that only this heroic treatment saved his life. From an ardent wader he has degenerated into an ordinary boat fisherman.

A few hundred yards above the club house in the canal is the famous Broad Water, where the canal bank dams a great ravine.

Some years ago the retaining wall was washed out at this point and 20 or 30ft. of wall went down. It is said the pool left was 30ft. deep, and standing all about in it were the blackened trunks of the trees which had been left when the canal was built, many years ago.

This Broad Water is well stocked with bass, crappie and pickerel, and is a favorite pool for a good many bait fishermen.

Two or three great stones on its margin and one well out from shore are famous perches for the man with the bob, and have given many a happy hour to jaded nerves and hungry hearts.

CLUB HOUSE OF THE WASHINGTON ANGLERS' ASSOCIATION.
Photo by Henry Talbott.

The Conduit Road, the most noted drive about Washington, is good to this point, fourteen miles from the Treasury Building; the rest of the road, which leaves the river here and goes around the hills to Great Falls, is crooked, hilly and poorly kept.

The cyclers of Washington have united in the enterprise of building a 6ft. path from here to the Falls, close to the canal, and friends of the measure about the city sport a red button bearing the legend, "Great Falls Cycle Path." This will considerably shorten the time and labor to the Falls, whose sixteen miles is now reckoned an hour by century riders. Next to plenty of fish, nothing delights the angler more than plenty to eat, and sometimes this is his only consolation for an empty basket.

The appetizing country fare the club offers is a delight to a hungry man, and its guests are safe to lose no flesh if they get no fish. HENRY TALBOTT.

Stream Stocking Systems.

A CORNISH (Me.) correspondent writes: "Fishing is also slow about here, excepting at 'Sebago Lake, which is nine miles from C——,' owing to over-fishing and the non-enforcement of the fish law. I believe for one that the fishing would be better if the State would stock all brooks that were noted for good ones for trout. It would not cost any more than to employ wardens, and if all good brooks were stocked there would be no such rush to any one brook as there is to one that has been protected for a certain number of years and the times expires, as your worthy correspondent, Mr. C. M. Stark, tells of in northern New Hampshire, where they camped for miles upon the stream the night before the law expired, and burned the fences."

The Halifax Herald says: The first pelican ever shot in Nova Scotia was killed Saturday on the shore at Three Fathom Harbor by William Graham with a rifle. The bird was brought to the city this morning and is on view at Egan's gun store. The wings have a spread of 6ft. 6in. The bill is 14in. long. The distance from the front of the bill to the tip of the tail is 48in. The fish pouch, which hangs from the bill, contained thirty-five small herring when the bird was shot.

Ouananiche vs. Kogani Trout.

Editor Forest and Stream:

I have only recently returned from a fishing trip to the Province of Quebec, and for the benefit of your many readers will proceed to give them a little account of my success. Leaving New York on the evening of June 12, en route to the far-famed Grande Décharge, the home of the "leaping ouananiche," I arrived at Quebec at 2 P. M. the following day, to find the train for Lake St. John had left at 7:30 that morning, and that the next rtain would not leave for two days, as during the fall, winter and spring only three trains per week leave Quebec for Roberval. The time required to make the 190 miles is about twelve hours, which, considering the train was a freight train, with a combination passenger coach, is pretty fair time.

Eventually I arrived at the hotel at Roberval on Thursday night, remaining there only long enough to take the little steamboat which makes daily trips across Lake St. John to the Island House, situated on a little island at the mouth of the Grand Discharge, or Saguenay River.

By the advice of a famous ouananiche fisher—one who has written a book on the subject—I took with me no less than seven split bamboo rods, ranging in weight from 4 to 10oz., with lines to match, and to cap it all an automatic reel, which it was explained was an absolute necessity, owing to the lightning rapidity of the movements of the ouananiche. I was also informed that I would probably smash all my rods, owing to the fighting qualities of these famous "kings of game fishes"; that I would be lucky if I succeeded in landing two out of five ouananiche hooked. Well, to make a short story of it, I killed nine ouananiche in succession without losing a single one, and did not smash any rods in doing it. I remained only four days at the Island House, killed eighteen ounananiche, and from my experience am prepared to assert that compared with a good, healthy chub a ouananiche is not in it for gameness. In other words, I consider the ouananiche a much overrated fish. The largest one caught while I remained at the Island House weighed between 2¼ and 2½lbs. John Merril, the famous canoeman of the Saguenay, who, with one of his seven sons, acted as my guide, informed me that the largest ouananiche killed in the waters controlled by the Island House last year weighed 4lbs.

The proprietors of the Island House have nominal control of several miles of fishing on the Saguenay River, but the last day I fished there I counted no less than seven natives fishing in those waters, and by using pork, the favorite bait for ouananiche, they all seemed to have had fair success.

While in the city of Quebec I called at the store of the Chinic Fishing Tackle Co., and met Mr. Bertrand, the manager, who informed me that I would find good trout fishing at Lake Kenogami, thirteen miles from Chicoutimi, the fishing rights of which are controlled by the Chateau Saguenay Co., of Chicoutimi. Having been a chaser of will-o'-the-wisps for lo these many years, I took Monsieur Bertrand's statement *cum grano salis*, as I expect many of the readers of FOREST AND STREAM will take mine. However, arriving at the Chateau Saguenay, I made arrangements the next morning to be driven over to the lake, where I arrived at about noon. The house at the lake is conducted for the hotel company by a Mr. Randall, an Englishman, who for eight years was the valet and general factotum of the Earl of Seafton. The house is a new one, built of logs only last year. In addition there are already three tents up on the grounds, and as many more will be put up as may be required. A telephone connects the house at the lake with the chateau at Chicoutimi. The houses are situated on a beautiful sandy, pebbly beach, immediately upon the shore of the lake, and the view from the veranda is beautiful beyond description. Stretched out as far as the eye can reach in both directions lies Lake Kenogami, twenty-one miles long by an average width of three-eighths of a miles, the waters of which are ice cold and clear as crystal. Lake Kenogami is merely the widening of Chicoutimi River, which has many smaller rivers emptying into it in those twenty-one miles of lake. From the very

water's edge mountains rise pile on pile until the view is lost in the distance.

I began fishing about 2 o'clock, and killed fifteen fine trout that first afternoon. While sitting in the bow of the boat waiting for my guide to shove off, I hooked at the second cast and landed a trout weighing 1½lbs., and two more at the same place within ten minutes. This was less than 50ft. from the house. My score during my stay at Lake Kenogami was as follows: June 21, 15 trout; June 22, 44; June 23, 58; June 24, 7; June 25, 5; June 26 (Sunday), —; June 27, 29; June 28, 29; June 29, 28.

Their lengths were 20¼, 19¼, 18, 17½, 17¼, and six over 15in. in length. I killed doubles no less than six times, and in every case the trout were matched in size and were over 1lb. in weight. The first afternoon I killed a double of exactly the same size, which together weighed 5¼lbs. They were the most beautifully marked trout I have ever seen, and like all the others killed in Lake Kenogami, exceedingly game. There is quite a current in the lake, and the trout take advantage of it, and are the hardest fighters it has ever been my good fortune to tackle.

I had almost forgotten to say anything about the charges at Lake Kenogami. The rates at the Chateau Saguenay are from $2.50 to $5 per day, and the charges at the lake are based on what the fisherman paid at the chateau, which seems peculiar, since all fare precisely alike at the lake. The charge for the guide and a first-rate boat is $1.25 per day, and no charge for his board. I recommend with the utmost confidence of his giving the best of satisfaction the guide of the name of Wilfred. That is not all of his name, but it is all that I can remember, and all that is necessary. Wilfred is willing and obliging, will cheerfully get up at 3 o'clock in the morning and work until 9 in the evening, if desired. He knows where the big trout are to be found and is skillful with the landing net when scooping in doubles. The buckboard charge from Chicoutimi to Lake Kenogami is $2.50. From the lake to Jonquires Station, seven miles distant, where the night train is taken either back to Chicoutimi or for Quebec, is $1.50. A buckboard will carry one or three persons without heavy baggage, besides the driver.

In conclusion I would say that Lake Kenogami will furnish good sport all the season through, and the fish will average large. I am informed that the fishing is incomparably better in September, just before spawning. I found the red ibis a killing fly—much the best in my book, with the silver doctor a good second, tied on No. 4 hook.

NOAH PALMER.

Nova Scotia Trout Fishing.

Editor Forest and Stream:

Occasionally I see in FOREST AND STREAM an account of some New England fishermen who have been after trout in Nova Scotia. I have never been as much interested in fishing as in shooting, yet I have caught my share of trout, both large and small. I have fished in the Maine lakes, northern New York, New Hampshire and Nova Scotia. My trips to the Provinces were solely to hunt moose, and they were made at a time of year when trout fishing had about ended. What trout we caught were for a change in our camp fare. (We never had any trouble in getting all we could use.) From what I saw on my hunting trips I was convinced the trout were abundant. One place in particular struck me as an ideal spot for a fishing party to camp. This was at Indian Gardens, at the outlet of Lake Rossignol, Queens county, Nova Scotia. Lake Rossignol is said to be some nine miles in length (rather think it is a chain of lakes connected by deadwater). At the outlet a dam has been built by lumbermen. This dam, when I saw it, had partly given way, the stream below it being about 100yds. wide, with a pretty rapid current. Our guides said that during May anyone could fill a boat with trout almost any day running from ¼ to 2½lbs. each. Now and then a salmon would be hooked, and sometimes a large one. On one of my hunting trips a few years since we crossed the stream at Indian Gardens on our way to the moose grounds (five moose were killed in less than ten days within two miles of the Gardens just after we left). A party of native hunters were camped at the Gardens, and they showed us some trout they had just caught, and also the first and only grayling I ever saw. At least the men said it was a grayling, and it certainly looked just like the illustrations I have seen of that fish; and I was told they were occasionally caught. Indian Gardens is an old Indian burying ground, which has not been used for a long time, and I could see no signs of graves. It was a fine camping ground, quite easily reached by a team over an old road leading from the stage road, some eight miles away. The current in the river below the dam is swift enough to keep one's flies well on the surface, no matter how much line is used. Anyone can fish from the dam, but to fish down the stream any distance a boat is needed, with a man who understands how to pole it up stream, as the current is too strong for oars or paddles.

Another lake I crossed while on a previous hunting trip had every appearance of a first-rate fishing ground. This is called Sporting Lake (I killed my first bear near the shore of this lake). This lake is, I think, either in Digby or Annapolis county. No doubt there are trout in nearly all the lakes of Nova Scotia, but Sporting Lake looked better than any I have seen. It is quite large. Where we crossed it was called about four miles wide. The water seemed much clearer than in most of the lakes, with white, sandy shores. We did not try any fishing, as on that trip. We did not have a rod in the party, and only one fish hook, which one of our guides happened to have. I asked our Indians whether there were any trout in this lake. They said they thought there were, but they never heard of anyone fishing there, as the only fishermen who ever came in that region were from Bear River or Digby, and they could always get all the trout they wanted without going so far. It seems to me that there are a great many trout to be found in Nova Scotia, and were I as enthusiastic about fishing as I have been about shooting, I would certainly try both Indian Gardens and Sporting Lake. A trip to either will entail camping and a certain amount of roughing, but such a trip can be made at much less expense than to many well-known resorts, and results, so far as sport goes, would undoubtedly be very satisfactory.

C. M. STARK.

DUNBARTON, N. H.

CHICAGO AND THE WEST.

Movements of Western Sportsmen.

CHICAGO, Ill., July 13.—Messrs. L. D. Kellogg and Edwin Potter, of Chicago, start next week for Libby, Mont., and will spend the fall in the Kootenai District, hunting and fishing. They are both rather young gentlemen, and they both have enthusiastically lost a bear, which I hope they will safely find.

Messrs. H. A. Cress and A. L. Pemberton, of Warrensburg, Mo., outfitted in Chicago this week for a trip to the Fox Lake region of this State. They go first to Pistakee Lake and will later visit Lake Geneva and other Wisconsin points.

Mr. William F. Taylor, of Indianapolis, Ind., made his summer pilgrimage to Mason Lake, of the Fifield Chain, Wis., where he is credited with a 36lb. muscallunge.

Dr. J. C. Bryan, of Chicago, left this week for Minocqua, Wis., after muscallunge.

Mr. E. B. Barnett, of Colorado Springs, Colo., is paying Chicago a visit this week. He is probably in search of a good summer climate.

Mr. Harry D. Laughlin, of Chicago, left this week for Plum Lake, Wis., on a muscallunge trip. The fishing has been fairly good there this season, and he should meet success.

Messrs. William Frès, H. Wilson, Arthur Cheney, R. D. Cressinger and Lock Ireland, all of Marion, Ohio, outfitted here this week and left for a pleasant trip to Kabekona Camp in Minnesota.

Mr. E. E. Elliott, of Chicago, left this week for a trip among the Cheneaux Islands, via Mackinac.

U. S. District Judge William C. Hook, of Leavenworth, Kan., paused this week in Chicago on his way to Saynor, Wis., where he will put in some time fishing for muscallunge, the waters at that point being visited by many Leavenworth anglers.

Mr. F. L. Williams, of Streator, Ill., also outfitted at Chicago this week for Saynor, Wis.

Mr. Albert Laflin, of Chicago, and Mr. C. H. Ferry, also of this city, left this week for Manitowish, Wis., for a muscallunge trip.

Mr. G. R. Watson, of Lexington, Ill., stopped at Chicago this week on his way to Tomahawk Lake, Wis., where he goes after muscallunge.

Mr. John H. Boyd and wife, of Evanstown, Ill., left this week for a tour of the Yellowstone National Park.

Fishing Dull.

It is the general consensus of opinion that there are more parties out fishing at the present time than have gone out for several years, the good times having been marked by a great increase of sporting activity. Yet from all reports available at date, the present week seems to be a very dull one in angling returns for this immediate vicinity. Bass are biting in upper Wisconsin and Minnesota, but in this part of the country the bass fishing at present is poor. The flood of summer resort travel has practically ruined most of the lakes of the lower tier of counties in Wisconsin and in the Fox Lake Chain, which latter is especially overdone. About as good fishing as I have heard of this summer, however, has been at Fox Lake, Wis., which is not to be confused with Fox Lake, Ill., the latter being very much further south. Mr. Hotchkiss, of the Fox Lake Representative, to whom I referred last week in this connection, writes me under date of yesterday: "We have had excellent black bass fishing here this season, and it is holding on remarkably well. Three bass weighing over 6lbs. each have been caught, as well as several 5-pounders and any quantity over 3 and 4lbs. I wish you could take a day off and come up, and I could promise you a lot of nice bass. The pickerel and pike are also biting well, and every one is getting all he wants." I last week mentioned several remarkable takes in these waters, which I believe are the best of which I get word this season outside of the wilderness country.

Lauderdale.

Of all the lakes in lower Wisconsin, I am inclined to believe that the Lauderdale Chain is taking the lead this summer in the excellence of the sport offered. The bass fishing has been very fair there, and one may always hope to pick up a pickerel in those waters of size sufficient to shake things up a bit. A number of Chicago fishing parties are now on the Lauderdale Chain.

A Tip on Bass.

I have often given out strong tips on the fly-fishing for bass which is to be had along the Mississippi River at points such as La Crosse, Wis., and Winona, Minn. Late August and early July are best for this fishing. You do not need to use bait, but can take the bass with the fly, casting from the boat and working close along the shore. I believe this would be a good trip to make, and have often wished to take it in, but if I cannot do so I hope someone else will, and report about it.

Fish Warden Arrested.

Executive Agent Mr. John Beutner, of Minnesota, was called this week to Waseca to get one of his deputies, Mr. Roberts, out of jail. Recently Deputy Roberts arrested a man for selling bass, and the latter, as a piece of spite work, caused the arrest of Mr. Roberts on the technical ground that there were only two men in Roberts' boat and that they had three rods in the boat, one more than the legal limit. This is drawing matters pretty close, but it is likely Mr. Roberts will soon be out of jail.

Salt Lake and the Rockies.

My friend, Mr. R. B. Organ, lately returned from an extended trip in the West, was good enough to write me from Salt Lake City a little story about sport and sportsmen as he finds them in that portion of the world. It would seem, as he says, that the craft is much the same, no matter in what portion of the world. Yet the extreme conscientiousness of the Salt Lake anglers, who require affidavits and photographs to accompany each fish story, is something not always found where anglers congregate. The Rockies still hold abundance of sport, and are the home of many sportsmen. I shall let Mr. Organ tell of these matters as he found them.

"The fishing is very backward, but few catches of any account having been made. Owing to the heavy rains of the past three weeks, and the large quantities of snow melting in the mountains, the streams are in anything but good condition.

"I find many expert fly-fishermen in this great trout country. I also found many whom I had known in the East. Among the most prominent I mention Judge Samuel McDowell, formerly of Chicago, who is an expert with both the rod and gun. Old-time Chicago trap-shooters will remember him as one of the leaders, and a member of one of the pioneer gun clubs, The Prairies, about the year 1867.

"J. D. Kendall, one of the prominent business men of this city, with his brother-in-law, W. W. Chisolm, both formerly of Chicago, are much interested in fishing and shooting, and are the owners of the finest resort in the State of California. It is in what is known as the Klamath Lake country, and if reports are true no finer fishing ever existed.

"Mr. Kendall has purchased many hundred acres of land each side of the Pelican River, thereby controlling the outlet, has put up substantial buildings, boat houses, etc., also has a steam launch, sailboats and many small duck boats. His houses are located at the foot of the mountain, the source of Pelican River, whose waters are within three degrees of freezing. It is said that fish killed and thrown in the spring will keep in good condition for several weeks.

"One peculiarity of this climate affects all in the same way—that is, every one wants to tell fish stories, and no one dares to tell a fish story without a photograph of the fish. Soon after my arrival at Salt Lake City I was introduced to several prominent railway officials, all enthusiastic fly-fishermen. No sooner were we seated than one after another they commenced telling fish stories, and in each instance produced a photograph of the catch. I was perplexed and greatly handicapped, for though I have caught many fish in my time, unfortunately I was not a camera fiend, and was not in a position to tell a story here, because I did not have the proof.

"As a sample of what some of the catches look like, I inclose photo of catch made some two years ago up on the North Fork of Snake River. The catch was made in four days. Every fish was saved and made use of, as participants went in a private car with refrigerator attached. Note the solemn expression of the cook's face as he swears each individual on the book of flies as to the number of fish he caught.

"Sitting in the office of Messrs. Kendall and Chisolm, the conversation naturally turns to hunting and fishing. Mr. Kendall told of two hours' fishing in Pelican River, and during the two hours there was not five minutes that he was not fighting a fish. The catch was six fish, total weight 20lbs. On another occasion Mr. Kendall caught a trout that tipped the beam at 22½lbs., a photo of which I also inclose.

"I was presented with a beautiful bear skin by Mr. Kendall, a tale connected which my modesty prevents me from refuting, further than to say that the bear was brought into camp by Mr. W. H. Bradley, a well-known Salt Lake attorney. At least Mr. Bradley came in ahead of the bear, and the bear was killed—a fine cinnamon.

"The close season opened in Utah on July 1. I was invited to participate, and in company with Mr. J. D. Kendall, Dr. Darke and Mr. W. H. Bradley, we proceeded to Browning Bros.' gun store, where I was requested to select a gun. I soon had a 7½lb. Parker in hand, and had a hat furnished by Bradley, a coat by Kendall. We started for the foothills. We had not gone far before I discovered that the effect of that hat and coat was irresistible, as I had a continual desire to tell fish stories, but not having photographs I was compelled to desist. However, we spent a couple of hours very pleasantly, though we found the birds quite scarce, as others had been there ahead of us. We succeeded in bagging a goodly number, and came home well satisfied.

"I found the sportsmen here the same good-natured, gentlemanly fellows that they are the world over. I found that they are well posted on shooting and fishing events, and also that they are readers of the FOREST AND STREAM."

Mr. W. P. Beaver, of Chicago, and Mr. S. D. Furst, of Lock Haven, Pa., will start within the next thirty days for an extended mountain trip after big game and big trout, reaching the hunting grounds in the early fall and remaining away about a month. They are not yet decided where to go, but will be most apt to try the vicinity of the Yellowstone Park.

Mr. Geo. W. Whitefield, of Evanston, Ill., has left for Goshen, Me., and while East promises himself some fishing.

Mr. G. M. Eckels, of Chicago, has left for a muscallunge trip at Star Lake, Wis., where he ought to meet success, though it is now a trifle late for the best chances.

Mr. Phil Mitchell, of Rock Island, Ill., has left for the Gaylord Club, Wisconsin, for a trip of some extent, and is to be congratulated on his rest at that pleasant locality.

Mr. Chas. W. Meeker, of Chicago, is fishing at Eagle Lake, Wis., this week.

Mr. A. M. Crone, of Chicago, starts next week for a bass trip at Grand Haven, Mich., taking in the fruitful waters east of that point.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Massachusetts Bass.

BOSTON, Mass., July 13.—*Editor Forest and Stream:* My friend Sam Head and I tried the bass at Gates' Pond, Hudson, Mass., last week, and returned after a good day's sport with a string of twenty-eight fish, the largest one weighing 4¼lbs; not a bad record for this locality.

FRANK JONES.

Boston Fishermen.

BOSTON, July 15.—Great fishing continues to be noted at Lake Dunmore, Salisbury, Vt. Mr. E. D. Thayer, a noted fisherman at that lake, writes his friend in Boston, Mr. E. C. Stevens, that he has just been at the lake for a day's trip, and beaten the record this year, at least. He caught a pickerel that weighed 13lbs. and 12oz., also a bass of 6lbs., four weighing over 4lbs. each and three of 3lbs. each. A number of small fish were also taken. Seven small pickerel were also taken that day by the same fisherman—from 2½lbs. up to 9½lbs. The writer of the letter doubtless considers a pickerel of 9½lbs. a small one beside one of 13lbs. and 12oz., but in Boston a pickerel of 2½lbs. is a good-sized one. Seventeen fish of both species were the result of the trip. Mr. Thayer also writes that Mr. Handy, another friend, he "only took out for ballast," Mr. H. catching only five of the fish. The bass were quick biters and very gamy.

Mr. Stevens, Mr. Tausig and Mr. Nickerson, of Boston, left for Lake Dunmore on a fishing trip Friday. Smelt are used for pickerel bait on that lake. They are taken up from the Boston fish markets. But on the day of the big catch of Mr. Thayer, noted above, suckers were used, since smelts were not to be had. Mr. Stevens and Mr. Tausig expect good fishing and some large pickerel, as they have supplied themselves with the best bait and rigging possible. They hope to go without any serious losses, and they have a reason for feeling in that way. A year ago, on the same kind of a trip, they changed their clothes before riding over to the lake, Mr. Tausig putting his diamond studs and other valuables into his hand bag, together with his reel, lines and other tackle. On reaching the lake the bag could not be found, nor could any trace of it be found afterward. While fishing at the lake the other day Mr. Stevens noticed a reel in the hands of another fisherman. He asked to see it, which request was readily granted. At once he recognized it as one he had presented to Mr. Tausig over a year ago, and one that was in the lost bag. He put a detective on to the matter, and the other day got a letter stating that the bag had been recovered, with all the valuables. The finder, or thief, had sold the reel only, and to the fisherman in whose hands Mr. Stevens had seen it.

In some sections of the country the people are sometimes proud of their fishing guests. Such is the case with the people of Chandler's Mills, Me., according to a letter shown me yesterday. Chandler's Mills is sixteen miles from Waterville, on the shores of Great Pond, which is becoming noted for its bass and perch fishing. The noted guests expected are Grover Cleveland and Joseph Jefferson, and they are likely to be there this week. Mr. Jefferson's son is alrady there, and his glowing reports have doubtless drawn his distinguished father and the ex-President.

July 17.—Most of the Boston trout fishermen are now at home, the spring trips having come to an end. The hotels and the fishing camps are now generally left to the vacationists and the summer boarders, who indulge in a little fishing now and then. At the Upper Dam, Me., there is the usual summer vacancy, the veteran angler, T. B. Stewart, of New York, who has been joined by his wife and son, being about the last on the ground. At the Middle Dam there are still a few anglers left. A few fishermen have gone on trips to the Seven Ponds, into the Dead River region and up to the Megantic preserve. They go for fly-fishing altogether. Mr. L. Dana Chapman, secretary and treasurer of the Megantic Club, is back from a flying trip to that preserve, where he did a good deal of tramping and but little fishing. His object was to see how matters concerning the camps, as well as fish and game, were looking. He is pleased with the increase in deer, and better pleased with the fact that there are more partridges than last year. The season has been very dry, and hence favorable to the chicks. He also considers that the winter was more favorable to the wintering of the old birds. Mr. E. C. Stevens, Mr. Felix Tausig and Mr. J. F. Nickerson, of Boston, left for Lake Dunmore, Salisbury, Vt., on Friday, determined to take some of those big pickerel. Saturday morning Mr. Stevens telephoned me that they had taken some good fish that morning.

Late reports say that the fishing holds out well at Newfound Lake, New Hampshire. At Haines Landing, Mooselucmaguntic Lake, Me., they are taking a good many small trout on the fly, and the same is true at Bemis, lower end of the same lake. Landlocked salmon, pickerel and bass fishing is still reported to be good at Lake Webb, Weld, Me. At Moosehead Lake the summer boarder reigns instead of the angler.

Upper Dam fishermen are inclined to think that the recent order of the Maine Commissioners closing the pool to all fishing from "sunset to sunrise" after Aug. 1 is unjust, as well as likely to lead to complications. In the first place they say that from "sunset to dark" is the best time in the day for fishing, and they believe that they should not be deprived of the privelege. Then the term "sunset" is altogether too indefinite, and no two fishermen will think alike about it. They believe that if such a ruling is to prevail at all a definite time of day for the fishing to begin and to cease should be noted in the order for each day from the beginning of the order till the legal close season begins, Oct. 1. On the other hand, the Commissioners have issued the order, simply as noted, from "sunset to sunrise." They are also reported as saying that it would be a good idea to close the pool altogether after the fish begin to come into the pool late in the season, since they come up there for spawning. But those interested say that this would kill the Upper Dam hotel interest in the fall and be a great hardship to Landlord Chadwick, who has always been very popular with the fishermen.

Several readers of the FOREST AND STREAM wish me to say that they are glad that Mr. J. S. Seymour came out last week and explained what he did with the 701 trout taken in one day at the meadow grounds, Seven Pond region. They say that they are glad that he put them back, so many of them. They say: "We really wanted to know what became of the fish." But at least one of those interested is puzzling his brains over the figures of the question. "Seven hundred and one trout in a day. How many hours did he fish? Did his arm ache when the task was done? What did he catch so many for, anyway?"

The salmon fishermen are also returning. Generally the fishing has been rather poor, the water being low from unusually dry and hot weather. Still, some good catches are mentioned. Mr. Herbert. Dumaresq and Mr. Lemuel Howe, of Boston, have been having good sport at Mr. Dumaresq's camp on the Restigouche. They caught in one day three large salmon weighing from 34 to 40lbs. Two of the salmon were among the largest ever taken in that region. The fish were hooked nearly an hour before they could be landed. SPECIAL.

Potomac Notes.

WASHINGTON, D. C.—Since last report, published July 1, we have learned of a number of scores made during the last week of June and first week of July. Some fine sport was enjoyed over the glorious Fourth.

Mr. Hoover fished the Potomac from the Shenandoah to Washington, and made so large a catch that his friends advised him to stock the various streams around the city in which bass are not now found.

Mr. Cameron, fishing the river around the mouth of the Monocacy, caught forty-eight bass.

Several members of the Blue Ridge Rod and Gun Club, so snugly housed at Harper's Ferry, have had good early summer fishing.

The Washington Anglers' Club, headquarters just below the Great Falls, has had some of its boss fishermen members on the river regularly since the opening of the season, and good catches have been made by them. Messrs. Coburn, Harper, Demonet, Fry, Hunter, Egloff and other members have been taking bass from 1 to 5lbs. weight in strings of three to a dozen.

Wirt Tassin, of the National Museum, one of our short hour enthusiasts, has been enjoying himself by hunting out bass and crappie after office hours. A few days ago Mr. Tassin surprised himself by taking four bass near the foot of the Little Falls; and another hour's outing was spent fly-fishing in the Little River, when he succeeded in catching a few crappie on brown hackle. Mr. Tassin will soon take a week or two off for camping and fishing along the Potomac above the Great Falls. With a boat and tackle for angling, a blanket for sleeping and a few cooking utensils, this gentle angler will have plenty of genuine sport and recreation.

One of our best anglers had a queer lot of luck recently. He fished three days, going up river so as to make a good strike, and caught one fish each day (1-pounders). He still wonders why.

Monocacy.

We made a flying trip to Western Maryland a few days since, and got two things, a few scores and an invitation to be up next clear water to go fishing.

Frank Wilson, of Union Bridge, captured eighteen bass, the largest, a 4¼-pounder, in rather a novel manner. Frank's leader was not strong enough for a fish of that size and parted. William Stockney, swimming near by, had come up to see Frank struggle with the fish. When the leader gave way Stockney made a dive for the bass, which had been worked into a small cove where the water was shallow and full of grasses; the boy failing to handle the fish readily, Wilson went in, clothes and all, and secured the prize, along with 3ft. of leader.

Jesse Reisler, Bill Furry and Bob Ayres caught twenty-six bass on June 29. They ran rather small.

There is some fishing at times in tributaries of the Monocacy, in Pipe Creek, for instance, but these streams are very uncertain as to condition. The banks are so soft and muddy that cows going into them for water, or for the purpose of washing the flies off their tortured hides, stir up the mud and becloud the water so that the bass will not bite. B.

More Fish Stories.

MR. TALBOTT'S reminiscences in the last number of FOREST AND STREAM recall to mind some singular experiences of my boyhood which may not be uninteresting to your readers.

When quite a small boy I was fishing once in Carter's Run in Fauquier county, Virginia, and had quite a string of sun-perch. To keep them fresh I would put them in the water, and once, after moving to a new spot, I threw the string of fish over the bank and fastened the end to a willow. I noticed that the bank was of clay and was honeycombed with holes. When a short time afterward I untied the string and attempted to pull up the fish I found that they were fast. Thinking they were twisted around a root I rolled my sleeve to my shoulder, lay down on the bank and thrust my arm deep into the water. With some difficulty I pulled them loose and brought them up, when to my horror I found I held a snake in my hand and within a few inches of my face. He had coiled around my string of fish and was appropriating them to his own use. I fished no more that evening, and to this day I feel the cold shivers run down my back when I remember how that snake felt.

On another occasion four of us one evening after school went to seine Moore's Creek, a small and shallow stream near Charlottesville. We had dragged with varying success about a half-mile, when a sudden bend of the stream brought us to a hole of more than usual depth and promise. We quickly strung out the seine, surrounded the hole and brought up among a lot of fish a bird about the size of a summer duck. Turning the net over it we climbed out on the bank to examine our prize. It was a loon which doubtless dived when it saw us coming. We took it home and kept it for quite a while confined in a chicken coop. His beak was hard, long and pointed; he was pugnacious, and when he took hold, like the proverbial turtle, would hold on "till it thundered."

A few years ago I was at Traveler's Repose, an inn on the Greenbrier River, in West Virginia, just at the foot of the "Big Alleghany," enjoying a few days' trout fishing. It is an ideal spot for a sportsman, more than a day's journey from the nearest railroad, the best section of the east for bear, deer, turkey and pheasant, with the grandest mountain scenery and the clear cold streams which trout love. I was talking to Mr. Peter Yeager, an old resident of that section, about an 11lb. trout which I had seen displayed in the window of a Boston sporting goods establishment, labeled "Brook Trout from Maine," and expressed doubt as to whether it was really a brook trout. Mr. Yeager said that in olden times he had known 26in. trout to be caught in the Greenbrier; that his father caught one about that size, and on cleaning it they found a young rabbit in his maw, and another very large one was caught which had swallowed a little pheasant. That fall, while hunting partridges on the Hardware River a flock arose, evidently a late hatch, and too small to shoot. We held up our guns and let the birds go. One of them flew across the river, and striking his wing against a weed, fell down into the water and went floating and struggling down the stream. If a big trout had been lying under the bank he would certainly have taken him in out of the wet. This incident strengthened my faith in the fish story.

SAMUEL B. WOODS.

"The Kingfishers."

PORT CLINTON, O.—*Editor Forest and Stream:* I wrote you a few weeks ago requesting the name and address of one of the Kingfishers, of Cincinnati, O. A few days later I received a letter signed J. M. Hickman (Old Hickory), which gave me the desired information, and I am pleased to say I have met three of the crowd, viz., J. M. Hickman, Col. Culbertson and Mr. Temple, and a more congenial lot of veteran anglers would be very hard to find.

Old Hickory, the originator of the Kingfishers, informs me that he has spent his vacation under canvas for more than twenty-seven years, and is just as enthusiastic as ever, in spite of his years.

Col. Culbertson has also been an angler for years, and has "wet his lines" in almost every stream and lake of importance from the Mississippi to the Atlantic, as well as a number in Canada, one of which is the famous Nepigon. He spends his winters in Florida, and his reminiscences of hunting and fishing in the South are very interesting and entertaining.

The Colonel entertained Old Hickory and me at his bachelor quarters on Race street, and during the evening the question of provisioning the camp was freely discussed—more particularly the "buying of the ham." There seems to be a difference of opinion between the Colonel and Old Hickory regarding this necessary article, where it should be purchased—whether at Cincinnati or of the natives in the backwoods. The Colonel says Cincinnati. Hickory says backwoods. It was also hinted to me that by purchasing them in the backwoods it gives Hickory an opportunity to visit among the ladies, and that on numerous occasions he has been known to steal away for hours in quest of "ham and buttermilk."

There is a very interesting relic among the Colonel's belongings in the way of a camp chair which has been his constant companion for perhaps thirty-five years. On every inch of the wood surface is carved the name of some favorite camp. There are some, however, which are represented by a circle with a dot in the center, the meaning of which will be instantly recognized should this meet the eye of any of the Kingfishers. This magic circle is defined as "Omea" in the language of their craft, and is a polite way of saying "cuss words" in the presence of ladies.

The "old boys" will start on their annual outing on July 18. Their destination will be northern Michigan, and as Old Hickory has promised a write-up of the trip I shall anxiously await its coming in dear old FOREST AND STREAM. WAH-WAH.

Pacific Salmon and the Fly.

NEW YORK, July 12.—*Editor Forest and Stream:* Accept my mite of evidence on the question as to whether or not Pacific salmon can be or have been taken with a fly.

In August, 1889, in company with Mr. Henry P. Wells, the well-known angler and author, I fished for Pacific salmon in Klakamas Creek, a tributary of the Columbia, at a point about eight miles from Portland, Ore. Here there is situated a hatchery whose weir when closed cuts off the further progress up stream of salmon ascending to the spawning beds. At the foot of this weir were from forty to fifty large Chinook salmon, averaging at least 30lbs. weight, and although we cast with care and patience, using a variety of killing salmon flies, no rise rewarded our effort. I may say that Mr. Wells has never been quite satisfied with the experiment, as the sun shone intensely bright and the fish were not fresh-run, and a good deal knocked about by their journeying.

Above the weir, however, the "steel-head" salmon were more accommodating. We took about a dozen on the fly, weighing in the neighborhood of 8lbs. apiece. Can Mr. Kipling's "Chinook" have been a "steel-head"? If so, he consumed an unnecessary number of minutes in landing the Bahadner. HENRY C. BEADLESTON.

Staten Island Fishing.

GIFFORDS, Great Kills, S. I., N. Y., July 13.—The weakfish have again begun to bite. Last week and the week previous but few fish were caught, but some good catches have been brought in this week. Mr. Harrison and Mr. Buchanan caught twenty-two weakfish yesterday, and Mr. Barth and Mr. Conover took three weakfish and four bluefish. On Tuesday Miss Devlin and Miss O'Malley, two enthusiastic and plucky young fisherwomen of this place, who go out by themselves and who take the fish from the hooks with their own hands, brought in a nice mess of weakfish and a few fluke. All these parties left from Mrs. M. J. Collins' hotel. Weakfishing should improve steadily now. The bluefish are beginning to bite, and there is plenty of sport in sight for the fishermen.

ANTOINETTE.

Michigan Trout.

PORTAGE LAKE, Mich.—The trout are now rising to the fly and good baskets are the order of the day.

G. N. GLEASON.

Fishing the Mulivai-to.

"Mais oui, Tamaitai, nous avons e tele i 'a i le Mulivai-to nei."

It was Pakele who made this somewhat tangled remark when he saw me overhauling a well-worn book which has carried a few essentials of fishing gear into many wild places. To appreciate the situation one should have seen Pakele, the generic name in Samoan for all the priests of the French Catholic mission. It was at Falefa, on the island of Upolu, in Samoa. The malanga had been received with the set phrases and wearisome ceremonies of the savage courtesy of Samoan life. The guest house set apart for the use of the travelers and retainers was that belonging to the Chief Salanoa, and over against it were the charred center posts of the house of Mataafa, who was then in exile, and who has since been in rebellion, and now is going back to banishment. When the pompous natives had shouted from the other side of the village green the last of their speeches, it was time for the white population to call and pay its respects. The white population was restricted to one man, Père Chouvier, the mission priest—Pakele to all the villagers, high and low, young and old, Catholic and Protestant—held in affection by all, if one may credit that line of emotion to the Samoans, who truly are too selfish to be capable of affection.

Poor old Pakele! He was picturesque and pitiable, an old man in long soutane and shovel hat, grizzled and with a long white beard. He had been at Falefa for forty-two years, rarely seeing a white man except when some trader was wind-bound and feared to attempt the risks of rounding the Jettison of Biscuit Point, which was next along that coast. At rare intervals Monsignor L'Eveque, or Le Provicaire, came to catechize his catechumens. It was a monstrously lonely life, a life of sad poverty. But here were visitors, and the aged priest must pay his respects. The poor old man, peasant bred and with little education beyond his book of offices, knew no English; even his French came but slowly to his tongue, and whenever he spoke it was a curious mess and jumble of French and Samoan. The ludicrous part of it was that when he spoke this jargon he thought that he was speaking the best of French; but it was very hard to make it out at times, and it was found much easier to let him talk in straight Samoan.

The fishing gear stirred him to a little interest. Ages ago, when he was young, and the deadly blight of Samoa had not settled down on him, he may have fished himself. At any rate, he retained enough enthusiasm to say in his queer jargon, "But yes, Madame, we have many fish here in the Mulivai-to." That was encouraging news, for after the first curiosity of seeing how the savages live has worn off, the three days which etiquette prescribes for a formal visit become very wearisome, and time may be better spent in fishing.

The local geography of Falefa makes it an ideal spot for all the kinds of fish there are in Samoa. Outside the reef in the open sea there is a streak of current which is a favorite water for the bonito, and if they are to be taken at all that is the best fishing ground. Inside the reef there is every variety of bottom in an equal variety of depth. An inner lagoon half a mile long opened to the sea by a narrow channel, but it was so abundantly fed by springs of sweet water that the movement of the tide scarcely makes it at all brackish; therefore a proper home for the common South Sea eel. The spot which seemed to offer sport was in the Mulivai-to, one of the most clearly marked river mouths in Samoa, and just at the edge of the village of Falefa. It was a picturesque spot enough. There was a bar almost opposite a gap in the outer reef, that admitted the rollers from outside, without the assistance of which it would not have been possible to take even the lightest draft boat over the sands. Inside the bar the river fills a deep valley for a straightaway of half a mile, and an unvarying breadth of about 100yds. at the water level. The western bank is a rock cliff about 80ft. high, the surface covered with ferns and convolvulus and ropy lianas, the summit dark in the shade of tamano and ifi trees. The eastern bank, while not so precipitous, is a very steep flank of the mountain, and is thickly grown with timber—cocoanuts near the water and then the gloomy jungle of enormous trees of many sorts. At the head of the gorge the river comes tumbling over the rock wall in two leaps, of which the second makes far the more conspicuous cataract, in a sheer drop of rather more than 50ft. With such scenery and such a wide range of water conditions, all within a distance that a pistol shot could carry, there could be no doubt about there being fish in abundance, even as Père Chouvier had tried to say in his mixed-up languages. But whether those fish would respond to the inventions of fishing with which they were unfamiliar and respond with sufficient animation to make sport was a thing yet to be determined. These Polynesian fish had become educated in Polynesian fishing; they knew all about the nets and the night spearing with torches and the skittering of shining tentacles of octopods; whether they would know what to do when enticed by bait or fly was a question yet to be determined, and all the more interesting because of the problem which it presented.

The fishing outfit was small in compass; everything has to be cut down to the lowest notch when traveling in a small rowboat. But it was sufficient. There were a few lines, linen and silk, far less cumbrous than the braided cocoanut fiber which the Samoans use; there were reels, multiple and automatic, the first whose click had ever sounded over these waters; there was a book of old favorite flies which had proved their worth in other waters. The sight of this gear, once familiar to the old priest in his own distant France, excited a forgotten enthusiasm of the old man. He had fallen into an apathy as regards fish; he ate them when his flock brought them to his door; but the Friday necessity for fish did not exist for him, since the Pope long ago gave this remote missionary diocese a dispensation. All of a sudden he became an enthusiast and a helper as he clicked the reels. Rods are simple in Falefa; in all the woods about the village of Falefa they grow in rank luxuriance, and a green bamboo of the right length is just as light and just as strong as the best hexagonal split that ever was made. A few commands from Pakele sent two half-grown lads into the bush with their head-chopping knives, and in a few minutes they came back with an assortment of bamboos from which to select the proper length and weight.

Since this fishing must all be in the nature of an experiment, it was decided to try every method which might produce results, both bait and fly, and to try them in the sweet water of the river gorge and in the surf as well. There was an initial difficulty in the matter of bait. It was easy to tell the curious children of the village to bring worms, which they call "anufe," but the command set them scampering in what seemed the wrong direction—down to the beach instead of to spots that seemed more likely. At the same time the priest sent others off after "afato," or grubs, and they were soon seen jabbing rotten trunks with sharp sticks in their search. The children who had gone for worms were the first back. Each had a sherd of cocoanut shell filled with writhing monsters, all wriggle and legs, and about as repulsive a collection as could be imagined. They were all marine worms, for Pakele explained with many apologies that Samoa might be dug over from beach to mountain ridge and not disclose a single angle worm. The marine worms he thought might well be tried, for they were the natural food of fishes in the salt water, and he busied himself with looping several on as many hooks, not puncturing them at all, but tying them in place with tiny threads of hibiscus fiber pulled from a fresh strainer made for the kava drinking. The boys who had been sent for grubs returned with a doczn or more assorted sizes, but most were quite too large and chubby to think of using them for any but large fish, which it was not expected could be taken in the particular waters which it was intended to fish. As a matter of fact, they were not used at all, through an incident or accident of Samoan life. They were all put in a half of a cocoanut shell, and that was forced down into the pebbled floor so that it would stand upright. While they were left for further consideration, the chief's wife strolled in to see the novel arrangements for fishing. As she sat looking on, her appetite awoke. Eating is a continuous performance with these savages. She ate the bait, and the fact was not discovered until she was seen crowding the last fat grub into her mouth, which was dripping with the creamy pulp of its predecessors. Pakele gave her a fine scolding, but it apparently made little impression, and even the priest had to confess that these grubs were very good eating when you got used to the idea, and that they had the flavor of chestnuts. Despite this assurence, it was at least a novel and decidedly nauseating sensation to have one's hostess eat up the bait. As to the choice of flies, there was little to direct the selection, for insect life in these islands is not abundant nor conspicuous, the most common forms hovering over the water, both salt and fresh, being a light lavender butterfly about the size of the cabbage butterfly of more familiar scenes, and a gauzy-winged libellula with two long, threadlike tails.

It is impossible to tell what fish were taken. They looked like odds and ends of the rainbow for variety of color, and their shapes were as grotesque as a Chinese puzzle. To be sure, they all had Samoan names, but that leaves one not at all the wiser, for they have not yet passed under the study of Jordan or Gilbert and Bean, who know the fine points of fishes. It is enough to say that they took to bait and fly as greedily as if they had been brought up to the white man's fishery. Fishing until weary, there was a large catch, and with very few duplicates.

The first attempt was made from the bar at the mouth of the Mulivai-to. Just behind the crest of each advancing wave the fish could be seen in abundance darting hither and yon on the smooth back slope and partly breaking the surface. The first cast was made with one of the repulsive sea worms, carefully placed in the depth of the hollow behind the wave, only a single hook being used. Immediately the fish cast themselves on the tempting morsel and the water seemed fairly alive with gaudy fish. As soon as the fish got the bait it bored right out seaward through the next wave, and then through the second to the quieter water outside. Here it was played to exhaustion. The movement of the sea was always tending to take the strain off the line, but the strong rush of the fish was constant in the other direction, so that there was little danger of losing it when it was thrown up on the crest of the surf. It took about ten minutes to wear the fish out, so it was safe to reel in. When it was brought to shore within reach of an improvised landing net, it was seen to be a cobbler fish a little more than 1ft. long, body bright red, with yellow bands and all fins sky blue, the dorsals and ventrals stretching out into long filaments, like cobblers' waxed ends, and as long as 6 or 8in. After this first essay, it was seen that it was perfectly practicable to use three hooks at once, and rarely did it happen that a fish was not landed on each.

One of the fish taken on the back of the surf had a curious little story. It despised the bait, and anyone who has seen these sea worms will not blame any fish for rejecting them. But this was a dainty fish, with the clean lines of the mackerel, yet only half as large. It responded promptly to a small fly put together of two green feathers and one red one from the head of the common parrakeet. It was just a little dash of color. There is not an insect in Samoa that has that coloration, but it attracted the fish, and that is all that is needed. The fish was a very dainty fawn color, faintly spotted on the sides and belly with steel blue dots regularly though sparsely placed. Just behind the gill cover on each side was a spot the size of a dime of a deep indigo. When Pakele had lifted it out of the landing net he looked at it with as much interest as the fisher, and then put it in the basket with the others. The native girls promptly took it out and put it in another basket, which they kept. Pakele took it back, and the girls repeated their performance. When he reclaimed it once more the girls refused to give it up, which led the old priest to give them a scolding for their discourtesy. But the girls and the women who joined the party scolded back in turn. They said that Pakele was a man and must not have the fish. It turned out that there has always been a taboo on this particular fish; it is always the property of the women, and men are forbidden to keep or eat it. There is no penalty for breaking the taboo, but none the less, not a single male Samoan will confess to having tasted the forbidden delicacy. And it is a delicacy, for there is no other fish in the South Sea so finely flavored.

It would need many illustrations, and in fact chromolithographs, to go into the details of this fishing at the mouth of the Mulivai-to. The largest catch was made on the seaward side of the bar, and there was some interesting sport. But the best work was done on a fresh water fish, just inside the bar. These fish are to be found in all the Samoan streams, but they are at their best in the brackish water of the lower reaches, probably because they are not able to get back over the many cataracts over which they are carried in the frequent floods. They are light brown in color, as finely modeled as trout, and are distinguished by a peculiar marking in dark, reddish-brown. The back around the dorsal fin is covered with a long, narrow ellipse of this dark color, the greatest length extending along the backbone; concentric with this are two bands of the same color, of which the outer one reaches from just behind the head back as far as the tail. These fish are to be seen in great numbers in the deep water just within the bars of all Samoan rivers, and are most common at the edge of the main stream and eddy currents, where they hover for long spaces of time motionless, but invariably with their heads toward the mouth of the stream.

Samoans say that these fish never eat and are never taken. The latter point is fact. The Samoan fishers have never been able to take them in nets or by spears. This in itself was a challenge to see what could be done with them, and even without such a reputation it would have been enough to see a school of fish from ½ to 2lbs. waiting to have something done with them. At first it almost seemed that the islanders were right, and that the fish did not eat anything. Every device in the way of bait and fly was tried for their benefit, and they refused to stir for anything which was tried. As a last resort a small hermit crab, of which there were thousands on the bar, was twisted out of his shell and impaled on the hook. This bait was allowed to float with the incoming tide just over the school of fish. Hermit crab proved to be what they were waiting for. There was a business-like movement of the whole school and a 2-pounder was straightaway on the hook. For a fish of limited education he showed himself familiar with most of the details of the game, and gave pretty sport before he came to land. This is the only fish in Samoa that has any true game flavor.

This fishing of the Mulivai-to was a revelation to the Samoans, and filled the old priest with an unwonted pleasure.

LLEWELLA PIERCE CHURCHILL.

Atlantic City Pier Jiggers.

WASHINGTON, D. C., July 12.—*Editor Forest and Stream:* Seeking information, and at the same time entering a protest against the wholesale slaughter of fish, and the degenerating of one of the most delightful sports, when rightly engaged in, I am writing to ask if there is any way to put a stop to the childish and unsportsmanlike so-called fishing from Young's Pier, at Atlantic City. During a recent visit to the above-named resort, I was surprised beyond measure to find full-grown men engaged in the "sport" of catching fish out of a net pound about 50ft. square. By means of a trap net the fish are driven into the pound, and after once they get in there is no possible way of escape. So great is the number of captive fish that a few days ago I stood by and watched one man catch fish as fast as he dropped his line over, and all without bait, using only a four-pronged hook and sinker, dropping the hook among the fish, giving a slight jerk and landing his fish, caught by the tail or belly. I protest that such is cruel and certainly not to be considered as sport. I am devoted to fishing, and am willing to undergo great privations for the enjoyment of the sport; but it does seem to me something should be done to put an end to such childish and unsportsmanlike wholesale slaughter of fish such as I witnessed only a few days ago, when I saw from fifteen to twenty full-grown men catching fish from a small pound, and all good fish. I trust a paper with the influence and standing of FOREST AND STREAM may in some measure do something toward establishing a sentiment resulting, let us hope, in the discontinuing of this most cruel and unsportsmanlike practice. I may add that in conversation with another, a stranger to me, at his sugestion I was moved to appeal to your valued paper.

H. FIELDS SAUMENIG.

The Salt-Water League.

THE Protective League of Salt-Water Fishermen, of New York, has received its charter; and on Wednesday night the first meeting of the incorporated society was held for the election of officers. Those chosen were: President, Theodore Biedinger; Vice-President, Albert Baywood; Treasurer, Thomas Reilly; Financial Secretary, Charles S. Crane; Recording and Corresponding Secretary, Eugene Fliedner; Board of Directors, Alfred Rogers, Frederick Etz, Frederick Hochgraef, Sr., J. F. Millikin, Edward Shott, William Roeber and Rudolph Hoffman.

Permanent headquarters will be provided, and everything promises well for the usefulness of the League and the accomplishment of its purpose, which is the enforcement of the protective laws.

Where are Blackfish and Crabs?

EAST ROCKAWAY, L. I., July 17.—Crabs have not been so scarce in years as they are this summer. Some years it has been an easy thing to catch a hundred or more in one day. Now the most skillful and persistent crabber has to be content with a few dozen. Blackfish and eels are also very scarce. Some baymen attribute the scarcity of eels and crabs to the anchor ice which settled on the muddy beds of the channels during the winter, while others say that the scarcity of food accounts for the absence of eels and shell fish. QUAHAUG.

Long Island Fishing.

QUEENSWATER, L. I., July 17.—Bluefish have felt the effects of the bad weather and have not been biting so freely as heretofore. The few that are caught, however, are very large, averaging over 6lbs. in weight. There

are plenty of fluke and bass, and an occasional kingfish. Weakfish are not as plentiful as they were earlier in the season and are more difficult to catch, but still good catches are made by experienced anglers.

Camp-Fire Flickerings.

"That reminds me."

A Fair Exchange at Ochotonl.

SOME sixty miles north of the city of Puebla, the table land, which is the topographical mark of all central Mexico, drops off suddenly like the pitch of a mansard roof. The treeless plateau disappears and one descends through a winding *barranca* whose sides are clothed with pines, and presently emerges upon an open plain or *sabana*, the *hacienda* of Ochotonl.

We are in great deer country now. The wary game finds excellent feeding in these open glades and perfect protection in the surrounding forests. It is a region to make the heart of a true sportsman glow and to make his fingers itch for his rifle.

But game is not all which you find of interest. The old *hacendado* (I wish I might tell you his name) will open his *saguan* doors with true Mexican hospitality. He is as keen minded as he is large hearted, and he will entertain you with quaint stories of these primitive people. For society here is yet unspoiled. The railroad with its innovations is still many leagues away, and human nature grows up here undisturbed. If you are very fortunate you may hear him tell the following story, which he told me not long ago, vouching upon his honor as a *caballero* for its truth.

Among the thousands of *peons* employed upon this *hacienda* was one notable for his laziness. He was joined to a woman who, though very pretty, was as shiftless as her husband was lazy. These two lagged through their tasks together, making sorry work of it. Not far from this pair lived another. The man was the leader in the field, the most capable of all the workmen; the woman, curiously enough, was of like character, strong, energetic, capable. These two were always beforehand with their work, while with the lazy couple things went from bad to worse.

At last light broke in upon the soul of the lazy man, and he went to the other with a proposition: "See here," he said, "you know that you are an energetic man and that I am not. You are always getting through with your work, and I am never done with mine. The fact is, my wife is no help to me. If I had your wife and you had mine, I should get along much better, and you would be all right anyway, you are so capable. Now I'll tell you what I'll do. I have a nice fat pig down at the house, a fine fellow; if you'll swap I'll throw in the pig and call it a bargain."

The offer was accepted, and the readjusted four are now living happily at Ochotonl.

Nov. 14.—Washington, C. H., O.—Ohio Field Trial Club's trials. C. E. Baughn, Sec'y.

Dec. 8.—Newton, N. C.—Continental Field Trial Club's trials. Thos. Sturges, Sec'y.

Dog Dealing.

IT was generally believed that the recent legislation concerning the dog, both with regard to its quarantine when arriving in this country from a foreign port and the increased liability to come under district muzzling regulations, would interfere considerably with its value as a commercial article. Possibly this has been so to a certain extent, especially so far as Continental dealers are concerned; but generally it may be said that the trade in dogs at the present time is quite as brisk as ever it was, and for good specimens of almost any of the many varieties which are popular with us exorbitant prices continue to be obtained. The man in the streets with the pug dogs and fox terriers still continues his wanderings around the fashionable neighborhoods of Regent street and elsewhere, and his persuasive eloquence in vending a three months old diminutive and ill-grown puppy as a fully grown dog is still as marked as ever. Then, too, the shops set apart for the purpose do a capital trade in the higher priced dogs. At any rate, they must do so to be able to pay the high rentals which are required for front shops in our leading thoroughfares.

The general public cannot be considered quite specialist in the matter of dogs; still, if they use ordinary common sense and discretion, their requirements may readily be obtained through the sources already named, and at the same time it must not be forgotten that every now and then special sales are arranged at Birmingham, Leicester and elsewhere, sometimes in connection with shows, where all kinds of dogs may be obtained, and drafts from the leading foxhound, terrier and beagle kennels be procured. The really clever dog man, dealer, fancier, gentleman, or whatever he may be, does not, however, as a rule, look to such sources to pick up the very best animals that he may require, either for exhibition or other purposes. He attends the shows, or the field trials, and there sees the best stock in the country. His knowledge and judgment are superlative; he seldom or never makes a mistake, and when he does see a dog to his liking, and which, in his opinion, is perhaps equal or even superior to anything else he knows, he will buy it if he can. Not afraid to put his hand into his pocket, he does not think form £100 to £200 too much to pay for a fox terrier or a bull dog; he will give more for a collie or a St. Bernard, the market value of each variety depending upon the number of classes and the amount of prize money it can win in the ordinary way of exhibitions. For instance, more money is generally offered in prizes for fox terriers than for any other breed, and thus the monetary value of that variety is considerably enhanced. Irish Terriers, perhaps, follow next, hard pressed maybe by the Scottish Terriers and the Pomeranians. All these dogs have specialist clubs provided for them, and the funds thereof go to extend the ordinary prize lists issued by managers of provincial and other exhibitions. Two or three years ago a well-known exhibitor paid something like £200 for a fox terrier puppy, and his friends naturally considered he had more money than he knew what to do with. Time proved his judgment correct, for, besides taking two or three times the amount of the dog's cost in prizes and stud fees, he eventually sold the same animal for £500, which may be taken as a record price for a terrier. Such a successful purchase as this and many others similar to it which could be named, have led certain people to come to the conclusion that a living is to be made by dog showing and by buying in the cheapest markets and selling in the dearest, and by breeding prize dogs of all kinds. A successful "dog farm" is as great an improbability as a successful poultry farm, and for much the same reasons. The land becomes tainted, and unless the puppies are sent out "to walk" the confinement of kennels cripples them, and the crowding together may destroy them. Then it is by no means certain that like gets like; the best parents may be used, but they are not particularly liable to produce champions. There is a considerable amount of luck in dog breeding, and at the same time special knowledge is required.

The writer is inclined to believe that the qualities which go to form a really good judge and successful breeder of dogs must be born with the man; they cannot apparently be produced by practice or by education, although, of course, both these tell up to a certain point. Not many days since I was looking for a terrier dog as a companion, and mentioned my requirements to a man who had kept dogs all his life, and was considered to be, by his class, an authority. I was led to believe that he did know something about a terrier. He said he was acquainted with a man who had just what was wanted—a "grand terrier with no fault." At considerable inconvenience I made an appointment to see this dog. All that could be said about it was that it was a terrier; but it had a short, stumpy neck, the crookedest of fore legs, a weak, toyish head—indeed, a creature that, so far as beauty was concerned, would have been dear as a gift. No amount of education could possibly make my recommender in this instance a judge of a dog. There are, indeed, very few good judges of a dog to be found, and to this is no doubt due the fact that the few, when they take up the matter from a business point of view, almost invariably prove successful. Within the last twenty years or so, one or two instances might be pointed out where a nice little competency has been made by breeding, purchasing and selling St. Bernards, and at any rate there are at present three or more leading exhibitors who make a good living by showing their dogs, which they purchase with admirable judgment, or have been lucky in breeding them. But they must depend more upon the former than the latter, and to suppose that an ordinary man or woman with little knowledge of the dog, and perhaps with less love for him, to at once jump into a similar groove is preposterous. Yet there are those who seek to do so, and write to specialists desiring information as to how they are to make a commencement and what "breed of dog" will prove most prolific and be most remunerative. Such inquirers are not, perhaps, aware that a dog to sell well must be pretty nearly perfect in its way, that moderate or inferior specimens are actually unmarketable, and at six months old will not realize as much as it has cost to rear them, and that they might breed a thousand dogs and not have one worth more than a £10 note. As already stated, it is much the better plan to buy a first-class dog likely to make a champion than attempt to breed one even from the most carefully selected parents.

Within the past quarter of a century the popularity of the dog as a companion has increased very much, owing to causes repeatedly stated in the columns of the Field; but the supply is always more than equal to the demand, notwithstanding statements to the contrary which are continually appearing in print. The other day I read of an Airedale Terrier selling for £600, a collie worth nearly £2,000, and such like trash. People reading untruthful statements of this kind, with a few pounds at their command, and without a particle of knowledge on the subject, not unnaturally come to the conclusion that they have found a royal road to fortune. They expend their capital in buying a dog and a bitch of the same strain as that from which the animal of fabulous price was produced, and wait for a return for their investment. This comes during the course of a few months in the form of a number of puppies which cannot be sold at any price! Thus the hope of an income from dogs is soon dispelled, and the misguided whilom fancier must be contented to seek fortune in the ordinary way of trade, and leave what there is to be got out of dogs to those who have made them a study, who are adepts in the art of selection, and have capital to fall back upon in the case of accident or misfortune. And it must not be forgotten that for exhibition and for mercantile purposes a perfect dog is cheaper at a couple of hundred pounds than one half as good at a tenth of that sum.—Correspondence London Field.

23. Riverside, fall regatta, Riverside, Long Island Sound.
24. Williamsburgh, annual fall regatta, Bowery Bay, L. I. Sound.
27. Taunton, ladies' day, Taunton, Mass.
30. Corinthian, knockabout, Essington, Delaware River.

OCTOBER.

3-5-7. New York, America Cup matches, Sandy Hook.

Columbia and Defender.

THE bent boom of Defender, in two pieces, arrived at Bristol on July 10 on Columbia's tender, St. Michaels, and was taken into the shops, where the bent plates will be replaced by new ones. Defender left New York on the same day under trysail and headsails for Newport, continuing on to Bristol, where she arrived on the morning of July 12. Her topmast was lowered and taken ashore, and a new one shipped. Columbia was out for crew practice several times during the week.

On July 14 Columbia left New Rochelle for Bristol in tow of her tender. At Bristol her new steel mast will be stepped. The following announcement has been made officially:

Newport Yacht Racing Association,
Newport, July 16, 1899.

The first race between the sloops Columbia and Defender off this port, under the auspices of this Association, will be held on Friday, July 21. The start will be made from Brenton's Reef Lightship at 11 A. M., and the course will be a triangular one, but where the marks will be has not yet been decided upon. The date of the second race will be announced later.

On July 17 it was announced that the other races would be sailed on July 25-27.

The following comments on Columbia are from the Boston Globe:

Columbia is slowly but surely proving her great superiority over Defender. This fact may not be apparent on the surface, nor possibly may the official times in the races sailed off Sandy Hook and at Larchmont show it, but it is the truth nevertheless and is known to those who have closely followed Columbia since her first sail in Narragansett Bay. It is true that the superiority is not so great as was expected from that sail, but it is there just the same and is growing.

On that original sail Columbia drew away from Defender, close hauled in a light air, as if she were in another class. The closest reproduction of these conditions in subsequent racing was on the last part of the windward leg of the triangular race off Sandy Hook a week ago last Thursday. Here Columbia, which in a fresh breeze had been barely holding Defender, came up hand over hand as the wind lightened, and finally weathered the '95 boat just before the outer mark.

Proof one, if you please, that observations as to her light weather speed in Narragansett Bay were not so far wide of the mark after all.

In the trials off Newport, in a fresh breeze under working topsails, Columbia showed a slight, but not decided, superiority over Defender. In the Sandy Hook race, with clubtopsails up, the boats sailed about evenly, but the writer then believed it due to Columbia's badly fitting topsail. Saturday, at Larchmont, this belief was justified, for in a fresh clubtopsail breeze and with a decent fitting topsail Columbia walked away from Defender in just as good style as need be asked, and gave her a nice little beating in both windward work and reaching in what previously had been Defender's best play.

Proof two of that coming superiority that shall be many minutes more than at present over a thirty-miles course.

In spinaker work at Larchmont Columbia showed up no better than Defender, but no fair comparison could be made because of the poor work in handling the big sail made by Columbia's crew. The Deer Isle men were badly outclassed by Defender's Norwegians, and showed that it takes training and practice to do such work properly.

Yet Columbia's crew will be as smart as the other crew by the time the official trial races come in September. Don't forget that. Defender's crew of Deer Isle men were as good as the best before the season of '95 was over. Columbia's crew are of the same material, and will show up in the same way.

And there will be no change of crews from one boat to the other.

Shamrock.

THE unexpected docking of Shamrock on July 11 at Southampton gave rise to a report that she was leaking. Naturally enough, the report was denied by all connected with her, the statement being made that the yacht was docked for cleaning and polishing. On July 12 she was floated again.

From one of the many special cable reports we learn that her topmast is "deflected" and also "unhoused." It is not stated whether these maneuvers were intentional or accidental.

The following is another specimen of the current nonsense about the yacht, from the Sportsman:

"It is stated that the Shamrock has a hollow keel, in which her cable is stowed. Remembering the difficulty and unpleasantness which arose regarding the Defender's shifting ballast, it will be interesting to know if this statement is correct and what American yachtsmen will have to say about it."

Any intelligent yachtsman would say that Mr. Fife is a fool if he carries a cable at the masthead or even on deck; and in a lesser degree if he carries an iron chain in any place in the keel where he might carry a solid piece of lead. As far as rule and usage go, he is at liberty to locate the chain locker wherever he may please.

On July 13, while the yacht was at her moorings off Hythe, an official of the Board of Trade went on board and the crew signed articles before him. The question of winning money is specially covered in the articles, the first officer is to receive £40, the second £30 and the crew £28 each. The two skippers have a private agreement with the owner. A story is current that Sir Thomas Lipton has promised a pension of £1 per week for life to every member of the crew in the event of Shamrock winning the Cup.

On July 16 Shamrock was under sail on the Solent for a few hours. At one time her throat or peak halyards parted. Her first race with Britannia was set for July 18.

The Seawanhaka Cup.

The new Crane 20-footer, Constance, owned by Messrs. Post and Thomas, has been officially named as the representative of the Seawanhaka C. Y. C. in the coming races for the Seawanhaka Cup. The trial races of the Royal St. Lawrence Y. C. have not yet been sailed, but they will be less interesting than in previous years, as but two boats are likely to start. The following is from the Hamilton Herald:

Montreal, July 14.—The new boat from Mr. Duggan's design will be out for a trial spin on Lake St. Louis, and as there are no entries for the Seawanhaka cup trial races the new boat will defend the cup without them. There appears to be a falling off in the interest connected with the Seawanhaka challenge cup, and this morning Arthur Hamilton said he wished a crew could be found to sail Speculator for a series of trial races, so as to ascertain really what the new boat can do in the speed line. As it is, the boat will go into races for the cup without trials, which is a most unusual thing.

It was stated this morning that the crew to sail the new boat in the approaching series of races will comprise Herrick Duggan, W. A. C. Hamilton, Mr. Sherwood and Major Hamilton. This is the same crew that sailed Dominioin to a successful finish.

Beverly Y. C.

WING'S NECK—BUZZARD'S BAY.

Saturday, July 15.

THE race of the Beverly Y. C. on July 15 was started in a light N.E. wind, which shifted to S.W. just as the boats turned the outer mark, making run each way. The times were:

25ft. Knockabouts.

Blazing Star, C. M. Baker	2 18 07
May Queen, D. W. Whittemore	2 18 42
Nokomis, Alfred Winsor	2 21 58
Ululu, W. H. Winship	2 28 44

21ft. Knockabouts.

Cyrilla, R. W. Emmons	2 26 41

Duxbury Y. C.

DUXBURY, MASS.

Saturday, July 15.

THE Duxbury Y. C. sailed a handicap race on July 15, one of a series, open also to the Plymouth and Kingston yacht clubs. Lobster led, but sailed the wrong course, owing to a change having been made, Bobolink being the winner. The times were:

	Elapsed.	Corrected.
Bobolink, Goodspeed	1 38 20	1 35 20
Halcyon, S. C. Winsor	1 38 05	1 36 05
Lobster, C. C. Clapp	1 36 21	1 36 28
Scamper, E. Reede & Bros.	1 43 15	1 39 15
Dolphin, N. Morton	1 56 56	1 45 56
Veritas, Alex. Holmes	1 57 25	1 47 25
If, B. F. Norwood	1 57 43	1 48 43
Fedora, C. F. Hunt	1 52 20	1 49 20
Randon, G. B. Cushman	1 59 45	1 49 45
Scrap, A. B. Holmes	Did not finish.	
Kittawake, H. M. Jones	Did not finish.	

Savin Hill Y. C.

SAVIN HILL—BOSTON HARBOR.

Saturday, July 15.

THE Savin Hill Y. C. has arranged a series of three championship handicap races for the club championship, which goes to the yacht having the best average. The first was sailed on July 15 in a light east wind, the times being:

	Corrected.
Romance, Loring Sears	1 07 55
Kalitan, W. Patten	1 09 49
Spray, A. L. Kidd	1 10 23
Siko, J. D. McBeth	1 11 21
Astrea, H. Packard	1 12 22
Sheerwater, L. T. Howard	1 13 04
Phœnix, W. T. Leach	1 13 17
Ethel, Damrell	1 13 31
Primrose, J. F. Stark	1 13 34
Widgeon, L. A. Horton	1 14 13
Annie Maud, F. O. Vegalhan	1 14 50
Hermes, C. D. Silsbee	1 15 06
Terror, C. H. Conant	1 17 31
Restless, Howland	1 19 17
Joque, W. Keely	1 32 22
Louise	Withdrew.
Tantrum	Withdrew.
Kiowa	Withdrew.

Romance, Kalitan and Spray each wins a cup, Siko and Astrea each wins a pennant. The other races will be sailed on Aug. 12 and 26.

Beverly Y. C.

WING'S NECK—BUZZARD'S BAY.

Tuesday, July 4.

THE Beverly Y. C. sailed a race on July 4 in a strong S.W. wind and sea, the times being:

25ft. Class.

	Elapsed.
Nokomis, A. Winsor	2 04 36
Ulula, W. H. Winship	2 05 16
May Queen, D. L. Whittemore	2 08 10

21ft. Class.

Amanita, J. Crane, Jr	2 05 10
Quakeress, W. H. Harrison	2 08 43
Cyrilla, R. W. Emmons	2 10 23
Edith, R. S. Dow	2 12 21
Kalama, David Rice	2 13 21
Gossip, S. R. Warren	2 16 34

Fourth Class—Cats.

Heiress, G. G. Amory	2 03 10
Daisy, Howard Stockton	2 05 54
Hope, J. H. Ellis	Disabled.
Pedro, Howard Miller	Disabled.

15ft. One-Design Class.

Next, Paul Jones	1 19 44
Varada, J. Parkinson, Jr	1 20 19
Peacock, Robert Winsor, Jr	1 22 00
No Name, Robert Bacon	1 25 01
Vim, F. W. Sargent	1 26 45
Flickamorro, N. F. Emmons	1 28 14

Shelter Island Y. C.

GREENPORT—SHELTER ISLAND SOUND.

Saturday, July 15.

THE Shelter Island Y. C. sailed its Ladies' Day race on July 15 in a fresh west wind, the times being:

Class D—Sloops.

	Start.	Finish.	Elapsed.	Corrected.
Marion	2 34 47	4 35 45	2 05 08	1 59 31
Martha	2 34 11	2 38 37	2 04 26	2 04 26
Asthore	2 34 57	Disqualified		

Catboats.

Edna	2 06 05	4 31 31	2 25 26	2 25 26
Yokee	2 05 30	Did not finish.		
Junita	2 05 31	4 37 40	2 32 15	2 28 12
Allegro	2 05 40	Did not finish.		
Edna	2 06 20	4 58 00	2 51 40	.. .. ..
Francis	2 05 28	Did not finish.		
Merula	2 05 30	2 55 35	Disqualified.	
Spook	2 10 00	Did not finish.		
Leader	2 06 24	4 34 20	2 27 54	2 22 39

Single gig race, for boats from yachts belonging to Shelter Island Y. C.—Com. J. B. Edson's steam yacht Claymore, first prize, $10; sloop yacht Pigeon, William Westlake, of Brooklyn, second prize, $5.

Windward Y. C.

BROOKLYN—NEW YORK HARBOR.

Sunday, July 9.

THE Windward Y. C. sailed a fine race on July 9 in a strong west wind and rough water. In It carried away her halyards and Chip broke her tiller, but both finished. The times were:

Class A—Cabin Sloops Over 25ft.

	Start.	Finish.	Elapsed.	Corrected.
Miranda	11 15 00	1 25 30	2 10 30	2 10 30
Curlew	11 15 05	1 50 00	2 33 45	2 35 30

Class B—Cabin Sloops Under 25ft.

In It	11 20 00	1 39 33	2 19 33	2 22 33
Bonita	11 21 00	1 46 20	2 25 20	2 28 20
Chip	11 22 00	1 56 00	2 34 00	2 34 00

Class C—Open Catboats.

Rush	11 20 00	Walkover.

Jamaica Bay Y. C.

ROCKAWAY BEACH—JAMAICA BAY.

Saturday, July 15.

THE Jamaica Bay Y. C. sailed its fourth race for the dory class on July 15 in a fresh south wind, the times being:

Start, 3:10.	Finish.	Elapsed.
O, F. S. Lafond	4 09 43	0 59 43
E, E. P. Allyn	4 11 45	1 01 45
S, W. W. Scheffler	4 12 57	1 02 57
B, Dr. C. J. Pflug	4 14 35	1 04 35

The standing by points to date is: F. S. Lafond 20, Dr. C. J. Pflug 6, W. W. Scheffler 5, E. P. Allyn 3, W. G. Gallagher 1, R. M. Kimball 1. A smoker followed in the evening.

J. Beavor Webb, fleet captain of the New York Y. C., has issued the following general orders by order of Com. J. Pierpont Morgan: "The squadron will rendezvous at New London on Aug. 7. The cruise will not be extended to the eastward further than Vineyard Haven. Details of the squadron runs, prizes, etc., will be furnished later."

Chicago Trial Races.

Monday, Second Race.

CHICAGO, Ill., July 11.—The second of the trial races, postponed from last Saturday, was sailed yesterday afternoon. The course was ten miles to leeward and return, and the weather conditions were all that could be asked, the wind being fairly steady and fresh enough to make matters sufficiently intersting. Once more Genesee showed a decided superiority over her two competitors, Prairie and Josephine. The Rochester centerboard was beautifully handled by Skipper Davis, who, indeed, sailed her without a fault. Genesee is now in perfect tune, her sails well set, and she proved herself in condition for a perfect race. Her victory is so liberal a one that there seems no chance for any of the Chicago boats to get anything but a look at her heels. If she goes to Toronto, as seems more than likely, the Canadians will meet a boat and crew which will have no excuses or explanations to offer, and which are certain to give a good account of themselves. Genesee was sailed to-day as though out for championship honors, and her canvas was handled as though the issue in question were international instead of the easy task of defeating her by no means dangerous rivals at this port. The Chicago yachtsmen cheerfully accord the Rochester yacht her superiority, and have no apologies to offer for their defeat.

Genesee won to-day by a margin of some sixteen minutes over the nearest candidate, Prairie. Between the latter and Josephine it was a nearer thing, the fin-keel coming within a couple of minutes of Prairie's time. Prairie was better handled in this contest than she was in the initial race. It is to be regretted that the sailing of both Prarie and Josephine did not bring out the full capacities of these boats, as it might have been perhaps a closer thing between them. Some criticisms were made that Josephine was not handled in as seamanlike manner as she deserved. Nothing in this, however, can in the least alter the relation between these two boats and the victor of to-day, for no seamanship would have caught Genesee yesterday afternoon with any boat in this harbor. There should have been a fourth contestant, Bald Eagle, but this boat is discovered to be badly wrenched by the accident of last week, and to-day withdrew from the series and was taken to Racine for repairs.

The start was made yesterday afternoon at 12:30, Prairie being first over the line, Josephine nine seconds later and Genesee one second behind Josephine. Genesee broke out her spinaker, followed a moment later by both of the others. Prairie lay well to windward and made a grand start, Josephine being also handled in a workmanlike fashion and going a very pretty clip. In the course of the first seven minutes Genesee closed up the gap, and for a time there was a bit of play between that boat and Josephine, the latter trying to blanket Genesee. This was not easily done, and in a moment Genesee had shaken Josephine off and shown her a clean pair of heels. They held these relative positions for nearly a half-hour, Prairie well to windward and pointing very well. Josephine caught a little flaw of wind, and for the first time in the series up to date the Rochester boat was passed by one of her competitors. She really did lose her place for a moment, but Skipper Davis, by a clever maneuver, once more cut down the lead and passed the erstwhile triumphant Josephine.

At 12:30 all the boats abandoned the spinaker and hoisted balloon jibs, an increase of speed resulting. Prairie was still outpointing her rivals and was well to windward, but she could not hold the clip which Genesee was now going, and the latter passed her safely before the end of the first leg. Genesee rounded the buoy first in 1:35:53, Prairie four minutes later, Josephine two minutes astern of Prairie.

On the run home Genesee outsailed her rivals in most hollow fashion. She bettered her lead every mile, and as she swung into her last tack her competitors appeared as mere specks astern of her. Genesee crossed the line at 4:36:20, her sailing time being 4:04:47, and she having gained enormously in her windward work over her rivals. Prairie on this leg had a decisive lead over Josephine, but near the finish the latter, very cleverly sailed, cut down the lead until it was a near thing at the line. The following is the time:

	Start.	1st buoy.	Finish.	Elapsed.
Genesee	12 31 33	2 07 26	4 36 20	4 04 47
Prairie	12 31 23	2 11 00	4 52 48	4 21 25
Josephine	12 31 32	2 11 41	4 55 12	4 23 40

Elapsed Time.

	First leg.	Second leg.
Genesee	1 35 53	2 28 54
Prairie	1 39 37	2 41 48
Josephine	1 41 09	2 43 31

Tuesday, Third Race.

July 12.—It is Genesee again, and this settles it. The skipper and crew of this gallant little boat to-night left for home. Their string of victories is complete. It is sheer sportsmanship which moves Skipper Davis to say that he will return next week and sail a race with Mr. Peare's Briar, provided that the latter shall be completed in time and that in her preliminary race against Genesee, the latter sailed by a Chicago crew, Briar shall seem worthy of a final try-out with the Rochester boat.

If there were any incredulous yachtsmen at this port who have considered Genesee as only a light-weather boat, they must to-day have changed their minds. It is matter of great satisfaction that these races have been sailed in such a variety of weather that no possible cloud can be cast upon Genesee's title to victory. Chicago has local pride, but no Chicago yachtsman grudges Genesee her place after the race she sailed yesterday. Her winning was no fair-weather matter, for the race was sailed in a gale of forty miles an hour for part of the time, the yachts meeting a genuine Lake Michigan squall, which they were very fortunate to weather in any fashion whatever. Prairie attempted to carry her clubtopsail through the squall, and was thrown flat on the water, the topsail getting adrift. It was declared that Genesee had lost two men overboard, though both were recovered, this report being also denied. The blinding sheets of rain which accompanied the wind rendered it impossible to see the boats for more than a short distance. Prairie was offered assistance after the blow by the judges' boat, Pathfinder, but declined and came in under her own sail. She was practically in dismantled condition, and for a time lay on her beam end, her clubtopsail dragging astern. Prairie is sailed from below decks, and during this storm her crew were not comfortable below, as she had shipped a flood of water. Josephine had hardly so hard fortune as Prairie. She carried away her gaff and topsail, but this top-hamper dragging astern seemed rather to steady her, and she weathered through until the sudden dropping of the squall gave her crew time to clear away the wreckage and set sail for the remainder of the course. All through the nasty squall, while even the big yacht Pathfinder was proving uncomfortable for judges and guests, Genesee was sailed most admirably, taking the wicked sea in most shipshape fashion, though with her lee rail far buried and at imminent risk of fatal disaster. Her crew took the weather as far out to windward as they could get, and in some way or other the plucky little centerboard got through better than either of her rivals. When things straightened out Genesee kept bettering her lead over Josephine and scored her third and decisive victory amid the most generous applause. The judges to-day were, as earlier, Messrs. W. R. Crawford, J. B. Berriman and Ben F. Carpenter.

The start was made at 12:30 off the Van Buren street gap. The morning had been very warm and close and at the start a storm seemed impending. Josephine was first over, then Genesee, then Prairie. Genesee went off on the port tack, her course northeast by east, in the hope of getting full benefit of the wind. None of the boats reefed, not anticipating so heavy a blow, but in fifteen minutes they had more wind than they wanted, and thence on it was a fight to keep afloat. When the squall struck her Genesee dropped her mainsail, but Josephine stood on under nearly all her original canvas. The blow was short in duration, and ten minutes after it had passed its worst, the wind lulled and the conditions were not bad for the continuance of the contest. Genesee then hoisted her mainsail, broke out her spinaker, set clubtopsail and began to fly. She soon overhauled the plucky Josephine, and thence home it was merely a question of how far she wanted to beat her. Josephine was ably sailed, but Genesee's handling was superb. For Prairie it may be said that she seemed in hard luck. She drew the start too fine, crossed the line a second too soon and had to round to for another start. This boat is still a trifle new to her skipper and crew. Prairie reports that when the gale struck her her halyards became fouled and she was left practically out of control. A Lake Michigan squall is no trifle and there is not one of these boats which should not be very thankful of so fortunate an event in what might have been a very disastrous experience.

The storm was over before the boats had gone far on the first leg, the buoy for the first leg of the triangle being eight miles out. Toward the close of this leg Josephine held the lead which she had maintained by not shortening sail to any great extent. Genesee showed a mainsail with two reefs, but she soon shook out her mainsail full, and at 2 o'clock broke out her balloon jib. She now outfooted Josephine and rounded the stake boat six minutes and thirty-five seconds ahead of Josephine. Rounding into the second leg, the wind for the time fell flat and nothing of interest followed, though Genesee steadily gained until she had established a lead of twenty-one minutes over Josephine at the second buoy. The course was supposed to be twenty-four miles, eight miles to the leg. On the last leg Genesee ran entirely away from Josephine and finished apparently four miles to the good. On her last mile she caught a good breeze and came home in lovely fashion. The following is the time:

	Start.	1st buoy.	2d buoy.	Finish.	Elapsed.
Genesee	12 32 26	2 35 04	4 03 08	5 18 41	4 46 15
Josephine	12 32 05	2 41 18	4 20 38	5 49 17	5 17 12
Prairie	12 32 34	Withdrew.			

	1st leg.	2d leg.	3d leg.
Genesee	2 02 38	1 28 04	1 15 33
Josephine	2 09 13	1 39 20	1 28 39

The new boat Briar will be ready by July 22. She will sail a race with Prairie for a prize of $25 offered by Com. Morgan, and if successful she will sail a trial with Genesee.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Hull Mosquito Y. C.

HULL—BOSTON HARBOR.

Saturday, July 15.

THE Hull Mosquito Y. C. sailed a race on July 15 in a light east wind, the times being:

Larchmont Race Week.

SATURDAY, JULY 15-22.

THE Larchmont Y. C. having inaugurated "Larchmont race week" for the purpose of encouraging yacht racing and bringing together the crack yachts on the coast, and in order that the yacht owners residing some distance from New York may be warranted in bringing their yachts to the Larchmont rendezvous, the club has decided to give three large regattas, open to all classes, and on the intervening days to give races for special classes, as hereinafter enumerated.

The club begs to extend to the captains of the New York, Eastern, Seawanhaka Corinthian, Atlantic, New York Corinthian, American, New Bedford, New Haven, New Rochelle, Corinthian of Marblehead, Hull, Douglaston, Indian Harbor, Riverside, Horseshoe Harbor, Hempstead Harbor, Corinthian Y. C. of Philadelphia, Sea Cliff, Knickerbocker, Huguenot and Shelter Island yacht clubs, including their guests, the privileges of the club house and grounds during race week, and to invite them to enter their yachts in the racing events.

Prizes.

Prizes will be offered in each class wherein two yachts start with full intention of completing the course; and in each class wherein three or more yachts start with like intention, a second prize will be given; and in each class wherein five or more yachts start with like intention, a third prize will be given.

Preparatory signal for the start will on each and every day be given at 11:30 A. M.

Regattas and Races.

Saturday, July 15.—Open regatta for all classes, special race for schooners in one class and race for 21 and 25ft. knockabouts.

Monday, July 17.—Special race for schooners in racing trim in one class, race for classes D and F of schooners, race for Class K, 51ft. R. L., and race for 21 and 25ft. knockabouts.

Tuesday, July 18.—Four-oared gig race for Hen and Chicken colors, presented by ex-Commodore Gillig; two-oared gig race for Dauntless colors, presented by Mr. H. B. Seeley; dinghy race for Execution colors, presented by Mr. H. B. Seeley; race for open naphtha and alco. vapor launches exceeding 21ft. l.w.l.; race for open naphtha and alco. vapor launches 21ft. l.w.l. and under, and tub races and water sports.

Wednesday, July 19.—Open regatta for all classes, race for special 30ft. class and race for 21 and 25ft. knockabouts.

Thursday, July 20.—Race for Class K yachts, with cabin trunks, 51ft. R. L.; race for Class M, 36ft. R. L.; race for 21 and 25ft. knockabouts; race for cabin cats all in one class, and resailed race for Class F.

Friday, July 21.—Schooner race, all in one class; race for Class F of schooners; race for Class K, 51ft. R. L.; race for Class M, 36ft. R. L., and special race for yawls under 43ft. R. L., all in one class.

Saturday, July 22.—Open regatta for all classes, special race for schooners in one class, race for special 30ft. class, race for 21 and 25ft. knockabouts.

Entry blanks can be had upon application at the club house or to either of the regatta committee.

All entries shall be made in writing and signed by the owner or his representative, giving name of yacht, racing number, rig and racing length, calculated according to the foregoing rule for measurement, which shall be verified by the measurer of the club before any prizes shall be awarded to such yacht; and all such entries must be lodged with the regatta committee, at Larchmont, at least thirty-six hours previous to the start of the race for which the yacht was entered.

The racing measurement of a yacht must be filed with the regatta committe before 10 A. M. on the morning of the race, otherwise her time will not be taken; except in case a statement from the measurer of the club is filed with the regatta committee relieving the owner from neglect.

The regatta committee may refuse or accept any entry made after the time of closing.

All yachts entered for this regatta must report to the regatta committee at the club house by or before 9 o'clock on the morning of the race for rules, instructions and a chart of the course to be sailed. The committee begs to call special attention to the rule, and requests that it be observed.

Each yacht shall carry her private signal at the main peak, and display her racing number above the reef points at an equal distance from the luff and leech on both sides of the mainsail.

Distinguishing numbers assigned to each yacht entered must be fastened to the mainsail, above the reef points, and must be retained and used in every race during the season.

The time of no yacht will be taken unless she shows her official racing number on her mainsail.

The racing envelope will contain in detail instructions regarding sails, crew, fittings, ballast and trim, start, starting signal, time of race, course for each class and system of measurement for time allowance.

The measurer of the club is Mr. John Hyslop, 4 River View Terrace, foot East Fifty-eighth street, New York City.

JOHN F. LOVEJOY, Chairman,
H. W. COATES,
FRANK HARDY,
} Regatta Committee.

Saturday, July 15.

The first day was clear and warm, with a very light breeze from the south in the morning, followed by a calm—after the start, a moderate S.W. wind coming in later. The times were:

	Length.	Elapsed.	Corrected.

Bouncer, A. D. Prince	15.00	3 26 30	3 26 30

The winners were as follows:

Races for schooners in one class, on elapsed time, with time allowance on actual measurement—Quisetta won from Amorita by 2:16, from Colonia by 8:45, and from Ariel by 21:23.

Special handicap races, Colonia allowing Ariel fifteen minutes—Colonia won by 3:50, corrected time.

Class B—Colonia won from Ariel by 18:50.

Class D—Quisetta won from Amorita by 58 seconds. Latonia had a sailover.

Class K—Syce won from Kestrel by 15:41.

Class L, cruising trim—Liris had a sailover.

Class L, yawls—Sultan won from Albicore by 31:07.

Class L—Hussar won from Tigress by 21:46 and from Eurybia by 44:12.

Class M—Possum won from Anoatok by 1:28, and from Siren by 53:02.

Class N—Marguerite won from Lorelei by 9:12.

21ft. Knockabouts—Spindrift won from Mongoose by 4:08; Mongoose won second prize from Kittie by 6:22.

21ft. Racing Knockabouts—Folly won from Ditto by 2:03; from Kittywink by 7:45, and from Thelga by 11:05. Ditto won second prize.

Class S—Kit won from Windora by 1:42.

Class T—Win or Lose won from Qui Vive by 1:01; from Kenwood by 7:51, and from Vera by 15:01.

Class V—Kazaza won from Spunk by 1:50. Spunk won second prize.

Class W—Bounce won from Lobster by 7:40.

Atlantic Y. C. Ocean Race.

SHELTER ISLAND TO SEA GATE.

July 10-11.

THE ocean race of the Atlantic Y. C. on July 10-11 proved a success in spite of the small number of starters, and the finish was a remarkable one, the four schooners finishing within the time of five minutes. The course was from a line between the channel buoy off Ram's Head and the committee boat anchored to the eastward of same, crossing from the northward; thence around Montauk Point, leaving spar buoy on northerly end of Gardiner's Island and bell buoy north of Montauk on starboard hand; thence to the Sandy Hook Lightship; thence to Sea Gate, leaving beacon on the Romer Shoal, and the Swash Channel bell buoy on the starboard hand; thence to the finishing line, passing between the club house dock and the committee boat anchored northwesterly therefrom. Distance, 138 miles.

Com. Adams presented a first prize for schooners and one for cutters; Fleet Capt. Watson presented a second prize for schooners, and Vice-Com. Whitlock a third prize.

The start was made on Monday at noon, the fleet being timed over the line as below:

Cutters—Start, 12:10.

	Length.	Allowance.
Awa, T. L. Arnold	....	0 27 44
Daphne, Geo. W. Copeland	....	Allows.

Schooners—Start, 12:20.

Coronet, J. L. Waterbury	114.84	Allows.
Ramona, Vice-Com. Whitlock	105.84	0 19 19
Sachem, Com. Adams	90.61	0 58 00
Katrina, R. W. Todd	73.14	1 57 20

All the schooners were handicapped at the start.

The start was made in a moderate N.W. wind, spinnakers being carried to the Montauk Point Buoy, where they were timed:

Sachem	3 01 31	Coronet	3 16 10
Katrina	3 03 20	Awa	3 19 07
Ramona	3 08 37	Daphne	3 19 30

The wind was now ahead and freshening. The fleet beat up as darkness fell, the three larger yachts standing well off shore. Daphne was in trouble with her steering gear, losing some time. The wind fell for a time toward morning, and also shifted so as to allow Katrina to fetch the Sandy Hook Lightship. She went out of her way to weather the lightship, though she had the option of passing it on either hand. The four came for the point of Sandy Hook together, the three big boats, well off shore, having overstood and starting sheets before a southerly wind. The finish was timed:

Schooners—Start, 12:20 Monday.

	Finish—Tuesday.	Elapsed.	Corrected.
Katrina	3 04 16	26 44 16	24 46 56
Sachem	3 04 17	26 44 17	25 46 17
Ramona	2 59 09	26 39 09	26 19 50
Coronet	3 03 24	26 43 24	26 43 24

Cutters—Start, 12:10 Monday.

Awa	4 50 14	28 40 14	28 10 30
Daphne	5 51 15	29 41 15	29 41 15

Plymouth Y. C.

PLYMOUTH, MASS.

Tuesday, July 4.

THE Plymouth Y. C. sailed its third race on July 4 over the inside course in a strong S.W. breeze, the times being:

Third Class.

	Elapsed.
Lobster, C. C. Clapp	1 50 26
Bobolink, L. B. Goodspeed	1 56 56

First Special—Jib and Mainsail.

Grace, M. S. Weston, Jr.	1 52 35
Minetuxet, W. T. Potter	1 57 28
Dolphin, W. Morton	2 06 38
Challenge, E. B. Atwood	1 51 53
Fedora, C. Hunt	1 58 25

Second Special—Cats.

Kittawake, H. M. Jones	1 28 42
Veritas, Alex. Holmes	1 29 55
Scrap, A. B. Holmes	1 30 40
Frolic, J. W. Dawes	1 36 10

Challenge fouled the judges' boat and was disqualified.

Boston City Regatta.

BOSTON—BOSTON HARBOR.

Tuesday, July 4.

THE usual city regatta was sailed on July 4 at Boston, under the rules of the Y. R. A. of Massachusetts. The day was clear with a strong S.W. wind, some of the yachts reefing. The feature of the race was the first meeting of the Quincy cup challengers, Heiress and Hostess; the latter soon taking the lead and holding it for a long time, though Heiress finally won. The times were:

30ft. Class.

	Elapsed.
Meemer, R. C. Nickerson	1 28 56
Ashumet, W. F. Bache	1 29 35

25ft. Class.

Widgeon, A. J. Horton	1 47 35
Romance, Loring Sears	2 02 58

25ft. Cabin Class.

Eleanor, D. B. Clapp	1 38 50
Jeanette, Walter Burgess	1 39 37
Hermes, A. W. Chesterton	1 40 40
Early Dawn, J. E. Doherty	1 43 30

21ft. Class.

Heiress, C. D. Mower	1 06 35
Hostess, H. M. Faxon	1 08 48
Bud, S. N. Small	1 13 07
Thelma, F. L. Pigeon	1 16 25

21ft. Cabin Class.

Arab IV., W. F. Scott	1 10 05
Harriet, L. T. Harrington	1 14 50
Jacobin, T. E. Jacobs	1 15 13
Privateer, A. H. Doble	1 15 52

18ft. Class.

Perhaps, J. E. Robinson	1 27 05
Helmi, J. E. Hunt	1 28 25
Dauntless, Benner and Patten	1 31 00

15ft. Class.

Ray, S. A. Freeman	1 37 40
Bedbug, F. D. Lawley	Disabled.
Lark, F. M. Crosby	Withdrew.

First Special Class.

	Elapsed.	Corrected.
Emma C., P. A. Coupal	1 35 15	1 34 15
Ida J., F. E. Beekman	1 36 00	1 36 00
Little Peter, Henry Moebs	1 38 20	1 36 20
Kulinda, F. R. Streeter	1 51 40	1 45 40
Beatrice, John Cavanagh	2 02 33	1 59 33

Second Special Class.

Harolde, A. T. Bliss	1 12 55	1 06 55
Fantasy, Wm. Allerton	1 15 45	1 07 45
Victor, F. W. Nickerson, Jr.	1 15 53	1 08 53
Annie A., Jas Leveridge	1 19 27	1 09 27
Alert, J. MacConnell, Jr.	1 14 35	1 10 35
Sea Bird, C. L. Joy	1 17 32	1 13 32
Alma, C. A. Heney	1 19 20	1 15 20
Icurez, G. P. Lawton	1 43 11	1 28 11
Ideal, H. B. Whittier	1 41 40	1 34 40
Oma, E. E. Merrill	1 52 47	1 38 47
Valka, W. P. Cashman	1 52 32	1 45 32
Wraith, F. E. Granger	1 59 17	1 47 17
Robin, H. W. Robbins	2 05 10	1 49 10
Aureolus, R. S. Landers	2 04 05	1 53 05

The winners were: First prizes, Meemer $25, Widgeon $15, Eleanor $25, Heiress $20, Arab IV. $20, Perhaps $20, Ray $15, Emma C. $30, Harolde $25. Second prizes, Jeanette $15, Hostess $10, Harriet $10, Helmi $10, Ida J. $20, Fantasy $20. Third prizes, Hermos $10, Bud $5, Jacobin $5, Little Peter $10, Victor $15. Fourth prizes, Kulinda $5, Annie A. $10.

The judges were G. H. Chapman, T. S. Young, Chas. Prescott, E. J. Harrington and A. T. Bliss.

Victor protested Harolde in second special class.

The 30-Footers at Newport.

ON July 11 a race was sailed over the Dyer's Island course in a fresh south wind, the times being:

Start, 2:55.	Finish.	Elapsed.
Vaquero III., H. B. Duryea	5 01 12	2 06 12
Wawa, Reginald Brooks	5 03 08	2 08 08
Asahi, Lloyd Warren	5 14 19	2 19 19
Carolina, Pembroke Jones	5 14 50	2 19 50

On July 12 the course was around the Bearel Tail and Bishop's Buoy, the wind being S.W. The times were:

Start, 3:40.	Finish.	Elapsed.
Carolina, Pembroke Jones	5 32 52	1 58 52
Wawa, Reginald Brooks	5 32 58	1 58 58
Asahi, Lloyd Warren	5 33 21	1 59 25
Vaquero III., H. B. Duryea	5 33 30	1 59 30

On July 13 the course was from Bishop's Buoy to Jamestown and return, two rounds, in a west wind. The times were:

Start, 3:21.	Finish.	Elapsed.
Wawa, Reginald Brooks	5 11 36	1 50 36
Vaquero III., H. B. Duryea	5 12 30	1 51 30
Carolina, Pembroke Jones	5 13 08	1 52 08
Asahi, Lloyd Warren	5 15 15	1 54 15

On July 14 a sweepstakes race was sailed, the times being:

	Start.	Finsh.	Elapsed.
Dorothy II., H. P. Whitney	3 31 00	5 29 40	1 58 40
Vaquero II., H. B. Duryea	3 31 00	5 29 48	1 58 48
Wawa, R. Brooks	3 31 00	5 29 59	1 58 59
Puck, E. D. Morgan	3 31 00	5 30 32	1 59 32
Asahi, L. Warren	3 31 00	5 31 30	2 00 30
Carolina, P. Jones	3 31 00	5 35 15	2 04 15

The race of July 15 was also a sweepstakes, over the Dyer's Island course in a strong west wind. The times were:

Start, 3:14.	Finish.	Elapsed.
Vaquero III., H. B. Duryea	5 31 36	2 17 36
Dorothy, H. P. Whitney	5 32 01	2 18 01
Wa Wa, Reginald Brooks	5 23 04	2 19 04
Esperanza, H. Havemeyer, Jr.	5 33 47	2 19 47

Mosquito Fleet Y. C.

SOUTH BOSTON—BOSTON HARBOR.

Saturday, July 15.

THE Mosquito Fleet Y. C. sailed the first of a series of four handicap races on July 15 in a light east wind, the times being:

	Elapsed.	Corrected.
Carrie, M., N. C. Robinson	1 45 50	2 05 25
Alda, Charles P. Mooney	1 53 10	2 07 19
Ariel, J. J. Maguire	1 45 55	2 08 05
Myth, J. T. Powers	1 52 13	2 19 19
Addie, W. F. Conley	1 59 31	2 10 44
Aurealus, R. Landers	1 59 11	2 11 33
Nonpareil, W. Davis	2 07 54	2 12 54
Seaweed, S. C. Higgins	2 11 04	2 15 59
Thistle, John Shaw	2 06 05	2 17 16
Kismet, D. Byford	2 11 12	2 18 24

Seawanhaka C. Y. C.

OYSTER BAY—LONG ISLAND SOUND.

Saturday, July 15.

THE annual race of the Seawanhaka C. Y. C. for the Alfred Roosevelt Memorial cup was sailed on July 15 over a twelve-mile inside course. The wind was light through the early part of the races, but freshened from S.W. The times were:

	Finish.	Elapsed.
Oiseau, H. S. Maxwell	6 45 03	2 50 03
Momo, H. M. and C. H. Crane	6 46 58	2 51 53
Infanta, W. H. Burgess	7 03 12	3 08 12
Bee, N. B. Burr	7 30 40	3 35 40
Dovekie, T. S. Young	Withdrew.	
Tosto, L. M. Scott	Withdrew.	
Spider, Clinton Work	Withdrew.	

Dorchester Y. C., Ladies' Day.

DORCHESTER—BOSTON HARBOR.

Saturday, July 15.

ON July 15 the Dorchester Y. C. sailed a handicap race, the crew of each yacht being partly made up of ladies. The wind was light from the east. The times were:

	Corrected.
Goblin, J. C. Gray	1 04 30
Hawk, H. W. Smith	1 09 50
Bud, Leon Small	1 12 00
Athena, T. W. Souther	1 16 45
Maude, J. T. Preston	1 20 55
Peteral, F. W. Guptil	1 21 35
Virginia, Leon Cutter	1 31 00
Yawl, Mr. Curtis	No time taken.

YACHTING NEWS NOTES.

The Conodoguinet Y. C. has been formed with the following members: Charles Gilbert Beetem, Pres.; Edward Biddle, Sec'y and Treas.; Herman B. Biddle, Mont Mahon, Jr., George and Abram Bosler, Jacob Hertzler, Fred Humer, Robert Patterson and J. Kirk Bosler, all of Carlisle, and Jas. A. Steese, Mt. Holly. The club house, built near the cave at Cave Hill Park, is 18 x 14ft., with a veranda 10 x 14ft., and pier, and is quite artistic. The club members have two canoes and one rowboat, and expect soon to have more. The house will be lighted with electricity.—Carlisle, Pa., Volunteer.

The Burgess Y. C., of Marblehead, Mass., celebrated the birthday of the late Edward Burgess, on June 30, by a reception at the club house.

On July 8 the Royal Hamilton Y. C. sailed a race in the 35ft. class. for the White Wings cups. The new keel 35-footer McLeod, named after her designer, carried away her mast before the start, the wind blowing almost half a gale. The new Fearnside boat, Hamilton, won her first race over Myrtle, the times being:

White Wings Cup—Start, 2:30.

	Finish.	Elapsed.
Hamilton	4 38 50	2 08 30
Myrtle	4 48 50	2 18 50
McLeod	Dismasted.	

25-footers—Start, 2:35.

Rosemaryn	4 41 45	2 06 45
Koko	4 42 30	2 07 30

On July 6 a race was sailed on Pistakee Lake in a fresh breeze, the times being:

First Class—Start, 3:07.

	Finish.	Elapsed.
Pistakee	4 24 08	1 17 09
Conqueror	4 24 49	1 17 49
Hyperion	4 25 08	1 18 08
Uncle Sam	4 29 25	1 22 25
Third Class—Start, 3:15.		
Fortune Teller	4 05 27	0 50 27
Tuck	4 08 50	0 53 59
Nip	4 09 19	0 54 19

The Mahtomedi Y. C., of White Bear Lake, sailed pennant races in two classes on July 8, the times being:

Catboats.

	Start.	Finish.
Britannia, Snowden	4 02 30	5 13 35
Bonnie Castle, Clarkson	4 05 30	5 25 00
Queen, H. W. Dresden	4 03 25	5 25 30
Albatross, Ethel Murray	4 02 20	5 26 00
Marguerite, Swift	4 02 25	5 26 15
Larks.		
Wren, J. J. Dobson	4 02 00	5 36 00
Magpie, George Dodds	4 00 20	5 40 50
Skylark, Frank Pinska	4 02 00	5 41 00

Britannia and Wren lead their classes with 8 points each.

On July 15 the Penataquit Y. C. sailed a race for the snipe class, the times being:

Start, 3:42.	Finish.
74, Joseph Low	4 18 00
69, Carl Brewster	4 18 15
67, J. Reilley	4 18 30
72, W. Tucker	4 22 15
79, Joseph Covell	Withdrew.
76, E. Lentilhon	Withdrew.

Mr. Low wins a silver mug. The class will sail no more races this year.

The Westhampton Y. C. has elected the following officers: Com., W. S. Whitehead, Jr.; Vice-Com., Marshall Mills; Fleet Capt., Charles De Hart Brower; Treas., Henry R. Beekman; Sec'y, Dr. William L. Fiske.

Canoeing.

Canoeing on Greenbrier River.

HAVING lately come into possession of a canvas folding boat, I thought to make a little trip in it merely to enjoy the scenery and derive what benefit I could that comes from little extempore trips in the woods. The passage to Ronceverte, seventy miles or so, was made in two days, and I believe that few persons have made the trip merely as a pleasure excursion. The unresponsive lumbermen and raftsmen and an occasional railroad prospector have alone had the beauties of this stream and its possiblities for fish spread out at length to them.

When the tour was resolved on, an alternative presented itself: Either to seize the opportunity and go then (June 10), while the river was at a good stage for boating, and not do any fishing, or wait until the 15th, when the open season for bass commences. Incidentally I may say my belief is that game legislation should be respected to the letter by each and every one for himself, irrespective of what others may or may not do. No preaching like that of example. So I started on the 10th, regretfully leaving rod and tackle behind, armed with kodak only, and provisioned from the grocery store with supplies of embalmed beef, etc.

The Greenbrier River is about 140 miles long. It lies wholly within Pocahontas and Greenbrier counties, and for the most part passes between the high river ridges, as they are called to distinguish them from the other ridges of this ridgy country. Where the river cuts through Droop Mountain range there is much wild scenery, and for six miles the water is very rough. The most dreaded rapids to be found on the river are here. The divided mountains are high and steep, the course of the river tortuous, rushing madly down steep places and swirling among huge boulders; resting a moment in a quiet pool and then dashing into more rapids. One peculiarity of this water is that the passage is more dangerous at low water than in flood, for then the rocks are submerged. In running the Glen Rocks Rapids, the Davy Run and a dozen other places around Droop, if you fail to take the riffles straight your canoe will be turned over, and if the current drives you to the in-shore the chances are good to be dashed on sharp, ridgy rocks and wrecked.

Droop Mountain is twenty-three miles below Marlinton, and I passed at 3 o'clock in the afternoon of the first day. It is a very wild spot and remote from any homestead or public road. At one point is a pool of such stillness and in the lower part it runs with swiftness and so smoothly that it has received the name of the Sliding Water. The steep mountains are so placed that a breeze rarely ripples the surface of the water, and the mountains and sky are reflected to the minutest details with the clearness of a mirror. On top of the mountain, on the east side, is a range of rocks where a great many buzzards were congregated, and where some of them doubtless had their nests, as they affect such places for nesting.

Two men and a boy—ginseng diggers—were seen fishing patiently, though awkwardly if bass were their quest. A camp-fire burned in the border of the wood. These people catch few bass at this season. They use crawfish for bait, and the bass is choice in his diet just now and takes only minnows freely.

The first night was spent under the boat on a pile of leatherbark brush, which makes an excellent bed. Even the limbs and knots of this shrub are soft and the green bark has the suppleness and strength of leather; hence the name. I had little appetite and much thirst, which I attribute to the baking I received in the hot sun, and the canned goods gagged me. I ate almost nothing for three days, and almost regretted my firm determination not to take bass out of season. The night was warm and I slept well without fire or covering, save the boat.

In the gray dawn I had a bath and then launched the canoe. Two miles below I came to a wonderful natural formation, and just at the right moment to enhance the natural beauty of the spot. The limestone strata, in some places 100ft. in height, borders the river for a quarter of a mile, and here the water is apparently motionless. The place is called the Chimneys, from the rock being regularly stratified both ways, so as to give it the appearance of masonry falling into ruins. Some reference to "towers" would be more appropriate; it bears

CANOEING ON GREENBRIER.

out the resemblance to some mediæval ruin very well; shrubs and vines cover the walls; a pair of owls flew about, and a hawk roosted on the limb of a tree. Seen through the fog it had a very romantic aspect, and the scene will not disappoint one seen in the full light of day. A projected railway line threatens to destroy all this. On the recent location survey a man was lowered by ropes to set the stakes along the face of the rocks.

At noon Keister's Mill Dam was reached, just as a shower came up. Turning the boat upside down on the crest of the dam, I passed through the rain comfortably. A short distance below I found the "rear" of the log drive destined to supply the paper mills. For ten miles the river is full of logs, and the current was accelerated perceptibly thereby. It was noted that the bass would rise very near the boat here, no doubt from its resemblance to a floating log. Having nothing in particular to do, I again indulged in regrets about the closeness of the fishing season.

At Caldwell bridge I saw a train of coal cars and was duly impressed with the sight. It seemed to me that the locomotive was a living thing and moved in great leaps—

THE FAN BRIDGE.

and what a fearful roar, like some monster of the ancient days. People who see trains every day lose sight of what a wonderful thing a locomotive is.

The town of Ronceverte enjoys good fishing and boating water above the mills of the St. Lawrence Company. Guay & Perkins run an excellent hotel and restaurant and give one the best attention to be had at the democratic price of $1 per day. Mr. Guay is a Frenchman, and for many years was the star cook for the lumber camps operating in Pocahontas county.

I had intended to supplement my tour by walking home, fifty miles by the Maslin's Bottom trail, but a neighbor's wagon going my way, I folded my boat and got aboard. It seemed to me we had parcels and packages for a hundred people on the wagon. Neighbors had charged the good-natured lad—the driver—to get them almost every sort of unattainable article, including gasoline to run a patent flatiron, and a fruit basket to adorn an art study.

Greenbrier county boasts a 25 per cent. levy and spends nothing in improving the old trail running north. One wagoner, with a team of stout horses, made four miles in three hours, and twelve miles in a day.

It was one of those delightful days in June when the air is clear, and when distant objects are seen; a pleasant breeze blew all day and the drive was most enjoyable. We made forty miles that day.

One needs to have a taste for solitude to thoroughly

enjoy such an outing. For a fishing trip requiring more time, companionship would be indispensable. However,

"To him who in the love of nature holds
Communion with her visible forms
She speaks a various language."

Two gentlemen from Texas—Messrs. Southall and Worsham—acting on a suggestion of what I would do if business permitted just now, had a boat built and started down the river June 29, expecting to spend two weeks fishing, it also being their route to reach the railroad.

Since June 15 (fifteen days) the writer has taken 110 bass, which happens to be considerably in advance of the record of any brother fisherman hereabouts. The catches were all made after business hours—usually after 5 o'clock in the evening. NORMAN PRICE.

MARLINTON, W. Va.

Toronto C. C. Annual Regatta.

TORONTO—TORONTO BAY.

Saturday, July 8.

THE Toronto C. C. held its annual regatta on July 8, with a number of good races, as follows:

Junior Single Blade.—J. Clarkson 1, R. N. Brown 2, George Dill 3.

Handicap Tandem.—G. W. Begg and G. Dill 1, E. Richards and A. Begg 2, E. McNichol and E. Blackhall 3.

Intermediate Single Blade.—H. Begg 1, J. Clarkson 2.

Open Fours.—G. W. Begg, H. Begg, S. Sylvester and F. Taylor, 1; F. Rogers, E. Richards, R. M. Brown and E. McNichol, 2.

Senior Single Blade.—F. Taylor 1, E. McNichol 2, G. W. Begg 3.

Handicap Fours.—H. Begg, E. Blackhall, H. Blatchley, E. Richards, 1; W. Begg, A. Morrell, R. N. Brown, S. Sylvester, 2.

Open Tandem.—G. W. Begg and H. Begg 1, E. Richards and F. Rogers 2.

Ladies' and Gents' Tandem.—Miss E. Tyner and G. W. Begg 1, Miss E. M. Moore and E. McNichol 2. Miss Sarah (Frank) Saylor and Mr. S. A. Sylvester furnished lots of amusement for the spectators in a burlesque race.

Overboard Tandem.—E. McNichol and A. Morrell 1, F. Rogers and E. Richards 2.

Duck Hunt.—Walter Begg 1, E. Clarkson 2.

Tilting Tournament.—W. J. Sparrow and E. McNichol 1, H. Blatchley and A. Morrell 2.

Following were the officials who had charge of the arrangements:

Club's officers—Past Com., C. H. Wilson; Com., T. P. Stewart; Vice-Com., George A. Howell; Rear-Com., J. H. Watlington; Hon. Sec'y, E. J. Hathaway; Hon. Treas., R. Osler Wade; Committee, F. Woodland, E. Beeton, G. Walter Begg.

Regatta Committee.—Vice-Com. G. A. Howell, Chairman; S. A. Sylvester, E. A. Blackhall, E. H. Richards; Henry A. Sherrard, Sec'y.

Officers of the Day.—Starter, H. R. Tilley; Judge at Finish, George Wilkie; Judges at Turn, J. S. Wallace, E. J. Hathaway, Alex. Young, Herb Kennedy; Referee, A. E. Bell; Clerks of the Course, J. C. Iredale, J. F. Rogers.

Western Division, A. C. A.

CHICAGO, July 15.—The Western canoemen have been few and far between in the recent four or five years of business depression, and it is as well that they abandoned the attempt to hold meets, in view of the little encouragement received for the past three years, and chose the wiser part of joining the parent body, the A. C. A. As it is, the Western men who keep up the belief in Western things and Western segregation may still gratify their ambitions, for they have accomplished all they have asked, and have gained names enough to get the establishment of the coveted Western Division. The meeting for the formal organization of this division will be held at Chicago, July 22, at the Great Northern Hotel. Com. F. S. Thorn, under date of July 6, sends out the following notice of such meeting. It will be well attended:

"As commodore, and under the constitution of the American Canoe Association, I would notify you that all the requirements for forming a new division of the A. C. A. have been complied with. The petition asking for the territory covered by Ohio, Indiana, Michigan, Illinois, Wisconsin, Minnesota and Iowa has been received and votes of the executive committee taken so that I can approve of the division, and do hereby approve of the same and call a meeting of the members of this division for the purpose of electing officers: One vice-commodore, one rear-commodore, one purser and one executive committeeman.

"This division shall be known as the Western Division of the American Canoe Association.

"This meeting to be held at Chicago, at the Great Northern Hotel, Saturday, July 22, 1899."

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

New York C. C.

THE New York C. C. sailed a special race on July 15 for a prize presented by F. C. Moore. A fresh S.W. wind was blowing on Gravesend Bay, and several canoes came to grief. Zip, Mr. Moore's new canoe, carried away her rigging and withdrew; Toreador capsized and Soubrette fouled a mark and withdrew from the races. The times were:

	Start.	Finish.
Aziz, L. H. May	4 08 00¼	4 47 00
Torment, G. W. MacTaggart	4 09 00½	4 49 36
Pioneer, F. G. Palmer	4 10 00	4 55 33
Zip, F. C. Moore	4 11 00	.. .. ..
Soubrette, L. B. Palmer	4 08 00	.. .. ..

Aziz won the cup and also heads the record.

Brooklyn C. C.

THE Brooklyn C. C. sailed two races on July 15, as follows:

	Start.	Finish.
Madge, F. L. Dunnell	4 59 00	5 17 27
Kathleen, P. F. Hogan	4 59 02	5 17 53
Nenemoosha, Harry M. Dater	4 59 02¼	5 18 33

Race for the Commodore's cup:

	Start.	Finish.
Madge, F. L. Dunnell	4 27 00	4 45 38
Kathleen, P. F. Hogan	4 27 01	4 45 38
Nenemoosha, H. M. Dater	4 27 01	4 51 10

Trap-Shooting.

Fixtures.

July 19.—Elkwood Park, Long Branch.—All-day sweepstake shooting.

July 19-20.—Providence, R. I.—Interstate Association's tournament, under auspices of the Providence Gun Club. R. C. Root, Sec'y.

July 21.—Kent, O.—Heikes-Elliott contest for Cast-Iron medal.

July 22.—Holmesburg Junction, Pa.—Grand midsummer target tournament and five-men team match, on grounds of Keystone Shooting League. J. K. Starr, Manager, Philadelphia.

July 22.—New Brunswick, N. J.—New Jersey Central League contest on grounds of Reservoir Gun Club.

July 22.—Elkwood Park, Long Branch, N. J.—Twelve o'clock; Elberon handicap, 15 birds, $15. White Seal prize; 5 birds, $5 entrance.

July 24.—Batavia, N. Y.—Elliott-Crosby contest for E. C. cup and championship at inanimate targets.

July 25.—Brooklyn, L. I.—Third annual tournament and clambake of the Hell Gate Gun Club. E. Doeinck, Sec'y.

July 26.—Albany, N. Y.—Second annual tournament of the Forester Gun Club. Bluerocks and magautrap; open to all. H. R. Sweny, Sec'y.

July 26-27.—New Castle, Pa.—Two days' tournament of the New Castle Gun Club. Henry P. Shaner, Sec'y.

July 27.—Bridgeport, Conn.—The fourth tournament of the Connecticut Trap Shooters' League, on the grounds of the Bridgeport Gun Club. Geo. B. Thorpe, Sec'y.

July 26-29.—Ocean City, Md.—Third annual midsummer tournament; two days at live birds; two at targets; $300 added. J. R. Malone, Manager.

July 29.—Elkwood Park.—One o'clock; Deal handicap, 10 birds, $10 entrance. Irroy prize; 5 birds, $5 entrance.

July 29.—Elkwood Park.—Twenty birds, $20; 12 o'clock.

Aug. 3-4.—Wolcott, N. Y.—Tournament of the Catchpole Gun Club. E. A. Wadsworth, Sec'y.

Aug. 8.—Haverhill, Mass.—All-day shoot of the Haverhill Gun Club; added money. C. F. Lambert, Sec'y.

Aug. 9-10.—Portland, Me.—Interstate Association's tournament, under auspices of the Portland Gun Club. S. B. Adams, Sec'y.

Aug. 15-17.—Little Rock, Ark.—Arkansas State Tournament.

Sept. 4.—Schenectady, N. Y.—Schenectady Gun Club's Labor Day shoot. H. D. Strong, Sec'y.

Sept. 5-7.—Omaha, Neb.—Du Pont Gun Club's fourth annual tournament. G. H. Moore, Sec'y.

Sept. 6-7.—Portsmouth, Va.—Tournament of the Interstate Association, under auspices of the Portsmouth Gun Club. W. N. White, Sec'y.

Sept. 13-14.—Cherokee, Ia.—Cherokee Gun Club's third annual tournament. J. D. Anderson, Sec'y.

Sept. 19-22.—Detroit, Mich.—Jack Parker's eighth international tournament; live birds and targets; $500 cash added.

Oct. 6-7.—Pawling, N. Y.—Tournament of Pawling Rod and Gun Club; targets and live birds.

Oct. 23-28.—Nashville, Tenn.—Belle Meade Gun Club's tournament; targets and live birds; $500 added. W. R. Elliston, Sec'y.

First and third Fridays of each month.—Watson's Park, Burnsine, Ill.—Semi-monthly contest for Montgomery Ward & Co.'s diamond badges.

Brooklyn Gun Club.—Third Saturday of each month, Francotte gun contest. Fourth Saturday of each month, Grand American Handicap free-entry contest.

1900.

June —.—Tournament of Ohio Trap-Shooters' League, first week in June. J. C. Porterfield, Sec'y.

DRIVERS AND TWISTERS.

The programme of the Interstate Association's trap-shooting tournament, given for the Portland Gun Club, Portland, Me., Aug. 9 and 10, provides ten events each day, five at 15 targets, $1.50 entrance; five at 20 targets, $2 entrance. This is a total of 175 targets each day, with a total entrance of $17.50. The price of targets, 2 cents each, is included in the entrance. Those who so wish may shoot for targets only. The Rose system, four moneys, will govern the division of the purses. A light lunch will be served on the grounds each day. Guns and ammunition sent to the secretary, Mr. S. B. Adams, will be delivered free on the grounds. Shooting commences at 9:30 o'clock each day. To reach the shooting grounds, take Ocean street cars at the head of Preble street at a quarter of or a quarter past the hour. Headquarters will be at the Preble House.

"If you see it in the Sun, it's so." The following appeared in that paper on July 17: "The match for the clay-bird target championship of New Jersey between Harold Money, of Oakland, and Christopher W. Feigenspan, Jr., of Newark, was to have been decided on Saturday at Lyndhurst, but Feigenspan failed to appear. The spectators were treated to an impromptu match at live pigeons, for $100 a side, between Money and Aaron Doty, of Plainfield. Great shooting was done, each smashing 95." In this case it's so—with some exceptions. There was no match arranged between Messrs. Feigenspan and Money for the championship of New Jersey on that day or any other. The match between Messrs. Money and Doty was not impromptu. They did not smash 95 pigeons, though they killed 95. Otherwise the Sun is quite correct, excepting as to Mr. Doty's domicil.

The Hell Gate Gun Club has issued is programme for its annual clambake and target shoot, to be held at Dexter Park, Jamaica avenue and Enfield street, Brooklyn, July 25, rain or shine, commencing at 10 o'clock. Tickets $3, including entry in merchandise event. The Rose system will govern. Shooters may enter for targets only; targets 2 cents. Bake served at 6:30. Two sets of traps will be used. No. 1 will have the Sergeant system, ten events, 10, 15, 20 and 25 targets, 50, 75 cents, $1 and $1.50 entrance. No. 2 also has ten events, known angles, rapid-fire, and on these traps the merchandise competition will take place. Only holders of tickets can compete. Tickets can be obtained from the secretary, Mr. Eugene Doeinck, 1355 Amsterdam avenue, New York.

Under date of July 15 Mr. Henry P. Shaner, secretary of the New Castle Gun Club, New Castle, Pa., writes as follows: "The New Castle, Pa., Gun Club will hold a two days' tournament, July 26 and 27. Quite a number of shooters from Cleveland, Warren and other eastern Ohio towns, as well as Oil City, Pittsburg and other Pennsylvania towns, have promised to attend. We will have one 10-bird event, four 15 and four 20-bird events each day. We will try to get enough good pigeons to have a live-bird sweep during the afternoon of the second day. We have recently moved our grounds, and are now nicely located on Highland avenue, easily accessible by street cars. Will do our best to make it pleasant for visiting shooters. A magautrap will be used. Money divided 40, 30, 20 and 10 per cent. Entrance $1.50 and $2."

Under date of July 13, in mentioning a pleasing incident which occurred at Lawrence, Mass., Mr. Frank Butler writes as follows: "You may be pleased to know that Annie Oakley was presented with one of the finest medals possible to make by admirers in Lawrence, Mass. It is finely engraved, with crossed guns, and an eagle hangs from a heavy gold bar, on which is inscribed: 'To Annie Oakley, from Mayor and Citizens of Lawrence, July, '99.' As it is very heavy, and all of solid gold, it must have cost considerable."

Mr. Charles Lancaster, of 151 New Bond street, London, Eng., who has an international reputation as a maker of high-grade firearms, is a strong advocate of a shotgun load in a 2in. shell, something entirely novel to shooters in this country. These shells are known as the Lancaster "Pygmies," and they are much used in England. On application Mr. Lancaster will mail circulars, etc., which will explain the advantages of the "Pygmies," the manner of loading, etc.

Under date of July 7 Mr. H. W. Brown, Binghamton, N. Y., writes us as follows: "The Binghamton Gun Club is going to hold a two days' tournament, July 18 and 19. This is the fourth shoot of the Central New York circuit. The programme comprises twelve events of 10 and 15 targets, alternating, with an entrance of 75 cents and $1. The second day, team races for championship."

On Friday of this week the eleventh contest for the M. W. & Co. trophy takes place.

We learn with much pleasure that the U. S. Smokeless Powder Co., San Francisco, whose great loss of property by disaster is now well known, will rebuild on a much larger scale and engage in the manufacture of dynamite, gun cotton, chemicals, and last, but not least, of Gold Dust powder, of which in the East Jack S. Fanning is the representative. He is still traveling in the interest of his company, and will continue to do so, shooting and selling goods in his well-known efficient way.

Now that the contests for the Chicago challenge trophy are ended by Mr. A. C. Paterson's final win, the sportsmen of that city should take steps to put another in competition. The keenness and persistency displayed in respect to the challenge trophy denote that the men who made the conditions governing it struck the true keynote of competition.

In a circular letter the Schenectady Gun Club, Schenectady, N. Y., announces that its fall tournament will be held on Labor Day, Sept. 4, commencing at 10 o'clock. There will be ten 15-target events, $1.25 entrance, targets included, and three or four moneys, according to the number of entries. H. D. Strong is the secretary.

The fourth tournament of the Connecticut Trap-Shooters' League will be held on the grounds of the Bridgeport Gun Club, on July 27. Programmes will be ready for distribution in a few days. Efforts will be made to insure a great shoot. Mr. Geo. B. Thorpe is the secretary.

On Saturday of this week, at Watson's Park, Burnside Crossing, Ill., there will be a contest between teams of the Garden City Gun Club and the Audubon Gun Club, each contestant shooting at 15 live birds. As there are veteran, skillful shots in both clubs, a fine contest is expected.

Under date of July 15 Mr. James R. Malone, manager of the midsummer tournament at Ocean City, Md., July 26 to 29, inclusive, writes that he expects a large attendance, at least fifty shooters. The inquiries concerning the programme and the numerous requests for them indicate a general interest.

The team contest of the midsummer tournament, to be held Saturday of this week on the grounds of the Keystone Shooting League, has evoked great interest, a large number of clubs having signified their intention to send teams to compete.

Under date of July 12 Mr. H. W. Brown, Binghamton, N. Y., writes us as follows: "At our club shoot to-day we had as guest Mr. J. R. Hull, of Parker Brothers, who made the splendid score of 144 out of 150."

In a match at 100 birds Mr. Edward S. Johnson, of Atlantic City, N. J., defeated Mr. Harry E. Buckwalter, of Phœnixville, by the score of 97 to 95, on the grounds of the Keystone Shooting League.

The Portage County Gun Club, Kent, O., will give a shoot on Thursday of this week; nobody barred. There are eight events on the programme, 15 and 20 targets, four moneys. Mr. W. G. Lyman is the secretary.

The formation of the Interstate Park Association, of which Mr. J. A. H. Dressel is secretary, marks a mighty advance in the furtherance of trap-shooting interests of America.

The Catchpole Gun Club, Wolcott, N. Y., has postponed its tournament to Aug. 3 and 4. Targets will be thrown by a magautrap. E. A. Wadsworth is the secretary.

On Wednesday of this week the regular monthly shoot of the Audubon Gun Club will be held at Watson's Park, Burnside Crossing, Ill. BERNARD WATERS.

Auburn Gun Club.

AUBURN, Me., July 17.—The scores made by the Auburn (Me.) Gun Club at their weekly shoot on Saturday, July 15, are appended. Hunnewell broke 25 straight and won the gold badge, there being four tied for it. A heavy shower came up, wetting things down in general, but it did not dampen the spirits of the twenty-eight shooters.

Messrs. Cameron, of the Winchester Arms Co., and Norton, of the Hazard Powder Co., were visitors of the club, and shot through several of the events.

On July 3 the Auburn Gun Club sent two squads to Portland to shoot for the Lovell challenge badge—although they did not bring the badge home with them this time, they are not discouraged, and mean to try for it again in the near future.

About 4 P. M. the Portland boys, who by the way are adepts in the art of entertaining, served a clambake which was thoroughly appreciated by all. Many good scores were made, but Portland still holds the badge, the other teams competing for it being Waterville and Auburn.

L. A. BARKER.

Buffalo Audubon Gun Club.

BUFFALO, July 15.—George P. McArthur won the Hebard trophy and F. G. Wheeler defeated C. S. Burkhardt for the Clinton Bidwell trophy to-day. In the first-named event George McArthur (Class B) won with 28 out of 30 and 3 added, making a total of 31. This makes three wins for McArthur, with only four more contests in this series.

The Clinton Bidwell trophy was shot for and was again won by F. G. Wheeler, who defeated C. S. Burkhardt by a score of 24 to 21 at live birds. No. 3 event was the club badge shoot. Dr. E. S. Carroll won Class A after a shoot-off with E. C. Burkhardt, who tied on first string. George P. McArthur won Class B and Porter won Class C. Following are the scores:

RAVELRIGG.

Confabulations of the Cadi.—XVIII.

THAT delightful season of the year had come when the softer light and cooler air had superseded the glare and heat of summer. Tintings of browns, purples and yellows enriched the summer green which was still to be seen on all vegetation, while pumpkins and corn galore, and pigs of larger size, were substantial proof that nature, though beautiful, was purposeful. Herin lies a matter of deep ingratitude, or lack of true perception, shown by a class who profess to be nature's most devout worshipers, namely, the poets; for, while they will grind out acres of "odes to spring or summer or fall," not one of them would compose an ode to corn-bread and bacon, the material part for which they are directly indebted. They, with such success as may be, love to dwell on color, light, sound and passion, designing to play on the readers' emotions, thus ungratefully ignoring the source of all emotion, to wit, corn-bread and bacon.

At this auspicious season there was great happiness in the home of the Cadi, for his wife's father, whom he deeply respected for his self-supporting ability, was a revered guest under the good Cadi's leaky roof. Stockily built and sturdy in bearing, with a homely yet good face, out of which bristled a wiry, healthy, full beard and a watch eye, this father-in-law was a man of more than ordinary individuality. His abundant uncombed and uncut gray tresses rested in graceful negligee, as they listed, while his garments, severely plain, had the chaste coloring made by the blended dust of many summers and the mud of many winters, the waistcoat in addition bearing a minute historical chart of his daily menu of many years. The strata of the earth, in its transition from chaos to the present high stage of trap-shooting, tells not the story of its æons, as did father-in-law's waistcoat, in its endless laminæ, tell of breakfasts, dinners and suppers eaten day by day through the far past.

The children, each with a thumb in his or her mouth and swinging on one foot in steady, rhythmic movement, something after the manner of a needle in a disturbed compass, would stand by the hour a few feet or yards away, gazing on him with mixed emotions of wonderment, deference and expectancy; for, first of all, did he not come from a strange, far away region, fully three counties distant? Was he not a very important personage in that he was the father of their mother? and was it not a possibility that he had candy or gingerbread in his pockets which he might produce in good time, and thereby repay them for patient, goggle-eyed waiting? But grandpaw was different from the visitors who came from the great cities, for he produced nothing in the way of gifts. Still in his simple way he was very happy at the loving interest manifested toward him by his sweet grandchildren, while they in turn were quite happy in anticipation of what he might produce in good time.

He had noted with deep concern the Cadi's habit of rest in company with his kindred idlers; so, with a view to reforming the household, he tentatively remarked to his daughter after breakfast, the Cadi being in the shade of the lodge outside meanwhile: "Hopie, I hain't not no jedge in yore fambly matters, but it 'pears like to me zif ther Cadi's growin' mor' 'n' more dratted lazy every year. He hain't not no 'count no more."

"Paw," Hopie replied, "you mustn't talk erbout ther Cadi thaterway. He's a sick man, 'n' I don't care what ornery low-down folks says, he isn't. Me 'n' him gets erlong all right, 'n' I think hit hain't nobody's business if me 'n' him's suited. The idee!" after which she slapped and slammed things around in a way which both expressed her disapproval and relieved her feelings. "Paw" heaved a sigh, and concluded that it was better to remain simply a visitor than to attempt a reformation which was sure to end in trouble.

Now, had he been at all versed in domestic diplomacy he would have said that the Cadi was the best and most industrious of husbands, with the immediate result that the Cadi in all probability would have had to cook his own meals and provide for himself thereafter; for Hopie Jane had the true spirit of a long line of ancestry which reached back to Eve. She had up to that time foregone all farm work in honor of her sire's visit, but, feeling that the dignity of the family had been attacked, she, after innumerable commands, got the children under control and went afield to work.

To her, as she saw things in her little world, the Cadi, poor man, was physically unfit for work; and if he had a certain natural repugnance for effort, mental or physical, it came from his higher mentality, more refined sensibilities and general superiority over other men. Withal, he was ill; too ill to work, and yet well enough to be about. In her inarticulate way she believed that the Cadi's healthy, rugged exterior, supplemented as it was by a good sharp hunger for three meals a day and a most excellent thirst at all times, was an irrelevant circumstance; all his ailings were internal, and therefore out of the world's view and sympathies. Furthermore, he gravely assured her, there was something quite wrong with his right kidney, over which he would place his right hand, by way of accentuating his story, his face meanwhile taking on the most agonized twistings and stretchings; and if these exterior signs of pain were a true index, no martyr at rest ever suffered more grievous tortures. Nevertheless he bore his pains with a certain degree of fortitude and dignity, for he never made a complaint in words, though at proper times he groaned famously and had therewith a trick of half-closing his eyes and taking a pot hook curve in one corner of his mouth, setting his features very hard meanwhile, all of which impressed Hopie Jane with fears that the dear, good husband was on the verge of the gulf wherein men disappear and rest forever. If he had died, he thereby might have vindicated his claims to invalidism from the standpoint of the public; or even if he had grown thin or lost his appetite there would have been a point on which to hang an inference that his health was failing; but he ate well, drank better, slept soundly and worked not.

"Paw" gravely sought a seat near him, and Moke shortly afterward joined them. He shook hands cordially with "Paw," seated himself comfortably, placed his bare feet on the back of a chair, then said: "Cadi, I've about made up my mind to shake the dust of trap-shooting off my feet and quit."

"I swow to goodness," said Paw, as he gazed at Moke's feet. "I don't think as how you could shake it off."

"I mean that I am going to stop shooting," Moke explained, with extra gravity, looking hard at Paw and at the same time taking down his feet from their spectacular perch.

"What has occurred to bring about this resolve, friend Moke?" queried the Cadi, in tones of concern.

"Oh, things are not what they used to be," replied Moke. "There was a time in the years not so long ago when a fellow could go to a shoot and win something; but shooting is going to the dogs generally these days. There are no more big tournaments, and there isn't the interest in powders and guns and loads and how to load, and everything else that there used to be. Some one ought to do something to revive shooting. We need a new plan or something or other, I don't know exactly what," and Moke sighed, as he knocked the ashes out of his pipe, preparatory to filling it and musing over the decay of trap-shooting.

"You are an instance of the large class of men who think at random and talk a great deal about what they think. Did it ever occur to you that shooters, first of all, for business reasons, cannot shoot all the time, and that if they could shoot all the time it would soon cease to be pleasure? Big tournaments, if they involve a large outlay on the part of the shooters, check shooting for a time, since in a short time they afford a great deal of sport to a great number of people, many of whom must refill their purses before they again can venture to engage in trap-shooting competitions. Few men care for any sport week after week, consecutively and actively. Considering the variety of good sports which have come into vogue and into competition with trap-shooting in the past few years, the fact that it has held its own so well—yes, more, that it has increased so much—is a most gratfying testimonial to the sterling worth of the sport. As a sport, people at large can use but a certain part of their revenue for it. They also can spare but a small part of their time. While there are not so many big tournaments, there are more small clubs throughout the country, for there is no town of any pretension to the name but has its gun club. One club of any activity will shoot away as much ammunition in a year as will be shot at a big tournament; so you will perceive that a multiplicity of small clubs are of much more importance in the shooting world than a few big tournaments, with their few big winners and their many losers."

"But things are so different from what they used to be!" Moke exclaimed, with inconsequential tone which men assume when they are somewhat vague on the subject which they are considering.

"Why shouldn't they be different?" queried the Cadi. "Dou you think that the world will remain at a standstill to oblige you or any one else? With more shooting and opportunities for discipline and instruction, it was perfectly natural that a class of first-rate shooters would be developed in time, not to mention a host of second-raters who are very close to the first. It also was very natural that the average shooter, being a man of intelligence, learned that a tournament was not the best school in which to learn the art of shooting. It was for the graduate, not the pupil. The local club has sprung up with gratifying numbers throughout the land. Your own personal observation is very poor data for a general conclusion, for what you observe in this neck of the woods must not be considered the standard of the whole country. Trap-shooting clubs have multiplied, and while there may not be so much interest in the big tournaments, for reasons which we have before considered, the aggregate of shooting is much greater. The great gun factories have not been so busy in years. The shell makers have contracts far ahead, and in short there is a general revival in all that pertains to the gun and its use. This of itself is absolute proof that there is more shooting."

"Perhaps the war has something to do with it," remarked Moke.

"Which war? the Revolution or Mexican?" father-in-law asked.

"Moke refers to the Mexican, Paw," and the Cadi winked one of his puffy eyes at Moke.

"A war always adds to the shooting interest," Moke added.

"The big tournament filled a public need, in a way," continued the Cadi, "for it gave an opportunity to men far and near to contest with each other, and thereby determined relative ability. But there came a time when every shooter knew every other shooter, and when every shooter knew who would be first, second and third in the list of winners. In the meantime, a large class of very skillful shots were developed, and now, aside from the home club competition for pleasure, the demand seems to be for a competition which carries with it more distinctly personal honors, and which exacts a higher degree of skill on the part of its competitors. That this is recognized by the leaders in thought and action is evidenced by the great trap-shooting grounds in contemplation East and West, which certainly would not be seriously considered if shooting is on the decline. In the big events the trap-shooting gladiators, who are nearly equal in skill, can struggle to determine who has the truest eye, hand and endurance. It is folly at this stage of trap-shooting development to imagine that the weak shooters will meet the strong shooters on even terms in the same cheerful manner and such goodly numbers as they displayed in years gone by. The average shooters, beside studying shooting, have paid some attention to the mathematics of the sport. But, to return: There is a most commendable emulation for the higher honors, and a general participation in the shooting at the home club. When managements pay more attention to the equity of a handicap instead of the juggle of systems there will be a revival of tournament interests."

BERNARD WATERS.

Calhoun Park Gun Club.

PITTSBURG, July 16.—Herewith are the scores of the Calhoun Park Gun Club's one-day tournament at inanimate targets. The morning opened up with a drizzling rain, and it continued until the afternoon. About the starting time there was a regular downpour, which accounts for the small number of entries. The Sergeant three-trap system, which was used, made a very good impression on the shooters present. Mr. Charles G. Grubb, Pittsburg agent of the King Powder Co., of Cincinnati, O., refereed the shoot, and Mr. Saul T. MacClarren was official scorer.

Pills, Pittsburg's Fanning, made the only straight score in the shoot. Why? He shot Gold Dust during the downpour. Old Hoss' Brown's store squad scored a straight pour down across—you know Hoss don't miss many that way, through his glasses. He has found scales on catfish since he yost got home from his two weeks' vacation at his old home.

Mr. S. H. Vandergrift's pigeon-retrieving English setter dog Art died 5th inst. at the Herron Hill Gun Club grounds with jaundice. He retrieved pigeons at Elkwood Park during the Grand American Handicaps of 1896 and 1897. Mr. W. S. King lost his fine English pointer Vic last week. She is the second pointer he has lost within a year. Mr. J. O'H. Denny has presented him with a setter dog pup. He will be trained for the Monongahela Valley Field Trials this fall.

H. P. Shaner, secretary of the New Castle Gun Club, took part in the different events and announced that his club would give a two-days' shoot next month, and extended an invitation to local shots to attend. The results follow:

Targets:	15	15	20	15	15	25	15	15	20	15
H P Shaner	13	12	17	14	13	20	11	12	16	13

Johnson Defeats Buckwalter.

ON July 12, on the grounds of the Keystone Stone Shooting League, Mr. Edward S. Johnson, of Atlantic City, defeated Mr. Harry E. Buckwalter, of Phœnixville, by the score of 97 to 95. Fine weather prevailed. There was a wind which blew from the shooters straightaway—a 6 o'clock wind. John Rothaker acted as referee. The scores:

E S Johnson, 28	2212222222*21222222222222—24
	2222121121222022221221222—24

A Queer Day's Pigeon Shooting.

IT is not possibly well known to the members and frequenters of Hurlingham that there are still many good old-fashioned pigeon gatherings held in the northern counties, where, though the birds are of the most pronounced barn-door type, the guns unwieldy lumps of shoulder artillery, and the traps of a rather primitive dovecot pattern, very good sport is sometimes afforded. The betting at these gatherings is very heavy, beyond the odd carts of coals, bushels of corn, and loads of turnips freely laid by the farmers, to say nothing of "cow's grass for a twelvemonth" sometimes risked unhesitatingly on a single shot.

It was at one of these meetings that a well-known country gentleman of the old-fashioned type now commonly to be met with at cattle shows was asked the question, "Were you really ever had in your life? for from my experience of you I can scarcely believe it. You buy better in most cattle markets, and no man, not even the village butcher, agrees that he ever did well buying from you."

"No!" was the cool, complacent reply, accompanied by a quiet glance. "I'm glad of that; I make it a rule to have the best of every transaction if I can. If a man has the better of me once, well, then——" Here he shook his head.

"Ah! you wait, I see."

"Oh, no. I knew a man once who was down in his luck, and ordered in a cask of whisky and sat down and waited."

"And luck came, of course!"

"Nothing of the kind; just a fit of the blues and a man for the price of the whisky. No, no; you must do something more than wait."

"Wait and watch, then."

"That'll do," said the Squire; "watch and wait, rather. And now, if you'll just let me fill my pipe, I'll tell you the whole story. It just takes a full pipeful of tobacco to tell it over, and the puffs allow a man to gether his memory together a bit. Now, did you ever hear of one Stickleg Jones, the pigeon shot? No! Well, I am astonished, but I daresay you've heard of Major Jones, R. N.?"

"Major Jones, R. A., you mean. Oh, hang! you must not begin that way, you know; that'll do for the marines. Admiral Jones, if you like, or Commodore."

"Major Jones, R. N., I tell you. You see, it was this way: When Jones came about our little country place it was on the day that our great man died, a Capt. Wilkes, R. N., so Jones concluded to be a cut above him. You will see now the sort of a man I have to deal with in the story."

"All right, fire away," was my reply to this. "I have no doubt you obtained him promotion before you had done with him."

"Well, he exchanged out of our lot very quick, I tell you, when I left him off; but just you wait. You say I tell a story fairly well. Then take a hint: Never interrupt a man who can tell a story; learn out of compliment to be a good listener. Help yourself to a pipeful of 'baccy, and wait.

"Well, when Jones arrived at our little country place, we had a nice little pigeon shooting club, which held a meeting every week. There were some fair good game shots among us—men who could stop snipe in the very rush-tops, or bring down a rocketing pheasant from the very clouds, but were nothing to your Hurlingham or Gun Club men over traps. I was about the best man of the lot myself, and I had to stand 1½yds. behind everyone. About the third week after he came to the place the Major, to the astonishment of everybody, joined the club. I say to the astonishment of everybody, for the Major had lost his right leg in active service on board his ship on the coast of Timbuctoo, or some other place, he used to say, and from his knee downward he was supported by a limb of wood; hence his sobriquet of Stickleg Jones. However, we soon found that that did not interfere with his shooting; in fact, a right leg of wood gives a man a great advantage, more especially over traps, as he has only to stick the point of it in the ground, and using it as a pivot describe the arc of a circle with a 28yd. radius, and bowl over his bird like a sort of pivot gun. This he used to do day after day, and limp home with the stakes in his pocket, to the great disgust of the members of the club. One afternoon, however, he crowed so triumphantly that I offered to shoot him next day for a 'pony' 30yds. rise, five traps, 10 birds each. 'Done!' was his ready call; 'the usual conditions as to birds,' he said. 'What are those?' I asked. 'Oh!' says he, in the mildest manner, 'you find the birds I am to shoot at, and I'll find you yours. There can be nothing fairer than that, you know.' Certainly,' I said, for I was greener then than I am now. Well, next day we met his man, a sharp Londoner, carrying his birds for me to shoot at in his basket, and me with a pannier full of the hardiest flyers I could find in my dovecot at home. Well, we started off in fair view of a full gathering of members of the club, I pulling his trap, and he pulling mine. He wanted nothing but fair play, did Major Jones, R. N.

"Sticking the right stump deep into brown clay, he gave the call 'Pull,' and in five seconds afterward one of my nice big black-brown-and-white pea-fed favorites was fluttering its last on the ground as the Major stumped back with the same triumphant stalk that he used to walk the deck of his man-o'-war. It was now my turn, and he took up the string. 'Pull,' I called, and he pulled, and up sprang from the left corner trap an infernal little blue thing no bigger than a cricket ball, and went off like a rocket, seeming inclined to be grateful for my kindness in firing a couple of shots as a farewell salute. There was a roar of laughter from the crowd, and I heard the landlord of the Swan, our chief hotel, say, 'Squire's caught for once.' Caught I was, there was no doubt; and I can tell you I was never more glad in my life of anything when the job was over, for the Major killed eight of my barn-doors, while I was only able to grass 5 of his best bluerocks, which he had sent for to London over night; so I paid my 'pony,' and laid up my gun in its old place in the rack."

"Then you caved in at once. That's not like your form!" I said.

"You just wait a little and you shall hear."

"Ah! I see, you resolved to watch and wait!"

"Just so. Nothing would tempt me to go in for pigeon shooting again, but all over the country when buying my young rams—for you know I like to do my own farming—I kept continually asking, 'Do you ever come across any man with a wooden leg that can shoot well?' The horse dealers at Horncastle Fair used to look twice at me to see if I was joking, and when they found I wasn't, they said, 'Squire has a bee in his bonnet!'

"But surely you do not really mean to think that the Major's wooden leg was an advantage to him in pigeon shooting? It was good birds that lost you the match. Why, if you had wanted to worst him, you had only to get down some of our best Hurlingham shots, like Capt. Leighton, Turner-Turner, or some of them, and they would have given 2yds. in 30 and a bird in 7."

"Just you let me tell my story, if you please," said the Squire. "As I said, I kept on inquiring after one-legged shots, till I was known as the Squire who had a craze for sound horses and lame men. Sometimes they did send me up one, but they were fearful failures; railway pointsmen and the like, who had lost their legs at their occupation and could put thirty pellets in the side of a coal truck at twenty paces, if the truck were safe in a siding and the brake on. I generally gave them their dinner and sent them home again. But one day an old fellow limped up to the front door, with a double-barreled gun and a lurcher at his foot, bearing a note from an old friend to say that he was a notorious poacher who had his leg shot off in a poaching affray, and was second to no man in the kingdom in handling a gun. Well, I tried him myself and found that the certificate was a genuine one. I concealed him, lurcher and all, about the premises, got him down a hundred bluerocks from London for practice, and on the day of the annual shoot drove him over in the dogcart to the ground, and bade him sit still and watch the sport. Everybody made me welcome, and no man professed himself more glad to see me than Major Jones, R. N. Just to put him in a good humor, I lost a £5 note to him, and he was in the end jubilant, having won the stakes. My time, I knew, was just about to come, but I felt terribly afraid it wouldn't. The Major was in the habit of making peculiar challenges when victorious. Come it did! 'I'll shoot any man in the company for £10, and any man on the ground with a wooden leg for £100.' 'Done!' I said. 'It's a bet, Major.' 'The ten, of course,' he said, laughing. 'No, the hundred,' as at the same time my poacher champion descended from the dogcart and limped up to where I stood. He was the Major's very counterpart, and his appearance was greeted with roars of laughter; but the Major did not seem to care to join in the general hilarity. Ten birds each, 30yds. rise, were the conditions fixed. I posted my hundred, and the Major covered it. Bird and bird both men proved equal, but the Major failed at the 6th, grassed the 7th, missed the eighth. With the 9th successive bird the ex-poacher won, and I repeated the challenge on his behalf, but the Major had had enough of it. I lifted the stakes, gave £10 to the winning shot, and drove home. I never saw the Major or that man afterward. Possibly they formed a wooden-leg gun partnership, and are starring it abroad. The landlord of the Swan said I was a man to beware of, and to this day tells how I got a crack shot's leg lopped off and healed up again to effect my purpose, rather than be beat. I have never had anything to do since with bluerocks and blacklegs, wooden or otherwise, but that was the most diffiult time I ever had in making things square."—Rockwood in Illustrated Sporting and Dramatic News (London).

The date of the Haverhill Gun Club's tournament, Haverhill, Mass., has been changed to Aug. 8, from Aug. 11.

IN NEW JERSEY.

A. Doty and H. Money.

July 14.—There have been few matches of a local character which have evoked more interest than the one shot to-day on Tom Morfey's grounds, between Messrs. Aaron Doty and Harold Money. The conditions were 100 birds each, for $100 a side.

The weather was favorable for high scores, the temperature being that of a sweltering July day, while there was hardly a breath of air stirring. On the other hand, the birds were a corking good lot, and had they had any wind to help them, there probably would have been lower scores. As it was, there was not one which could properly be called a sitter, though there were two or three which lagged a moment after the trap was opened. They were a bright, strong, speedy lot.

Both men shot in excellent time, and showed the speed and accuracy of the genuine shooter. At the end of the first 25 the race seemed to be going in favor of Money, and Doty had a most difficult up-hill problem to face, but he shot away with extraordinary nerve and gameness to the finish, tieing where all seemed lost. The scores—95 each—were phenomenal. This ended the match, as it was agreed that the tie would not be shot off. Mr. Jacob Pentz was scorer, B. Waters referee:

Trap score type—Copyright, 1899, by Forest and Stream Pub. Co.

The Interstate Park Association.

ON Thursday of last week it transpired that much of the rumor concerning the formation of a new trap-shooting association which for some weeks past has been going the rounds of the daily press and was a topic in the places where shooters gather, had a very broad foundation in fact.

In addition to the organizing of a powerful association, rumor also had it that a large tract of land had been purchased, to be fitted up most completely in all the appointments of a first-class shooting institution, and this somewhere in the Borough of Queens, which is a part of Greater New York. This too was true; but the man who knew all about it had the least to say of it, up to the time that he had his plans all perfected and his most important negotiations completed.

While rumor gave the venture a very broad scope in the interests of the trap-shooting world, it fell far short of the scope contemplated by the genius of its founder, Capt. J. A. H. Dressel, of the U. M. C. Co., who conceived the idea and had the nerve and ability to carry it through. One can justly wonder that a venture so great from a financial standpoint, and so universal in its important significance to the trap-shooting world, could have been brought to so successful a conclusion without parade, without the tooting of horns, or the exalting of sections, or timorous deliberations. Yet it was all done quietly and perfected quickly, and was established as a fact while the outside world were considering it as a theory.

In due time Capt. Dressel had the park matters perfected to a degree which warranted that it would be a permanent institution, whereupon he hesitated not in proclaiming that fact to the shooting world.

In response to an invitation extended by Capt. Dressel to his guests on Thursday, July 13, at the designated rendezvous in Brooklyn there appeared Col. Charles H. Luscomb, president of the new Interstate Park Association; Messrs. A. W. Higgins and Ed Taylor, of the Laflin & Rand Powder Co.; Messrs. Edward Banks and W. Fred Quimby, of the American E. C. & Schultz Powder Co.; Mr. Justus von Lengerke, of Von Lengerke & Detmold; Mr. Charles E. Willard, of the International Smokeless Powder and Dynamite Co.; Mr. Harry Palmer, of the Commercial Advertiser; Dr. F. H. Creamer, ex-coroner of Brooklyn; Dr. Kemble, of Brooklyn; Messrs. Theodore F. Archer and James Vanderveer, of Jamaica, L. I.; Messrs. W. R. Hobart and B. Waters, of the sporting press; and the Brooklyn Times was represented by Mr. Detheridge.

A giant tally-ho, to which were attached four shapely horses in the full glittering panoply of four-in-hand harness, in charge of a coachman and footman in livery, awaited the party; for, be it known, that a delightful ride in this huge vehicle was a part of the programme which Capt. Dressel had arranged for the entertainment of his guests, who soon ensconced themselves as was best to their liking, some within, others high aloft on the capacious roof.

The day was all that could be desired in respect to comfort and pleasant weather. A veiling of clouds broke the sun's hot rays and mellowed the light; a gentle breeze tempered the heat gratefully, while the heavy downpour of rain which fell early the night before washed the streets and roads into a clean condition, besides freeing them of the absorbed heat of the daytime. The twelve miles or more led in part through city streets, through a boulevard in a setting of trees planted along its sides; over hard pike roads, main thoroughfares to suburban towns, and betimes over soft country roads; but all alike the rubber-shod wheels of the tally-ho sped silently over pike and pavement, to the metallic clatter of the horses' feet, and men, horses and tally-ho were the observed of all. And truly it was a majestic vehicle, great in its sweep at the turning of corners and betimes placing its upper-deck occupants among the limbs of the trees which overhung the roadway delightfully, and great in its ponderous length and momentum as it swept onward in straight roads, receiving many a cheer from men and many a sweet smile from the ladies—benisons upon them.

Capt. Dressel so ordered it that the party was driven along the southern boundary of the tract, which contains some forty-five acres, within its boundaries; then turning at the furthest end and following it for a short distance, the tally-ho was turned into a road which ran through the middle of the tract, and stopped about half-way, where a full view of the grounds was afforded. Capt. Dressel and his guests then alighted, and he pointed out to them the many advantages which the tract possessed for the purpose to which it will be devoted.

There were many questions asked and answered, but the substance of all was that the gigantic trap-shooting enterprise had been most auspiciously launched; that the purchase of the beautiful and suitable tract of land had been completed, and plans in a general way perfected as to buildings, the installation of traps, the laying out of roads and their building, fencing, etc., while the financial ways and means had been fully provided for. The management considers the expenditure of $40,000 at once in buildings, with a much greater outlay in the near future. This contemplates the construction of a great casino, with broad and ample verandas from which guests can comfortably view the shooting; and a grand club house, with billiard rooms, dining rooms, sleeping apartments, all in first-class style, will be provided. Hundreds of lockers will also be a feature, and in these the paraphernalia of the shooter will be safe as in his own home. The purpose is to make this park the most perfectly equipped and most suitable ground possible. No pains nor expense will be spared to attain this end. The company is incorporated, with Col. Luscomb as president, and Capt. Dressel as secretary-treasurer.

At present the tract is tilled from boundary line to boundary line, bearing a most generous crop of garden truck, all of which is to be removed and the whole tract seeded in grass and smoothed level as a lawn within the next two months. It lies a short distance east of Jamaica, in a section designated as the Fourth Ward of the Borough of Queens. It fronts on the main Jamaica road. The Long Island Railroad touches the front end, and the electric road which parallels this road in a way is but a few yards further out. The front end, which is the north end, has 806ft. of width on the railroad, where a depot will be built in due time for convenience of visitors to the park, to which the many trains will run from the bridge in thirty-five minutes. The east side, bounded by Bennett avenue, measures 1,955ft.; the south side, on Hollis avenue, 575ft.; the west side boundary widens out from the south well up toward the north end, where it suddenly turns into the north boundary, forming thus an obtuse angle, and a boundary line some 2,200ft. in length. Near the north end are some buildings which will be torn down within the next two months. Near the obtuse angle above mentioned the traps will be set, and there is a background perfectly free from any undesirable obstacles. The whole outlying country, however, is picturesque and pleasing to the eye.

For the Grand American Handicap these grounds, besides their perfect equipment, will possess the special advantage that visitors will find accommodations on the grounds if they wish them, or they can stay in New York or Brooklyn, or wherever else they please in the vicinity, and still be within a few minutes' ride of the grounds; thus they can spend a part of their time in sight-seeing or amusement in New York, if they choose to do so.

Every member of the party bestowed warm praise on the grounds, with their ample scope, flat surface clean as a prairie, and transportation to their doors.

After due time the Captain ordered all aboard, and the great carriage took a long flight via the Jamaica plank road, through the Boulevard and Prospect Park, thence by Ocean Boulevard, a delightful drive, to the Manhattan Hotel, where Messrs. Luscomb and Dressel entertained their guests at a banquet. Col. Luscomb acted as toastmaster, with most felicitous humor and tactfulness, and in response Messrs. Creamer, Banks, Higgins, Palmer, Willard, Von Lengerke, Quimby, Detheridge and Hobart said many things denoting a full grasp of matters in the trap-shooting world and full faith in the success of the new venture.

This marks a new era in the matters pertaining to the use of the shotgun, a transition from the crude and badly equipped grounds, or bad grounds well equipped, or good grounds with bad transportation facilities, with their more or less troublesome short leases or high rentals, or protesting neighbors, to a perfectly appointed shooting park wherein all is as complete as can be devised. There are many shooters about New York and vicinity who would shoot more if they could reach the grounds in a reasonable time and in a pleasant manner; there are many more who would attend shoots if they could do so comfortably; there are many more who prefer that the surroundings be wholesome and pleasant; there are those again who would like to remain several days and shoot. All these advantages and many more the Interstate Park Association has gathered into a perfect whole.

ON LONG ISLAND.

Brooklyn Gun Club.

July 15.—There was a strong support to the team shoot which was an added feature to the special prize shoot of the Brooklyn Gun Club. There was a keen spirit of competition pervading the shoot throughout. Besides the honors of a win in the team contest, John Wright had hung up a most attractively engraved $10 bill, while the club contest was the initial one of the series for a free entry in next year's Grand American Handicap. To save time the 50 targets which each man shot at in the club event were to score in the team event also, and the remaining 50 were shot afterward.

Carl von Lengerke and Dudley shot a very even race—91 and 92 each out of 100—winning with something to spare, though Banks made the best individual score of any of the competitors. 93 out of 100. In the club event Paterson and J. B. Hopkins were the only two out of the twenty-one competitors who scored the possible ten points. There was a good attendance of spectators, who watched the competition with keen interest.

St. Paul Rod and Gun Club.

ST. PAUL, Minn., July 9.—St. Paul Rod and Gun Club held a well-attended shoot Saturday afternoon. I inclose score made in badge event. Morrison and Cat tied for senior, and Mead won junior. The club held a special meeting and accepted three new members. The following events were shot in addition to the badgs. No. 5 was a merchandise event. First was won by Danz after a lively contest with Wilkinson, Thompson, Ed, Hanser, Daley and Dayton, who were able to get in by shooting the birds allowed them.

A. E. PERRY, Sec'y.

Fort Smith Gun Club.

FORT SMITH, Ark., July 15.—It was a warm shoot. There weren't many there, but it was warm anyhow. The club proposed to run off five $1 sweeps besides the medal contest, and though only six members showed up four of the sweeps were run off on schedule time.

Matthews has a penchant for medals, and proceeded to win Class A medal for the third consecutive time, and it still reposes upon his manly bosom, together with the State championship medal, which he has held unchallenged ever since he won it last fall, from John J. Sumpter, of Hot Springs. This doesn't speak very well for the courage of those good shots and genial gentlemen who compose the Little Rock and Pine Bluff gun clubs, though it speaks volumes for their discretion. Matthews is, in shooting parlance, "a hard proposition."

Durden was down at Greenwood attending court. Knott was away on business. Baptiste could not be present. Boyd is away on a vacation, and Bemis and Echols had other engagements.

The club is indebted to Messrs. Matthews and Coffee for a bucket of ice water and an ice-cold watermelon. Some of the members who had been shooting badly certainly made a "straight" on the melon.

The traps are working beautifully. Out of about 700 targets trapped for the afternoon, only about 20 were broken in the trap.

There will be a regular practice shoot at the grounds next Thursday at 4:30 P. M. Following are the scores:

Medal contest:

Class A.	Shot at.	Broke.	Class B.	Shot at.	Broke.
Matthews	50	43	Hunt	50	31
Leach	50	32	Trobridge	50	25
Hartwell	50	32	Coffee	50	24

Matthews won Class A and Hunt won Class B. As this is the second consecutive win for Hunt, he is now promoted to Class A.

Sweeps, 15 birds, five moneys, $1 entrance, equitable system:

Events:	1	2	3	4	Events:	1	2	3	4
Matthews	10	12	12	14	Hunt	11	6	8	9
Leach	13	13	10	12	Trobridge	8	8	8	8
Hartwell	11	10	9	7	Coffee	9	7	5	10

SECRETARY.

Woonsocket Gun Club.

WOONSOCKET, R. I., July 1.—The weather was fair this afternoon, though rather windy, nevertheless some quite good scores were made, O. D. Banfill's being the highest. A challenge for the State pennant has been received from the Burrillville Gun Club—the match will take place July 15. There will be a programme of 125 targets, $7 entrance, three moneys, divided by the equitable system. All amateurs are cordially invited.

This afternoon's scores, by events, were as follows:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	25	25	25	25	Targets:	25	25	25	25
Campbell	20	23	20	17	Balcom	11	5	7	..

H G Krogman	..	19	20	8					

The match between Messrs. Aaron Doty and Harold Money, at Lyndhurst, N. J., last Saturday, was one of the finest competitions ever witnessed. Doty was 2 birds behind at the end of the first 25, Money killing his first 25 straight. He could not reduce the lead at the end of the first 50, and had a most discouraging up-hill race up to the 91st bird. The race ended in a tie on 95.

WESTERN TRAPS.

Paterson Wins Chicago Trophy.

CHICAGO, Ill., July 14.—In the three-cornered final race for the Chicago trophy to-day, between Messrs. Paterson, Palmer and Hicks, the former won with the greatest ease, and thus retired that emblem from public view. His two competitors have between them shot ten races since Paterson was practically barred out of the competition some months ago, though he challenged frequently, and was once defeated by Palmer. The new trustees did a wise thing in arranging this three-cornered race. Silas Palmer said to-day at the close of the race, "The trophy goes to the right man," and under the circumstances this seems to be the general feeling.

Mr. Palmer was to-day perhaps the favorite of the three contestants in the general choice, his record for the past several months being a very strong one. Mr. Hicks was expected to be in the running, but as to Mr. Paterson there was some doubt. He has not been shooting a great deal lately, and it was not known whether he retained much of the form he showed in the earlier races of this series. He proved, however, that he has gone forward, rather than back, and he shot in perfect form to-day, killing 29 out of his 30 birds and using his second barrel but three times, once on the only bird he lost. It would have taken very hard work to beat him as he shot to-day. The wind blew toward the score from the left quarter. The weather was dull, cloudy and humid. Under such conditions the birds could not be expected to be very fast, and they might rather be called mixed, now and then a very fast one among the slower ones.

Mr. Hicks lost his 4th, 5th and 6th birds, the last dead out. He also missed his 12th bird, and thus fell back of Mr. Palmer, who had only missed 3 at that stage. Mr. Hicks lost his 22d and 30th dead out, the latter a very fast one. Mr. Palmer failed to stop his 19th, 22d and 25th, going out with 24 also. Meantime Mr. Paterson was shooting a race by himself without any company. He was never headed from start to finish, and centered his birds with the first in most remarkable fashion. His 8th bird was a handsome kill. His 12th bird, the only one he lost, was touched with the first, but lightly. His 29th was an excellent kill with the first barrel. Mr. Palmer got some fast birds in his string, notably his 1st, 18th, 25th and 30th. His 25th bird was a very fast twister, which was touched, but slightly, with the first.

Mr. Paterson shot his B. O. E. Remington, 3½drs. Du Pont, chilled 8s in the right and 7s in the left. The following is the score:

At the close of the trophy race there was some shooting gotten up among those present. Messrs. Hollister and Leffingwell shot a team race against Messrs. Amberg and Palmer at 25 birds for the suppers, the former team winning. Three other friendly races at 10 birds followed thereafter, the scores being as below:

```
F H Hollister .....2112212211221121112011110—23
W B Leffingwell.....1211010211122221121102112—22

Palmer vs. Leffingwell:

```
S Palmer.....2222221211—10 W B Leffingwell...2111111111—10
```

Audubon—Garden City.

There will be an interesting team race shot Saturday, July 22, at Watson's, between Audubon and Garden City gun clubs, of this city. Some interest is manifested over this event. We will need to stir up some races of this sort, as the Montgomery Ward series will soon be over, and we shall then be without any regular events to keep up the general interest outside of the club shoots.

Daniels and Elliott Arrested.

J. A. R. Elliott, of Kansas City, and A. B. Daniels, of Denver, were arrested at the latter city on July 11, by the Humane Society on the charge of killing pigeons. The society claims that the Colorado law is invalid. The case will be taken up and the law tested.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Eureka Gun Club.

CHICAGO, July 15.—This was not a good day for target shooting, the light being very bad and the wind blowing very hard. The targets were thrown very hard and low. Some good scores were made and some very poor ones. In the trophy F. P. Stannard won Class A, Dr. Meller won Class B, C. C. Hess won Class C, Dr. Morton Class D. In the team shoot F. P. Stannard's side won.

Trophy event:

Miller .....1111111111
```

Dr. Miller won.

The Garfield Gun Club.

CHICAGO, July 15.—Inclosed please find scores as made on our grounds to-day. Despite the fact of its raining hard until almost 1 o'clock, and still looking very threatening, nineteen members braved the weather and came out to quite a successful afternoon's shooting. Very fair scores were made, C. P. Richards winning Class A medal with a score of 22, while Dr. Meek and W. P. Northcott tied for Class B medal on scores of 23. Northcott finally won B medal after another tie had been shot. Cornelson won C medal on the very creditable score of 20. The atmosphere was murky and light uncertain. No wind.

Trophy shoot, 25 targets:

```
Dr Meek.....1110111111011111111111111—23

DR. J. W. MEEK, Sec'y.

Minneapolis Gun Club.

MINNEAPOLIS, Minn., July 13.—The conditions were nearly perfect for the shoot of the Minneapolis Gun Club, held to-day. The attendance was fair, considering that several of the members were at Kittsondale attending the practice shoot there, preparatory to the tournament to be held Friday and Saturday. Several shooters from outside the city stopped off here for a little practice with the local club before attending the big shoot. Among them were the Hon. Tom A. Marshall, mayor of Keithsburg, Ill., the twice winner of the Grand American Handicap; Tramp Irwin, of Laflin & Rand powder fame; Judge Moore, of Duluth, Sachem of Sioux Falls; A. Anderson, of Chicago, and L. Greenwald, of Anoka.

The Minneapolis Club and its guests will be on hand as a body at Kittsondale this morning and attempt to show the boys where some of the good shots come from. The following are the scores of the different club events of the afternoon:

Val Blatz diamond badge, 15 targets, unknown angles: Parker 13, French 13, Mrs. Johnston 11, McKay 14, Hays 8, Black 8, Morrison 7, Kennedy 9, Woolf 12, Nelson 7, *Tramp 14, Johnston 14, Rex 7, Stone 6, Dr. Bill 11.

* Visitor.

Ties: McKay 2, Johnston 3. Johnston won badge.

Event No. 2, Schlitz diamond badge, 25 targets, unknown angles: Parker 23, French 18, Mrs. Johnston 18, McKay 19, Hays 20, Black 15, Morrison 12, Kennedy 15, Woolf 19, Nelson 20, *Tramp 20, Jonhston 17, Rex 18, Stone 15, Dr. Bill 19, *Greenwald 16, *Hart 18, *Sachem 17, Shattuck 22.

* Visitors.

Ties: Woolf 2, Parker 4. Parker won badge.

Event 3, Paegel challenge badge, 25 singles, unknown angles: Parker 24, French 22, Mrs. Johnston 21, McKay 22, Hays 17, Black 16, Morrison 20, Kennedy 13, Woolf 17, Nelson 15, *Tramp 25, Johnston 20, Rex 10, Stone 21, Dr. Bill 16, *Hart 18, *Sachem 21, Shattuck 22, Jones 14, *Greenwald 14, *Anderson 15, Hoffman 19.

* Visitors.

Parker won badge.

Club badges, 10 singles, unknown angles; 5 pairs, known angles:

Jones won senior badge, Mrs. Johnston won junior badge. Kennedy won amateur badge.

Boston Gun Club.

WELLINGTON, Mass., July 15.—Eight shooters combined forces at Wellington Wednesday, July 12, and enjoyed themselves accordingly. Match scores were placed, though not running as high as usual, Miskay and Leroy being the only ones to improve their six-score totals.

After the match Mr. Leroy suggested universal 16yd. practice, his 7s, 8s and 9s at 21yds. hardly suiting his hopeful nature, and yet not exactly wishing others to give him distance. On dropping 3 out of 50 targets he even regretted those, saying there was no earthly reason for it except carelessness. Some of the others present rather wished so small a lost percentage was all they had to regret, whether from carelessness or otherwise. Scores in full:

Arkansas and the South.

Denver Tournament.

RECENT advice from this point pertaining to the tournament of the Overland Gun Club, which was held on July 7 to 9, indicate that this was a very pleasant affair, though the attendance was not very large. The first day but fourteen shooters participated, and of these A. B. Daniels was high with 196 out of a possible 200, a percentage of .980; J. A. R. Elliott was second with .970; J. W. Garrett, of Colorado Springs, third, .960, and Capt. Sedam, the old veteran, fourth, with .950. The weather conditions were ideal, and the shooters must have been in the very best of form to roll up such high averages. Daniels broke his first 98 straight, which was the best run of the day.

The second day the attendance was much better, being nearly twice the number of that on the previous day. However, the leaders did not quite reach the high totals, and there is a corresponding falling off in the averages. Daniels is again high with .955, Garrett second, .930, while Capt. Sedam, Pickett and Elliott are tied with .920. These constitute the five high men of the day. A squad composed of Elliott, Sedam, Garrett, Pickett and Daniels broke 99 out of 100 in event No. 3, Elliott missing the only target of the squad.

After the programme was disposed of, Daniels, Elliott, Garrett, Sedam and Ellis engaged in a 50-target event. Garrett and Elliott took the money in this event on 49 out of 50, though each of the other three scored 48. During part of the day there was a good wind, which, while it prevailed, assisted in no small measure in marring the averages.

The third day brought out a still larger attendance, the local men especially turning out well. Pickett and Elliott are high with .955, while Daniels did his poorest work of the shoot, though his average is .945. Capt. Sedam has an average of .930, and Haywood .920. When the programme was disposed of, a handicap for a gun followed. This was won by C. Mann and C. S. Barnes, who sold the gun and divided the cash.

During the entire programme of the three days, which called for 600 shots, A. B. Daniels missed but 24 targets, an average of 8 a day. This gives him the great percentage of .960 for the entire tournament. J. A. R. Elliott did nearly as well, as he scored 569, an average of .945.

St. Louis Doings.

The initial contest for a silver trophy, which represents the championship of St. Louis at live birds, took place at Du Pont Park, on July 8, and brought out twelve entries, of which number King proved the winner by scoring his allotted 25 birds straight. Taylor, Peck and Dick were second, with but a single loss. Altogether the scores ran very high. There will be a similar contest a week later. The first contest for this trophy should have taken place on the Fourth, but was prevented by rain.

Capital Gun Club.

The local club held its first medal shoot on the 13th. This was a 50-target handicap affair. J. K. Thibault won out with a score of 46, having an allowance of one bird. None of the other contestants were factors in the race to any extent, as none of them displayed any form. However, after the main event was decided Fletcher duplicated Thibault's score, and by breaking his first 26 birds straight made the best run of the day. The above race will be repeated hereafter every Thursday.

PAUL R. LITZKE.

McCarthy—Burkhardt.

BUFFALO, N. Y., July 14.—I inclose you score of a 100-live-bird match shot between William McCarthy and Charles S. Burkhardt, both of Buffalo, N. Y., which took place yesterday afternoon at Audubon Park. C. S. Burkhardt won by 2 birds, the score being 88 to 86.

This was a handicap match, Mr. Burkhardt allowing Mr. McCarthy the first 10 birds dead, and he to stand at 28yds. and Burkhardt at 30.

The match was for $50 a side and price of the birds, was very exciting and drew quite a crowd. McCarthy took the lead on the handicap, Burkhardt missing 3 out of his first 10 birds, and holding it until about the 85th round. Burkhardt finished strong, killing 70 out of his last 75. The birds were a good, fast lot for this time of year, and out of the 200 birds not one proved to be a setter. Referee, B. Talsma; scorer, F. P. O'Leary.

C. S. Burkhardt used 3½drs. Du Pont powder, 1¼ oz. No. 7 chilled shot in U. M. C. Trap shells; Wm. McCarthy used 3½drs. Hazard powder, 1¼oz. No. 7 chilled shot in U. M. C. Trap shells.

SIMON.

Omaha Gun Club.

OMAHA, Neb., July 10.—In a practice shoot to-day Mr. Geo. W. Loomis, in experimenting with a light load, broke 44 out of 50 targets. On July 8 the following scores were made, and Roberts won the prize: Kimball 19, Brucker 18, Parmelee 17, Kenyon 14, Hardin 18, Roberts 20, Fogg 15, Johannes 18, Burgess 12, Caldwell 9, Townsend 17, Loomis 17, Plumber 16, Bersheim 19, Smead 13.

On July 4 the contest at 15 English sparrows, 28yds. rise, $3 entrance, resulted in Kimball winning first, Plumber and Loomis dividing second. The scores:

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1899, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JULY 29, 1899.

VOL. LIII.—No. 5. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

Some of our best sportsmen, who desire to protract the pleasure of slaying deer through as many seasons as possible, object to the practice of the hunters who make it their chief business to slaughter as many deer in a camping season as they can. Their own rule, they say, is to kill a deer only when they need venison to eat. Their excuse is specious. What right have these sophists to put themselves into a desert place, out of the reach of provisions, and then ground a right to slay deer on their own improvidence? If it is necessary for these people to have anything to eat, which I doubt, it is not necessary that they should have the luxury of venison. CHAS. DUDLEY WARNER.

SNAP SHOTS.

Charles Dudley Warner says that the sportsman's plea that when in the woods he must have venison to live on is specious, inasmuch as the sportsman need not put himself in a place where he must depend on the game for subsistence. There is just enough plausibility in that proposition to give it ready unthinking acceptance; but as a matter of fact the teachings both of the necessities of man and the provisions of nature are against it.

It is necessary for some men to go into the woods, to travel far into the wilderness, to penetrate to remote regions, where for sustenance they must depend on what they pack in with them, or else upon what the country itself supplies. It is necessary for them to go into the wilds for sport. Sport is just as much a necessity to some men as is music or the play or a ride awheel or a trip to the seashore or a weekly half-holiday to others. The necessities of a human being mean more than food and raiment and a roof to sleep under. Man is higher than the brute; his necessities are something more in scope than those of other animals. If one have a taste for woods life and hunting it is a reasonable necessity with him to gratify it. And venison in the woods is to him quite as much an essential as beefsteak at home.

Consideration of the provisions of nature leads to a like conclusion. Deer meat is food for man. The deer dwells in the wildernes. If in the wilderness there is a food supply adapted to the use of man, it is logical to reason that man may go into the wilderness and use the food there supplied for him. This is in keeping with the rules of that adaptation of means to ends which has enabled the human race to people the earth. Is haunch of venison, wild deer, good to eat, eat it. Is breast of partridge food for man, let man use it. Is salmon, trout or bass good for the table, or for camp use where the table is the ground, catch the fish and eat it. This is what nature tells us. It is only when we get so far away from nature that sentimentalisms take the place of common sense, and artificial aberrations blind us to the truth of things, that we begin to question the propriety of going into the woods to get the good things which were put there expressly for the purpose.

We have said that it is a necessity for the individual to go into the woods; in a larger sense and not less truly it is essential to the community, the state, society, that its members, or some proportion of them, should by such contact with mother earth reinvigorate, renew, recreate the stamina of the race.

A bird in the bush is worth two in the hand, for it affords not only the food but the opportunity, the reason, the excuse for shouldering one's gun and going out to secure it. And even then by eluding pursuit it may give this same opportunity another time. The smallest buck that entices the town dweller into the deer forest may in this sense be more in worth than the prize steer butchered in the shambles.

More game killing by Indians is reported from the Jackson's Hole country in Wyoming, where Bannocks from Fort Hall are said to be slaughtering elk. We shall in all probability hear excited denunciations of the Indian, and in due course of time there will be a conflict between reds and whites and bloodshedding. The blame for it all, whether simple game killing or human killing, must be put where it belongs, upon the agent who gave the marauding Indians their passes. It is said that the permission to leave the agency was granted that the Bannocks might visit the Shoshones at Fort Washakie; but after all these years of recurring troubles, growing out of depredations of Indian hunting parties, an agent may be assumed to know what giving passes means. This Bannock raid is precisely the occurrence which was foretold by one of our correspondents on the ground some weeks ago; it might have been prevented had the warning then given been heeded. Gov. Richards is perfectly reasonable in his request that no more passes be issued.

An extraordinary report came from Debeque, Colorado, last Sunday saying that Governor Tanner of Illinois had got "safely out of the State, despite efforts on the part of game wardens to detain him for violation of the game law." It was charged that he had killed a deer, the close season extending to Aug. 15, and that the local warden had hesitated to arrest him because he was the Governor of Illinois. If Mr. Tanner killed his deer out of season his official dignity furnished an added reason for his prompt arrest. The spectacle of the chief executive of one State openly violating the game laws of a sister State is intolerable. If the Illinois Governor was guilty of the act with which he was charged, it is to be hoped that the wardens will intercept him upon his return from the Pacific Coast, and improve the opportunity here afforded to make a game law case which shall attract all the more attention and teach all the more useful public lesson because of the prominence of the culprit.

There are entirely too many folks who imagine that their place in the community gives them warrant to snap their fingers at the game laws. They share something of the old world notion that game protection is a class interest, for the peculiar benefit of a favored part of the community; and take it for granted that they belong to the favored part. Some years ago we had the case of a Connecticut Adjutant-General who imagined that he was a big enough man to kill Maine deer in the water; but eventually he paid his fine just as any plain private in the ranks. There have been governors and judges and divines who have held these mistaken notions, but they are not in the least difficult to deal with unless, as in the Colorado case, the wardens themselves fall into the same delusion.

FIELD TRIALS.

THE field trial interests of America are thriving to a gratifying degree at present, with a prospective permanency which did not exist two or more years ago. This is evidenced by the staunch support given to the Derby competition of the different clubs in the way of entries; by the number of local clubs which have sprung up in several of the different States, and by the contemplated organization of others. The entries to the Derby events this year have reached quite as high an average numerically as could reasonably be expected in the new order of things, though they fall short of the large entry which was expected and given some years ago. There is, however, a wide difference in the motive of field trials of the present and those of the past, the one having been an era of the commercial development of the dog world on an ostensible sporting basis; the other being on a basis which is nearer what it truly represents—that is, a trial of dogs in competition for the sake of the sport itself. This is much more wholesome in itself and sounder in its principle, for business which is masquerading in the garb of sport has a false foundation and little hope of being a permanent institution.

The commercial era of the setter and pointer has been referred to by writers as an era of the development of great dogs. This is true in a qualified way, for it also was an era of the development of poor dogs as well, the good and bad being perpetuated alike when there was but a catchy pedigree to be established and a market to be met. Had the commercial era been more of sport and less of the commercial breeding and marketing of dogs, there is nothing to show that the dogs of to-day would not have been equally as good or better than they are. FOREST AND STREAM years ago pointed out the inherent weakness of the field trial support which had its source in commercial purposes, and the undue zeal displayed in catering to the commercial while neglecting the element which supported the sport for its own sake. This was at a time too when it was considered as being both unwise and hurtful to him who disagreed with the established order of things. Years ago we also pointed out and advocated the formation of State field trial clubs, which are now finding favor and which have so large possibilities for good if rightly handled.

The hard times made a sharp turn in the transitional stage of field trials, and for a time the prospects were that the turn was more toward their decline than good progress. The sporting interest had been so neglected and discouraged that when the commercial support dropped out there was but little of the sporting element left. But this element rallied and by good and persistent work trials have again been put in a flourishing way, though when a setter or pointer is, at the present day, sold at a large price there are those who exclaim that it is a sure sign of the returning glory of field trials, as if dollars and cents were the standard of measurement to-day as they were at a time in the past. With field trials at present as a sport, there will always be given to them a staunch support from those who take delight in beholding the work of dogs afield; with field trials as a commercial outlet for stock for sale, as they were years ago, and as a manufactory for stud dogs and a means of revenue, they are of uncertain existence.

THE DEFINITE ARTICLE.

IN its issue of July 23 the New York Herald disposes very summarily of the question of the propriety of using the definite article in speaking of a yacht, as follows:

"Now that the yachting season is at hand a majority of the yachting writers seem to feel it necessary to drop the definite article before the name of a yacht. This is a silly Anglicism that has no reason and is decidedly bad grammar. To speak of the yacht Defender as 'Defender,' and not 'the Defender,' is ridiculous."

The above editorial is emphasized in the same issue by a new departure in the news columns, the definite article preceding every name of a yacht in the tables of times.

In spite of the Herald's positive statements and silly practice, the question is still as much of an open one as it has always been. So far from the non-use of the article being an Anglicism, there is no uniformity of usage on the part of English yachting writers. Some use the article and some do not. In the Field, which certainly may be taken as an authority in such matters, one may read in one paragraph of "the Shamrock" and in another of plain "Shamrock"; and the same is found in the other yachting journals. In this country there is no uniform practice; in fact, expert writers use and discard the article almost in the same line.

The FOREST AND STREAM has for a number of years followed a practice of its own, which it does not propose to abandon until it is shown to be wrong. In speaking of a sailing yacht the definite article is not used; but it is always used in connection with a steam yacht. In the case of a sailing yacht, she (not it) is of all inanimate objects the nearest to a thing of life, and if at all famous she has a distinct identity which justifies a slight departure from the rigid rules of grammar. It is, in our opinion, a fitting recognition of the nature of the object to thus personify it by the use of the feminine pronoun and the omission of the definite article, and it is certainly more euphonious to speak of Vigilant, Colonia, Mischief, Minerva, Britannia, Thistle and Priscilla than of *the* Vigilant, *the* Colonia, etc. The former method is permissible by the rules of rhetoric; it gives rise to no confusion of meaning; and it is in harmony with the established custom of the sea by which a vessel is always spoken of as a being of the female gender.

In the case of steam yachts we prefer to use the definite article, as they are more machine-like by nature, and they do not possess the individuality of a racing yacht; falling into the same category as merchant and war vessels, with which it is always customary to use the definite article.

After the Herald has been successful in this proposed reform and compelled all yachtsmen to bow to the rules of grammar in prefixing the article, it may find a field for a new crusade in the almost universal use of the pronoun "she" instead of "it" among seamen and yachtsmen. To our minds the writers, and they abound in the West, who speak of a yacht as "it" are but the veriest landlubbers, but the Herald may be able to show that they are right, and that the poetic usage of the sea, sanctioned by unknown years of use, must give way to strict grammatical accuracy of expression.

The Sportsman Tourist.

Days Off on Off Days.

I AM sitting on a mossy hillock on a rocky little island in a lake up in northern New Jersey. Resting in the shade of maples, looking at the sunlight on the waves, and at the minnows sporting in the clear water at my feet, a feeling of contentment is with me and I am suffused with a tingling thrill of happiness such as comes to me at home at times when my daughter, stealing up behind in my spells of reverie and placing her soft hands over my eyes, leans forward and I feel the throb of a young heart and the kiss of love on my bald pate as she asks, "Guess who!" But I am not at home in that sense just now. I am at home, however, at any time when in the presence of that older one, Dame Nature; married I think she is to Father Time, and yet at liberty to flirt with all mankind, while her progeny is scattered over the whole world and there are no scandals connected with her name. She is stealing upon me now and blinding me with her midday searchlight; I feel her breath and hear her also say, "Guess who!" Oh, I am getting acquainted with her a little at a time. She has fooled me often, and once more to-day. I thought I could fish, and in boasting moments have said so. I tried to fish this morning, and only that part which consists of rowing, of oar-blistered hands and sun-blistered nose has been a success. I was after bass regardless of size of mouth, and found no mouth large enough to put even a word into. I cast flies, spinners, shiners and bullfrogs at them with my outfit and reproach and expletives with my tongue. I offered them everything from cold tea to landing net, and they would not even accept the latter. I tried to telephone to them, but Central said, "Busy; ring off and hang up your receiver." Do you know, I think their line was busy, inasmuch as mine was not. They rang the bell on me. Could I have cut in on them, I would probably have heard something like the following: "Give me Oswego." "Hello, Small-mouth; what is it?" "Say, that duffer from New York is on the road again." "What line?" "Silk." "Any flies on him?" Yes; just the same as last year." "What has he got?" "Gut leaders." "Oh, come off!" "I did." "Make it clearer." "He tried to hook me." What struck you?" "He did." "Why didn't you make a break?" "I broke water." "Is he still fishing?" "Yes." "Is that a straight tip?" "It is one of them; he has the other." "Your a sinker." "That's right." "Was he smoking?" "His reel was." "Did you get the butt?" "He says so, but he is a liar; he lies in weight and wait. He is gone now—gone on—gone on himself and his piscatorial proclivities." They may talk thus, and we have no less an authority than Rowland Robinson for it. He has written much about the Slang fish.

With aching back and aching arms I worked this lake for five hours steadily, and not a fish in the boat. Wait a moment. A fellow once called me a crawfish, but he was betting on a sure thing. The poor luck caused me to wonder why I left New York to come to this place when right at home there is a FOREST AND STREAM in the heart of the New York Life Building up a circulation that is by no means dormant, while I contribute $4 per year toward the fund and foolishly spend $20 more in coming here to increase my own circulation by rowing about in the hot sun. "What fools these mortals be!" Maybe, but there are other considerations. Here you don't have the corners knocked off you on crowded crossings, and you needn't wear a label reading, "Don't use hooks." If your russet shoes are bespawled you do it yourself, and no boozy bum in crowded car rests his frowzled head on your shoulder in peaceful slumber. Neither do you rise and lift your hat to some stout laundress and hear her say, as she takes your seat and the basket containing the wash catches on your watch chain, "Yez the bye kin tark fioine to us leddys." No newsboys walk beside you with emblazoned scare heads held in front and appreciating the opportunity to "git to yell" shriek "Jarnel, Wurruld!" in your tired ears. Up here you escape the turmoil, and the living and moving things seem interested, and "toil not, neither do they spin."

Say, come over to the other side of this island; look down there where the shadows of the trees darken the water and give to it a look both murky and cavernous. What do you think is going on down there? Under those lilypads is the lair of a cutthroat; deep in the semi-gloom he lies motionless till his prey comes carelessly by; then there is a darting gleam; blood is spilled; murder is done; a 6in pickerel has swallowed a 5in. shiner. A mud turtle is coaling down there and filling his scuttle butts. That sedate-looking bullfrog is studying his part and resting preparatory to singing a baritone solo in the concert at 8 P. M. See that hole in the reeds and bushes over there? You may think those shrubs grow on the land, but they do not. You might think that hole a tunnel in a hillside, but it is not; it is a canal; and now, supposing you were dwarfed to a Liliputian or to a Palmer Cox brownie, and taking a sardine box for a gondola and a souvenir coffee spoon for a paddle, you move into that maze. Do you think you would be a gondolier in Venice? Well, you would not be. You would be a delinquent and suffering thing in Dante's Inferno, and New Jersey's pride, the mosquito, is an imp with a forked tail on the wrong end and knows all about antitoxine and just where to inject it for the desired end. The water snakes would tip you over, and if you had as many legs as a blue-bottle fly the muskrats would pull every one of them. Well, supposing you are just what you are and a shower should come up while the sun was still shining and a rainbow end rested in the top of that big pine tree on the mainland. Wouldn't you take that boat, go over there, climb that tree, and then, supposing just as you reached out to grab that rainbow you lost your balance and fell down through the branches and landed a-straddle of a darn big bear, and looking backward, like Edward Bellamy, supposing you should see a big snake—a boa constrictor—come billowing toward you with open mouth, intent upon swallowing you and the bear, too. What do you suppose you would do? Would you fall off or hang on and kick that bear's ribs to make him run? I like to sit out here and think about these things, and decide what I would do if the chance occurred, so it occurs to me now that I would like to go fishing up in Sunapee Lake, New Hampshire, with Admiral Dewey when he gets home; and if I am not greatly mistaken he will be glad to go. I would rather be in his boat than in another, especially if he did not like me. He is all right, but has a way of puncturing tires and making people who don't have pleasant diplomatic relations with him and with his country walk Spanish. If I could go fishing with him I would gladly chop bait. Perhaps he would let me write up the trip and not cut the cables—he has not written for the magazines; at the same time he seems to understand such things. If I could go with him and write up the trip and see my name beside his, either in the War Cry or FOREST AND STREAM, I would willingly give my fly-book to the sporting editor and die happy. But I don't think he will go, because there will be so many men and women who will fish for him.

I was out in that hail storm yesterday, and I don't know why people always see hailstones as big as walnuts or hens' eggs. Those that came down yesterday came down like sash weights or like bricks in a riot. At first little attention was paid to the gathering gloom; I was thinking of my debts, and the first thing noticed was a large spatter here and there on the boat bottom, as though some one over me had spat and missed. Then the boat began to heave from the bow and the waves slapped under it; then something hard hit behind me and the water around was in miniature eruption. The storm started off easy like; then it let out another link, then coupled on another boiler and the battle was on; and from the conning tower came the command, "Give him the port broadside and the 13in. and the machine guns; torpedo him; ram him; sink him." I was as helpless as a Spanish fleet, and like one made for the shore to beach the boat. From choice I had rather be a bad actor pelted with eggs than a fisherman bruised with such shot as was fired that day. The boat was dented where hailstones struck, and I felt as though I had been playing with Jim Jeffries. As I stood under the trees a shower of twigs and leaves came down through the branches with the hailstones, birds were killed, and I was "between the devil and the deep sea." If I stayed under the trees there was more danger from the lightning; if I had gone out into the open field the end would be slow but sure. After a while the firing ceased around me, but away down the lake I could see the flashes and the boom of the clash came back to me over the water, as if in warning not to exult in escape. When the lake quieted down I came back to this island and cooked my supper; then the pipe was sweet and the June bugs batted against the lamp chimney while I read from Edward Atkinson's statistics to calm myself. The whippoorwill sang without, and to those who know his call and the bugle call of "Taps" the notes sound much the same. Put out your lights! Often have I played that call in military camps, and I obeyed the whippoorwill's call as other men have obeyed mine from the bugle. Pardon me for talking so much about myself; but I am here all alone doing my own cooking and chamber work. If there were neighbors I would talk about them. Some men go so far as to talk about their sisters—particularly so of those sisters who consent to be sisters to them. To-morrow I will put the padlock on the door and on my lips and again be a quiet oppidan of the noisy city until some day the fever is on again and the Doctor prescribes a change and a trip into the country. That is what they prescribe when all else fails, and it is the cheapest in the end and no drug in the market or "in your midst."

When I get home I presume that I shall be careless in feeding again and have another dream something like the following, which dream had much to do with my departure from home. It was Friday night—fish-day night—hot and close, with a superabundance of humidity in the air, and the air could not move, apparently, with the burden. The day had been long and troublesome, and a poor lunch, eaten hurriedly in a crowded restaurant, ill-sufficed to stay hunger; and when at my own table I more than made amends by disposing of a goodly portion of a baked bluefish, and then indiscreetly smoked too much strong Perique tobacco, at bedtime I was in a receptive mood to entertain hobgoblins, deformations and malformations of animal or marine life in a dreamy and disturbed sleep. As I dropped off into the realms of slumber-land I wondered what the solar plexus might be, and if it were about or around a pain I thought to exist where my girth is greatest. How the weary hours passed; they came and went as usual when tired nature is embroiled in a contest with indigestion. Surely there is some hideous thing in the room—there in the corner; now under the bed; then dragging its distorted and hideous length along the footboard; I feel it drop at my feet, and I bound from my couch and fumble for the match safe; but the window that direction was located from was a door and the flashes of the electric lamp came from the rear street and not from the front. Will I get a light befor that thing gets me? I stoop, that my night robe may protect my feet, stand on one foot and then on the other, wondering which will be bitten first. I try to cry out for help, and the voice sounds a vacuum. The matches would not light and broke repeatedly, until at last one seemed ignited and was thrust under the glass globe, and the yellow flame appeared, but no light. Thrusting a finger into the light to test its reality made possible the ejaculation, "Damnation!" Suddenly the flame lit up the environs, and there in the bay window, bathed in a flood of light with rings of halo about their heads, stood three Websters, one a former fishing companion; Daniel, the expounder of the law and expounder of fish heads, and Noah, the dictionary man. On the floor and flapping toward me was a huge dogfish. It seemed to look appealingly at me, as though asking me to right some wrong done in the past, and then I understood the visitation of Webster No. 1 and recalled a cod-fishing trip down Boston harbor and near Minot Light years ago. I had caught that same dogfish, and after life was extinct had placed him in the folded and loving arms of my sleeping friend as he lay on his back on the sloop's deck. I placed that dogfish in such a way that when my friend awoke their eyes would meet, and when that came about each bore the same pleasing expression as now seen. Why Daniel came I know not; maybe from a desire to fish again. Noah was there to caution me against further misuse of his copyright. The lights grew dim and the three Websters dropped noiselessly, one by one, from out the window and on to the flagging below. Then I took that dogfish—that nightmare, or seahorse—by the tail and slung him into the middle of the street and the three Websters passed under the arc light and faded in the shadows, and then that dogfish flopped along after them and in turn disappeared. Then I went to bed and then awakened. Sweat, just plain sweat, was pouring from me, and my collar and the pillow were soaked. I realized that it was a dream, and the taste of sage dressing and a strong pipe in my mouth gave me the clew to the cause. Like cures like, and I arose to find something to eat and to smoke again. Fumbling in the closet of an adjoining room in the darkness, I felt what seemed to be food—crackers and such were usually kept there. After masticating some substance for a while, and being suspicious, I lit a match, and the stuff was a new kind of dog biscuit just bought for the pup. Bad dreams, dogfish, dog biscuit. If there were blackberry brandy in the house could I be blamed for partaking thereof?

On the door of my hut someone has carved the name "Hager." Perhaps he was the builder. If so, he had forgotten a passage which reads:

> "Who builds a church to God and not to fame,
> Will never mark the marble with his name."

The name Hager recalls to my mind an old, white-haired gentleman known in my early days. He was a sportsman and a gentleman; but anything said of him does not belong here, and later, when in the mood and able to verify impressions, I will endeavor to tell about him under the heading, "Types of Sportsmen," for he certainly was a type by himself. W. W. HASTINGS.

Pioneer Days.—IX.

BY ROWLAND E. ROBINSON.

AGAIN Josiah went to Canada upon the urgent appeal of General Sullivan, then in command there, to Seth Warner to come to his aid, but the arrival of an overwhelming force from England put an end to all offensive operations of the Americans, and a general retreat was ordered, when it became Warner's duty to cover the rear and bring off the sick and wounded.

One evening Josiah and a companion entered the house of a habitant, where they heard a soldier was lying sick. They found him, a handsome young fellow, in the languor of convalescence, assiduously tended by a pretty daughter of the house, with something more than sympathy in her black eyes, and telltale blushes that glowed in her dusky cheeks when she was caught in the act of smoothing the flaxen hair from the pale forehead of her patient. A motherly old dame was laboriously bending her fat form over the fireplace, busy with a kettle of pea soup, and only turned her head without straightening her body when the strangers entered.

"Good evelin', zhonte-mans," she gave greeting. "Si' do'n, si' do'n, 'f you please. Matilde, gif de zhentlemans some chair," and the daughter set two splint-bottomed chairs by the fireside.

"Thank ye," said Josiah, moving toward the pallet where the sick man lay, and looking him over with scrutinizing glance. "We come tu git this 'ere chap. Hain't he bothered ye 'bout long 'nough? Well, but be you able tu travel towards hum?"

"Oh, I guess so," said the young soldier, rising with alacrity at the name of home, but as he arose to his feet he tottered and sank back to a sitting posture. "But," he added, with a faint smile on his half-scared face, "I don't 'pear tu be very stiddy on my pins just yit."

"Oh, we'll give ye a lift on a litter—me an' Sam," said Josiah, cheerfully. "Sam, you go aout an' knock up some sort of a contraption—a couple o' saplin's wi' some cross-pieces."

"Oh, he too seek for go," the girl plead anxiously. "'F you lef' it 'ere, we took good care of it, me an' mah mère."

"I hain't no daoubt on't," Josiah said, significantly, as he looked at her eager face, "but the Britishers 'll be along ter rights, an' if they got a holt on him, I do' know, hangin' mebby, prison anyhaow, an' that will mean dyin', the way he is. No, he'll haf tu try runnin'."

"Yes, me guess so, if dey goin' keel it," the girl assented. "Oh, mon pauvre ami!" She gave the soldier a tender helping hand to don his tattered coat, as ready now to speed his parting as she had been to delay it.

"You goin' heet some super 'fore you gone," said the mother, ladling out the soup into bowls and setting them on the table with a brown loaf. "De Bostonais is always ongry," she laughed as Josiah, without ceremony, drew his chair to the board. "Oh, jus' one tam 'go me an Matilde was make ready de souper an' wait for mah hol' mans, an' dey come in one grand Bostonais an' 'ee took hoff de bread, de lard an' de boutelle whisky on esprit. Whoof! an' way 'ee go! Ah wish me haf de whisky for you, mais 'ee take all! Ah 'ope it choke it, me!"

Josiah bent a guilty face over his bowl, and knew now why the room looked familiar.

"Me goin' gat boy for he'p you carry it," said Matilde, leaving the table and slipping out.

Presently Josiah and his comrade brought in the rude litter, upon which the sick soldier took his place, after a folded blanket was spread on it. The soldiers laid their guns beside the sick man and set forth in the dusk along the highway.

The white fleeced rapids rushed past them like a flock of frightened sheep, with a continuous musical clamor, swelling and falling with the waft of night wind. When they had gone half a mile a swift patter of moccasined feet came behind them, and they were overtaken by a boy, of apparently about sixteen years, bearing a brown loaf under his arm.

"Me come for he'p carry," he panted, out of breath with running, as he came up to the litter, and looked anxiously down at the face of the occupant, showing white in the fading twilight.

"You can't carry nothin'," Josiah said, good-naturedly as he scanned the slight figure.

"Yas, yas! Me strong lak leetly hosses," said the boy eagerly, and persisted in taking the tall man's place, and bearing its burden manfully with an easy swing over the rough places, often asking their charge if he was tired or

at ease, or thirsty, or hungry—always as gentle and tender as a woman. "Matilde send me," he explained. "He ma cousin. Ma nem Pierre."

"Matildy never come anigh tu bid me good-by," said the sick man, with a peevish tone in his voice. "It's kinder cur'ous she didn't, for she's nussed me mighty keerful. I guess I'd ha' kicked th' bucket if it hedn't b'en for her. She's a good little gal." The head of the litter shook perceptibly.

"What was dat, keek de bucket?" Pierre asked.

"Oh, that's Yankee for dyin'," said Dick Wheeler, the sick man.

"Oh, you mus' never keek to die. Matilde, ma cousin, not want you."

"Sho!" Josiah exclaimed, contemptuously. "Your Matildy's a-makin' love tu some new pea-souper by naow. Come, boy, gi' me a-holt o' them handles; you're a-gittin' tuckered."

"No, no! It is not so wid de Canadieune," said Pierre, hotly. "It may be wid de woman of de Bostonais, but de Canadieune never forgot hees frien'. No. Yas, you may took de hol', an' Ah will go for de lait for M'sieu' Dick," and so he ran to a house to beg milk in a little pail he had brought.

"A cur'ous leetle cuss, tu be a-lookin' aout so for you, Dick," said Josiah. "Was he a-carin' for you much whilst you was with them folks?"

"Never see him afore," said Dick.

"Dey was hol' hugly," said Pierre, returning with a brimming and foaming pail. "W'en Ah ask, dey will not gif de lait, an' Ah ask de vache—cow, you call it, dat gif de lait? He was not riffuse."

"So you hooked it?" Josiah asked.

"It was for de cow to hook, mais he did not, he haf pity for M'sieu' Dick," said Pierre. "And shall he not sleep in the houses this night?" Whether they would or not, Pierre would hear to nothing but that the sick man should have the shelter of a roof, and found it for him in the cabin of a friendly habitant.

Next day they fell in with a detachment of the retreating army, and with more help made more rapid progress. Josiah insisted that the boy should now go back to his people, but Pierre was determined to go on, saying that Matilde's instructions were that he should accompany the sick man until he was safely embarked on the lake.

When this was accomplished he did not go back, but took his place in the batteau beside the sick man, ministering to his slightest want, and holding a bough over his face to shade it from the glaring sun, which shone down fiercely from the cloudless June sky upon the unprotected invalid, whom the cool, green shores and the sparkling water seemed to mock as they voyaged wearily around toward Crown Point.

One evening as they landed on an island for the night's encampment there arose a sudden alarm of "A man overboard!" and Josiah being near at hand plunged in to rescue him. He seized him by the hair and swam to the shore, which being gained he discovered that it was the boy Pierre whom he had rescued, lying now insensible across his knees. He unbuttoned the rough woolen jacket and stripped open the coarse tow shirt, and to his amazement uncovered the rounded breast of a girl. He covered it as quickly, and pouring a spoonful of rum into the pale, set lips, soon saw the closed lids quiver and the black eyes open in questioning wonder.

"I wish't I could send ye back, you little fool," he said in keen vexation.

"Ah, do not, ma frien'," the other whispered. "Ah shall keek de bucket if I haf not heeme!"

Next day in the boat, Dick lying with closed eyes, heard a voice over him in accents of love, "Ah, ma pauvre ami!"

"Why!" he cried, staring wildly into the face of Pierre bent close to his own, "I'd hev' swore I heard Matildy speakin' tu me!"

"Ouie, mon cher, it is Matilde. Do not be hangry of me. Do not tell de peop'—dey will shame me. Ah can't lif if I haf not you always."

The retreating army had been a week at Crown Point in the stricken camp where Col. Trumbull said he did not enter a tent or poor shelter of boughs that he did not find one wherein there was not a dead or dying soldier, when one morning at roll call Private Richard Wheeler was reported missing.

"Dick Wheeler's deserted," said a soldier to Josiah an hour later. "An' that 'ere Canuck boy 'at's allus a-hangin' 'raound him, he's gone tew."

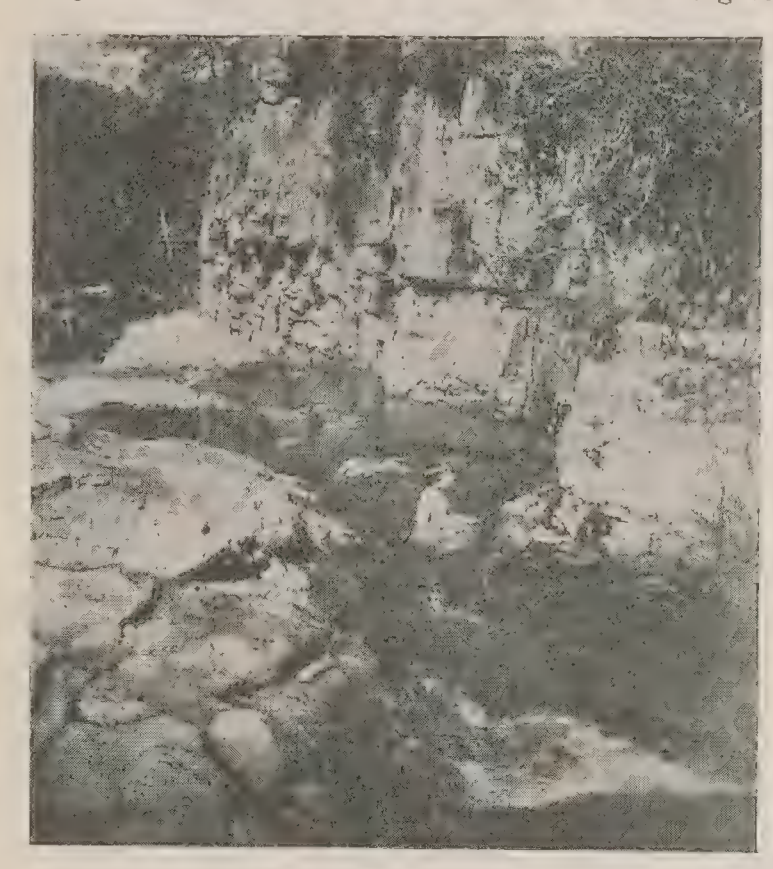
"Nat'rally," said Josiah, laconically, and musing to himself. "All women hain't jest alike, for all Kenelm says so. If Dick don't merry that gal, I'll shoot him, by the Lord Harry! though as a general rule I'm ag'in mixin' breeds."

The First Outing with the Boy.

WASHINGTON, D. C., July 13.—*Editor Forest and Stream:* Under the head of "Types of Sportsmen.—III.," W. W. Hastings writes in a vein that is calculated to move the hearts of many of your readers. Mine it has touched deeply, and I sympathize with his love for the little boy who lives now no more on earth, but whose image and memory remain enshrined in the father's heart.

My experience is parallel with that of Mr. Hastings' up to the point of separation. That grief has hitherto been spared me, and my writing to you at this time is prompted by a perusal of Mr. Hastings' letter, and by my having recently returned from the first fishing excursion my boy—now ten years old—and I have taken together.

About the middle of June we set out together for the Alleghanies after trout. The locality is one familiar to me, through having visited it again and again in the same quest; and it had for years of late fostered the yearning to visit it accompanied by the little son coming up from babyhood. This year the foliage shown as of never so rich a green, the sky smiled serene overhead, and the brooks murmured sweet music of welcome on every hand. The eyes of my little companion looked out upon the sweet face of nature in joyous surprise and trustfulness, that lent to me for her a new charm. The trees and sky were sights familiar to his eyes, but the grand mountains, the crystal streams and the rocky cliffs and stones seemed to call to him as to a brother and to whisper their secrets to him. He never tired of riding and climbing over the mountains, of exercising his little unpracticed hand in casting the fly, and in wading and bathing in the clear cold streams.



JOSEPH L. ATKINS.

Yukon Notes.

Jack Barton's Hard Luck.

We waited over at Fort Selkirk several days, making preparations for the trip out to the coast. The evening of Dec. 30 we made the acquaintance of Mr. Jack Barton. There was nothing formal or conventional about the introduction. We were just getting supper when he opened the door, and making a bee line for the stove, said: "Give me something hot, quick, boys. I'm half froze." To look at him one would have said that he stated the proposition mildly, for he was covered with ice from head to foot. We were short on whisky, but we had a bottle of pain killer, and Mac mixed a good stiff dose of that in a tin cup, and the stranger swallowed it without ever winking. "My name's Barton," he said when he had finished—"Jack Barton, and as I was getting ready to start from the noon camp to-day I got over a warm spring and went through into the wet. I knew we were somewhere near the post, so I left the boys and footed it up the river. I didn't stop to parlez vous any on the way, I can tell you. That ice on my clothes was like the tin armor the old fighters used to wear, and if I'd stood still a minute it 'd of froze up in the joints so 's I couldn't 'a' moved hand or foot and held me there till kingdom come. Tell you I wasn't so much afraid of freezing myself as of having the clothes freeze and boxing me up in cold storage." Mr. Barton laughed at the idea, and dismissed the affair as a matter of no further importance. While he was waiting for his party, who were following more slowly, he told us of conditions in Dawson, and of his unfortunate connection with the Kansas City Cyclone. He apparently felt that he had a duty to perform in righting himself with the public.

We were still discussing the cyclone when Barton's companions arrived. We could hear them shouting to

THE FIRST OUTING.
Photo by Mr. Joseph L. Atkins.

the dogs as the weary animals strained their utmost to drag the sleds up the 40ft. bank of the river. Mac and I went out to meet them and found that an accident had befallen one of the sleds. This was a gee-pole sled, and the man who took Barton's place behind the dogs was inexperienced at the work and had run it into an ice obstruction and wrecked the whole front of the sled. Barton heard the news philosophically, remarking that he never liked the old sled anyhow, and that it was a good chance to substitute for it a new basket sled which Mac told him could be bought of Pitts. I don't know what the new sled cost, but it probably was not far from the Dawson price, which was 8oz., or $128.

Barton's friends made a fire in one of the other cabins, which Mr. Pitts had generously placed at the disposal of travelers, and soon the place was festooned with wet blankets and various articles which had been on Barton's sled when it went through the ice.

Later in the evening Mac and I went over to call on Mr. Pitts, and while there were joined by Barton, who had changed his wet clothes for a dry suit. Barton shook hands with the agent, whom he had known for several years, and asked if he might have the key of the storehouse to get his cache of salmon, as he wanted some to feed his dogs.

"Salmon?" said Mr. Pitts, in a surprised way; "there's none left in your cache. I gave them up to Nigger Jim on an order."

"The blank you did," said Barton, profanely. "I didn't give him any order and never met the man in my life. What would I be giving an order for when I need them so badly myself and there ain't a fish to be had this side of Chilcoot?"

"The private marks on the cache were described perfectly by the lady," said Mr. Pitts, "and"——

"The lady," Barton groaned; "say nothing more." He paused a moment and then added, dramatically: "First she took my reputation, and now she steals my dog feed; the viper."

"They assured me," said Mr. Pitts, in an apologetic tone, "that Nigger Jim was a responsible gentleman and a mine owner; but I must say I hated to let him have the goods, though everything seemed straight enough."

"Partner," said Barton, with something more than the necessary emphasis, "you did me a good turn. I'm glad you gave up those salmon. I'm only getting what I deserve, and the more kicks I get the better I'll realize what an almighty fool I've been and the less likely I'll be to burn my fingers again."

And with that he pulled up his coat collar over his ears and left the room.

One of Barton's companions told me the following day that it cost them $140 for dog feed for the next stage of their journey, and instead of the light and nutricious salmon were obilged to take beef heads and offal, because there was nothing else to be had.

As if that wasn't enough misfortune for any man, an Indian, accidentally or intentionally, it is hard to say which, shot one of his dogs in the hinder part, amputating its tail and injuring it to such an extent that the dog had to be thrown out of the team, and Barton's start was still further delayed. The incidents of his stay at Fort Selkirk in December, 1897, will not be marked with a red letter in Jack Barton's diary. The poisonous purple of the deadly nightshade would make a most fitting illumination, grown in that malarious country where Childe Roland's dark tower stood.

Flashlighting the Indians.

Before leaving Selkirk I took a few photographs as mementoes of the place. One was a flashlight of the interior of an Indian cabin.

Sam, who was an enterprising young fellow, with two wives, gave me permission to take the interior of his abode. His old mother was seated cross-legged on the floor, and he hustled her to one side out of the way and gave me to understand that the place was mine to do with as I wished.

There were several gaudily decorated trunk-like boxes near the door containing the ashes of some of Sam's relatives, and I made a pyramid of these and placed the camera on top. Sam smiled all the while, so I suppose my course of action, while unconventional, conveyed no serious breach of etiquette. In the meanwhile, Jonathan and his wives and Albert and Bum and Bailey and a number of giggling young women crowded into the place. I told Sam to explain to them that it was bad medicine to look at the camera, and then I set off a handful of flashlight powder, which exploded with a blinding glare of light and a vigorous "w-o-o-f!" that threatened to raise the roof. The place was filled to the furthest cranny with a suffocating smoke, and without waiting to explain what had happened, I picked up the camera and left.

It would have been no easy matter throwing photographic lingo into Siwash, and I never was good at the languages. I was careful to close the door behind me, and either the Indians did not know I had gone, or else they were unable to locate the latch in the dark, for as long as I had a view of the cabin no one appeared on the outside.

I trust that the foregoing incident will not give the impression that we imposed upon the Indians or took advantage of them in any way. I saw some of the men later in the day, and they seemed to think the affair of the flash-light a good joke. We were very careful in our business dealings with the Indians to treat them fairly, and I am sure they bore us no ill will for anything that happened while we were at Selikirk.

J. B. BURNHAM.

NOTICE.

THE New York Clearing House has adopted new regulations governing the collection of checks and drafts on banks outside of the city. This entails a collection expense on those who receive such checks. Our patrons are requested, therefore, in making their remittances to send postal or express money order, postage stamps, or check or draft on a New York city bank or other New York current funds.

Natural History.

The Coon's Whicker.

Editor Forest and Stream:

Ordinarily I admire, digest and batten upon FOREST AND STREAM editorials, but in the journal of June 17 I find some sand or other foreign matter in the sugar. In suggesting a moot-court for the trial of the cause of Raccoon vs. Man you have doubtless inspired considerable mental activity abroad, which you will doubtless hear from. If you will permit me to moot I will proceed.

In the concluding paragraph of the note to which I venture to allude you nominate Coahoma, of Mississippi, judge of the case proposed, or calendared. While I would most heartily indorse the nomination of Coahoma, I will not, if "his judicial poise has been marred by the coons which whicker in his cornfield of nights." I will not vote for judicial poise that can be marred by coons which whicker. In fact, if coons whicker to any such result as suggested, they must remain in their present status, without claim upon human jurisprudence. We cannot afford to expose our courts to any further whickering. The cause is worthy of investigation, however, and before legal steps be taken I would suggest that a court of inquiry ascertain to what extent the coon is whickerful.

In the business acquaintance I have enjoyed with coons, I have never found any which whickered, although I have known them to do disreputable things with my poultry and fruit. I do not think all of them are whickerish. Perhaps the whickerers are made so by conditions existing in some localities, and if so they may be isolated from the great coon family, which should not be universally condemned because Mississippi or New York coons have got to whickering.

The suggestion embodied in this proposition for a moot case is a grave one, and is most worthy of intelligent and serious consideration. I have been so presuming thus far that I will presume now to advance the opinion that the cause is too grave for disposition by moot-trial. A moot-trial is the trial of a supposititious or imaginary case, while the cause of Racoon vs. Man is a real one indeed. It is identically the cause of all other creatures vs. man, and can only be permanently and forever settled when we can righteously settle the question of the fittest to survive. The raccoon must submit or subside, and the same holds with all living things under the sun. If the coon whickers, perhaps he is driven to it because some farmer has gathered his fruit or some Frenchman his frogs.

Seriously, FOREST AND STREAM is constantly trying such causes, and I believe it is well for its contributors

and readers to remember the decision of famous Sancho Panza:

"Harkee, honest man, either I have no brains, or there is as much reason to put this passenger to death as to let him live and pass the bridge; for if the truth saves him, the lie also condemns him; and this being so, you may tell those gentlemen who sent you to me that, since the reasons for condemning and acquitting him are equal, they should let the man pass freely; for it is always more commendable to do good than to do harm; and this advice I would give you under my hand, if I could write. Nor do I speak thus of my own head, but on the authority of my master, Don Quixote, who on the night before the day I came to govern this island told me, among many other good things, that when justice was doubtful I should lean to the side of mercy; and God has been pleased to bring it to my mind in the present case, in which it comes pat to the purpose." RANSACKER.

SHASTA MOUNTAINS, Cal.

Fishing Hog and Mousing Hen.

DOES the reversed negative make an affirmative? If it does, as may seem to be true both figuratively and algebraically, which we might say is the same as literally, then we should reasonably expect to have real fishing hogs, as hog fishers, and if my memory does not mislead me, I think our ancient poet, Shakespeare, wrote of a mousing hen. But while the discovery of these—scarcely *lusæ naturæ*—in the hitherto unexplored locality known as Kansas, is nothing new, yet it is interesting to know that animals as well as we may change the place, but not the natural laws of creation. For the mousing hen is to my knowledge a native of several States, and these so widely apart that now we know she is found in Kansas we may consider her to be an established fact. I first saw her hunting along the sweet flowered hawthorn hedges of an English meadow; again I saw her a short time after at home in Pennsylvania, at the same sport, and since then she has been doing the same useful work in every country place in which I have lived forty years since that time. Indeed, I can improve on Mr. Pine Tree's story, given on page 45, FOREST AND STREAM, July 15—for I have witnessed a battle royal between a game rooster and a rat, in which the bird come out a victor and the carcass of the enemy was eaten by the hens. More than this, for while at times I have been lying—physically, not verbally, I assure you, notwithstanding the provocation here given for such a supposition—I have seen a small wood mouse chased and caught and carried off, I suppose for food, by a pheasant.

Birds are omnivorous, and exceedingly energetic in getting their food. Seeing my fowls busy on the bank of one of my fish ponds, I investigated and found they were wading into the shallow water for the eggs of the frogs and toads lying there, and since then the hens have hunted there for the little pollywogs which line the banks in hundreds. Just here I would diverge to this pollywog subject, and ask your readers if they know when a pollywog becomes a frog or a toad, and for how long these creatures go about like little alligators. The present year I have seen hundreds of them some rods from the water in the grass, and catching flies, and 4in. long. Going back to the hens, these birds are exceedingly omnivorous, as will be shown by the many true stories told of the strange things found at times in their crops. It was through the enterprising hen that the California gold was first discovered, for long before Sutter found it in his mill race the women of his boarding house found nuggets in the hens' gizzards as they dressed them for the table. Other stories of similar discoveries of gold and precious stones in the gizzards of hens, or in their crops, have been told in mining camps, and similar stories in more truthful places.

When I was a boy it was a common story that pigs could not swim, because their sharp hoofs cut their throats; but here in North Carolina I find our native razorback, or rail splitter, is an excellent swimmer, for he navigates my ponds and rivers here, and I suspect him of actual poaching for fish. I have seen him make a grab at something in the water and dive after it, apparently with the swiftness and agility of an otter. Anyhow, I have had to shut in both sides of my ponds with a 2in. barbed wire fence to keep the hogs from doing something in my ponds akin to fishing, quite as much as to guard against fishers who emulate the hogs in this respect.

Mr. Pine Tree talks of these ravenous brutes of fishing hogs, four-footed of course, but a whole drove of them will not do as much harm as one two-legged one. One of this breed I have seen, when he struck a shoal of trout so thick that the whole of the three flies on his leader frequently took a fish each, still keep on taking fish after his 12lb. basket was full, and when I fortunately came across him and stopped him he had a big heap on the bank, as well as a respectable string on a forked twig. Of the two breeds of this *sus scrofus*, I must say I prefer the quadruped variety as a fisher. H. STEWART.

HIGHLANDS, N. C.

Note.—But I have forgotten the real object I had in view when I sat down to write. This was the wild hog of this locality. I happen to possess a tract of possibly a hundred acres in about the center, nearly about 4,000, mostly all forest, but surrounded in part by a few small farms, the owners of which keep their half-wild hogs in my woods range, in which the mast is, of course, very abundant. This hundred acres is a sort of bay made by an ancient bend of the river, now filled up and covered with a thick growth of laurel, among which is a large quantity of big timber. This thicket, as it really is, is densely shaded by the tops of the laurels 20ft. or more tall, but below it is easy to thread one's way among the undergrowth. A few years ago I was exploring this thicket, called by the people here the Devil's Peach Orchard, on account of the wildness of its thickets and the fact that a solitary peach tree is growing or alleged to be (I have not seen it) in the center of this tract. But the wandering razorbacks, rail-splitters and other so-called hogs of the locality seem to have hidden in this solitary retreat, and have multiplied to a considerable extent. On my only visit of exploration of the one-tree orchard, I found numerous hogs, some of which would have put to shame those of the noted Black Forest of central Europe, in which the Kaiser is said to shoot his wild boars. One of these beasts lying in a mud hole in a branch, and aroused by my appearance, ran furiously at me and my companion. The brute had great sharp tusks fully 6in. long, and as he came at me with gnashing teeth, the foam fell from his jaws. His bristly mane stood up stiffly and I remember well his little keen eyes as he came rushing at me. Fortunately, I was carrying in my hand, ready for use a Colts navy, which enabled me to disable the big savage brute so that he retreated, and I must say I let him retreat with good will. From the abundant sign of hog wallows in this wild place I am sure there must be a large number of old stagers who would tax the courage and enterprise of an experienced hunter of wild boars. I am sorry to say that I have so far been too busy to visit this part of my farm since. But if any FOREST AND STREAM reader wishes to try some of my pork in this pasture, I cordially invite him. H. S.

The Canadian Lynx.

THE Canadian lynx (*Lynx canadensis*) is most abundant in Canada, reaching as far north as timber is found, and extending south into the northern parts of the United States, where it chiefly inhabits the high mountains of the West, but is frequently met with along streams in the valleys.

In the foothills and lowlands of the Rocky Mountains of northern Alberta, Canada, I found them common, or perhaps I should say they seemed to be common, judging from the number of tracks seen and large quantities of skins brought out by trappers and traders. Although I spent nine months in this locality for part of each summer and fall of the years of 1895 and '96, our party saw but two "pissues," as the Cree Indians call them. The locality was favorably adapted for their concealment, however, being a continuous expanse of timber.

Its long, thick hair is ample protection from the winter blasts, and the huge feet being also provided with long hair, which cover the naked soles, make excellent snowshoes for traveling over the deep snows. When not alarmed, or hunting, it stands erect, and walks about with the air of a common cat with its short tail erect. Its long legs and thick fur make it appear much larger than it really is, and the hunter is often surprised upon killing and skinning one to find at what a small mark he has fired.

The Hudson's Bay Company ships thousands of the skins to Europe yearly, and we often see them dyed black and made into muffs, and I have seen several natural and full length skins as boas.

In the northern parts of Alberta, about the foothills of the Rocky Mountains, large tracts of burnt timber are found, the fallen trunks of which lie in a perfect network on the ground. After a few years have elapsed, young pines, spruce or poplar trees spring up, covering these places with a thick growth to the height of 10 or 15ft. In such places as this, the snowshoe rabbit, northern or varying hare (*Lepus americanus*), is found in large numbers, and as this species under consideration preys chiefly upon them, it too is found most abundantly in such localities, although it is frequently met with in higher altitudes. That the Indian thinks the lowlands its favorite home is proven by the number of snares found along the trail. While hunting in such places the Canadian lynx can either lie in wait on a log near a rabbit trail until his prey comes along, or from behind the fallen timber it can creep stealthfully within reach of and spring upon it without being observed. In addition to the snowshoe rabbit, it also feeds upon various species of grouse, ptarmigan and small mammals and birds, occasionally feasting off a freshly-killed deer that some hunter has left out over night in the forests. Audubon and Batchman ("Quadrupeds of North America") relate an incident of this kind, in which the animal refused to leave the carcass, and was killed. The thick willow, alders and poplars along the banks of streams is another favorite hunting place of the lynx, where it lies in wait or still-hunts his game.

During the day it usually remains quiet, taking refuge in a hollow log or stump, or under the low and overhanging limbs of spruce, but is frequently seen out on dark days. It is very shy and cowardly, and flees at the least alarm. When pursued by dogs, it proceeds in great bounds, throwing its hind parts high in the air at each leap, and on being pressed, soon takes to a tree, where the hunter finds it seated on the first limb with its back against the trunk. I have been told by Indians that when driven into close quarters by a dog it spits and snarls, and strikes with its four paws, and as a last resort seizes its adversary with its front feet, draws him close and disembowels him with the claws of the hind feet.

Large numbers are annually snared by the Indians, but not a few are poisoned, caught in steel traps, or run down with dogs, but the most favorite way of capturing them is with the snare. This is done in the following manner: A small inclosure of sticks is made and an opening left on one side, the snares usually being set along a trail. A snare is then placed in the opening and some scent bait daubed on a stick and stuck in the back of the inclosure, the other end of the snare twine being fastened to a pole 6 or 8ft. long and about as large around as the wrist. The scent bait is made of beaver castors, livers of wildcats that have been hung in the sun till decayed, nutmegs, cloves and root from a small plant known as love root, ground and mixed, to which may be added cinnamon, oil of cloves and rum. This is stirred together and allowed to stand a week or ten days before being used. The smell of this mixture draws the cats from some distance. When they arrive at the snare and try to enter the opening, they push their heads through it, and while rolling in the stench get entangled in the cord, and as the snare tightens they become alarmed and try to escape. The pole soon gets fast in the brush, where the trapper usually finds them either strangled to death or dead from exhaustion. I am told that they seldom get very far from the place where the snare is set. Occasionally a spring pole is attached to the snare and the animal, while struggling to escape, frees it and is swung into the air, where death soon comes to its relief.

The Indians of the North esteem its flesh very highly, and the eyes are considered a great delicacy. They are very superstitious about different parts of the meat. The women are never allowed to eat the eyes, and they believe that should a dog secure a piece of the meat he would be ruined as a wildcat hunter forever. Although I have frequently had an opportunity to eat lynx meat, I regret to say that I did not do so. It is light in color, and is said to taste like veal.

While camping in the high mountains of the locality mentioned above, my attention was attracted one morning by the loud barking of my dog. On going to the tent and looking out, I saw a large Canada lynx hunting mice in the middle of a muskeg (a sort of swamp) about 200yds. away. As he bounded away I fired a shot after him, which had the effect of hurrying him along. The dog pursued him, and in a few minutes I heard him barking, and on arriving found the cat perched on a low limb of a pine spruce. In one of the barrels of my gun was an auxiliary, which I used in shooting small specimens. It took a .38 extra-long rim-fire shell, loaded with No. 12 shot. Taking a position where I had an open shot at his shoulder, I aimed a little back of it and fired. He kept his seat about five seconds, and then fell, and in ten seconds more was dead. On skinning him I found that the shot had spread a little more than a person's hand would cover, and had eater their way to his heart. He was about 15ft. away when I fired. Another that I found in a trap by the side of the trail was killed likewise. I serve all the coyotes, foxes, coons and skunks that I catch in the same manner, and if I am careful and can place the shot where it should be, it is always effective.

Mr. E. W. Nelson ("Natural History Collections Made in Alaska"), in speaking of this animal, says: "Mr. McQuester, a fur trader living in Fort Yukon, witnessed one winter day a combat between a lynx and a red fox, which he described to me as follows: 'The lynx sprang upon the fox in comparatively open ground, evidently trying to capture it for his food. The fox instantly made fight, and for a few moments the fur flew right and left. Then a short pause followed, and the fight was renewed. A second pause ensued, and after the two had glared at each other for a few moments they slowly withdrew in opposite directions, the hair on each bristling defiance, but each evidently satisfied to close accounts.' This lynx was probably weakened by hunger, for a vigorous lynx is certainly more than a match for a fox."

The fur traders and Indians of the upper Yukon claim that the lynxes sometimes unite in parties of five or six and make rabbit drives on the small islands in the Yukon. They claim to have heard the lynxes utter a sharp, whistling noise, and to have found their tracks in the snow where the line had swept the island, until each secured its prey, near the further end.

When rabbits increase in a district for a number of years, the yield of lynx skins is large, until, suddenly, an epidemic breaks out among the rabbits and they are almost exterminated. The succeeding seasons are marked by a heavy decrease in the number of lynx skins secured by the natives, and until the rabbits become common again the lynx become scarce.

The last paragraph is substantiated by the Indians in the country in which I traveled.

Dr. C. Hart says in his "Mammals of the Adirondacks" that the number of young brought forth at a litter is two.

J. ALDEN LORING.

OWEGO, N. Y.

A Robin as a Mock Bird.

Editor Forest and Stream:

The communication of Mr. Chill in a late number of FOREST AND STREAM, telling of a robin repeating the call of Bob White, reminds me of a somewhat similar circumstance in my own experience, or, rather, observation. One spring, when I was a boy, in Ohio, many years ago, in corn-planting time, a robin took his position on a dead elm tree on the edge of the cornfield, every day for some two weeks, or perhaps longer, and sang his regular song, interspersing it at not infrequent intervals with the cry "Whip-poor-will," as distinctly as the bird that bears that name could utter it. As I say, this was kept up for a considerable period of time, and the cry was heard not only by those on our farm but by the neighbors: but, except those persons, I never met any others that ever heard or knew of a similar case. Long afterward, however, I read in some book on natural history that it was not unusual for a robin to imitate the whippoorwill or other birds.

Does any other reader of FOREST AND STREAM know of a like case? K.

CAMP PERCY, N. H.

Does the Loon Prey on Ducks?

LAKE CLAIR, P. Q., July 10.—*Editor Forest and Stream:* By the great indulgence of my friend Greenough, I have been permitted to enjoy, for the first time, the natural beauties, the entertainment and the health-giving excursions which Lake Clair and its picturesque surroundings afford. This lake is a gem set among forest-clad hills which rise 300 and 400ft. above the level of the lake, while the lake itself is some 750ft. above the level of the St. Lawrence River. Within 500ft. of Lake Clair, on its western side, lies the southern end of Lake Long, the level of which is some 200ft. below the level of Lake Clair. One of the wonders is why the waters of Lake Clair do not percolate through to Lake Long; but Lake Long is here separated from Lake Clair by a magnificent cliff of solid rock rising sheer some 300ft. Close at hand is Black River, a rushing, turbulent stream—the outlet of Lake Long—and scenery not only picturesque but grand.

Of course trout abound in these waters. Our host indulges his guests so far as the taking of trout is concerned, and in every seasonable way; but promiscuous shooting he does not look upon with favor. He likes to see game in its native state about his domain. So it is, for the most part, unmolested here. The cry of the loon is a common sound, and this bird is always present about the lake. One species, the great Northern diver, is a handsome and powerful bird. A pair with a young one may be seen daily in the vicinity of the camp.

A wild duck with fifteen young lives near by. A few days ago, in a pouring rain, and while we were all indoors, this little family was discovered close in under the windows of the camp, feeding.

The loons—or some of them—seem to be very hostile to

ducks. I have witnessed some encounters between them. In one case, when a duck and her family were sailing quietly along. I saw them make a mad rush, the old one calling loudly, when suddenly out of the water rose a large loon ,and attacked them with great fury, churning the water into foam with his wings in the pursuit. He seemed to me to secure one of the young ducks, with which he disappeared under the water. At another time I witnessed a contest between a loon and an old duck—the latter defending her young apparently. In each of these cases the loon was concealed under the water, and rose suddenly from it to the attack. It will be interesting and instructive to know if the loon makes food of young ducks.

Of course FOREST AND STREAM knows.

ONE OF GREENOUGH'S GUESTS IN JULY, 1899.

Birds in Town.

ANN ARBOR, Mich.—Are the natural inhabitants of the fields and woods taking up new homes in the smaller cities and villages where they are not molested but fed and encouraged? The robin and bluejay long since did this. More of these birds can be found in the little cities than elsewhere in southern Michigan, I think. Certainly the cities contain numbers of these birds out of all proportion to their relative area. I have often walked through our deserted woods and been oppressed by their silence. Birds, squirrels and rabbits are gone. In the cities all of these are found. The catbird is more numerous in town than in country hereabouts. There are one or two on my place (less than half an acre) every spring.

From what I have seen and have been told, I think the squirrels are making the change. I have learned of no place where they have not been welcome, except in isolated cases where they have entered and occupied portions of dwellings against the expressed wishes of the owners. The squirrels of which I write are the red squirrel and the fox squirrel. I know of no gray squirrels or chipmunks following this practice yet. Chipmunks do better near the habitations of man—a little to one side—not among the houses.

More interesting still is the accumulating evidence that something of the idea of safety in cities has crossed the mind of the quail. We had scarcely returned home lately from a stay of some weeks, till my wife twice noticed Bob White call right near our house in this city. Twice the same fall a few years ago I saw, at widely separated places, quail cross the street, not far in front of me—evidently a passing flock of which I saw a few in each case. Note also the evidences of the same thing published in FOREST AND STREAM. Let them come in. Perhaps the way to raise quail is to be good to them. Even grouse might some time be so raised.

In cities the natural enemies of these creatures have nothing like the chance at them that they do in the country.

Is there a change going on in the chosen abode of our friends of the air, the trees and the ground?

For years there was, perhaps there is yet, a large colony of crow blackbirds on the college campus here. There were plenty of others about various parts of the city. I have not noticed any of late years though.

J. B. D.

Game Bag and Gun.

The July number of the Game Laws in Brief and Woodcraft Magazine is now ready. See advertisement of it.

Utah Justice.

A FEW mornings ago, about 9 o'clock, I was in a book store, when the proprietor came in from the rear and informed me that a man had offered him some very small trout for sale. I went out and found in a farm wagon a box containing about 40lbs. of trout, carefully packed in ice and all under size. Three young men from Wallsburg, Wasatch county, offered the lot for 17½ cents per pound. They said that the fish had run out on their lucerne patch while irrigating and they didn't know what to do with them. They admitted having sold several boxes of trout on the previous evening to a local wholesaler. These remaining had been refused as "too small," though the wholesale dealer did not do his duty in the matter. Immediately I sought Commissioner Newell, who was out of town, and then went to the sheriff's office and brought a deputy to the wagon. The fish varied from 4 to 7in. in length. Arrest, immediate trial, plea "guilty," fine $30. All inside of two hours. We thought that the fish had been seined, but could not prove it. The confiscated trout sold for about $7.

Owing to the fact that the Indian agent at Fort Duchesne has specially deputized Indian police to look after the waters in Strawberry Valley, there has been less poaching upon the reservation this season than for a number of years previous. Late high water prevented a violation of the law before the open season, in the streams emptying into Utah Lake, Salt Lake, Bear River and tributaries. Since June 15 there have been several charges preferred by the Fish and Game Commissioner. On looking over the justices' docket I find that three convictions have been secured for having in possession trout under size; two for spearing bass; one for seining, and one for the use of a fish trap. This is a splendid record when we consider how the local sentiment has had to be educated. Good work is also being done in Cache county.

The State has planted suit against the Telluride Power Transmission Company for failure to provide a screen, as required by law, at the head gate of their mammoth flume. Concerning the fishway at their dam, about which I have written previously, I give the company's side of the case from a local paper:

"Anent the criticisms offered in regard to the fishways over the dam of the Telluride Power Transmission Company in Provo Cañon the Democrat man on Monday interviewed W. B. Searle, chief engineer of the power company. Mr. Searle states that three experimental fishways have been put in. The first was according to company plans and did not meet the satisfaction of the Fish Commissioner. The second was constructed by the Telluride Company on plans furnished by the Fish Commissioner, but failed to be satisfactory. The third was constructed under the direct supervision and direction of the Fish Commissioner and entirely paid for by the Telluride Company, but it also fails to meet the requirements of the official who constructed it. The Fish Commissioner has submitted plans of another fishway and demanded that it be put in. We understand that it is on the plan approved by the Department at Washington. The company say they will put in the new one if the Commissioner will agree to accept it, but that they are tired of being experimented with. The matter is still in abeyance, but should certainly be adjusted."

Utah county and the State in general may be proud of the effort that is now making marked headway to have good game laws that can be lived up to, and of having these laws strenuously enforced.

SHOSHONE.

The Big Head.

WE had gathered in the drawing-room. My host Charlie, an old college chum, had always been an ardent sportsman, and in true hunter fashion had furnished this the principal family room, in backwoods—yet nevertheless elegant—style. On the polished hardwood floor and on the spacious wall appeared all kinds of trophies of the stalk and chase, which, as well as giving a frontier aspect to the room, showed his skill with the rifle. There was a monster grizzly's skin, with great dull claws as long as my fingers, that seemed to occupy at least one-third of the floor space of the big room, and a mountain lino's skin. Several big gray wolf and three or four red fox and coyote skins covered the remainder. Suspended from the walls were several deer heads, a pair of massive elk horns and a fine mountain sheep's head, while just over the fireplace, in the most conspicuous position in the room, and looking down at us in a proud and lordly manner, was the finest blacktail buck's head I had ever seen.

This head had been mounted by some one who thoroughly understood the business, for the workman had given just the right expression to the wise old face, with its bright eyes, great ears and sensitive nose, and the widely spreading, many-pronged antlers were carried in a manner well fitting the noble animal which this one beyond all doubt had been. Many times had I seen deer heads with more points on irregular, misshapen horns, but never before one with such heavy beams, such a wide spread between the tips, nor such elegant symmetry in every turn, all of which were shown in the twelve points of the antlered head before me. The grayness of the scalp about the nose and under jaw, the jet black of the long hair between the horns, and snowy strip across the throat, all proclaimed the beast to have been an old-timer, and the great antlers marked him as a leader of his tribe.

My friend noticed the look of admiration with which I regarded this noble specimen and asked casually, but in a manner which showed he wished to say more, "Pretty nice head, isn't it?" I replied in a most positive affirmative, and added that I would give a large sum to become the owner of such a trophy.

"I call that my Thanksgiving deer head," said Charlie. "During all of last season I did not have any luck finding game, although I hunted through several districts where deer and elk were quite plentiful. So when I received an invitation from Andy Hilger, a noted young hunter, to come and spend a few days with him hunting in the Belt Mountains about forty miles north of Helena, Mont., I decided to try for big game once more before the close of the season. Three days before Thanksgiving I was at the ranch of my friends' father. The ranch lies on the river bottom close to the Missouri, and just above the point where that stream rushes through the narrow pass in the Belt range called the Gate of the Mountains.

"On the next morning after my arrival Andy and I loaded our blankets, provisions, guns and ammunition into a light skiff and pushed off from the ice-covered shore. It was risky business running the rapids through the Gate, but guided by Andy's skillful hand our light boat mounted and overcame the big, foam-crested waves and floated safely through the wild rush and on down the river, which was running full of slush ice, the intense cold having formed the surface of the stream into a partially frozen mass. Our camp was to be in a little cabin which had been built close to the river bank several miles below the Gate and at the mouth of a deep cañon called Bear Gulch that ran back into the very heart of the range.

"We arranged our camp that afternoon, and the next day, bright and early, we started out. Half a mile from camp we struck some fresh mountain sheep tracks in the snow, and we followed them all day without getting sight of the animals, which, from the sign, were evidently traveling. Crossing the high ridges on our way back to camp we could see by the clouds in the west that a storm was brewing, and that night it snowed about 2in., covering all old tracks.

"The next mornnig, which was Thanksgiving, we were afoot before the cold, gray dawn made the sights of our rifles visible. It was bitter cold, and as we stole our way up the steep incline in the bottom of Bear Gulch our breath rose in white clouds above us. But it was an elegant day for hunting, and we vowed to have fresh meat in camp that evening if it was a possible thing. Shortly after the sun had risen above the rugged peaks ahead of us, its first rays tinting the surrounding forest crests a beautiful crimson, Andy, who was ahead, stopped suddenly and looked long and carefully up the steep mountain on our right. I soon stood beside him, and he asked, without removing his eyes from a dark object that was but faintly discernible among a heavy growth of dead scrub pines far above us, 'I wonder what that is?'

"I had my glasses out in a moment, and through the powerful lenses I could distinctly trace the outlines among the twigs and branches of an immense blacktail buck. He had seen us, for his big ears were up and he stood still as a rock for several minutes, looking down at us. He was away out of range—fully 800yds. away—so we just stood still and waited to see what he would do. In a little while a doe and her fawn and another buck trotted in sight. They didn't see us, as we stood still as a couple of black stumps, but the big fellow who had first spied us knew there was danger in that vicinity, for having finished his observation he led his little band up over the crest and out of sight.

"As they trotted along a small bare spot near the summit of the ridge, the big buck we had first seen loomed up almost twice as large as the others, and even at that distance we could see the sun shine on his massive antlers. When we saw what an immense fellow he was, both of us made up our minds, though nothing was said, that we would have that deer before night.

"'They will run over into the head of Dry Gulch,' said Andy, who was thoroughly familiar with the lay of the country, 'and as they are not badly frightened, will probably lie down. That is about three miles from here, and our nearest and easiest route is to climb to the top of this ridge, which we can follow up and strike the gulch just to the right of Cap Mountain. I think we shall find them somewhere in the head of that gulch.'

"We immediately started on our long climb to the top of the ridge, which we gained after an hour's hard and steady work, for it was very steep, and we often slipped back quite a distance, taking an avalanche of snow with us, and had to climb up again. On the summit of the crest the icy wind blew directly in our faces, but we didn't mind that, although it drove sharp particles of snow in our eyes and ears and benumbed our hands, for it gave us 'the wind' on the deer. Several times we crossed the tracks of the game we had started, but did not follow them. We could see they were heading for Dry Gulch in a roundabout way, traveling in the gulches, where there was scattering timber, while we were going the shortest route, following the ridges.

"In about two hours we stood on the crest of the long, rocky ridge which bounds Dry Gulch on the west. From this point the scenery was grand, and we stopped a few moments to rest and 'take in the country,' as Andy expressed it. We had attained such a height that we overlooked an immense expanse of country, and that one of the roughest in Montana. To the east rose the highest peak in the Belt range, Mount Moore, which reared its forest-covered sides and rugged, snow-capped head in the very heart of a great mass of deep ravines, rocky cañons, bare, burnt hillsides, and rolling wave after wave of timber-covered ridges—the very wilderness the blacktail most love to roam.

"To our left the same seeming endless expanse of wild country swept away into the blue distance. The sheer walls of Picnic Cañon stood out clear-cut and gigantic from the dark colors of the surrounding evergreen timber, and directly above us towered Cap Mountain, a curious, conical-shaped peak on whose summit, like the ruins of some ancient castle, a great jumbled mass of rock was outlined distinctly against the cold blue sky.

"To our right, full forty miles away as the crow would fly, partly enshrouded in a smoky haze, we could fairly make out the buildings in Helena, and now and then catch the glint of the sun on a window or bright tin roof. At our rear, and thousands of feet below us, the Missouri, dwindled to a mere ribbon by distance, wound its way between icy banks. Just above the river, grim and silent, old Bear's Tooth reared its rocky, crevice-riven peaks.

"At our feet, and stretching away on either hand, lay the great gulch in which we were sure we would find our game. The immense hillside opposite us had a few years before been swept by a forest fire. All timber had been killed, but the blackened trunks still remained standing. On our side of the gulch the timber was still green, the fire, in one of its curious twistings and turnings, having passed by it altogether.

"But a short distance back we had crossed the tracks of the game we were after, and they were going for the head of the gulch. So we knew if everything went all right we would soon have some sport. We pushed ahead rapidly, for the freshness of the trail showed we were not far behind. We dropped over into the gulch and descended its steep sides for a short distance and then, some 30yds apart, commenced to hunt carefully up toward its head. In a few minutes, happening to look down toward Andy, I saw him stop suddenly and raise his rifle. He did not shoot, however, but after looking intently down the hill for an instant, he turned and beckoned to me. I went down as fast as I could without making any noise, and he exclaimed:

"'They just passed below me there, and if one of them had stood still a minute longer I would have killed him; but we will get them sure, now, at any rate.'

"We started on a run diagonally down the hill and we made good time, I can tell you, for when we were within 200yds. of the bottom of the gulch the deer were only a short distance ahead of us. Andy, who was in the lead, ran out on a point of rocks, from which elevated position he could overlook the bottom of the ravine. One look was enough; then he sat down in the snow and began to screw up his Lyman hunting sight. I looked into the bottom of the gulch, and the deer had just begun to cross in single file, the smaller buck leading. Then they started up the hillside directly opposite, going quartering from us through the scattering burnt timber, on a slow trot. In the meantime I had screwed my sight up to the 300yd. notch.

"'Well, there's two of them,' said Andy, 'but where is that big buck?' And we both looked up and down the gulch in search of the big deer. 'Here he comes!' exclaimed Andy; 'and ain't he a slasher,' he continued. 'Just look at those horns, will you!'

"The big fellow—and he was a monster, I can tell you—trotted slowly and majestically up the hill, following the trail of the others. He did not act as if he was in a very great hurry, but even then, in the presence of danger, seemed to defy us as he proudly held his big antlers back on his broad shoulders and plowed his way up the hill through the snow. It seemed a pity to kill such a magnificent beast, but both of us wanted that pair of massive antlers, so after taking a good look at the proud old fellow we began to shoot, one after the other. It took our bullets over a second to cross the gulch. One would shoot and watch where his bullet struck, making a dirty patch as it threw up the dust in the clean snow, and then the other would fire.

"Andy's first bullet struck just behind the big fellow

and a little too high. I made allowance on his miss, and aiming ahead fired. The bullet struck 2ft. ahead and a little high. My next shot went just over him, and Andy's just underneath him. Taking careful aim for my third trial, I held the bead of the front sight just underneath his outstretched nose and pressed the triger. As the smoke cleared away I saw Andy take his rifle down from his shoulder with a decidedly disappointed air, for he would have liked to kill the big buck himself, and he said ruefully, 'Well, you got him that time.' Sure enough, there the big fellow lay, motionless in the snow.

"A quick run down the mountain, a hard climb up the opposite side, and we stood alongside the biggest deer either of us had ever seen. It was with an indescribable thrill, such as only a hunter feels after a hard but successful stalk, that went through me as I gazed on the fallen monarch and noted the fine symmetry and broad expanse of the great antlers and the graceful outlines of the monster form.

"'You might hunt twenty years and never kill another such animal,' said Andy. 'He is the biggest buck that was ever killed in these parts, and those horns go away ahead of anything I ever saw'; and he stretched his arm across them. By bringing the tips of the antlers on one side into his armpit he could just touch the opposite side with his outstretched fingers. 'Over 32in. across,' he said.

"We dressed the big fellow, and after several unsuccessful efforts, for it seemed as if he weighed 500lbs., hung him up. After carefully looking him over, Andy guessed his weight at 245lbs., while I guessed 5lbs. less.

"It was just at nightfall that we arrived in sight of our little cabin, and I can tell you no place ever looked more homelike than that dingy little hut. It didn't take long to build a fire out of pitch knots, and then our Thanksgiving dinner, of which roast venison was the principal dish, was one of the best I ever ate.

"The next day we got a big, strong pack-horse from the ranch, and it took us till long after dark to get the big buck out of the mountains. We weighed him carefully at the ranch, and he tipped the scales at just 249lbs., and his antlers measured just 32in. across. The weight was all solid meat, too, for when I skinned him I found scarcely any fat on him. If he had been killed six weeks sooner, when in his summer condition, he would have weighed at least 75lbs. more. When I cut him up I found that my bullet had entered his body pretty well up and half way back from the shoulder, and ranging forward and across, had just creased his backbone and lodged in his shoulder, making a wound that was instantly fatal."

R. C. Fisk.

CHICAGO AND THE WEST.

Rapid Changes in Western Regions.

Chicago, Ill., July 20.—It was some three or four years ago, after a rather careful study of the upper Wisconsin region, that I made the prediction in these columns that this Wisconsin section had seen its best days, more especially as a muscallunge country and a prime fishing region. I remarked then in these columns that the State of Minnesota would be the next Western region to be included in the sweep of sporting travel. This prediction at the time created certain comment, more especially from some persons who thought that Minnesota was already shot out and fished out. Yet there seems to have been some justice in the statements made at that time. In a very few rapid years the State of Minnesota has sprung into the most prominent position of all our Western sporting regions. Ten years ago it was all Wisconsin. Now it is all Minnesota, and with every month the tide of sporting travel to that State increases. It may be added that, so far from the State proving itself to be barren of shooting and fishing grounds, there has been found within its confines a region so vast and so inviting as to be eminently fit to be set apart permanently as a recreation ground for the American people. The very fitness of this proposal to-day, and the very dangers which render the establishment of a Minnesota forest reserve a necessity immediate if it is to be a possibility at all, go to show better than anything else could do the extreme rapidity of the changes in Western sporting grounds. History does not repeat itself in these respects. It multiplies itself. If we are to preserve the American game and the American game regions, the time to act is now, and not five years or one year later.

Minnesota Reserve Ably Handled.

In this connection it is pleasant to be able to say only good words regarding the movement for the proposed Minnesota forest reserve. It has certainly been handled in a most able way thus far. The credit for this belongs largely to Col. J. S. Cooper, of Chicago. The movement was practically begun in the first week of May, hardly more than two months ago. To-day it has reached a point when the leading dailies East and West are giving the matter editorial attention, as well as extended news mention. The plans for putting the Congress of the United States in full possession of details regarding that region have been carried out admirably, and on so generous a scale as to render insignificant earlier individual efforts on similar lines. The preliminary organization is advancing on perfectly sane and well-considered lines, and indeed in every detail it would be difficult to point out anything left to be desired. It is still a long way from here to the end, and the successful end, but whatever may be the result, it may be said even at this stage that the fight for the forest reserve was a good one, and handsomely carried on.

The First Meeting.

The first meeting of the preliminary organization will be held at 125 Michigan avenue, Chicago, on the evening of Tuesday next, July 25. The call has been sent out by Col. Cooper. With the call there is inclosed to each gentleman a "broadside" embodying full details regarding the proposed movement, the boundaries and characteristics of the country intended to be included, a map of the region and a collection of editorials from leading journals such as the Chicago Tribune, the Chicago Times-Herald, the Minneapolis Tribune, the St. Paul Pioneer Press, the Minneapolis Times, the Rochester, N. Y., Post and Express, the Hartford Post, etc. The organization will send out this collection of details, very interesting and valuable, to any who may ask for it.

At the meeting on next Tuesday night there will be elected a temporary president and secretary, and also a committee on membership, who will suggest names of gentlemen in adjoining States who are interested in this movement. In its final shape the "Itasca Association" will be a dignified and representative body. Its work will then be rapidly pushed, and before snow flies we shall perhaps know the fate of this movement, one way or another.

Legal Objections and Difficulties.

Col. J. S. Cooper, the generous enthusiast who has taken the practical lead of this movement, is an attorney of attainments, and it has happened that in his practice he has more than once been concerned with cases involving private rights on Indian reservations, some of these cases having been fought through the highest courts of the land. In response to an invitation from a St. Paul gentleman, Col. Cooper has gone into this matter from a legal standpoint, and has endeavored also to assemble all the objections which would naturally be made by parties whose interests render them antagonistic to this movement. It may be well to present the Colonel's brief on these points in an extended form, as follows:

Chicago, July 14.—Dear Sir: In answer to your inquiries respecting the project for a national forest reserve in northern Minnesota, I have to say, as to your first question, What is the legal situation as to the lands within the proposed boundaries, their ownners and present residents as affecting the plan? my opinion is as follows:

FIRST—AS TO THE LANDS STILL OWNED BY THE NATIONAL GOVERNMENT.

Those lands are entirely subject to the control of Congress, to be sold, donated or devoted to any public use. That a public park is a public use, was decided by the Supreme Court of the United States in the case where, by act of Congress, Rock Creek Park was established in the District of Columbia, and authority was given to purchase or condemn the lands lying within the boundaries of the park.

(Shoemaker vs. United States, 147 U. S. Reps., 282.)

Among other things, the court said: "The validity of the legislative acts erecting such parks, and providing for their cost, has been uniformly upheld."

SECOND—AS TO THE LANDS WITHIN THE INDIAN RESERVATIONS.

The Supreme Court of the United States has fully affirmed the power of Congress to deal with and regulate the Indians on their reservations and their lands within the boundaries of the same.

See United States vs. Kagama, 118 U. S. Reps., 375, and other cases there cited and approved.)

In the above case the court, among other things, said: "The power of the general Government over these remnants of a race once powerful, now weak and diminished in numbers, is necessary to their protection, as well as to the safety of those among whom they dwell. It must exist in that Government, because it never has existed anywhere else, because the theater of its exercise is within the geographical limits of the United States, because it has never been denied, and because it alone can enforce its laws on all the tribes."

The decisions of the Supreme Court and the acts of Congress go to the extent of deciding that the national Government has sole power and jurisdiction over the Indians and the lands comprised in their reservations. It is therefore clear that Congress has complete authority to deal with the lands included in the Indian reservations, and either purchase them for a national park or pay to the Indians from year to year designated sums by way of rental for their joint use by white citizens as a place for out of door recreation, enjoyment and health.

THIRD—RESPECTING THE MERCHANTABLE PINE TIMBER INTERESTS.

Those lands, as well as all other property interests located within the boundaries of the proposed park, could not be taken by the national Government for a park or for any other purpose, except by satisfactory arrangements with the different owners, or except through condemnation proceedings by the Government, in which each owner must be paid the fair value of his property to be assessed by a court and jury, as the same was done in the Rock Creek Park in the case above cited.

Whether, after the Government shall have acquired, in addition to its lands already owned, those in the Indian reservations and certain other lands belonging to private parties, it could acquire the remaining lands within the park boundaries by condemnation proceedings where amicable arrangements with the owners can not be made, is a question which has not been decided by the Supreme Court of the United States, so far as I know.

The case of the Rock Creek Park is clearly in point to the extent that private lands may be condemned for a public park, and that such "use" is a "public use." But in that case the United States exercised the sole governmental authority over the district in question. Here the region in which such lands lie is under the jurisdiction of the State of Minnesota.

But there is one aspect of the case which would clearly give the United States jurisdiction to condemn these lands.

For over twenty years the general Government, under various acts of Congress, has been engaged in building, rebuilding, repairing and maintaining large dams at the head waters of the Mississippi River, within the proposed district, for the sole purpose of reservoiring the water against the dry seasons of the year, in order to aid navigation during these periods. There is no doubt that the power exists in the United States to acquire private property, by purchase or condemnation, for the purpose of improving the navigation of the Mississippi River. By how much more then than damming the upper river would the volume of water in the lower river be maintained if its sources shall be protected by maintaining the natural forests surrounding them? Both science and the common experience of mankind unite in the conclusion that "Forest floor prevents rapid evaporation and tends to turn surface drainage into underground channels, retards melting snow, and thereby reduces spring floods." By so much as the natural forests at the sources of a river are preserved, the volume of water in that river is maintained more equally throughout the dry and wet seasons. The region sought to be conserved by establishing a national park covers the headwaters of the Mississippi. Therefore the general Government, in order to protect the natural forests there in the aid of navigation, would have the power to acquire the lands in that region, either by purchase or condemnation.

But I do not consider that phase of the question a practical one now. My information, from several of the owners of these pine lands, is that if the general Government will protect the whole region from forest fires and illegal spoliation by the axe the owners of the merchantable pine are disposed to make such arrangements with the Government as will enable the latter to preserve all the timber for the park except the merchantable timber, and that to be removed under such governmental regulations as will not materially mar the beauty and utility of the remainder of the forest, and especially so as to protect the country against forest fires.

More than that, it is almost certain that many owners of pine forests would hold on to a large part of their timber as an investment for the future if they had assurance of protection from forest fires and illegal spoliation, such as would be the case should the United States assume the care and control of that region the same as it has in the Yellowstone Park.

The wholesale use of pine for commercial purposes has so denuded our forests that standing pine accessible to market is already becoming scarce. A corresponding increase in the value has ensued. Gauging the next twenty years by the past twenty, there are few, if any, substantial investments in the country which are better to hold for future markets than merchantable pine near to markets, provided it be protected from fire and spoliation.

So great has been the demand in civilized countries for wood and lumber in the past, and as a result prices have so advanced, that even in Germany, where the forests are protected by law, prices have doubled in about thirty years.

In my judgment it will only be a short time after the proposed park should be established when the merchantable pine in that region will be very greatly enhanced in value, on account of the assurances that will be given for its protection by reason of the general Government having control of that district by its troops. The owners of this standing pine can be trusted to see all this and act for their own pecuniary interests.

FOURTH—THE LANDS OWNED BY HOMESTEADERS AND IN SMALL TRACTS FOR AGRICULTURAL PURPOSES.

The above class is not numerous, nor are its holdings large. With a National Park established, and its forests thronged with visitors for their annual outings, those small farmers would find right at home a greater demand for their products than they could possibly supply. The fact that their farms would be within the limits of the park and would belong to and be cultivated by their owners would rather benefit than detract from the utility of the park. There are so few of them, and they are so widely scattered throughout that wilderness, as to constitute just what would be wanted if they were not already there.

FIFTH—THE VILLAGES WITHIN THE PROPOSED PARK.

There are only five villages or towns within the proposed boundaries of the park, whose size or importance is such as to demand separate consideration.

At present, practically the sole industry on which each of them depends, is the lumber interest. With the present rate at which the standing pine is being cut and marketed it will last only a few years longer. A leading lumberman, who spends most of his time in his lumber camps in Itasca county, told me two years ago when I was up there that the outside limit to the cutting of the merchantable pine accessible to market in all that region was ten years. Since then the East & West Railroad has been extended right through that region and all the pine forests about Cass, Winnibigoshish and Bemidji lakes made easy for marketing. Unless something be done, such as contemplated, a very few years will see the end of all that industry, and then those five towns will go the way of Goldsmith's Deserted Village, just like their predecessors have in northern Maine, Michigan and Wisconsin.

On the other hand, if the park be established those towns will still have the lumber interests to depend on for a much longer period than otherwise would be the case, and in the meantime would have the business which necessarily would follow the large numbers of people who every summer and autumn would throng that region for its salubrious climate, its majestic forests, its sparkling lakes and its abundant fish and game.

That park can be reached by rail within twenty-four hours by over 20,000,000 people living in prairie regions or districts in which the natural forests have been destroyed. The great multitudes which throng the Yellowstone Park and the Adirondack State Park of New York attest the love of our countrymen for natural scenery and their hunger for forests, lakes and streams in their yearly outings.

The elevation of the region at the headquarters of the Mississippi is equal to or greater than those regions in the Adirondacks most frequented by tourists. By reason of the vast stretches of native forests of pine, cedar and other balsamic trees still standing it has been ascertained, not only by medical and other scientific authority, but by personal experience, such as I, with many others, have had, that the region around the headwaters of the Mississippi has an atmosphere of marvelous effect upon diseases brought on from impurity of the blood; and those embrace most of "the ills which flesh is heir to."

No one has any right to predict with certainty what the effect of the creation of the proposed national park will be upon those five towns. We can only draw conclusions in this case from the influences which the Yellowstone Park has had upon the railroad towns near the entrances to that Park, and all my information is to the effect that they have prospered wonderfully.

To sum up this is the situation which surrounds all that region and controls all the interests there. They have the last great stretches of natural forests accessible to large centers of population left in this country. The wealth of the region chiefly consists in its standing, merchantable pine, which will last, under present conditions, for only a brief period. If it shall be cut in the future as it has in

the past, there will be left in the wake of the lumbermen the same desolated country which is seen all over northern Michigan and Wisconsin. Neither the climate nor soil is agricultural to an extent which will support much of a population. Meanwhile, if the cutting of the pine progresses with the same methods used in the past, the whole region, towns and all, is constantly under the menace of destruction by forest fires.

On the other hand, if this territory shall be embraced within the boundaries of a great people's national park, the persons now interested in that region will still have all their interests now owned amply protected, and will in addition profit from the thousands of visitors who will annually throng that park.

Pretty much all the great enterprises which have built up Florida and southern California have come as a result of investments by persons from outside, made through visiting those places in search of health or pleasure.

Governor Roosevelt is Right.

Governor Theodore Roosevelt, of New York, has a great way of getting at the essential facts of any proposition, and of taking the logical, which is to say the common sense, point of view in looking at a thing. Governor Roosevelt is in favor of this Minnesota forest reserve, and he presents it in one light which has been heretofore perhaps overlooked by others. He says:

"The rich men are clubbing together and purchasing great game and fish preserves. Why should not the Government do the same thing for the vast majority, who are not rich?"

Governor Roosevelt is right. Any thinking man who has noted the rapid disappearance of the open sporting grounds of the American people, who has seen the tightening financial conditions which more and more threaten the man without financial means, and who has seen the rapid growth of the great game preserves in this country, must know that the time is coming when America can no longer be regarded as the free hunting ground of a sport-loving and arms-bearing people. What that may mean to the American character, and more especially the American military character, perhaps the historians of the future may tell us. To-day the American is the best soldier in the world, and the poorest American may still be a sportsman. Whether he may be a sportsman fifty or twenty or ten years hence is another question. But if the American Government, caring for the American citizen and the American character, shall set aside proper portions of territory which shall still represent the original and unhurt America, then we shall yet see reconciled the grave questions between old world methods and new world methods, between the game preserve system and the open shooting system to which every American clings so tenaciously. It is without doubt true that, if left alone, the poor American sportsman will eat his cake at once. It is equally true that the rich American sportsman, if left alone, will eat the poor man's cake for him. Between these two there is war. It has been the custom of the Government not to allow two enemies to pass judgment upon each other by means of the judiciary of the land. Here is the opportunity of the United States Government to at least partially abate this quarrel. It can give the poor man preserves of his own, and allow the rich man to retain the preserves to which he is entitled under the laws of the land. The wisdom of this thing may be more apparent fifty years from now than it is to-day.

Visitors.

Mr. Noel Money, known for many years among the shooters of the country as a good shot and ardent sportsman, stopped in Chicago Monday en route from California, Montana and other Western sections. Mr. Money sails Wednesday next on the Majestic, and will reach England in time for the 12th. He expresses the deliberate intention of bagging a few grouse in Scotland before his return to America, which may perhaps be this coming fall. Since leaving America Mr. Money has had a varied and vivid career in sport, having killed such grand specimens as the great Siberian red deer, the large Russian bears, etc. He tells me that he used the Holland .303 double rifle, and found it so good that he would not care to use any other on any sort of big game. Some of the bullets were fitted with a steel cone at the point, and these he did not find successful. With such a bullet, used by mistake, he shot his first bear quite through and through and knocked it down, but did not kill it. This bear was shot at horse bait after dark, and was followed for twelve miles the next day without success. After that Mr. Money began experimenting with hollow point bullets. When he filled the aperture with wax the bullet did not expand. Then in a moment of inspiration he filled the cavity with chalk powder and used over it a cap of wax to keep in the powder. This bullet he describes as perfection. It penetrates hardly more than a foot, and the shock is something tremendous. It was with these bullets that he killed the double on bears which was some time ago mentioned in the FOREST AND STREAM. While in our Western States Mr. Money had no opportunity for hunting, but now and then caught a trout, and speaks with great astonishment of the abundance of trout in some of the Western streams, for instance, the Truckee River. Life in the open air seems to agree with this young man very perfectly, and for the sake of his Southern friends I may say that he never looked better in his life. Whether he will get to meet Captain Bobo again on a bear hunt is a question, but if so the worthy Captain had better do something to protect his bears.

Mr. William Allen White, of Emporia, Kan., has spent the week in Chicago, and business has brought him much in the vicinity of the FOREST AND STREAM office, so that I have met him frequently. Mr. White, as, of course, everyone knows, was the author of the famous "What's the Matter of Kansas?" editorial which reached such prominence in the last Presidential campaign. He is also the author of the charming "Boyville" stories and of many other magazine contributions. He will go to the United States Senate from Kansas as soon as he gets old enough, and we shall hear of him in many different ways as a man prominent in Western affairs. Chiefly admirable is Mr. White for his natural bigness of character and charming unaffectedness of disposition. A bit of a sportsman he is, too, and knows his Rockies shrewdly. General Funston, of Kansas, who has made so meteoric a record for himself in Cuba and the Philippines, is a great friend of Mr. White's, and they two have hunted together for many years. Once upon a time, before the game laws had very much respect given them in Colorado, these two worthies were on a hunting trip in the summer time, out beyond Estes Park. Here in a little valley they came upon a deserted village, some scores of houses without a single inhabitant, the abandoned camp of an earlier mining stampede. They took possession of this town in the name of Kansas, hoisting over it their broad pennant, and when they got tired of living in one house they moved into another. Mr. Funston, whom Mr. White describes as a shocking bad shot, went out hunting regularly after mountain sheep, and finally succeeded in killing a good ram, which they bore in triumph to the house which at the time they were honoring with their presence. They had disposed of most of their sheep, when, one morning, they were surprised to receive a visit from the game warden. While Mr. Funston entertained this gentleman in the front parlor, Mr. White pulled up a couple of boards in the drawing room and lost the head under the house for the time being. The game warden departed, silenced and apparently convinced. A few days later than this Mr. Funston went out after raspberries, taking his gun along as usual. He gathered a pail full of berries, which he put in a shady spot and threw his gun down beside them. Wandering a little way from this spot he at length lay down and went to sleep. He was awakened some time later by an unfamiliar noise, and on sitting up saw a very handsome cinnamon bear making for his pail of berries. It needs only be added that the bear got the berries, the future general of volunteers making a masterly retreat along the mountain side until he reached the bosom of the deserted village aforesaid.

Indians and Game Laws.

Speaking of game laws in the mountain country, one sees this week in the dispatches the report of some Crow Indians who killed an antelope in the country to the north of Lusk, Wyo. The sheriff went out after these Crows, but was stood off. He got a big posse and pursued them for many miles. Eventually the Indians came in and gave themselves into custody. While I am no special advocate of breaking the game laws, I can imagine that if I were an Indian, who had once seen the country teeming with the game which gave me a living, I might acquire a personal dislike for white men who came in, nearly exterminated the game, and then chased me around for killing a measly antelope or so. The white men personally dislike the Indians, yet I imagine there are two sides to the question.

Good Old Way.

In confirmation of the supposition that the Indian may not be so red as he is painted, we have this week also the story of Mr. John F. Campion, owner of the Ibex mine, of Leadville, Colo., and worth $6,000,000, who was arrested at his summer home at Twin Lakes for breaking the State fish laws. This reads in very wild West fashion, as Deputy Blades, who made the arrest, covered the wealthy Mr. Campion in the good old Western way for fifteen minutes with a plain unvarnished Western gun. Blades also arrested four other men in similar fashion, and they feel very much aggrieved and have sworn out warrants against him for assault with a deadly weapon. Methinks that, inasmuch as Mr. Blades did not turn her loose, neyther set her a-rollin', there may be difficulty in making such a charge as that stick, even yet, in Colorado.

Shadowing Pere Marquette.

The early voyage of Père Marquette, who sailed down the Kankakee and Illinois rivers 220 years ago, is to be duplicated by a Catholic priest, known as Brother Boisvert, who starts this week in a big boat with a company of several persons. What a change, my countrymen, since the days of Père Marquette!

Red Deer.

I stated that Mr. Money spoke with respect of the Russian or Siberian red deer, of which he killed specimens weighing up to 850lbs. I presume this is the same deer advertised for sale this week in the FOREST AND STREAM by Mr. Colvin, representative of Carl Hagenback. A rare chance for some wealthy American to get some grand park animals.

Gov. Tanner's Lion.

Governor John R. Tanner, of Illinois, has been for some days in the mountains north of Debeque, Colo., and dispatches of this morning state that he has succeeded in killing a large mountain lion, which is described as having been shot at night while prowling around the camp of the party.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

The Dead River Region.

STRATTON, Me., July 15.—*Editor Forest and Stream:* This vicinity has always been regarded by good hunters as the home of deer, moose, caribou and black bear, and may well be termed the Switzerland of Maine. Moose are more plenty this season than ever before in my remembrance. They are frequently seen about the shores of lakes, ponds and streams by fishing parties. There is no need to mention the caribou, as they are very scarce, and a close time has been imposed for a term of six years, from Oct. 1, 1899. Deer are too numerous to mention, and every sportsman who visits this section this fall is sure to get all the law allows if he can shoot straight. Grouse shooting will be fine this season, as the old birds have wintered well the past two winters, and large broods of small ones seem to be more plenty than usual. This region is full of lakes and ponds, all of which are well filled with trout, and a fisherman who cannot land the finny beauties to his heart's content is out of place with rod and reel. The Dead River region is easy of access, in the very center of the sporting territory of the State, where the natural advantages are all that could be desired. Services of reliable guides can be obtained at all times. Any sportsman desiring information in regard to hunting and fishing can obtain it from me.

A. M. JONES,
President Dead River Guides and Camp Owners' Association.

New Brunswick Notes.

AMONG local sportsmen the arrival of the veteran guide and woodsman, Henry Braithwaite, from his annual bear hunt is always an event. Henry is much revered by the younger generation, and his diaphonous narratives of life in the deep woods have a never failing charm. Henry brought out eleven bearskins, one of them the finest he ever secured. It measures 8ft. in length, and the fur is glossy and black unto blueness. This monster picked up trap and clog and carried them over three miles of mountain side, and was only found by the most skillful tracking. During his travels this spring Henry states that he saw forty-three moose, not counting calves, nor the same moose twice. He spent a great deal of time watching their aquatic operations, and is prepared to affirm by actual timing that a moose frequently remains under water for as much as a minute and a half. Moreover, he says that the animal, when feeding in deep water, can sink or rise at will. He had one experience this spring that for a time rather upset his equanimity. He was quietly paddling his canoe around a turn in a dead water. There was not a ripple on the water. Suddenly a huge form broke the surface a few yards in front of the canoe, took in a breath of fresh air and went down again. When the moose came up the second time Henry had passed the point where he first appeared. The moose on this occasion caught sight of him and made for shore at his utmost speed.

On another occasion the guide sat perfectly still in his canoe for over twenty minutes and watched a moose feeding on the bank of the stream. The moose frequently lifted up his head and looked straight at Henry, but gave no sign of alarm. When the guide finally picked up his paddle and resumed his journey the moose seemed to lose his head altogether, following the canoe for some distance and exhibiting the utmost curiosity.

Braithwaite on this trip made some investigation as to the mating time of bears. He is convinced that it is usually the latter part of June, though it probably extends into July and August. He examined the stomachs of all the bears he killed and found abundant evidence that caribou veal is a favorite article of bruin's bill of fare.

During the coming season Henry will have associated with him on the Deadwater region two of the most expert moose callers in Maine, Ed. Church and A. J. Kennedy. They will each have charge of a line of parties.

Salmon fishing on most of our rivers has not been as good as usual this season, owing to the continuous wet weather. Mr. J. S. Ehrich, of New York, however, is delighted with his initial experience on the Tobique, where he captured six salmon, varying from 10 to 20lbs. in weight. On the Restigouche the fishing has been exceptionally good of late. Messrs. Cochrane and Penlolt, members of the club, recently took fourteen salmon in one day at Indian House, averaging 20lbs. Messrs. Vanderbilt and Beach killed eight or ten large fish nearly every day at Kedgwick. In two days nineteen salmon were caught at the club house.

Dr. Coulthard, James S. Neill, John Palmer and S. Dow. Simmons, all local anglers, have returned from a very pleasant trip on the Dungarvon. They only caught ten salmon, but found the sea trout remarkably large and plentiful.

FRANK H. RISTEEN.

FREDERICTON, July 22.

Long Island Gunning.

LONG BEACH, L. I., July 24.—Snipe are beginning to arrive and some good bags are reported. The best way to get them is to stop at Queenswater over night and go out on the beaches and meadows early in the morning. Even if snipe are scarce the novel sights and sounds of the beaches and meadows at daylight repay the sportsman for the expenses of the trip. Snipe may be found on the north side of Long Beach in either direction from the depot at Queenswater.

If the Long Island meadow hen or clapper rail were not a tough bird there would long ago have been made an end of it. For some years the law was off when it should have been on, and on when it should have been off, so that the birds could legally be taken only in the breeding months; and they were taken then, just as they are now, although the law has been changed. The lawful shooting season will open on Aug. 16, but the birds have been killed all through July in the meadows of East Rockaway, Long Beach and vicinity. The parent birds are killed off while, at this writing, the young are in many cases still very small, and in fact some of the hens are still on the nest. Add to the destruction caused by the premature July shooting by city gunners the May and June egg gathering by the natives who collect large numbers for home consumption, and it will be seen that the measure of protection actually assured to the species by the application of the law is extremely slight.

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Do You Want Guides?—Parties wanting guides for hunting moose and caribou in New Brunswick this season should correspond with A. Pringle, Stanley, N. B.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

ANGLING NOTES.

Minnows for Bait.

FOR years the use of nets for taking minnows to be used as bait has opened the door for abuses of various kinds. The law in force up to 1899 permitted the use of a minnow net 40ft. long and 4ft. in depth, with ropes at either end not exceeding 30ft. in length. It was especially provided that minnow nets should not be used in streams inhabited by trout, but if the truth could be known it would show beyond peradventure that quantities of trout (I was about to write tons) were taken every year in nets. One man in particular, so far as I can learn, never even pretended to fish with hook and line, and I doubt if he owned a hook or a line used in angling, but he netted and sold bait fish and often had trout for sale, and generally they were large fish. I was morally sure that every trout was netted, and I tried again and again to prove it. It may seem to be an easy matter to catch such a man and convict him of illegal fishing, but one knows far more about it after making the effort. His neighbors were willing to aid in convicting him if their action could be hidden from him, but they said frankly if it should come to him that they had furnished evidence against him their barns would probably be struck by lightning some dark night when there was no lightning in the sky. For two years I had an officer watching this man, and he suspected it but did not know it positively; but finally he caught him, and when we faced each other in court, if black looks and muttered curses were dangerous I might have been sent to the hospital. The strong arm of the law got the man to the door of the jail, where he could ponder on the accommodations furnished inside, and then a smart lawyer and his construction of the law, to which the justice assented, saved the fellow. He had been so near to the dead line and smart lawyers are so expensive that it cost the man his nerve, or he no longer trusted his cunning, for he ceased his business altogether and no longer had either bait or trout for sale. His arrest did the business as thoroughly as a conviction would have done, and that was all that was desired. When that man went out of the bait-fish business the trout fishing in the stream near which he lived improved wonderfully, and anglers caught big trout by fair fishing as they had not done before in years.

The rules of the Fisheries, Game and Forest Commission provide that gill nets shall not be used, and in one lake it was found that a score of gill nets were operated to take bait fish. It was necessary to amend the minnow net law to make it more binding. I am not prepared to say that the law passed last winter is a perfect law, but if enforced it will stop much fishing that never was intended to come under the head of fishing for minnows.

Section 145 of the Fisheries, Game and Forest Law, as amended by Chapter 701 of the Laws of 1899, provides that "In all waters, except creeks and brooks, and waters inhabited by trout, minnows for bait may be taken with a net not more than 6ft. in length or diameter, without a license; in all waters, except waters inhabited by trout, they may be taken with any net if the owner thereof shall have first obtained from the Commissioners a license to catch minnows therewith. Such a license can only be granted upon payment of a license fee of $1 and the execution of a bond by the owner of the net, to be approved by the same Commissioners, conditioned for the payment to the people of the State of $100 if the holder thereof during the time for which the license is granted." There are men who can be trusted to take minnows for bait with a net, but I am also sorry to say that there are many more who cannot be trusted with a net unless there is a bond to insure that the net will be used only for the purpose for which it is intended to be used. For some kinds of fishing bait fish are a necessity, and I am in doubt if, under the bond and license clause, it was necessary to use the words "in all waters except waters inhabited by trout," for in large waters inhabited by lake trout, minnows are not found where there is any likelihood of trout being taken in a minnow net. If the law was made to read brook trout, it would open many lakes to minnow net fishing which are now closed by a strict interpretation of the law.

The Application.

A person who desires to make application for a minnow net license must send to the Fisheries, Game and Forest Commission at Albany for a blank and fill it out. The applicant specifies the kind of net to be used, its size and the waters where situated, in which the net will be used. Also: "I hereby state that said water in which I desire to use nets is about —— miles long and empties into ——; that the same is not inhabited by trout of any kind; that I have not been convicted of illegal fishing within the past year; that I have accounted for all net license tags heretofore furnished me with licenses that have expired, and that I have reported all fish caught under said expired licenses."

This declaration the applicant swears to, and procures the signature of two men who recommend the granting of the application.

The Bond.

With the application a bond must be furnished by three bondsmen, who bind themselves in the penal sum of $100, etc. "The condition of this obligation is such, that if the above bounden —— —— —— does not violate or attempt to violate any of the provisions of the Fisheries, Game and Forest Law of the State of New York relating to the protection of fish, and shall return to the water alive and without unnecessary injury all black bass, Oswego bass, whitefish, pickerel, pike and mascalonge caught in the net licensed in pursuance hereof, and shall faithfully observe all of the rules and regulations of the Board of Fisheries, Game and Forest, so far as the same are applicable to or made a part of the conditions of the license given him by said Board of Fisheries, Game and Forest, then this obligation to be void, otherwise to be and remain in full force and virtue." It may be seen that this bond is practically the bond given by licensed commercial fishermen, with the addition of certain fish which must be restored alive to the water, and with reference to the law under which the license is granted.

The License.

The application being satisfactory to the Board of Commissioners, a license is issued to the applicant, which gives the number of the license and the number of the tag which must be attached to the net, and says to whom the license is issued, residence, etc., the kind of net and where it is to be used, and the kinds of fish it can be used for: "But in no case shall this license be construed as authorizing the use of nets for the purpose of catching brook or California trout, black bass, Oswego bass or mascalonge, and no fishing shall be done in violation of the rules and regulation of this Board, which are hereto annexed and made a part thereof."

The rules and regulations number seventeen, and provide, among other things, that a license is not transferable, and if a licensed net is used by other than the licensee it shall be deemed forfeited; all licenses granted during the year will expire on the 31st day of December following; and the Chief Fish, Game and Forest Protector may, at any time, in his discretion, revoke any license after notice to the licensee of charges made against him; licensed nets shall be set, drawn or used only between sunrise and sunset, and no net shall remain in the water after sunset unless raising it is prevented by the weather. Any person holding a license, who shall forfeit the same by reason of being hereafter convicted of illegal fishing, or who shall violate any of the rules, shall not thereafter be granted another license within one year. The metal tag with number of license issued to each licensee shall be attached to the net when in use, in such a manner that it will be on top of or above the water, and in plain sight at all times. The licensee must exhibit his license when required to any fish and game protector and forester, or to any peace officer of the State, or to any person designated by the Board of Fisheries, Game and Forest.

Kipling Spooned his Salmon.

My note about Kipling having taken Pacific salmon with the fly, and the suspicious admission that a spoon was lost later in the game, went over to England in FOREST AND STREAM and caught the eye of Mr. Marston, the editor of the Fishing Gazette, who clipped it for republication in his paper, but first sent it to Mr. Kipling for any reply he might choose to make. Mr. Marston writes me and sends galley proof of my note with Kipling's answer, appended as follows:

"Having often heard salmon anglers who have fished the rivers of the Pacific coast of North America say that fly was no use, we sent Mr. Cheney's note to Mr. Rudyard Kipling, and his reply shows that anglers who want to sup with or on a Pacific coast salmon must have a long spoon. He says:

" 'Dear Mr. Marston: In the language of the immortal Jorrocks, "Spoon! Spoon! Spoon!" "Fly" is a slip of the rod. Those brutes won't rise to it.

" 'I return the cutting. Sincerely,

" 'RUDYARD KIPLING.

" 'To R. B. Marston, Esq.' "

Mr. Kipling having admitted that it was with a spoon, not a fly, that he killed Pacific salmon, the question, has the Pacific salmon ever been taken with the fly? is now up to some other angler. I have searched through some of Admiral Beardslee's letters, hoping to find what he said about this matter, writing me from Alaska, but I cannot find that he confesses to the fly, and yet something of this kind lingers in my memory.

The FOREST AND STREAM of July 22 has just arrived, and I find in it the note of Mr. Henry C. Beadleston, and for the first time I have a doubt about the Pacific salmon being made to rise to a fly when properly presented, and the doubt arises because I know that Mr. Wells is a successful salmon fisherman on Canadian rivers, and presented his fly to the fish as is done in Canadian waters. It was upon this that I had banked that the Pacific salmon would rise to the fly. When a salmon fly is offered to Atlantic salmon it is not presented as a trout fly, for instance, is presented to trout. The current draws the fly continually down stream, just beneath the surface, and the constant motion of the rod in the angler's hands draws the fly up stream, producing a succession of short flights up and down stream on the part of the fly, causing the hackle's wings, etc., to open and shut, giving the fly the appearance of something alive; and why a Pacific salmon that will take a spoon will not take the fly, silver doctor for example, or dusty miller with silver body, that is as much a live thing as a spoon trolled through the water, I have not been able to understand, but the experience of Mr. Wells shakes my faith, heretofore strong in theory.

Last year I cast all one forenoon on the Restigouche without a rise, using silver doctor and Jack Scott. At noon an old resident on the river and a man familiar with salmon fishing in that particular water asked me what I had been using, and when I told him, he said the Durham ranger was the fly for that water. In the afternoon I used a Durham ranger, and had two rises and killed two salmon, and my friend attributed my success entirely to the fly, but I did not, and in my own mind was positive that I would have got the fish had I continued to use either the silver doctor or Jack Scott. The conditions changed between forenoon and afternoon, and it was the change in the water and not in the fly that brought me to fish, to my way of thinking. For days the water had been falling, and was very clear, and though we could see big fish in the pools, they would not notice a fly. In the morning of that day referred to it began to rain, a slight drizzling rain, and soon after noon the water came up just a trifle, and a fog settled over the river. Then it was that the fish began to move, and I had my rises and I happened to have a ranger on my leader. I would not be ungenerous enough to tell the old gentleman, who was a firm believer in the Durham ranger, that I believed I would have had the rises to a Mitchels, dusty miller or some other fly, although I thought so. For the same reason I have believed that when salmon are fresh run and on the rise they are not particular as to the name of the fly if it is properly presented, and that Pacific salmon would prove no exception. I say I have believed, for Mr. Wells' trial may well cause me not to be too cock sure, when belief is confronted by practice.

Eels.

Mr. Wm. A. Wheeler writes me from East Templeton, Mass.: "Your article in FOREST AND STREAM seems to substantiate the theory that all eels breed in salt water, and what I will say does not imply that I wish to criticise this theory adversely. In this town is an artificial pond tributary to the Connecticut River, shut off from the connecting streams by eight dams. This pond is the most productive water for eels that I ever heard of, and their size is remarkable. There is no place in this vicinity where a body of water so soon restocks itself with fish as this; two seasons being sufficient to bring back the most excellent fishing for pouts and pickerel.

"The pond is not over fifty acres in extent, with a very muddy bottom, and it has been my good fortune to be present twice in the last twenty years when the water was drawn off for repairs to the dam. The quantity of eels taken on each occasion was enormous in comparison to the size of the pond—hundreds and hundreds of pounds being taken, and not one less than 2lbs. in weight, and the majority weighing 4 and 5lbs. The last time the pond was drawn I saw one Frenchman with a sugar barrel and a large washtub full of these large eels, and I think that not one would weigh less than 4lbs. He salted them for winter use. Can it be possible that all these were barren eels? One shop, which is now gone, had lots of trouble every winter with eels getting in the iron wheels, eight or ten frequently being taken out at one time. It was always in January or February that the eels clogged the wheels. Were these females going to the sea to spawn? We find lots of small eels 8 or 10in. long below the dams in summer, but never catch any in the ponds. The size of the eels here is the more remarkable when compared with those seen in the city markets."

What Mr. Wheeler states is not inconsistent with the belief that all breeding eels breed only in salt water; in fact, what he says supports that belief. The pond evidently furnishes an abundance of rich fish food, and the eels grow rapidly and to great size, as any species of fish will do under similar circumstances (the late Max von dem Borne, one of the most distinguished of German fish breeders, told me that a pike (*Lucius lucius*) which he hatched artificially in one of his ponds escaped into a pond containing black bass fry, and in eight months from the time the pike was hatched it attained a length of 17in. and weighed 2lbs.). It does not follow because the eels in Mr. Wheeler's pond are of great size that they are barren, but rather the breeding instinct has not moved them to repair to salt water. The eels caught in the mill wheels are beyond doubt those which are seeking salt water to breed. That elvers are found below the dams shows that a supply of young eels is coming up from the sea constantly to grow fat and large on the rich pasturage furnished by the pond.

In looking for Count Von dem Borne's letter giving the exact weight and length of the pike, for I think it was a fraction over 2lbs. and a fraction over 17in., I found a letter dated Sept. 7, 1887, referring to eels, although I have not yet found the pike letter. Of eels he wrote nearly twelve years ago: "In Germany we believe that eels spawn in salt water only. The male eel will not leave the mouth of the river, while the female will go far up to the sources. The eel is not a native in the Danube, and the German Fisheries Association made great efforts to introduce the fish. For some years we have placed millions of fry of eels, all females, in the upper parts of the river, and this year we have sent from 10,000 to 20,000 mature males from Hamburg, out of the estuary of the Elbe to the mouth of the Danube on the Black Sea, and in consequence of our conviction that the fish spawns only in salt water." Count Von dem Borne made a close study of the habits of the eel, and I presume I could find other personal letters from him on the subject if I had the time to search for them, but in his published works he arrived at the same conclusions that I gave in FOREST AND STREAM of July 1, quoting from other authorities, but I had forgotten all about the Danube experiment until I found the letter this evening.

I noticed in one of the daily papers of quite recent date that an eel had been caught in a net in Senaca Lake, New York, that was 13ft. long. It seems that this lake has had its sea serpent in former years, and now the fishermen think they have caught it in an eel of 13ft. Perhaps some FOREST AND STREAM reader will tell what there is to the story. The fisherman is alleged to have been George Sorner, living on the shore of Pine Bay, seventeen miles south of Geneva.

Ouananiche.

The article in current issue of FOREST AND STREAM on the ouananiche, by Noah Palmer, has afforded me considerable satisfaction in the reading, in one particular, at least, although I cannot agree with him in all his conclusions. The reputation of the tackle smashing, high jumping, deep diving ouananiche had been made known to me before my first visit to Lake St. John, and thoughtlessly, perhaps, I went to the scene prepared as I would be to catch any game fish, and without a surplus of rods to be smashed, leaders to be broken and flies to be lost. That I did not lose a fish, break a rod, leaders, line or fly, I put down to the fact that I had not encountered the tackle smashing variety of ouananiche, but I was loath to confess that I had not smashed rods, etc., and lost a good proportion of fish hooked. As Mr. Palmer confesses to having killed such fish as he hooked, it makes it easier for me to say what I have. When I say I did not lose a fish that I hooked I refer to fish hooked in fly-fishing, for I did troll in the lake near the Island House, and did lose a number, as I deserved to do, for using a spoon.

The only bit of tackle that I broke was two flies at the upper pool of the Metabetchouan, on another visit. Twice I hooked ouananiche on the upper fly of my cast, and the fish broke off the point of a fly below in dragging it about in the pool. Altogether I considered myself extremely fortunate in not mixing up with the kind of ouananiche that causes disaster, famine and pestilence. The fish that I did catch were game fish, and about that there is not the least doubt in my mind, whether I caught them in the rough water at the foot of the Grande Décharge, in the lake at the Island House, or in the pools of the Meta-

betchouan. In the second pool one fish that I hooked jumped clear of the water twelve times, and no club in the waters of the earth will do that. Strange as it may appear, my first ouananiche was caught on a bumble bee fly, and I never caught another on that fly. I had been casting unsuccessfully with standard ouananiche flies at the foot of the Grande Décharge, when Johnny Morel took from my book the bumble bee and asked me to try it, and I then hooked and landed my first ouananiche from that river. The ouananiche is a good, honest, graceful, game fish, and not the holy terror that he has been pictured in ink, and he does not smash tackle or escape more frequently than other game fish if properly handled.

A. N. CHENEY.

New England Fishing.

BOSTON, July 22.—The people of Chandler's Mills, near Great Pond, Me., are much disappointed. Dispatches to the daily papers say that Grover Cleveland and Joseph Jefferson have not been able to visit that noted bass fishing locality, as intended, by reason of illness in the family of Mr. Jefferson. The two have become almost inseparable anglers. They hope to visit the Belgrade and Great Pond bass waters later in the season.

Mr. D. W. Farquhar, of Newton, will put his fishing trips this year all in at his pretty camps on the shore of Rangeley Lake, where he is at present located with his family. Mr. J. D. Kinsley, of Newton, is at present at Andover, Me., and taking in the local brook fishing, as well as the bass fishing at Roxbury Pond. His wife and children are with him. Later he will occupy Camp Stewart, Richardson Lake. His son is to be accompanied by a schoolmate. The boys are counting greatly on the fishing and doubtless will stay till into September and try for a deer, since it may now be done legally by campers, by buying a license. By the way, Commissioner Stanley says that a great many licenses to take deer in September have already been applied for.

The Snowman case, for guiding without a license, has been taken before the full bench, at Portland, and has been argued on the question of the constitutionality of the guide license law. Judge Foster, not now a member of the bench, argued for Snowman. He claimed that there would be "just as much reason in making a resident of Maine take out a license for showing another a blueberry patch" as for showing hunters where to find game or fish. Mr. Carleton presented the case for the law, arguing chiefly upon the great benefit that law had already been to the fish and game interests of the State. The bench has the matter under consideration.

Mr. H. W. Clarke, of Boston, may well be styled a veteran trout and salmon fisherman. He has recently returned from his twenty-sixth consecutive annual trip to the Rangeleys and his twenty-third to the Mountain View House. One season he tried some of the Aroostook waters, but came back to the Rangeleys again, though being much pleased with the new fishing grounds. Old attachments are strong. Mayor Quincy, of Boston, is in the Adirondack forests for a vacation. He is a fisherman too. Mr. A. G. Frost, of Boston, has been spending some time at the Rangeleys on a fishing trip. He had indifferent success till he made several camping trips to other waters.

The rod and line smelt fishermen are having some success in the bays and inlets along the Massachusetts coast. Mr. Alden says that his son has taken several dozen at each trip off Cohasset. Rod and line fishermen are also taking some mackerel in the bay, though they have been small, and late reports say that they are leaving. Maine shore fishermen say that striped bass are being taken at the mouth of Cathance River, Mr. Ed. Warren having taken three big ones there the other day. His success has set the summer boarders to fishing. Recently Commissioner H. O. Stanley was called to see "the salmon trying to go up over the dam" at Augusta. Local fishermen were enthusiastic and glad that the salmon were at last returning to the Kennebec. After a good deal of trying one was taken, when behold it was a big sturgeon.

In the FOREST AND STREAM of last week your correspondent F. H. Risteen, of New Brunswick, sees fit to accuse Mr. L. Dana Chapman, secretary and treasurer of the Megantic Club, of giving me false information in regard to the Canadian Government* having put the beginning of the open season on moose, caribou, deer and birds forward to Sept. 1. I need only refer Mr. Risteen to page 71 of the revised edition of the game laws of the Province of Quebec, which reads: "Open season for moose and deer (except in counties of Ottawa and Pontiac) Sept. 1 to Dec. 31; caribou, Sept. 1 to Jan. 1."

Page 77, same book, reads: "Open season on partridge, Sept. 15 to Dec. 15; ducks," pages 77-78, "Sept. 1 to March 31; divers, Sept. 1 to April 4." As the information given me was given particularly in reference to Megantic members and in connection with other notes regarding the same club, the matter does not seem to be so much of "an odd specimen of fiction" as Mr. Risteen designates it.

Mr. L. Dana Chapman is not only well posted as to fish and game matters, but he is also a hard man to follow in a woodland tramp. His recent flying trip through the Megantic preserve would be termed a "record breaker" by those in touch with long distances in the woods. He fairly covered the entire preserve, in the continuous route he took, in eighteen hours. The distance was forty and one-half miles, all on foot, except four or five miles of canoeing. One Boston man took alarm when he reached Austis, though he had planned the trip with Mr. Chapman. One of the guides told the Boston sportsman that if he undertook to follow Mr. Chapman he would be "a dead man" before he got half-way round.

The late fly-fishing has its advantages, even if liable to be not quite up to that in the earliest season. The sportsman's whole family can join in the outing. Parties to the more distant mountain resorts of Maine for fly-fishing are now in order. Mr. H. A. Phinney, his wife, Mr. F. S. Frost, Mr. W. G. Peck and daughter, and Mrs. Helen A. H. Dolliver, all of Arlington, are off to Round Mountain Lake on a fly-fishing trip. Mr. Frost, though over seventy years of age, is a devotee of the camera. He was always the mentor of the late George T. Freeman, and together they have produced some remarkable pictures of natural as well as historic scenery. Good pictures of the Maine woods may be expected from this trip of Mr. Frost.

Fly-fishing is reported still to be holding out well at the Rangeleys. At Billy Soule's Pleasant Island camps Mr. H. W. Smalley, of South Framingham, took forty-five trout during his stay of one week. The fourteen he saved weighed from 1 to 2lbs. each. Mr. A. J. Hobbs has taken seven doubles, one pair getting away with a strong leader between them. At Bemis and Haines' Landing the fly-fishing has been better the past week.

Late Bangor reports say that the salmon season on the Penobscot has been a failure. Very few have been taken from the pool by anglers, and the netters "down river" have not made half their usual catches. Those most familiar with that river and its salmon interests say that the greater need is a close time of from two to three days a week, to allow part of the salmon to reach their spawning beds. During the close time all weirs should be open. The New Brunswick rivers have some protection of this sort, and the salmon are greatly benefited thereby. From July 15 to April 1 all weir and net fishing is closed on the Penobscot, though hand and single line fishing is allowed till Sept. 15. It is contended, however, that the salmon start up the Penobscot early, and that to almost entirely stop them from going up during all the spring and early summer will soon destroy the whole stock.

SPECIAL.

* Our correspondent probably intended to write "the Provincial Government of Quebec," and this not to apply his statement to the other provinces.

CHICAGO AND THE WEST.

Western Angling and Anglers.

CHICAGO, Ill., July 21.—Until to-day this has been a week of extreme heat, and the weather has apparently set the bass down. We would hardly expect to meet the best of sport now until cooler weather comes at the close of summer. About as good luck as I have heard of recently was that of Billy Payson, of Chicago, who has been fishing at Hartland, Wis. Mr. Payson caught sixty-seven bass in three days. He used a bass fly above a live frog, and casting in this way he had seven double strikes, of which he landed three pair, lost two pair and landed two half-pairs. He found this lure very taking for the big-mouths.

Mr. Joel Kinney, of this city, has sent down a nice box of bass from Trout Lake, Wis., and among them were some lake trout. The box is sent without explanation, and no one knows how he got the lake trout, which are very rarely taken there except in the early spring.

Mr. John Watson has been fishing again at Maksawba club house. He found the water too high for bass, but caught four catfish which weighed 25lbs.

Messrs. Harry E. Goebel and C. B. Cleveland, of Chicago, have gone on a fishing trip to the waters in the neighborhood of Manitowish, Wis.

Mr. N. W. Andrews, of Chicago, has gone for a trip of a few days at the Cheneaux Islands.

Messrs. Joe Downey, Dan Quirk, A. H. Darrow, W. S. Burley and H. C. Castreal, all of Chicago, have returned from an angling trip near Minocqua, Wis. Mr. Downey caught a muscallunge weighing 32¼lbs., and four smaller 'lunge. Mr. Quirk took nine 'lunge, the largest 18lbs. Mr. Darrow took seven 'lunge, the heaviest 22lbs. Mr. Burley caught several 'lunge, his heaviest being 16lbs., and Mr. Castreal caught three 'lunge, the heaviest being 14lbs. Other fish, pike, bass, etc., were taken by this party.

Mr. Warner Arms, of Chicago, left this week for an extended trip to the Georgian Bay, Ontario.

Mr. Arthur Orr, of Evanston, is now at Watersmeet, Mich., on a fishing trip.

Messrs. O. von Lengerke and W. H. English leave tomorrow night for a short trip after bass, but have not yet chosen their locality.

Mr. Paul Van Dyke, of Princeton, N. J., is in Chicago this week planning for a Northern fishing trip.

Along the Mississippi.

The Clinton Herald, of Clinton, Iowa, says that the fish are biting splendidly all along the Mississippi River near that point, and also in the bayous and sloughs along the Illinois shore above Lyons. Bass, catfish, pike and white perch are mentioned in the list, and it is also said that carp are biting well. One loses confidence, however, in the accuracy of the informant in this case, upon reading the sage advice on how to catch carp. "Nothing will tempt a hungry buffalo or German carp like a dough ball, and many are now being caught with this kind of bait, although they will not turn up their nose at a good fat minnow." It is possible the reporter means to say a good fat worm.

Concerning Carp.

Mr. A. Lent, treasurer of the Austin Powder Company, at Cleveland, Ohio, has recently been having some sport on the St. Clair flats, and he writes me as below regarding a matter which is of certain importance to the anglers of that region: "In a recent issue of your paper there appeared an article on carp. Will you kindly mail copy to Henry L. Avery, Pearl Beach? He is situated on the North Channel, some three miles distant from Pearl Beach, and in a locality where the best of fishing and duck shooting may be found. Mr. Avery is a thoroughbred sportsman, taking great interest in all that pertains to gun or rod. The carp appear to be gaining a strong foothold in the waters of the St. Clair Flats. He is greatly interested in the question of how to dispose of them and thereby preserve both game fish and birds."

I am sure I don't know what can be done to help Mr. Avery out of this dilemma. So far as I know there has been no way discovered by which the German carp can be exterminated after it has once gained a foothold in any given water. This fish has ruined the Kankakee River and many of the Indiana lakes which were formerly fine bass waters. Lately I told of the experience of a gentleman who this spring shot many scores of these carp on the marsh where he was duck shooting, near Toledo, O. He called attention to the fact that these fish were ruining the duck marsh, and indeed this is to be feared for the St. Clair Flats, as well as that the bass fishing may be injured. For this interloper, brought to this country by one of the most absurd mistakes that ever damaged American sport and sporting interests, there can be nothing but execration. Inasmuch as he is a traitor and full of treason to our ancient traditions, I know of no better handling than to apply to him the doctrine of that Union general who said, "If any man attempts to pull down the American flag, shoot him on the spot." When you see a carp, kill him, not necessarily to eat him, but as a guarantee of good faith. If any reader of FOREST AND STREAM knows how to get the carp out of the St. Clair Flats he will be criminal if he holds his peace.

Fishing Up and Down the Potomac.

Buckton Dam.

BETWEEN Strasburg and Riverton on the North Branch of the Shenandoah is the little station of Buckton. Just below this are the ruins of a rude dam of loose stone some 6ft. high and so old that the pool above has filled with the years' floods, until it is a long stretch of wading water, but too shallow to hide the bass comfortably, and so they are not plenty. A half-mile or more below is a pool called the Irishman's Hole, in which local legend has it an unfortunate from "that emerald set in the ring of the sea" lost his life before the war, which is the date from which all modern history is reckoned. This pool is about 20ft. deep, and is the winter home and summer resort of all the big bass for that five-mile stretch of water. They sometimes wander far afield for forage, but their permanent home is here, and here they mostly stay until some one drops them a line from above with an irresistible postscript.

Judge White, of Warrenton, who has shown his love for this part of the river in these columns, and who remembers it when with a single companion he could get more than a half-gross of good bass here in a day's fishing, was here on the last day we celebrated, initiating his little son into the mysteries of the gentle craft.

The boy was lucky in the enjoyment of privileges that do not come to many youngsters. Good water, good weather, good fish consideration and a loving coach. His line moved away with the certainty of big game, and he was keen to fasten at once, but the Judge quietly forbid him. "Wait; give him line; don't hurry. When he starts again strike him," and the boy did with all his little might, and it was enough. The bass, a 4-pounder, started for headwaters at a rate that robbed his captor of any sense of victory; the reel whizzed, the handle was striking his knuckles at every revolution and the blood streaming down his fingers completed his demoralization, and he danced up and down in the boat shouting for his father to take the rod. "I can't." But when the fish was finally landed he had so far recovered as to boast that he had struck him anyway, and "Don't tell mamma I didn't catch him"; and the next one, half as large, he managed by his lonesome. His ambition now is to kill a big one without help, and the chances are good he will not have long to wait.

As we were skirting Doerflinger's Pool, the next one below, trying to entice a bass out of the shady nooks on the marrgin, we saw under the spreading branches of a great sycamore an overgrown frog, a boomer, sitting on the sloping mud bank, apparently lost in reveries of childhood's happy hours on the banks of the Nile. The branches were low and reached far out on the water, but an underhanded sweep luckily landed the No. 4 Hawthorne within 6in. of him with the snell on his neck. He gave a surprised wriggle, sat up and showed his breastpin, with a sly glance at the tempting looking cricket alongside. A slight twitch turned the fly over, and at the first sign of animation the frog, with a croak, pounced on the luckless intruder. When we boiled our coffee for the noon-day lunch, froggie was broiled on the coals and was so toothsome under these conditions that we shall have an eye open for the balance of the family after this.

Just above this pool is Catlett's Ford, and while we rested here and hired a small native to bring us a bucket of fresh milk from a nearby spring house, there came down to the water a patriarch bestriding a likely looking cob, and stopped a moment to chat. My chum's boatman, who looked about seventy, hailed him and recalled himself to the elder by saying, "I'm your cherry boy." He explained to us that nearly half a century ago he had been employed by the other and directed to take a couple of baskets to a neighbor's and pick them full of cherries. A dance was to come off somewhere in the neighborhood and he could not resist the temptation, so he hid the baskets, hurried home to fix up, and went down to the dance. The old man came with the wagon, borrowed some baskets and picked the cherries himself. They both laughed over the incident, which seemed to us like a whiff of the little hatchet epoch, and then the rider, who announced that he was eighty-four, rode through the ford. We remarked his erect seat and he said, "They call me the colt-breaker yet." It was interesting to note the careful way in which his horse trod among the rolling stones of the rocky bed of the stream as if feeling not only his way but his responsibility.

Not far from this in a shallow the other boat picked from the bottom of the river a flattened stone, washed by the floods of a thousand storms and worn by its jostling neighbors of the centuries into the rude likeness of a ploughshare, and there grew up about that stone a fairy story of aboriginal art. The savage ancestors of Pocahontas, long before Columbus plowed the deep, had used this primitive implement. With a disposition that builds its opinions by resistance, adverse argument only confirmed the absurd theory. In vain it was suggested that no evidence existed that the nomads of this region ever utilized animal power in cultivation; that only proved ignorance, did not establish a condition. Or that in the rocky soil the soft stone would not last a furrow; that no known appliance could fasten or control so rude an implement; more ignorance. Or that the stone, which was not basaltic but sedimentary, would pull in two with the slightest strain; all was useless. Stone hoes and stone axes, why not stone plows? and that alleged stone plow is now on its way by easy stages to archæological experts, and woe betide them if they find in it no relic of a red-skinned hayseed.

If my friend had his way, this stone should be set up at

the door of the Smithsonian Institution and applicants for appointment on the scientific staff would find in this their Shibboleth. No civil service or other examination would be required, but the only mental and moral test of fitness would be the possession of an intelligence broad enough to see in this stream-worn slab a cultivator; and that lucky or brazen individual should be made chief who boldly asserted that he could decipher Adam's trademark in its moss-eaten surface.

The ledges and dams which reach across the streams of the Upper Potomac system often have but a single opening with water sufficient to carry over a boat, and here the current is swiftest and reaches in a glassy curve over the stones almost to the foot of the rocks, and then breaks into heavy waves that look to the uninitiated as the worst possible place in which to trust a boat, but over which it goes as lightly and safely as an autumn leaf. It is so often the case that failure becomes a disappointment that a good fish lies in wait at this point and a fly dropped over the curve and drawn back to the edge is nearly sure to get a response. Sometimes as he takes it he goes over the fall with his first leap, and a broken rod is the price paid for that experience this year. He felt a 10-pounder, but when he was at last killed weighed scant 3. To the angler it seems a poor place for the fish to ambush for that as soon as he can sight his game it is gone, but the certainty with which he hits the fly encourages the belief that in this as in many others the wily bass knows his business. The bass, like the pike, and probably most other predatory fishes, has a habit of heading off his game, and perhaps if one fished up, the bass' turning rush at the fly would carry him up stream, but fishing down, which seems to find them easiest, he intercepts the fly with his head turned down with the current. Inconsistent as it may seem, a quick, hard strike is safest both for rod and fish. It turns the bass' head up stream, and you get him in the pool where the man, as well as the fish, has a fighting chance, whereas a slower tightening of the line lets him over the falls and puts his pulling weight at pounds on a rod intended to hold ounces, to say nothing of the nasty effect of stones and swift water on one's tackle and the fish's tactics.

The river here runs eastwardly. The best way to fish is with the fly. If it is too clear and bright to find the bass in mid-river, is to fish down the northerly bank in the morning when the bushes on that side cast their shadows up stream and up the other bank in the evening.

Hunting here as a couple, we take each a side, and on half a dozen different days and seasons the left bank has yielded fish in the morning only, the right bank in the afternoon. It is not hard to find a good bass reason for this, that there should be no fish on the north side after 12 o'clock. The fish when at rest is always headed up stream, and the afternoon sun would be shining right in his eyes under the bushes, and besides the glaring light and comfortable warmth of the summer sun against the bank and shallow water, the fish itself would stand revealed too conspicuously to his hunted prey or his hunter —man.

When a bass is found in this water though, he gives a good account of himself, and is as reluctant to come to net as the famed ouananiche, but he leaves the water no oftener than his congener of the slit face, his fight after his long runs are over being principally a system of borings. Every time he catches sight of the skiff his heels "kick at Heaven" and he starts for the bottom of the river as if he had business in China.

They are, however, not so plenty as they once were, and one of the old inhabitants who had spent his life on the banks of the river and who claimed to know every stone in it, thinks he can remember when there were more fish than stones, but now, he mourned, "You can count every bass in the river when it's low."

Among the curiosities of "Angling Literature in America" is a series of articles written for Knickerbocker's in 1855, by Charles A. Munger. They are a parody, and a very clever one, on old Izaak, and called the "Complete Susquehanna Angler." He makes his Piscator say, "The flesh of the Susquehanna bass is reputed by those who have had the good fortune to taste it to surpass that of all the other dwellers in the water. Yet I cannot vouch for the truth of such affirmation, since never have I, nor have any of my honest brethren with whom I have met, been so fortunate as to eat thereof. Still there be reasons which force me to give faith to the rumor, to wit: For that it is generally received as true; also, for that they be very scarce and difficult to take, qualities which give flavor and relish to anything; and also for that I did once see an honest angler, who did assure me that formerly he did see another brother of the rod and line, who, upon his honor as a fisher, did most religiously and solemnly asseverate that he did once upon a time drink of some water wherein tradition said a large bass was seen to lie, and that it had a most sweet and wholesome taste."

This must have been the striped bass, as our black bass were not planted in that stream until later, and one cannot help a feeling of satisfaction that such a scoffer never had the opportunity of enjoying the real thing either in the water or out of it, though for that matter if he had he could no longer have been so bitter; he would have been "pigeon-livered and lacked gall." HENRY TALBOTT.

Where to go.

ONE important, useful and considerable part of the FOREST AND STREAM's service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsman for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

Take inventory of the good things in this issue of Forest and Stream. Recall what a fund was given last week. Count on what is to come next week Was there ever in all the world a more abundant weekly store of sportsmen's reading?

Canadian Angling Notes.

Editor Forest and Stream:

Were all the world to think alike the readers of FOREST AND STREAM would certainly be deprived of much amusing reading about the game qualities of the ouananiche. The letter from your correspondent of last week who ranks the fresh water salmon as inferior to a chub is quite amusing, but not a bit more so than his quotation from "the famous ouananiche fisher who has written a book on the subject." It is just such nonsense as he quotes about "the rod smashing qualities of the ouananiche," and the luck of killing even "two fish out of five hooked," that has brought contempt upon the fish by leading visiting anglers to anticipate something different from what they actually find. In their vexation they rush to the other extereme and belittle those admirable game qualities of the ouananiche that have been so fully testified to by Messrs. Cheney and Van Dyke and Myers and Morris and scores of other unassailable witnesses. I would not have it appear, however, that I have any desire to discredit the statements of that small minority of ouananiche anglers that expresses disappointment with the sport. It is unreasonable that the whole world should be expected to think alike, either in regard to the game qualities of the ouananiche or to any other subject of equal interest to those engaged in the discussion of it. For one ouananiche is so much unlike another in the method of its fight and in the game qualities that it displays, that I can quite understand much of the difference of opiniion in respect to the fish. Nor is it to be expected that the 2¼lb. fish, which was about the largest taken by Mr. Palmer, would put up anything like the fight of the 5 and 6lb. ouananiche that are so familiar to old-time anglers on the Grande Décharge.

Within the last few weeks there has been splendid sport in the Discharge, and many anglers report catches of thirty to forty fish a day. Some of those sent to Quebec during the last few days weighed 3 and 4lbs. each.

It will be good news to lovers of the sport to learn that Mr. Beemer is quite determined to keep up the supply of fish in Lake St. John and its tributary water. I paid a visit recently to his hatchery at Roberval and found there 75,000 young ouananiche, which are to be planted at the end of the present month. The parent fish were taken in the Metabetchouan last autumn, and there was a difference of about fifteen or twenty days in the time of stripping them. The spawn was placed in the incubator about Nov. 1, and the fish eggs were hatched on April 21, all the fry being out by May 20. The young ones are exceedingly healthy in appearance, and the mortality has been almost nil.

There are also to be seen at this hatchery 75,000 young salmon and 25,000 little fish, the product of a cross between salmon and ouananiche. What the fate of the latter will be it is difficult to foresee. They may prove a good game fish; but if worthy of perpetuation the stock may have to be renewed by a fresh crossing of the parent fish, since mules have not, so far as I have been able to inform myself, the power of reproduction, and these little fish are decidedly mules, if there be any ground for the contention—which I am not ready to admit—that the ouananiche and the *Salmo salar* are two distinct varieties.

The experiment of planting the salmon from the sea in some of the tributaries of Lake St. John is likely to prove deeply interesting. I see no reason why it should not succeeed, providing that a good passageway for the fish is made with dynamite at the falls of the Saguenay above Chicoutimi. During a recent visit to Newfoundland, I found that salmon ascend from the sea to the headwaters of several rivers, which necessitate their passage through large inland lakes. Why should they not similarly ascend through Lake St. John into the Peribonea, the Mistassini, the Ashuapmouchouan and other rivers tributary to it, in which they may be planted, and where they may spend the first two or three years of their life?

E. T. D. CHAMBERS.

QUEBEC, July 21.

Concerning ——— ———.

Editor Forest and Stream:

Some years ago the impropriety of "ringing the changes" on the hackneyed expression "speckled beauties" was discussed in your columns by the readers of FOREST AND STREAM, and the "consensus of opinion" by a large majority, in fact *nem. con.*, pronounced against it with emphasis, as being dudish, qualmish, nauseous and generally reprehensible. For a number of years thereafter this repulsive expression remained in a state of "innocuous desuetude," much to the relief of delicate stomachs.

But as vigilance relaxed the expression again stealthily crept in, until one can now scarcely ever become immersed in an otherwise interesting fishing narrative but he will straightway run up against "speckled beauties" in all its sickly smiling inanity, upon which event this writer invariably throws down the magazine, and when it is again picked up he carefully avoids falling into the same trap by skipping the offending article altogether.

One is tempted to exclaim with Hotspur:

> "Swear me, Kate, like a lady as thou art,
> A good mouth filling oath; and leave in sooth,
> And such protest of pepper gingerbread
> To velvet guards, and Sunday citizens."

In the name of suffering humanity, Mr. Editor, please bring into requisition your editorial prorogative—use the blue pencil, and spare not such offenders against the canons of good taste—substitute for the sickly and unwholesome "speckled beauties" some such sturdy expression as "freckled frowsies," for example, or any other that a healthy stomach can digest without a faintness in the epigastric region. Your suffering friend,

COAHOMA.

P. S.—After laying down FOREST AND STREAM for the purpose of relieving an overburdened mind by outpouring the above diatribe, I again picked it up and shortly fell upon Mr. Cheney's very moderate and sensible protest against the same abuse. I felt that I was "outclassed" by Mr. Cheney, and ought to withdraw somewhat "hot and incoherent" complaint; but on reflection I concluded that the medicine, though drastic, was fitted to the malady; so let it go, if you think it worth space. COAHOMA.

Long Island Fishing.

WRECK LEAD, L. I., July 24.—Fishing has been good during the past week. Sea bass and fluke are very plenty, and weakfish are still caught. They are, however, not as plenty as they were early in the season.

QUEENSWATER, L. I., July 24.—A peculiarity of this season's fishing is the scarcity of bluefish and blackfish. The auxiliary yacht Inner Beach has been off to the wreck of the Iberia or the fishing banks nearly every day this season. Capt. Henry Wright says that there have been no bluefish to speak of for some time. He thinks the low temperature of the water is the cause. There seems to be plenty of food, and as soon as the water gets warm, either by a change in current or by the heat of the sun, there will probably be a great run of fish. Weakfish, sea bass and fluke are very plenty, and a basket full may easily be caught, either in the bay or off to the banks.

A curiosity in the way of the gastronomical powers of the weakfish was discovered by Capt. Samuel Jackson. It was an oyster nearly 3in. in length in the stomach of the fish. The strangest part of the story is the fact that the oyster was recognized as a Prince's Bay, consequently the fish must have made a journey of thirty miles after swallowing the oyster.

Chicago Fly-Casting Club.

CHICAGO, July 22.—*Editor Forest and Stream:* At the fifth competition of the club to-day the following records were made:

	Long Distance Fly, Feet.	Distance and Accuracy, Per Cent.	Accuracy and Delicacy, Per Cent.	Bait Casting, Per Cent.
I. H. Bellows	127	94 2-3	94 1-3	95 8-15
H. G. Hascal	....	85	96	96 13-15
N. C. Heston	....	90 1-3	.....	95 11-15
C. Lippincott	....	91	96 2-3	93 1-15
H. Newkirk	....	88 1-3	95	97 13-15
F. N. Peet	119	93	96 1-3	92 3-5

Holders of Medals.—Long distance fly, I. H. Bellows; distance and accuracy, I. H. Bellows; accuracy and delicacy, C. A. Lippincott; bait casting, H. A. Newkirk.

The Kennel.

Fixtures.

BENCH SHOWS.

Aug. 5.—Providence, R. I.—Rhode Island Kennel Club's one-day show. Crescent Park. George S. Miller, Sec'y.

Sept. 4-7.—Toronto, Can.—Toronto Industrial Exhibition Association's eleventh annual show.

Sept. 12-15.—Milwaukee, Wis.—Milwaukee Kennel Club's fifth annual bench show. Edward Meisenheimer, Sec'y.

Oct. 2-6.—Dallas, Tex.—Texas Kennel Club's second annual bench show. Sydney Smith, Sec'y.

Oct. 3-6.—Danbury, Conn.—Danbury Agricultural Society's eighteenth annual show. G. M. Rundle, Sec'y.

Oct. 10-13.—Providence, R. I.—Rhode Island State Fair Association. E. M. Oldham, Supt.

Nov. 15-18.—Philadelphia, Pa.—The Philadelphia Dog Show Association's first annual bench show. Marcel A. Viti, Sec'y.

Nov. 22-24.—New York.—American Pet Dog Club's show. S. C. Hodge, Supt.

FIELD TRIALS.

Aug. 31.—Emmettsburg, Ia.—The Iowa Field Trial Association's second annual field trials. M. Bruce, Sec'y.

Sept. 4.—La Salle, Man.—Western Canada Kennel Club's annual amateur field trials. A Cole, Sec'y.

Sept. 6.—Morris, Man.—Manitoba Field Trial Club's thirteenth annual trials. William C. Lee, Sec'y.

Oct. 31.—Greene Co., Pa.—The Monongahela Valley Game and Fish Protective Association's fifth annual field trial. A. C. Peterson Sec'y.

Nov. 7.—Washington C. H., O.—Ohio Field Trial Club's trials. C. E. Baughn, Sec'y.

Nov. 8-9.—Lakeview, Mich.—Michigan Field Trials Association's second annual trials. E. Rice, Sec'y.

Nov. 12.—Bicknell Ind.—Independent Field Trial Club's first annual trials. George D. Mayfield, Sec'y.

Nov. 14.—Chatham, Ont.—International Field Trial Club's tenth annual trials. W. B. Wells, Hon. Sec'y.

Nov. 17.—Newton, N. C.—Eastern Field Trial Club's twenty-first annual trials. Simon C. Bradley, Sec'y.

Nov. 21.—Lawrenceville, Ill.—Illinois Field Trial Association's inaugural trials. O. W. Ferguson, Sec'y.

Nov. 28.— ———, Mo.—Missouri Field Trial Association's third annual trials. L. S. Eddins, Sec'y.

Dec. 8.—Newton, N. C.—Continental Field Trial Club's trials. Thos. Sturges, Sec'y.

1900.

Jan. 22.—West Point, Miss.—United States Field Trial Club's annual trials. W. B. Stafford, Sec'y.

Feb. 5.—Greenville, Ala.—Alabama Field Trial Club's fourth annual trials. T. H. Spencer, Sec'y.

Derby Entries of the Manitoba Field Trials Club.

Mahdi, liver and white pointer dog, May 27 (Tippo—Queen Kent). Charlottesville Field Trial Kennels.

Dervish, liver and white pointer dog, May 27, (Tippo—Queen Kent). Charlottesville Field Trial Kennels.

Kartum, liver and white pointer dog, July 3 (champion Rip Rap—Toxic). Charlottesville Field Trial Kennels.

Soudan, black and white ticked pointer bitch, July 3 (champion Rip Rap—Toxic). Charlottesville Field Trial Kennels.

Bedouin, black and white ticked pointer bitch, July 3 (champion Rip Rap—Queen III.). Charlottesville Field Trial Kennels.

Luna, black, white and tan setter Bitch, January (Tony boy—Christiana). Charlottesville Field Trial Kennels.

Ightfield Rill, lemon and white pointer bitch, April 20 (Alberta Joe—Ightfield Diana II.). F. G. Simpson.

Jubilee Lilla, black, white and tan setter bitch, March 29 (Brighton Monk—Manitoba Belle). G. B. Borradaile.

Nora, lemon and white setter bitch, April 19 (Duke's Rush—Nellie). H. G. Spurgeon.

Witch, black and white pointer bitch, May (Shot—Tannis). James Gower.

Princess Bonnie, liver and white pointer bitch, May (Shot—Tannis). C. C. Bradley.

Star Bondhu, black and white setter dog, May 1 (Dick Bondhu II.—Bonnie Lit). John Wootton.

May Bondhu, black and white setter bitch, May 1 (Dick Bondhu II.—Bonnie Lit). John Wootton.

Kit, black and white setter bitch, March 1 (Larry—Angela). F. W. Scott.

Ightfield Ripple, liver and white pointer bitch, April 20 (Alberta Joe—Ightfield Diana II.). E. R. Collier.

Shiftless, black and white setter bitch, April 19 (Duke's Rush—Nellie). Winnipeg Kennels.

Trixie, orange and white setter bitch, March (Kingstone—Duke's Ruby). D. E. Rose, agent.

Bona, black, white and tan setter bitch, April (Tony Boy—Christina). D. E. Rose, agent.

Hurstbourne Cricket, black, white and tan setter bitch, June (Tony Boy—Cynosure). D. E. Rose, agent.

Minne W., black, white and tan setter bitch, January (Dude B.—Miss Bess). D. E. Rose, agent.

Pride, black and white setter dog (———————). D. E. Rose, agent.

Braun, liver and white pointer dog, April (Von Gull—Baby Ruth). D. E. Rose, agent.

Forest Hall Chief, black and white setter dog, April 17 (Val Lit—Maid of the Morn). E. McKenney.

Forest Hall Victor, black, white and tan setter dog, April 17 (Val Lit—Maid of the Morn). E. McKenney.

Bob Acres, orange and white setter dog, July 4 (Tony Gale—Minnie T.). Del Monte Kennels.

Miss Medows, black, white and tan setter bitch, July 4 (Tony Gale—Minnie T.). Del Monte Kennels.

Miss Bangle, black, white and tan setter bitch, July 4 (Tony Gale—Lightfoot). Del Monte Kennels.

Queen Lill, black, white and tan setter bitch, July 4 (Tony Gale—Lightfoot). Del Monte Kennels.

Chadwick, black, white and tan setter dog, July 4 (Tony Gale—Lightfoot). Del Monte Kennels.

Del Monte King, black, white and tan setter dog, July 4 (Tony Gale—Lightfoot). Del Monte Kennels.

Cyrano de Bergerac, black, white and tan setter dog, April 5 (Duke of Manitoba—Dora M.). W. F. Ellis.

Manitoba Prairie Bird, black and white ticked setter bitch, March 29 (Brighton Monk—Manitoba Belle). E. H. White.

Saskatchewan Ned, liver, white and tan pointer dog, April 20 (Alberta Joe—Diana II.). Thos. Johnson.

Snowball, black setter bitch, March 25 (Little Billie—Scwab). Thos. Johnson.

Aunt Sally, black setter bitch, July 11 (Toss—Mrs. Black). Thos. Johnson.

Fairview Tom, liver and white pointer dog, March 16 (Sir Walter—Van's Pride). W. Gould Brokaw.

Fairview Tibbie, liver and white pointer bitch, March 16 (Sir Walter—Van's Pride). W. Gould Brokaw.

Fairview Patty, liver and white pointer bitch, May 3 (Prince Boy—Fanny Davenport). W. Gould Brokaw.

Fairview Bonnie, black, white and tan setter bitch, April 15 (Belton Boz—Vick). W. Gould Brokaw.

Misfortune, black and white setter bitch, March (———Queen). W. Gould Brokaw.

Pontiac, black, white and tan setter dog, March 23 (Count Gladstone IV.—Hester Pryme). Avent & Duryea.

Soux, black, white and tan setter bitch, March 23 (Count Gladstone IV.—Hester Pryme). Avent & Duryea.

Ute, black, white and tan setter bitch, March 23 (Count Gladstone IV.—Hester Pryme). Avent & Duryea.

Coddo, black, white and tan setter bitch, March 23

Apaclie, black, white and tan setter dog, March 19 (Count Gladstone IV.—Tory Luna). Mrs. H. B. Duryea.

Piccolo, black and white pointer dog, February (———————). Jos. Lemon.

Continental Field Trial Club.

NEW YORK, July 18.—*Editor Forest and Stream:* In sending you list of entries for the Continental Field Trial Club Derby I neglected to put in Joe Cumming, Jr., whelped January, 1898, by Joe Cumming—Laura, the property of Mr. W. W. Titus.

THEO. STURGES, Sec'y-Treas.

Canoeing.

American Canoe Association.

Twentieth Annual Meet, Hay Island, St. Lawrence River, Aug. 4-18.

To the Members of the American Canoe Association:

The annual meet of the American Canoe Association will be held from Aug. 4 to 18, inclusive, at Hay Island, St. Lawrence River. The main camp will occupy favorable locations on both sides of headquarters, which will be directly between two small bays.

The ladies' camp will occupy a selected position convenient to the general camp and headquarters.

Meals will be served by caterer in mess tent, at the usual rate of $1 per day.

A camp store, conducted by Mr. McParland, will be conveniently located and camp necessities kept in stock. Orders will be taken for articles not on hand.

Mails will be distributed in camp at the secretary-treasurer's tent. Address United States mail and express matter A. C. A. Camp, Hay Island, Clayton, N. Y., and Canadian mail and express matter A. C. A. Camp, Hay Island, Gananoque, Ontario, Canada.

Carpenters and laborers have been engaged and lumber purchased, and tents, floors, skids, etc., will be built for members at reasonable rates. Lumber and nails will be sold to members who desire to build their own floors, etc. Members desiring floors are requested to send their order, stating size desired, by Aug. 1, or as soon after as possible, to John S. Wright, chairman camp site committee, 333 West avenue, Rochester, N. Y. After July 28 address care of camp address given above.

Tents, cots, camp-chairs and tables may be rented at reasonable rates by giving three days' notice to the chairman of the camp site committee, stating size of tent, etc.

Customs Regulations.—The same arrangements as have prevailed in former years have been made for canoes and dunnage coming from the United States. Duty must be paid on provisions.

Cruises.—Several short cruises will be arranged under competent guidance to some of the most beautiful spots in the Thousand Islands, and it is hoped that all members will come prepared to take part.

Signals.—The A. C. A. signal code will be used to convey all intelligence from headquarters to the entire camp. Copies of the code may be obtained from the secretary. Price, 10 cents.

Water Parade and Illumination.—The officers urge all members to bring colored lanterns and flags and colored fire. The illuminated parade will take place if possible, also a review of the fleet, and a special effort will be made to illuminate the camp. Members are also requested to bring their musical instruments, songs, jokes and any odd costumes they may have.

Camp Rules.

1. A member of the executive committee will be appointed each day as "officer of the day," who will have charge of the camp, and will be obeyed accordingly. He will appoint four members as pickets to assist him. The officer of the day and pickets will wear distinguishing badges.

2. An active member and four associate members will be in charge of the ladies' camp. (See ladies' camp committee.)

3. Members will register, pay their camp dues ($1), and obtain badges at secretary's tent immediately upon arrival.

4. The commodore and secretary will be at headquarters for the transaction of business from 9 until 11 A. M. and 1 until 3 P. M. each day, but will be immediately available at all other hours.

5. Tents may be located by owners, subject to the approval of the camp site committee and with due regard for the thoroughfares and lines. Daily before 10 o'clock tents and grounds must be put in order; all refuse, papers, etc., must be ready for removal by the camp cart. Members will be held responsible for the appearance of their tents and the surrounding grounds. Due regard to dress while at meals is requested.

6. Camp will be open daily from 10 A. M. to 5 P. M. Guests may be invited by card, obtained of the secretary. Before 10 A. M. and after 6 P. M. no guests will be expected in camp, except by invitation for occasions specially announced on bulletin board.

7. Neither guests nor members from main camp will be expected in the ladies' camp before 10 A. M. or after 7 P. M., except by invitation, nor will the ladies be expected in the main camp before 10 A. M. or after 7 P. M., except by special invitation, announced on bulletin board.

8. Visiting boats must land at the steamboat wharf, unless otherwise directed by officers in charge.

9. Reveille will be sounded at 7 A. M. The United States Army bugle calls will be used.

10. Flags will be raised at 8 A. M. and lowered at sunset. Taps will be sounded at 11 P. M., after which quiet will be maintained in camp. Hours for meals will be noted on the bulletin board and called by bugler.

The observance of these rules will greatly facilitate the officers in the discharge of their duties.

F. S. THORN, Commodore.

A. C. A. By-Laws, Sec. 2, Chap. 1.—Every member attending a camp shall pay for camp expenses; for general camp $1, and for division camp such sum as may be determined upon by the executive committee of the division, provided such sum does not exceed $1. Visitors when accompanying members may be admitted to the general camp at the discretion of the commodore and secretary-treasurer, and to the ladies' camp on the invitation of an associate member and at the discretion of the committee governing it; provided, that if they spend more than two nights in camp the member introducing them shall pay $2 for each, the same dues and camp charges as regular members. But this shall not preclude the admission of any of the immediate family of a member.

Transportation Arrangements.

The Trunk Line Association, New England Passenger Association, Central Passenger Association, General Passenger and Ticket Department, the Grand Trunk Railway System, the Canadian Pacific Railway and the Richelieu & Ontario Navigation Company have granted the customary concessions, viz.: A round trip of one and one-third fare to Clayton and Gananoque. Members will pay full fare to the points named, obtaining from the selling agents certificates which, when indorsed and visédi at camp, will enable the holders thereof to return to the point of starting by continuous passage at one-third of the regular rates. Tickets may be purchased three days prior to and during the camp, and certificates will be honored for return trip (without stop over) for three days (Sundays excepted) after the close of the camp, Aug. 18.

All certificates must be indorsed by the secretary-treasurer and the special agent.

The special agent of the Trunk Line Association will be at the camp to visé certificates on the following dates: Friday, Aug. 11; Wednesday, Aug. 16.

The Richelieu & Ontario Navigation Company have granted the rate of one and one-third fare, all points on their line to Clayton. This rate will not apply on their weekly steamer Hamilton, running between Hamilton and Montreal and touching only at Canadian ports.

Members arriving at Gananoque or Clayton by rail via R. W. & O. or by steamers of the navigation company (from Hamilton, Toronto, Kingston, Deseronto, Belleville, Brockville, Prescott, Montreal, Quebec, and intermediate points) will find the steamer Valeria at the railroad dock, running on the following schedule. The Valeria does not run Sundays, but the A. C. A. launch will connect with trains on those days:

Leave Gananoque 6:45 A. M.; arrive Hay Island 7 A. M.; leave Gananoque 2:45 P. M., arrive Hay Island 3 P. M.; leave Clayton 10:15 A. M., arrive Hay Island 11:30 A. M.; leave Clayton 5 P. M., arrive Hay Island 6:10 P. M.

The rate on the steamer Valeria will be, from Clayton to Hay Island and return, 75 cents per passenger, which includes one canoe and duffle. From Gananoque to Hay Island and return, 50 cents per passenger, which includes one canoe and duffle.

Round trip tickets from either Gananoque or Clayton will be furnished by purser of steamer Valeria.

All canoes, duffle, baggage, freight or express matter should be prepaid and plainly marked Clayton, N. Y., or Gananoque, Ont., A. C. A. Camp, Hay Island, via steamer Valeria.

Any other particulars regarding transportation will be gladly given by the undersigned, and the committee would be pleased to help clubs or members in securing favorable transportation from the railroads in regard to handling canoes and duffle.

The transportation committee: C. W. Lansing, chairman, Worcester, Mass.; Geo. A. Howell, Toronto, Ont.

Sailing and Paddling Races—Decked Canoes.

Event No. 1. Record Combined Race—Paddling and sailing, ½ mile alternately, three miles; time limit, 1½ hours; start to be made under paddle. Aug. 10, A. M.

Event No. 2. Record Sailing—Four and one-half miles; time limit, 2 hours; same rig and seat to be used in events Nos. 1 and 2. Aug. 10, P. M.

Event No. 3. Record Paddling—One-half mile straightaway. Same canoe as events Nos. 1 and 2. Aug. 11, A. M.

Event No. 4. Novice Sailing—Three miles; time limit, 2½ hours. Open only to members who have never contested in any but their own club sailing races. Aug. 11, P. M.

Event No. 5.—Trophy Sailing—Nine miles; time limit, 3½ hours. See rule 5 of racing regulations. Aug. 12, A. M.

Event No. 6. Dolphin Sailing Trophy—Seven and one-half miles; time limit, 3 hours. Canoe winning first place in trophy race will not compete in this event. Aug. 12, A. M.

Event No. 7. Sailing, Live Man Overboard—Decked sailing canoes, ½ mile. At the discharge of gun the passenger will go overboard, the canoe will pass around the quarter mile buoy, pick up the man, and then sail to home buoy.

A. C. A. War Canoe Championship Race.

Event No. 8. War Canoe Race—A. C. A. championship, 1 mile straightaway. Aug. 14, 10 A. M.

Sailing Races—Open Canoes.

Event No. 9. Open Canoe Sailing—One and one-half miles; time limit, 1½ hours. Open or partially decked canoes allowed.

Event No. 10. Combined Sailing and Paddling—One-half mile, alternately one and one-half miles; time limit, 1½ hours. Start under sail; single blades. Open or partially decked canoes allowed.

Note.—In events 9 and 10 the sail area is limited to 40sq.ft. No rudder or seat projecting beyond gunwales allowed. One pair detachable leeboards may be used. The paddle can only be used for steering, except in event No. 10 on the paddling leg. The same canoe, sail and leeboards will be used in both events. Canoes may have the usual bow and stern decks of about 32in., and side decks of about 2in. wide, with combing about 1½in. high. Canvas covers or other substitutes for decks will be measured as decks.

Division Sailing Races.

Event No. 11. Atlantic Division cup.

Event No. 12. Central Division cup.

Event No. 13. Western Division cup.

Event No. 14. Northern Division open canoe sailing for Orilla cup.

Note.—Division sailing cup races will be sailed on Aug. 16, weather permitting, provided they have not been sailed at division meets, and will be sailed under the rules provided by each division, which will be posted on the bulletin board day of race, and called in the order published. Division regatta committee will run their own sailing races. (See Chap. 9.)

Division Paddling Races.

Event No. 15. Western Division Gardner cup, paddling.

Event No. 16. Northern Division war canoe race; open to A. C. A. members only. Aug. 14, 3 P. M.

Paddling Races.

Event No. 17. Trophy Paddling—One mile straightaway; paddles optional. Aug. 15.

Event No. 18. Paddling—Double blades, open canoes, ½ mile, with turn.

Event No. 19. Tandem Paddling—Single blade, open canoes, ½ mile, with turn.

Event No. 20. Relay Race—Open paddling canoes, single blades; 1½ miles, over sailing course, three men from each club or division. Starters paddle to and around first buoy, pass an article to second man, who paddles to and around second buoy, passing to third man, who paddles to the finish.

Event No. 21. Paddling—Single blade, ½ mile, with turn.

Event No. 22. Novice Paddling—Single blade, open canoes, ½ mile, with turn. Open only to members who have never contested in any but their own club paddling races.

Event No. 23. Four-Men Paddling—Single blades, open canoes, ½ mile, with turn.

Event No. 24. Tandem Overboard—Single blades, open canoes, ¼ mile. At the discharge of the gun both men will jump overboard, clear of their canoes, regain their seats in same and paddle to home buoy.

Event No. 25. Tilting Tournament—Sparring poles will be provided by the regatta committee. Each sparrer will stand immediately aft the forward thwart. Both contestants must be on their feet when giving and taking.

Event No. 26. Upset Paddling—Single blade, open canoes.

Event No. 27. Hurry-Scurry—Single blade, open canoes. Run, jump, swim and paddle.

Event No. 28. Ladies' Paddling—Double blades, open canoes, ¼ mile, with turn.

Event No. 29. Ladies' Tandem Paddling—Single blade, open canoes, ¼ mile, with turn.

Event No. 30. Swimming—One hundred yards.

Notes.

First, second and third prizes will be awarded in all events except Nos. 25, 28, 29, 30, in which two prizes will be awarded. Two starters to win first, three starters to win second, and four starters to win third.

Flag prizes will be awarded sailors and paddlers. First prize flag will be blue ground with event in white letters; second prize same as first, except body will be red; third prize same as the others, except body will be white.

A special banner, emblematic of the "A. C. A. war canoe championship," together with a suitable "follow" prize, donated by Com. Thorn, will be awarded the winning crew of the war canoe event. Flags for second and third places will be awarded also.

Events Nos. 1, 2, 3, 4, 5, 6, 11, 12, 13, 14 will be called on the dates shown in programme, weather permitting. The time for starting same will be posted on bulletin board by 8 A. M., date of race. Postponed events will be run off first opportunity.

Events Nos. 8, 16, 17 will be run on dates shown in programme, wind, sea or rain notwithstanding.

The committee reserves the right to call remainder of programme at any time during the meet, when in their judgment the conditions are most opportune, notice of which will be posted on the bulletin board at 8 A. M. date of race.

Entries must be filed with the clerk of the course one hour previous to calling of any race.

All events will be called promptly at hours designated on the bulletin board. Events postponed for lack of starters will not be called the second time. Stragglers will be ruled off the course.

All races will be governed by American Canoe Association rules, given in 1899 Year Book.

Al. T. Brown, Rochester, N. Y., chairman; John W. Ely, Rochester, N. Y.; F. B. Huntington, Milwaukee, Wis.

Camp Site Committee—G. L. Kelley, Buffalo, N. Y.; C. V. Ketchum, Gananoque, Ont.; John. S. Wright, Rochester, N. Y., chairman.

Regatta Committee—F. B. Huntington, Milwaukee, Wis.; John W. Ely, Rochester, N. Y., secretary; Al. T. Brown, Rochester, N. Y., chairman.

Transportation Committee—Wm. E. Barlow, Sing Sing, N. Y.; Geo. A. Howell, Toronto, Ont.; Chas. W. Lansing, Worcester, Mass., chairman.

Entertainment Committee—S. A. Anderson, Buffalo, N. Y.; E. A. Burns, Toronto, Ont.; L. P. Hubbell, Buffalo, N. Y., chairman.

Fleet Captain—Harry R. Ford, Buffalo, N. Y.

Rochester, N. Y., July 12, 1899.

To the Members of the American Canoe Association:

This year the camp site committee is working hard to make the camp the most attractive in the history of the A. C. A. Not only in respect to the situation and laying out of the camp has care been taken, but particular attention has been paid to the charges for camp outfits, as will be noticed in the accompanying list. As this has only been accomplished by careful estimates and much work, it is hoped that the members of the A. C. A. and their friends will show their appreciation by attending the meet in large numbers.

Hay Island, which has been selected as the site of the 1899 meet, is about 1½ miles south of Gananoque, on the Canadian side, among the Admiralty Group, and for beauty of situation is far ahead of any of the recent camp sites of the A. C. A. The island is indented by two bays directly opposite each other, with a narrow level space between where the headquarters will be located. There is a fine sand beach in each of the bays, good for bathing. The shore line in front of the main camp is quite broken, affording many picturesque spots for the tents, while the outlook on all sides is beautiful, many small islands being near. Careful attention will be paid to the laying out of the ladies' camp in the most attractive, convenient and comfortable manner. The center of the island is well wooded with birch, beech and maple, and the banks are covered with pines and cedars. The waters round about are considered the best for bass fishing at the islands, while pickerel and pike are also abundant, many people coming from as far as Alexandria Bay for the fishing.

What will be of especial interest is that the sailing course is particularly fine, the local men assuring us that there is seldom a day when on one side of the island or the other good wind and water may not be found. It is expected that there will be at least 200 in camp, and it is hoped even more will attend.

The Canadian canoeists will go to Gananoque in order to reach the island, while the Americans will proceed to Clayton and thence by steamer Valeria, which stops at the camp dock four times a day.

Lists, with prices, follow, and it is earnestly hoped that those who are sure of going to camp will send in their orders for camp outfits as soon as possible, so as to be out of the way of those who may decide later, and thus somewhat lessen the work of the camp site committee.

Rent of tents per week: 7x9, $1.50; 10x12, $2; 12x14, $3; 12x17, $3.25.

Rent of tent floors: For tent 7x9, $2.40; for tent 10x12, $4; for tent 12x14, $5.25; for tent 12x17, $8; porch 6x10 for 10x12 tent, $2.25.

Rent of wire cots, $1.25 per week; rent of mattresses, $1.25 per week; rent of camp beds, 50 cents per week; rent of camp-chairs, 20, 30 and 50 cents per week.

JOHN S. WRIGHT,
Chairman Camp Site Committee.

Western Division.

CHICAGO, Ill., July 22.—Pursuant to call, the meeting of the Western Division of the A. C. A. met at the Grand Northern Hotel in this city at 3:10 this afternoon, the following members being present: Vice-Com. H. C. Morse, Central Division, Peoria, Ill.; Rear-Com. Wm. C. Jupp, Western Division, Detroit, Mich.; R. M. Lamp, Madison, Wis.; F. W. Dickens, Milwaukee, Wis.; T. B. Lafferty, Davenport, Ia.; J. M. Studebaker, Jr., South Bend, Ind.; N. H. Cook, Chicago, Ill.; E. H. Holmes, Milwaukee, Wis.; F. B. Huntington, Milwaukee, Wis.; N. B. Cook, Chicago, Ill.; Harry B. Cook, Chicago, Ill.; E. Hough, Chicago, Ill.

At the preliminary organization of the Western Division of the A. C. A. the following officers were elected at Milwaukee, Jan. 16: Vice-Com., H. B. Cook, Chicago, Ill.; Rear-Com., W. C. Jupp, Detroit, Mich.; Purser, D. H. Crane, Chicago, Ill.; Ex. Com., A. W. Freise, Milwaukee. The meeting of to-day was accordingly called to order by Vice-Com. Harry B. Cook, of Chicago, Mr. F. B. Huntington, of Milwaukee, being chosen to act as secretary.

Vice-Com. Cook, after addressing a few remarks to the meeting, said that he presumed the first matter of moment was the election of officers for the Western Division, pursuant to the notice of the Commodore of the A. C. A. Mr. Fred Dickens, of Milwaukee, rose and said that he presumed members would be glad to hear from Mr. Morse, of Peoria, who was thoroughly posted on all the questions pertaining to the organization of the Western Division, and who had had long experience with the A. C. A. in official capacity.

Mr. Morse made a lucid and succinct address. He stated that he was very glad to see this forming of the fifth branch of the A. C. A., in addition to the Eastern, the Atlantic, the Northern and the Central divisions. He had witnessed the growth of the movement for a Western Division, and he was very glad to congratulate all present upon the successful outcome of their efforts, which showed indeed that they had the best interests of canoeing at heart, and cherished not the least of sectional feeling. Since March 1, 1899, there had been secured 109 members for the Western Division, including fifty-four new members, the latter representing new material to be sure, and not yet seasoned canoeists, but material as good as the best. Of the present roll of the new division, there were thirty-seven former members of the W. C. A. There were eighteen members from Milwaukee, fourteen from Chicago, fifteen from Detroit, seven from Davenport, four from Des Moines and twenty-four from Peoria, the city from which he had the honor to hail. He said that it had been feared that, as some of this constituency apparently robbed the Central Division, it might be weaker; but he was glad to say that the Central Division was stronger than ever, and had gained sixteen members over last year, having 231 active members. Mr. Morse said he was therefore very glad to address the Western Division as a very healthy and very welcome infant. Vice-Com. H. B. Cook extended to Mr. Morse the thanks of the members for his services in the good work accomplished in the organization of the Western Division.

Election of Officers.

The election of officers of the Western Division, to hold office till the August meeting of the A. C. A., was now announced as the next order, and with single nominations the following were chosen in short order: Vice-Com., H. B. Cook, of Chicago; Rear-Com., William C. Jupp, of Detroit; Purser, D. H. Crane, of Chicago; Member of Executive Committee, O. A. Woodruff, of Dayton, O. For member of Board of Governors (for four years' term, subject to probable amendment to three years' term), Mr. H. C. Morse, of Peoria, Ill., was chosen

Wishes of the New Division.

There now arose discussion, in the first stages informal, over the location of the A. C. A. meet for the ensuing year, and it was evident early in this discussion that there might be two opinions in regard to this, as well as some opinions which were as yet unformulated. The talk turning upon the question of a meet for the Western Division in 1900 as against 1901, Mr. Jupp, of Detroit, said that he was of the belief that in 1901 the Western would be stronger and in better position to hold a good meet, and might then count upon getting more Eastern men to attend the meet. He thought the Pan-American Exposition at Buffalo in 1901 would mean a season of low fares, so that the Eastern men, already so far west as Buffalo, might naturally be expected to come to Ballast Island—where he supposed the meet would naturally be held.

Mr. Morse, being called upon to explain, stated that the Central Division this year got the Hay Island meet by grace of the waiver of the division really entitled to it. He said that the Central Division would again have the refusal of this meet in its regular turn under the rules in 1901. He thought Mr. Jupp's suggestion very good, as the Buffalo exposition would naturally bring many Eastern men part way west in 1901. Peoria canoemen would none the less, he believed, like to see a Western meet.

Mr. Lafferty, of Davenport, Ia., said that he believed his club would like also to see a Western meet.

Mr. Hough, of Chicago, was asked for an expression of opinion by the Vice-Commodore, and said that he was at first of the belief, before this meeting was called to order, that a Western meet might be a larger undertaking than the new division could properly carry through. Since hearing the gentlemen who had preceded him, however, he was disposed to give the matter further thought. Here were many new members—all but thirty-seven of the entire Western Division were new members. If these new men were called together at a meet nearer to their own country, it would have a tendency to improve their morale. If they were allowed to rust in idleness for two years (and they might not like to go very far East at first), they might desert or lose interest. They might think it was a long way to an Eastern meet. It seemed worth while to cultivate this new material which now offered, and to think very carefully over this question of the location for the next year's meet.

Mr. Jupp said that he had no doubt that the Detroit club would send forty members to a meet at Ballast Island. Mr. Morse called attention to the fact upon the other hand that the Northern Division privately (not for publication) had arranged to hold a local meet at Muskoka Lakes next year in any case. The Northern men had said that they ought to have the A. C. A. meet themselves, as they needed both this local meet and the grand meet to gain the added membership which they required, and which the A. C. A. had wanted and expected in view of certain earlier expectations, more or less perfectly carried out.

At this juncture Mr. N. H. Cook, of Chicago, again called attention to the fact that we had in this new Western Division fifty-four new members. He questioned very much if all these new and untried canoeists would stick till a meet in 1901. He thought that 1900 would be a far safer date for the welfare of the new division. Mr. Hough now moved that the question be referred to ballot, the vote to be taken on "1900" or "1901," and that the secretary be advised to convey the result of this ballot to the executive committee of the A. C. A. as the respectful sense of this meeting, and as an expression merely of its preferences and with the tender of its loyalty to the parent body, the A. C. A. This motion prevailed and the ballot was had, upon which it became evident that the meeting and the proxies represented were closely divided, the vote being 7 for 1900 and 7 for 1901. There was now some hesitation and further informal talk, the Vice-Commodore not caring to cast the vote, were that within his province. Mr. Hough again addressed the chair, stating that as he thought further of the question upon both sides, with what light he could gain upon it, he was of the belief that the executive committee of the A. C. A., seeing that the old split between the W. C. A. and itself was now quite closed, and that the errant one had returned to the fold, would be more than willing to meet the new division half-way. It could do no more graceful act than to accede to any reasonable preference the new division might have in this, its first year under the old roof. He was sure the members of the A. C. A. would wish to do this graceful and tactful thing, and would listen very carefully to any preference the Western Division might express. This preference ought, with equal tact and good feeling, not to go as a demand or even a formal request, but merely as a suggestion of preference, and he was sure it would be thoughtfully considered and acted upon with wisdom. What had been said as to the impatience of new members was well worth listening to. It was new members which represented the main need of any canoeing body, small or large. Moreover, he had just privately heard the expression of the aged member of the old W. C. A. (Mr. N. B. Cook, one of the pillars of the W. C. A., and most prominent in its records, an old gentleman, nearly seventy-eight years of age). Mr. Cook had privately said, and he took the liberty of repeating it publicly, that he was now growing very old; he wanted to see one more meet at old Ballast. He might see it if it were held in 1900, but in 1901 he might not. For one, the speaker after hearing this expression could personally vote for nothing but 1900. Mr. Jupp, of Detroit, now rose and withdrew his vote, which he said had been cast for 1901 in the preceding ballot. He moved that the secretary cast one ballot for the year of 1900, and this was carried with applause.

It is thus to be understood that this is the preference only, and not the insistent wish of the Western Division. The matter must, of course, be decided by the Executive Committee of the A. C. A. Mr. Morse took up the situation carefully in his questions for instructions to the committee, representing the Western Division. He stated that perhaps the representatives of this division could not obtain the date they wished, but might perhaps obtain a compromise on 1901. What should they do in that case? It was stated by general consensus that there existed no necessity of giving the committee iron-clad instructions, as they knew very well what was desired by the majority of the meeting. There was to be no insistence, but only a fair representation of the wishes of this body. A large discretion was to be left to the committee, with the understanding that they were to secure a Ballast Island meet in 1900 if they could with honor and dignity. It was thought sure that the A. C. A. would be anxious to show every courtesy to the new division and would weigh very carefully its wishes, coming as it would with so large a list of new-growth material.

Mr. Morse now called attention to the fact that the Western Division was entitled to a second member on its executive committee, having 109 members. On motion Mr. F. B. Huntington, of Milwaukee, was chosen unanimously to serve as such member.

W. C. A. Formally Disbands.

Mr. Fred Dickens, of Milwaukee, now moved that the Western Division of the A. C. A. respectfully accept the tender of the property of the formerly existing W. C. A., at such time as same should be made. This was carried. The meeting then adjourned.

Immediately following the meeting of the Western Division of the A. C. A. a meeting was called of the old W. C. A., several members of which body were present. Com. Huntington was called to the chair and Sec'y Dickens took the desk. Mr. Harry B. Cook, of Chicago, moved that the W. C. A. do transfer to the Western Division of the A. C. A. all property, trophies, records, hereditaments "and headaches thereunto appertaining." This carried. On the motion by the same gentleman that the W. C. A. be then disbanded there was also a unanimous vote, but there was not a jest, and every man present showed that he felt a certain sadness at thus saying good-by to an organization which, whatever may have been its fate for one reason or another, was certainly always one of good fellowship and sportsmanship. Yet there was evident no inkling of lukewarmness or disloyalty to the new mother, and unless all signs be much in failing, the matters of the canoemen of the country, East and West, have not for years been in as good shape as they are to-day. Perhaps a word to the executive committee of the A. C. A. may or may not be of worth; yet if they will meet this new division as above mentioned more than half-way at this, the first year of the new relations, the writer thinks he knows Western men well enough to say that the A. C. A. will never have cause to regret it. Let us, if gentlemen please, have 1900 and old Ballast for the campaign of next year's meet. The Western men do not insist upon it, but they would like it. H.

British Canoe Association.

Falmouth Meet, 1899.

The above meet will commence on July 29 and terminate officially Aug. 19.

The executive trusts that as far as possible members intending to be present will endeavor to assemble at Falmouth on the opening day.

The site of the camp ground is at Pencarrow Point Field, on the farm of Mr. Alfred Bath, Churchtown Farm, Mylor, near Falmouth.

The commodore of the Association, T. H. R. Bartley, Esq. (Capt. Mersey C. C.), assisted by the other flag officers, will be in command of and responsible for the discipline of the camp.

Friends of members and any one already a member of a recognized canoe, yacht or sailing club may join the camp, subject to the approval of the committee, on payment of £1, such fee to count as the subscription to the B. C. A. for 1899 in case of election to membership of B. C. A. during the meet. Application from non-members to join the camp should be made to the honorable secretary, or to Percy Nisbet, Esq., 1 Water Lane, London, E. C., on or before July 25, and after that date at the camp.

Any gentleman thus attending the camp agrees to conform to the rules and regulations which may be made by the camp officers.

There will be as usual a camp attendant, whose duties are defined by the honorable secretary, and members and others are requested to note that his services are engaged for the general convenience of those in camp.

Moorings for fifteen boats (or more if necessary) will be laid down off camp. All members picking up or using these will be charged 2s. 6d. for one week, or any part of a week. Members engaging to rent a mooring for use during the whole time of camp will have to pay 6s.

Small canoes can be hauled up clear of the tide, which has a rise and fall of about 12ft. at Neaps, and 16ft. at Springs.

The executive recommends that those members who do not travel to Falmouth with their canoes should consign them and their camping gear to the care of Mr. F. Jose, 17 New street, Falmouth, who will take charge of all canoes, canoe-yawls or boats, etc., sent to await their owners' arrival.

A large marquee will be erected in which the camp dinner will be served each evening (Sundays excepted), and a piano will be provided for sing-songs; all those who can contribute to the amusement of the camp, either vocally or instrumentally, are requested to bring their music and instruments, for the purpose of holding "camp-fires" during the meet.

All members attending the meet are requested to fly the burgee and wear the badge of the Association, and they are desired to bring an assortmnt of flags and Chinese lanterns, etc., for the decoration of the camp.

The executive wishes to point out that this meet being held practically on open water, members and others attending it should provide themselves with life belts or other suitable gear in case of capsizes occurring at a distance from shore or immediate aid.

It is proposed to make several excursions from camp to various places of interest in the neighborhood, possibly extending over a day; consequently members should come prepared with portable camping equipment and their own cooking utensils. Such arrangements will be duly posted on the camp notice board, so that members can avail themselves of such should they wish.

There will, as usual, be a camp kitchen for the convenience of members, under the charge of the camp attendant, but for those who prefer cooking in their own tents a supply of methylated spirit and paraffin can be obtained from him.

Arrangements have been made for various tradesmen to call daily at the camp for orders, but articles such as milk, butter, eggs and vegetables can be obtained from Mr. Bath's farm close by. Lodgings for those who do not wish to camp can be obtained on application to the following parties: G. Bennett, Riverside, Mylor Creek; Mrs. Thomas, Levithick, Mylor; Mrs. A. Bath, Farmhouse, Mylor; and C. Bolton, Beach Cottage, Mylor Creek.

Arrangements have been made with the postmaster of Falmouth for the delivery of letters and telegrams at the camp—two deliveries per day. Telegrams will be charged a 6d. fee for delivery from Flushing Village. A post office letter box is within 400yds. of camp, from which there are three collections daily. Letters or telegrams for members should be addressed British Canoe Association Camp, Falmouth.

The annual general meeting of the Association will be held on Monday, Aug. 14, in the camp at 3 P. M., and will be followed in the evening by a dinner at a hotel in Falmouth at 7 P. M.

During the meet the Greenbank Hotel, Falmouth, will be the official town headquarters of the Association.

Any member wishing to propose a site for the 1900 meet at the general meeting, must be prepared to give all necessary preliminary details of the place in question, otherwise such site cannot be discussed then; and members are reminded that, in accordance with Rule XVII., any member wishing to propose a new rule, or alteration in existing ones, must notify same to honorable secretary in writing twenty-one days previous to the date appointed for the opening of the meet.

The usual B. C. A. regatta will take place (weather permitting) on Saturday, Aug. 12, at which the Lough Erne challenge cup race, open only to canoes and canoe-yawls belonging to members of the B. C. A., and in accordance with the following conditions, will be competed for.

Conditions for the Lough Erne Challenge Cup Race.

To rank as the B. C. A. definitions required by the deed of gift. And for any other sailing races held during the B. C. A. meet.

1. The race for the above cup shall be held at and during the B. C. A. meet, and shall be sailed over a course of not less than 10 nautical miles.

2. A committee of not less than three non-competing members of the B. C. A. shall be elected by the general committee, with full powers to accept or reject entries, should in their opinion any craft not comply with the spirit of the rules, which is to encourage bona fide cruisers; to award time allowances, select course and to decide protests; and their decision shall be final.

3. Only members of the B. C. A. shall be eligible to compete for the above cup, and they must have been camping with the Association in a bona fide manner for a period of not less than three clear days before the race. (Members sleeping on board a yacht in the vicinity of the camp shall be considered as "camping out.")

4. Each competitor shall have an efficient camping outfit in actual use during his stay at the meet, and his canoe or yawl shall be capable of carrying such outfit in a seaworthy manner.

5. Competitors must be bona fide owners, or at least half-owners, of the boat they sail, and must take the helm throughout the race.

6. Only boats that are of canoe type will be eligible to compete, i. e., sharp at bow and stern, decked or partially so, and with the rudder hung abaft the sternpost, or housed into an inboard case if the rudder projects below the level of the keel.

7. No canoe or yawl shall be eligible to compete in any race whatever that has not, in the opinion of the committee, proper sleeping accommodation for her racing crew, which must not exceed two persons.

8. An efficient life belt, or air cushion, must be carried, ready for use, by each competing boat.

9. Each boat must fly a racing flag of not less than 8 by 8in.

10. All races shall be governed by the sailing rules of the R. C. C.

11. Every competing canoe of not more than 3ft. 6in. beam shall be so provided with efficient bulkheads, or air tanks, as to render her unsinkable in the event of a capsize.

12. Sliding seats shall only be allowed in canoes of not more than 3ft. 6in. beam, and shall not extend more than 24in. outboard.

13. The time limit for the cup race shall be five hours.

14. Time allowances shall be given for differences in rating, as found by the formula $\frac{\text{Length over all} \times \text{Sail area}}{6,000}$; the scale of time allowances to be those used by the Y. R. A., with the formula $\frac{\text{L.W.L.} \times \text{S. A.}}{6,000}$, and they shall be posted in the committee tent at least twelve hours before the start of the cup race.

15. Every intending competitor shall declare his maximum sail area, in writing, to the committee before entering for any race, and shall not exceed it nor declare any smaller area throughout the duration of the meet.

16. No boat shall carry more than 250sq.ft. of sail.

17. All entries for the challenge cup race shall be delivered to the committee, in writing, forty-eight hours before the start of the race, and shall state the owner's name and address, the name of the canoe or yawl, the sail area and the colors of the owner's racing flag.

Construction Rules.—In all craft built after the passing of these rules the minimum scantlings allowed shall be:

	Canoes of not more than 42in. Beam.	Over 42in. Beam.
Planking	¼	3/16
Deck	3/16	3/16
Bulkheads	¼	½

No craft shall have a greater fixed draft than ⅓ beam.

Transit of Canoes and Yawls to Falmouth.

Members can either send their boats and gear direct by rail (in which case they should apply for rate to Falmouth to the goods superintendent at the station they wish to be dispatched from) or by steamer from the following ports:

From London—Per British and Irish Steam Packet Company; Messrs. J. Hartley & Co., 19 Leadenhall street, E. C.

From Liverpool—Per steamers of S. Hough, 25 Water street, Liverpool, or F. H. Powell & Co., 21 Water street, Liverpool.

From Newcastle—To London by steamers of Tyne Steam Ship-

ping Company, and thence by British and Irish Steam Packet Company.

From Dublin—Per British and Irish Steam Packet Company.

Members who have not yet paid subscriptions due by them to the Association are requested to send same to Geo. Huntley, Hon. Sec. and Treas. B. C. A., Redheugh Bridge Works, Gateshead-on-Tyne, from whom also badges and burgees may be obtained.

Yachting.

Fixtures.

JULY.

27. Jamaica Bay, cat classes, Jamaica Bay.
29. New Jersey-Knickerbocker, Ellsworth cup, Bayonne, Newark Bay.
29. Plymouth, club, Plymouth, Mass.
29. Royal Nova Scotia, one-design, Halifax, N. S.
29. Norwalk, club, Norwalk, Long Island Sound.
29. American, club handicap, Newburyport.
29. Winthrop, open, Winthrop, Boston Harbor.
29. Indian Harbor, annual, open, Greenwich, Long Island Sound.
29. Corinthian, Marblehead, 4th cham., Marblehead, Mass. Bay.
29. Quannapowitt, club.
30. Penataquit Cor., 15ft. class, Bayshore, Great South Bay.
31. Wood's Holl, open, Quissett.
31. Manchester, 3d cham., Manchester, Mass.
30. Lake Champlain, annual cruise, rendezous Port Henry, Lake Champlain.

AUGUST.

July 30 to Aug. 8. Lake Champlain, annual cruise, L. Champlain.
1. Wood's Holl, club, Wood's Holl.
2. Royal Nova Scotia, squadron cruise, Halifax, N. S.
2. East Gloucester, cup, Gloucester, Mass.
3-4-5-7-8. Manchester, midsummer races, Manchester.
5. Beverly, Cor. race., Monument Beach, Buzzard's Bay.
5. Burgess, Marblehead, Massachusetts Bay.
5. East Gloucester,, club, Gloucester, Mass.
5. Hempstead Harbor, annual, open, Glen Cove, L. I. Sound.
5. Jamaica Bay, dory class, Jamaica Bay.
5. Sea Cliff, annual, open, Long Island Sound.
7. New York, annual cruise, rendezvous.
7-8-9. Royal Canadian, Canada cup trials, Toronto, Lake Ontario.
7. Knickerbocker, annual cruise, rendezvous College Point.
9-10-11. Corinthian, Marblehead, midsummer series, Marblehead, Massachusetts Bay.
12. Corinthian, Marblehead,, open, Marblehead, Massachusetts Bay.
12. Horseshoe Harbor, annual, open, Larchmont, L. I. Sound.
12. American, cruise to Squam, Newburyport.
12. Quincy, club, Quincy, Boston Harbor.
12. Taunton, club, Taunton, Mass.
12. Wood's Holl, open, Wood's Holl, Quissett.
12. Wollaston, open, Wollaston, Mass.
12. Bridgeport, Bridgeport, Long Island Sound.
12. Royal, Nova Scotia, one-design class, Halifax, N. S.
12. Norwalk, club, Norwalk, Long Island Sound.
12. Quannapowitt, club.
12. Squantum, handicap, Squantum, Mass.
12. Jamaica Bay, annual cruise, rendezvous.
12-13. Winthrop, cruise to Marblehead. Winthrop.
12. Savin Hill, club handicap, Savin Hill, Boston Harbor.
13. Penataquit Cor., 15ft. class, Bayshore, Great South Bay.
13. Williamsburgh, sloop classes, Bowery Bay, L. I. Sound.
14-15-16-17. Lake Y. R. A. meet, Toronto, Lake Ontario.
14 to 19. Oshkosh, I. L. Y. A. week, Oshkosh, Wis.
14-15-16. Erie, open, Erie, Pa., Lake Erie.
14. American, open, Newburyport.
16. Annisquam, open, Annisquam.
17. Newport, ladies' day, Newport, Narragansett Bay.
17. East Gloucester, open, Gloucester, Mass.
17. Taunton, ladies' day, Taunton, Mass.
19. Corinthian, Marblehead, 5th cham., Marblehead, Mass. Bay.
19. Beverly, club Cor., Monument Beach, Buzzard's Bay.
19. Burgess, club, Marblehead, Massachusetts Bay.
19. Jubilee, annual, open, Salem Bay.
19. Huguenot, annual, open, New Rochelle, Long Island Sound.
19. Morris, special club, Port Morris, Long Island Sound.
19. New Jersey-Knickerbocker, Cor. cup, Bayonne, Newark Bay.
19. Royal Hamilton, open,, Hamilton, Lake Ontario.
19. Royal Nova Scotia, all classes, Halifax, N. S.
19. Quannapowitt, club.
19. Philadelphia, cup, Philadelphia, Delaware River.
20. Penataquit Cor., snipe class, Bayshore, Great South Bay.
21. Royal Canadian, Canada cup, Toronto, Lake Ontario.
21-22-23-24-25. Seawanhaka Cor., Cor. of Philadelphia, knockabout match, Oyster Bay, Long Island Sound.
21. American, moolight sail, Newburyport, Mass.
24. Plymouth, open, Plymouth, Mass.
25. Kingston, open, Duxbury Bay.
26. Royal Nova Scotia, club, Halifax, N. S.
26. Jamaica Bay, dory class, Jamaica Bay.
26. Huntington, annual, open, Huntington Bay.
26. Manhasset, special, Port Washington, Long Island Sound.
26. Beverly, open, Monument Beach, Buzzard's Bay.
26. Corinthian, Marblehead, 6th cham., Marblehead, Mass. Bay.
26. Duxbury,, open, Duxbury Bay.
26. Burgess, club, Marblehead, Massachusetts Bay.
26. Quincy, club, Quincy, Boston Harbor.

THE new steel mast which will be stepped in Columbia this week is 107ft. over all and about 21in. in diameter. It has one feature which, we believe, is positively new in yachting—the topmast will house within the lower mast. The former is or Oregon pine, an entirely new stick, and the latter is a hollow steel tube. Mr. N. G. Herreshoff has devised details by which the topmast can be dropped down into the mast or hoisted to place and fidded securely. So far as strength and simplicity are concerned, the present arrangement can hardly be surpassed, but if suitable mechanism can be arranged to set and house the topmast within the lower mast, making practically a pole mast, it will be a decided advance on the old plan.

THE news has been cabled to New York that two heavy hawsers are being made for the purpose of towing Shamrock across the ocean astern of the steam yacht Erin. Under the *fin de siecle* interpretations of the New Deed such a course would be proper if the New York Y. C. gives its consent, but the yacht will probably be safer under sail with a snug Ketch rig such as Valkyrie III. and Vigilant carried.

ON July 23 Columbia sailed from Newport to Bristol, and early on Monday morning she was warped on to the cradle of the new marine railway and hauled out as far as her mast would admit, all but her bulb keel being exposed at low water. The bottom was scrubbed and polished and a few barnacles were removed from the keel. The new mast was finished on Monday and the derrick tug Archer came down from Providence in the afternoon to step the mast on Tuesday.

SHAMROCK arrived on the Clyde on July 23 in tow of the Erin, reaching Fairlie at 11 A. M. She sailed on the same evening for Rothesay, and on Monday she was under sail. On Tuesday she was to go to Greenock to fit out for New York.

THE Race Committee of the Newport Y. R. A. has arranged two matches for Saturday, August 5, one between Navahoe and Vigilant, and one between Syce, Kestrel and Acushla, the prizes being $250 and $150 respectively.

Shamrock.

THE trials of Shamrock with Britannia, so long talked of, have at last taken place, and, save possibly her designer, no one is any the wiser. To all appearances they amounted to little, and in addition the various specially cabled reports are mainly utter nonsense or palpable fakes. For instance, it is reported that Shamrock sails closer by one point than Britannia; that "she is difficult to beat in close-hauled tacking," and that her canvas is "voluminous." One of the London papers, the Daily Mail, has solved what it terms the "secret of the Shamrock's construction, hitherto so carefully guarded to prevent it being used by America," as follows:

"The Shamrock is designed with swanlike lines, rounded in such a way as hardly to cause a ripple in her wake. She displaces the smallest possible amount of water. Her keel is shaped almost like the thick letter T, so that she can turn as if on a pivot. It is claimed and proved that she is two seconds faster than the Columbia in stays.

The secret was, therefore, an extension of the theory that a yacht should endeavor to glide over instead of cutting through the water. Those in charge of the Shamrock doubt whether the Columbia has proved her superiority to the Defender, and consider it quite on the cards that the Shamrock will have to meet the latter."

The trials, such as they were, took place on July 18-19, on the first day the two yachts sailing a course of about forty miles in a variable breeze, Shamrock beating Britannia by seventeen minutes. On the second day the breeze was again variable and fluky; the course was not covered, as the Prince of Wales had an engagement in town. The following reports of the two races are as detailed and reliable as any:

July 18.

The first trial race between Shamrock and Britannia took place to-day. The result was a victory for the Cup challenger, which won easily, beating Britannia by sixteen minutes and twenty-five seconds. Both yachts were handled with admirable skill. The Prince of Wales was on board Britannia.

There was much excitement on the Solent over the race. From early morning crowds watched the preparations on board both yachts, while the whole fleet from Southampton, Cowes, and other points made for Ryde. The scene at Ryde pier was most animated. Long before the start crowds of fashionable visitors had arrived.

The Shamrock was towed from Southampton, the Erin following with Sir Thomas Lipton and a distinguished company. The weather was hot and slightly hazy, with a slight southeast breeze, which promised to last through the day. The course was from the Ryde pierhead eastward around the Nab Lightship, leaving it on the starboard hand; then back past Cowes to a buoy on the Solent bank, rounding the buoy on the starboard, and finishing at Cowes opposite the Royal Yacht Squadron's house. The course sailed was about forty miles.

The Prince of Wales arrived at Southampton at 11 o'clock, wearing a yaching suit, and immediately embarked on board the Admiralty yacht Fire Queen. From the Fire Queen he was transferred to Britannia.

As the starting gun boomed Britannia immediately crossed the line, Shamrock following in a way to give the impression that she had no objection to giving Britannia a slight lead. The latter, however, did not long maintain the advantage.

It was a dead beat to windward, and little distance was covered before Shamrock, which started on the short leg to port, overhauled her, and on the following long leg to starboard Shamrock forged ahead rapidly. It was at once noticed that she was sailing nearly half a point nearer the wind than Britannia. Shamrock was carrying her mainsail, jibheaded topsail, jib and foresail. Britannia carried the same canvas, but, in addition, her clubtopsail. Shamrock was half a mile ahead passing Warner.

Hogarth was at the helm of the Cup challenger. The boat held up admirably, and there was not a drop of water adeck. She proved extremely quick in putting about, only taking ten and one-half seconds.

On rounding the Nab Lightship both yachts set their spinakers for the run back.

The only mishap of the day was that when Shamrock's sail began to fill the top caught in the crosstrees. The huge canvas flopped flat, and then suddenly burst like a balloon, and a big rent became visible in the upper part, where a long strip had been torn out, leaving a hole big enough for a man to crawl through.

Shamrock's speed naturally suffered somewhat from this accident.

Both boats soon set their topsails, and later the balloon foresails. The yachts jibed to port near Ryde. They were then traveling at such a rate that the press boat, going at a speed of eleven knots, was unable to keep the pace with Shamrock, though the wind lightened considerably after leaving the Nab Lightship.

Britannia appeared to be holding her own for a short spell before she reached Ryde, but Shamrock again crept slowly ahead, widening the gap.

The scene at this time was an inspiriting one. Both yachts, under a cloud of canvas, were gliding on even keels.

As the Shamrock rounded Old Castle Point and came into full view of the crowds on the Cowes esplanade, she had all sails full set, showing an immense stretch of canvas and affording a splendid sight, which drew hearty cheers from the assembled spectators.

The wind freshened after passing Cowes, and both boats took in their spinakers and started on the broad reach to the Solent buoy. After jibing around they reached back, finishing with a short tack to make the home mark.

The corrected times at the finish were: Shamrock, 3:43:50; Britannia, 4:00:15. The times passing the buoy on the Solent bank were: Shamrock, 3:15:45; Britannia, 3:25:04.

Experts were satisfied that the Shamrock will be able to give a good account of herself in the contest for the America's Cup.

Both yachts were admirably handled, but the Shamrock had a clear advantage throughout.

July 19.

There was beautiful weather to-day for the second trial of the yacht Shamrock, challenger for the America's Cup, against the Britannia. There were big crowds, both ashore and afloat, to withness the race. The course to-day was yesterday's course reversed. The starting point was off the Royal Yacht Squadron's house, around the Solent Bank buoy, thence to the Nab Lightship, finishing at the Spit buoy, off Portsmouth.

The Prince of Wales boarded the Britannia shortly before the start.

There was a good southeasterly breeze blowing all the morning, but it softened considerably toward the time for the starting of the race. Both yachts carried clubtopsails. A good start was effected at 10:12 A. M., the Shamrock crossing the line half a length ahead of her competitor, being very smartly handled. She had a new spinaker set for the run to the Solent Bank. Her sails seemed to set better than yesterday. The breeze almost died out as the yachts stood along shore, and the boats housed their spinakers. The Shamrock then headed for the center of the channel to avoid becoming becalmed on the lee of the island. The Britannia followed. There was but little air, and the yachts practically drifted during the next half hour. The breeze then revived, and the Shamrock, which meanwhile had slightly increased her lead, secured a start, widening the gap that separated her from the Britannia, and rounded the Solent Bank buoy at 11:17:20. The Britannia rounded the buoy at 11:21:35.

The boats returned close-hauled on the port tack. There was only the faintest breeze, and the Britannia was getting the best of it, slightly reducing the gap. Nearing Cowes, however, the breeze freshened considerably.

The Shamrock passed Ryde, going toward the Nab Lightship ,a mile and a half ahead of the Britannia, and finally won easily.

The course as originally planned was, however, not completed. When off Southsea the Britannia signaled that the Prince of Wales had an engagement in London and requested that the race be considered over, as he must return to Portsmouth. The Shamrock was immediately turned homeward.

Soon afterward the new yacht grounded on a sand bank outside Horsefoot Fort, between Portsmouth and Langston Harbor. She remained fast for ten minutes, when she was safely and easily towed off and back to Southampton. She was not apparently damaged in any way.

As was the case yesterday, the Shamrock showed her superiority very soon after the start was made. Beating to windward, she ran away from her opponent to the Nab Lightship, and again put about in ten seconds, the Britannia occupying twelve seconds in the maneuver. The whole performance again showed that the challenger is far ahead of the Britannia, although the unfortunate becalming of the boats preculded the finishing of the course before the Prince of Wales was obliged to start for London.

The report current last week that Meteor would sail trial races with Shamrock was of course a fake, as was the added detail that the Emperor of Germany would steer his own yacht; and no further trials will be made. All that could possibly be shown by such haphazard and desultory trials as above detailed would be defects of a serious nature, if any such existed. Assuming what is evidently the case, that they do not, and that Shamrock is what she should be, a very fast craft, of the latest design and construction, there is absolutely nothing to indicate that she is either five minutes faster or five minutes slower than Columbia.

Mr. Fife's skill as a designer, both in design proper and in construction, is beyond question, and he has put all that he knows into this venture; so that it is safe to say that up to a certain point the chances of the two yachts are about even. If, as now seems likely, the Cup remains in Tiffany's vaults next winter, it will be mainly through the work of each boat in the interval of three months between the launching and the Cup races.

On the part of the challenger, she has had thus far one light weather race, half of another race, and a couple of trials alone under sail. Nothing has been done to fairly test her initial trial-trip speed, much less to develop a still higher speed by continued racing. On the day after the second trial with Britannia Shamrock was towed from Southampton by the steam yacht Erin, the intention being to take her to the Clyde for a quick refit for the Atlantic voyage, it being expected that she will be ready for sea by July 31. By way of thickening the very thin veneer of Irish nationality she will make brief calls at Belfast and possibly other Irish ports if time permits. It is probable that the ocean trip will take about four weeks, and with ten days added for the refit at New York she will be ready for further sailing in American waters by about the end of the first week in August, or just two months before the Cup races.

While there is time enough for further working up, there will be no opportunity, as there will be no similar yacht on this side by which she may be tested. Further than this, if the whole policy of her managers thus far is considered, it is very unlikely that they will really try the yacht in earnest for fear of giving away something to the other side.

The whole experience of yacht racing shows that the only way to the improvement of a yacht's speed is by real racing, day in and day out; merely sailing alone is of no use whatever in showing how fast a yacht is going or how she may be improved, and it is of very limited use even for crew drill. It is difficult to see how Shamrock can come to the start in the Cup races save as an untried boat, only half known to those who sail her.

The defending yacht, on the other hand, has already had half a dozen formal or informal trials against a yacht of her own size whose performance is very well known, the only question being how much faster Defender is now than in 1893. These trials, the least of which is worth more than all Shamrock's racing with Britannia or sailing alone, have already disclosed many small points in which improvement may be made. This work of trial and improvement has, however, hardly begun; the two yachts Columbia and Defender are booked to sail a large number of races during the next three months. No one who has watched the gradual development of higher speed in all of the Cup defenders of previous years can doubt that this sort of work means anywhere from five to ten

minutes' improvement in both Columbia and Defender, measured from their first performances under sail this year. With the same skill and good judgment on the part of the defense that has brought victory in previous years, in spite of the high-colored reports of Shamrock's marvelous speed, there seems but one probable result to the races in October.

Columbia and Defender.

THE first of the series of races off Newport between Columbia and Defender was set for July 24, and prior to that date both yachts were at Bristol for various changes. Defender's bent boom was repaired, new plates being built in, and her mainsail was in the hands of the sailmakers. Columbia had some changes made in her sails, but the new steel mast was not ready. Defender ran down from Bristol to Newport on July 18, and Columbia followed on July 20. The conditions of the races were as follows: Dates of races, July 21, 24 and 29.

Warning Signal, 11 o'clock.—A blast of the whistle of five seconds duration will be blown, and a flag bearing the letter indicating the course will be hoisted.

Preparatory Signal.—At 11:10 o'clock a blast of the whistle will be blown and the blue peter hoisted.

Starting Signal.—At 11:15 o'clock a blast of the whistle will be blown and a red flag hoisted.

In case a postponement is necessary the warning signal will be hoisted only on the even quarter hours.

In case it is deemed advisable to finish the race in one round the signal code letter B will be hoisted and a blast of the whistle of ten seconds' duration blown as the yachts approach the finish line.

Course A.—Start from an imaginary line between the committee boat and Brenton's Reef Lightship, to and around the whistling buoy off Point Judith; thence to and around a mark boat anchored two miles southwest by west from West Island light, flying a red and white flag, and thence to and around Brenton's Reef Lightship, twice around, and finish over the starting line from east to west. All marks to be left to port.

Course B.—Reverse of Course A.

Course C.—Start as in Course A, to and around the Sow and Pigs Lightship; thence to and around Hen and Chickens Lightship, and finishing across the starting line from east to west. All marks to be left to port.

Course D.—Reverse of Course C.

On Friday morning a dense sea fog hung over Newport Harbor, but it cleared before 9 o'clock, the sun breaking through with the aid of a fresh S.W. wind. The two yachts went out under mainsails and jibs to the start off Brenton's Reef Lightship, accompanied by a large fleet of steam and sailing yachts. The race committee, Messrs. H. B. Duryea and Ralph N. Ellis, were on board the steam yacht Sultana, J. R. Drexel. When the signal was set for Course A, to Point Judith and the West Island marks, two rounds making forty-eight nautical miles, there was a strong S.W. wind and a lively heave to the sea, the first leg to windward. Before the start the two yachts sent up working topsails, but they were not sheeted home.

The start was given at 11:15, and within four seconds Capt. Barr put Columbia across the line on starboard tack, under lower sails, Defender, to leeward, with Capt. Rhodes at the wheel, following within twenty-six seconds. They made a long tack out to sea, standing on for twenty-five minutes before Columbia came about, Defender at once following. The sailing had been very even; so much so that it was a question between the partisans of the two yachts as to which had gained. After tacking Defender sheeted home her working topsail and a couple of minutes after she luffed up and took in her staysail. The steel link by which the main sheet block is hung from the span on the boom had broken, the block also being damaged, so that further sailing was impossible. Defender started for the harbor under sail, while Columbia continued on the course as far as the first mark and then started home. The accident was very unfortunate, as every condition was favorable for a thorough test of the boats.

It was proposed to postpone the race until July 29, but on telegraphing to Bristol a new link was promised for the next day, and both yachts were ready again on Saturday morning. They went outside together, Columbia with working topsail and a dinghy towing astern, while Defender had her clubtopsail set, the wind being light. No attempt was made at a race, and the two sailed about in company for some time, with no results worth noting. The first race has been again postponed to July 29, by which time Columbia will have her new steel mast.

The statement is current that it is the intention of Com. Morgan to send Columbia abroad next season, whether she is successful or otherwise in defending the Cup; and that to this end she has been built specially strong.

When Defender was built in 1895 the greater part of the cost was born by W. K. Vanderbilt, Messrs. C. Oliver Iselin and E. D. Morgan each having a small interest in her, believed to be $5,000 each. Some time since it was stated that Mr. Vanderbilt had become the sole owner of the yacht. This report is now revived as a novelty, it being stated that he has recently purchased the interests of Messrs. Iselin and Morgan, and that he will present the yacht to his son, W. K. Vanderbilt, Jr., owner of the cutter Carmita, after the present races are over.

The Seawanhaka Cup.

THE first race of the series for the Seawanhaka international challenge cup will be sailed on Thursday, July 27, in the afternoon, the steamer Duchess of York leaving the Lachine wharf on the arrival of the train which leaves Montreal just after noon. Messrs. R. H. and Edwin Post arrived in Montreal on July 21, and on the following morning the challenging yacht Constance reached Dominion, the station of the Dominion Bridge Works at Lachine, on a flat car. She was launched into the canal by means of the Bridge Company's crane, and towed to Dorval. She will be sailed by Messrs. C. H. and H. M. Crane, Sherman Hoyt and J. B. Thomas, Jr. The new Duggan boat is also ready. The races will be sailed under the usual conditions and over the old courses.

The Quincy Cup.

THE second annual series of races for the Quincy challenge cup began on Monday, July 24, the conditions being as follows:

The races shall be sailed during the week beginning Monday, July 24, 1899.

Barring postponements, the first race shall be started at 10:15 A. M. on Monday, July 24; the second, Tuesday, at 11:15 A. M.; Wednesday, at 12:15 P. M.; Thursday, at 1:15 P. M.; Friday, at 2:15 P. M., and Saturday, at 2:15 P. M.

There will be three guns fired, the first a warning gun, ten minutes later the preparatory gun, at which time all contestants become amenable to the rules, and five minutes later the starting gun.

The time limit shall be three and one-half hours.

In case of accident to any of the competitors the judges shall have power to postpone the succeeding race; but no postponement shall be made for more than one race day.

There shall be three judges, one each from the Lynn, Beverly and Quincy yacht clubs.

The courses shall be the same as those of the cup races of 1898.

At all races the warning signal will be given by the lowering of the blue peter fifteen minutes before the starting signal, the preparatory signal five minutes before the start, and the starting signal will be the lowering of the blue peter at fifteen minutes past the hour. In noting these periods of time, the lowering of the blue peter will be the official notification, the gun being used simply as an auxiliary to call attention to the signals.

All Q. Y. C. barrel buoys are painted cream color with one brown stripe.

Skippers are cautioned against sailing between the red and black nun buoys which mark Spear's stand.

A yacht crossing the line before the starting signal is made will be recalled by the megaphone announcing her association number.

In case the start should be postponed, a preliminary signal will be made by lowering the blue peter three times, and firing the gun three times rapidly in succession for the assembling of the competing yachts at the judges' stand.

Owing to the limited capacity of the floats, and the danger from accident by overcrowding, the committee deems it best to limit admission to the floats to only those persons who wear badges. This rule is intended to apply only to people who desire to stand on the floats, and not to those who desire to land from or board a yacht. All officers and members of committees of the club, judges and their assistants, crews of the competing yachts, and press representathives can procure badges upon applicathion to the committee on the challenge cup.

Six courses have been laid out, to suit varying winds.

The defender of the cup, Hostess, owned by H. M. Faxon, is of the scow type. The challengers are four, Heiress, Thelma, Oogrook and Pompano. Heiress was designed by C. D. Mower, her owner, and is of the up-to-date racing type without being quite a scow. Thelma, F. L. Pigeon, is somewhat similar in model. Oogrook, Walter Abbott, is of the peak order, with flat floor and side rounded in to meet the deck. Pompano, designed by her owner, W. E. C. Eustis, is a fin-keel, carrying a lead bulb of 1,000lbs.

Cutter and Sloop.

IT is the fashion now to apply the term sloop to all single-stick yachts, regardless of the fact that such craft as Columbia, Defender, Queen Mab, Liris and a host of keel boats are most indubitably cutters, both in hull and rig, while others like Vigilant are technically cutters in spite of a centerboard. The New York Times discusses the question of the name and origin of the modern yacht in the following editorial:

We have ceased to talk politics with the Evening Post, for reasons that we suppose are obvious to readers of this journal who are also readers of that. But as was ably observed by the gentleman who introduced Martin Chuzzlewit to Elijah Pogram, "Ginerous enemies may meet upon the neutral sile of private life, I rather think." Respecting expansion and kindred questions we must allow the Post to be joined to its idols, if it can find any with which it can itself get on without quarreling with them, and applying opprobrious epithets to them, as certain Polynesian tribes are said to do to theirs when things do not go to suit them. But when it comes to yachting the Post shall not instill heretical opinions into the public without our earnest protest.

The Post had an article on modern yacht racing the other day in which there was a good deal of good sense but one persistent heresy, and that was that the two contestants for the America's Cup were equally examples of American invention. That is perhaps as true as that they are examples of exclusively British invention and development, but certainly it is no truer. Shamrock is much broader in proportion to length than Genesta and Galatea, says the Post. Now the American model has always been distinguished by greater beam than the British. Therefore the American model has prevailed. Q. E. D. Very pretty. But, on the other hand, Columbia is very much deeper comparatively than Puritan or Mayflower, and much more than Gracie or Fannie. Now the British model has always been distinguished from the American by greater comparative draft of water. Therefore the British model has prevailed. Q. E. D.

One of these demonstrations is as good as the other and neither is good for much. In fact, when we are able to compare the lines of the two and to compare them with the lines of a British and an American racing yacht of 1875, we shall doubtless find that the two models have been gradually approaching each other, but that it has been by a process of give and take on either side. The distinguishing feature of our own old model, the centerboard, is retained, where it is retained, rather as a "gonfalon" than for its utility. The differences between the original models were as the differences between the shallows of the North River and Long Island Sound to the deep water that is carried in close to the chalky cliffs of Albion. If we go from hull to spars we must admit that the borrowing has been done on our side. Columbia carries almost as strictly a British cutter rig as Shamrock. It is very much the rig that a British cutter carried twenty-five years ago, when the American sloop rig was merely a huge jib and mainsail.

There is, however, much force in the Post's lament that a boat which is built and rigged to hunt or to hold the ugly mug which the America brought back almost half a century ago should be good for nothing else, should be a mere racing machine. But there does not seem to be any present help for that in view.

Larchmont Y. C. Race Week.

FIRST DAY, SATURDAY, JULY 15.

Open Regatta.

THE account of this race appeared in the FOREST AND STREAM of July 22. The official times as first given out contained two errors in the knockabout class. Midge, reported as not finishing, really won second prize, while Kitty Wink did not finish.

SECOND DAY, MONDAY, JULY 17.

Special Races.

The special race on Monday was started in almost a calm and sailed in a very light and variable wind that shifted between S.W. and N.W. The times were:

Schooners in One Class—Start, 11:35—32¼ Miles.

	Racing Length.	Elapsed.	Corrected.
Colonia, C. A. Postley	93.13	4 31 53	4 31 53
Amorita, W. G. Brokaw	74.86	4 51 07	4 37 17
Quissetta, H. F. Lippitt	71.10	4 58 21	4 40 59
Latona, Dr. H. C. Eno	74.42	5 23 39	5 09 22
Atlantic, Wilson Marshall	86.31	5 32 00	5 27 21

Schooners—Handicap Race—Start, 11:35—32¼ Miles.

Latona, Dr. H. C. Eno	74.42	5 22 29	5 22 29
Atlantic, Wilson Marshall	86.31	5 27 12	5 17 12

Schooners—Class D—Start, 11:35—32¼ Miles.

Amorita, W. G. Brokaw	74.86	4 51 07	4 51 07
Quissetta, H. P. Lippitt	71.10	4 58 21	4 54 49

Schooners—Class F—Start, 11:40—32¼ Miles.

Clorita, Philip T. Dodge	51.46	4 15 55	4 15 55
Uncas, C. P. Buchanan	51.46	4 17 47	4 17 07

Cutters—Class K—Start, 11:45—21½ Miles.

Syce, F. M. Hoyt	50.86	3 49 11	3 49 11
Kestrel, J. B. Mills	48.37	3 53 39	3 53 39
Acushla II., H. W. Hanan	50.15	3 55 53	3 55 53

21ft. Knockabouts—Start, 11:50—10½ Miles.

Mongoose, Simeon Ford	21.00	2 31 13	2 31 13
Spindrift, S. C. Pirie	21.00	2 26 00	2 26 00

S. C. Y. C. Knockabouts—Start, 11:58—10½ Miles.

Midge, F. W. Boyer	21.00	2 28 00	2 28 00
Thelga, A. P. Thayer	21.00	2 34 51	2 34 51

Acushla had been refitted after her long series of accidents, and led for the first round, but was finally beaten by both Syce and Kestrel.

THIRD DAY, TUESDAY, JULY 18.

Water Sports and Ball.

Tuesday was devoted to miscellaneous water sports of a hilarious nature, with an illumination and ball in the evening. The races were as follows:

Naphtha Launches—21ft. and Over.

	Length.	Start.	Finish.	Elapsed.	Corrected.
Trochilus	22.06	1 55 28	2 33 03	0 37 55	0 36 04
Levanter	30.00	1 55 19	2 29 35	0 34 16	0 34 16
Sister	28.00	1 55 14	2 30 01	0 34 47	0 34 29
Sagamore	21.18	1 55 31	2 32 10	0 36 24	0 36 24

Winners—Levanter, first prize, $12; Sister, second prize, $10, and Trochilus, third prize, $8.

Levanter won from Sister by 0:13, from Trochilus by 1:48, and from Sagamore by 2:08.

Naphtha Launches—21ft. and Under.

Allen	21.00	2 02 17	2 41 18	0 39 01	0 39 01
Atlantic	18.00	2 03 19	2 46 21	0 43 02	0 42 05
Latona	17.50	2 02 57	2 43 11	0 40 04	0 39 07
Crusader	....	2 02 44	2 45 08	0 42 24	0 41 27
Amorita	....	2 02 11	2 45 32	0 42 21	0 41 24

Winners—Allen, first prize; Latona, second prize; Amorita, third prize.

21ft. Alco.-Vapor Launches.

Colonia	21.00	2 02 29	2 40 00	0 37 31	0 37 31
Katrina	18.50	2 03 27	2 48 07	0 44 40	0 43 33
Nydia	18.00	2 03 00	2 55 25	0 52 25	0 51 13

Winners—Colonia, first prize; Katrina, second prize.

Four-Oared Gigs—Start, 2:59:30.

	Finish.	Elapsed.
Colonia	3 23 27	0 23 57
Amorita	3 22 47	0 23 17
Lady Evelyn	3 22 04	0 22 34
Katrina	3 22 33	0 23 03

Lady Evelyn won.

Pair-Oared Gigs—Start, 3:26:20.

Sagamore	3 43 58	0 17 38
Alsacienne	3 45 50	0 19 30
Crusader	3 42 51	0 16 31
Syce	3 43 36	0 17 16
Southern Cross	3 43 43	0 17 23

The Crusader won.

Dinghies—Start, 3:45:20.

Lady Evelyn	3 58 23	0 13 03
Alsacienne	3 58 29	0 13 09
Trochilus	3 58 34	0 13 14
Amorita	3 57 50	0 12 30
Nymph	3 58 50	0 13 30

Amorita won.

The swimming race for boys under sixteen, 75yds. scratch, was won by Butler Whiting, with W. J. Swan second and Louis Hall third. Time, 1m. 6 2-5s.

The race for boys under twenty, with the same conditions, was won by Alfred Lockwood, with K. Whiting second and Frank Wood third. Time, 1m. 2-5s.

The third race, against the American record for the same distance, 58s., was made by F. F. Proctor in 55s.

The next race was a handicap swim of 220yds., won by Butler Whiting, scratch, in 3m. 25s., with K. Whiting second and W. J. Swan third.

Messrs. E. C. Shaeffer and F. A. Wenck then swam 220yds. in 3m. 4s., beating the record by 4s. The tub race was won by K. Whiting, with Butler Whiting second and A. Riley third.

After some exhibition diving the water baseball game between the Rubber Neck team and the Kissing Bug team was called; ending in the summary ducking of the umpire, Alfred Lockwood. In the evening the house and grounds were beautifully illuminated, and the Seventh Regiment Band was present.

FOURTH DAY, WEDNESDAY, JULY 19.

Open Regatta.

On Wednesday the racing was resumed with a fleet of thirty-eight yachts in a fresh N.W. breeze. The event

of the day was the debut of the fast Meemer, a Hanley boat from Boston, launched in 1898, and her easy defeat of her class, including Hussar. Colonia sailed a special handicap match with Atlantic. The times were:

Schooners—Class B—Handicap—Start, 11:35—32¼ Miles.
Colonia allows 30m.

	Length.	Elapsed.	Corrected.
Colonia, C. A. Postley	93.13	4 11 12	4 11 12
Atlantic, Wilson Marshall	86.31	4 46 28	4 16 28

Cutters—Class K—51ft. Racing Length—Start, 11:45—21½ Miles.

Syce, F. M. Hoyt	50.86	3 12 45	3 12 45
Kestrel, J. B. Mills	48.37	3 22 17	3 22 17
Acushla II., H. W. Hanan	50.15	3 22 14	3 22 14

Class K—Cruising Trim—Handicap—Start, 11:50—21½ Miles.

Liris, T. J. McCahill, Jr.	48.00	3 36 51	3 31 51
Kiora, M. C. Parsons	46.50	3 30 20	3 30 20

Class L—43ft. Racing Length—Start, 11:50—21½ Miles.

Hussar, J. D. Baird	39.05	3 36 32	3 36 32
Eurybia, Charles Pryer	42.80	4 23 00	4 18 47
Irex, C. Meyer	42.90	4 06 16	4 06 16
Meemer, R. B. Nickerson	36.75	3 26 22	3 26 22

Yawls—Class L—43ft. Racing Length—Start, 11:50—21½ Miles.

Albicore, S. J. Hyde	41.00	4 22 56	4 22 56
Sultan, C. S. Somerville	37.93	Disabled.	

Sloops—Class M—36ft. Racing Length—Start, 11:55—21½ Miles.

Possum, J. R. Maxwell, Jr.	34.73	3 50 00	3 50 00
Zenobia	35.10	4 16 20	4 16 20

Knockabouts—25ft. Class—Start, 12:00—21½ Miles.

Momo, C. H. Crane	25.00	4 07 43	4 07 43
Oiseau, H. W. Maxwell	25.00	4 06 25	4 06 25

Raceabouts—21ft. Class—Start, 12:05—10½ Biles.

Kittie, Hazen Morse	21.00	Disabled.	
Spindrift, S. C. Pirie	21.00	2 15 00	. .. ..
Mongoose, Simeon Ford	21.00	2 18 16	. .. ..
Rel, E. Lentilhon	21.00	2 37 03	. .. ..

Knockabouts—21ft. Class—Start, 12:05—10½ Miles.

Thelga, A. P. Thayer	21.00	2 32 15	2 32 15

Class Q—20ft. Racing Length—Start, 12:10—10½ Miles.

Edwina II., J. N. Gould	16.00	3 03 41	3 03 41
Fidget	....	3 18 36	3 18 36
Nike	....	2 57 11	2 57 11

Mainsail Yachts—Class S—30ft. Racing Length—Start, 12:15—10½ Miles.

Volsung, De Forest Bros.	....	2 13 10	2 10 26
Dosoris II., G. P. Vail	....	2 17 04	2 17 04
Windora, W. L. Ward	29.40	Disabled.	

Class T—25ft. Racing Measurement—Start, 12:15—10½ Miles.

Qui Vive, G. A. Freeth	24.87	2 23 48	2 23 48
Florence, A. H. Alker	22.04	3 04 15	3 04 15
Vera, A. M. Bradley	20.07	2 29 10	2 29 10
Win or Lose, J. S. Appleby	....	2 23 25	2 23 25

Class V—20ft. Racing Measurement—Start, 12:15—10½ Miles.

Spunk, C. E. Silkworth	19.00	Did not finish.	
Ox, R. N. Bavier	19.14	2 51 30	2 51 30
Bogey, G. P. Vail	17.10	2 55 40	2 55 40
Kazaza, T. F. McCahill, Jr.	17.32	2 19 25	2 19 25

Class W—Special Race—Start, 12:20—10½ Miles.

Lobster, T. J. S. Flint	15.00	3 02 40	3 02 40
Skimmoug, F. Benham	....	Disabled.	

FIFTH DAY, THURSDAY, JULY 20.

Special Races.

The wind on Thursday went around to the N.E., blowing fresh. Two new yachts started, O Shima San and Irex. The times were:

Cutters—Class K—Start, 11:40—16¾ Miles.

	Length.	Elapsed.	Corrected.
Syce, F. M. Hoyt	50.86	3 15 37	3 15 37
Kestrel, J. B. Mills	48.37	3 27 44	3 27 44
Acushla II., H. W. Hanan	50.15	3 35 54	3 35 54

Sloops—Class K—Cabin Trunks—Start, 11:40—16¾ Miles.

Penguin, G. Brightson	48.94	3 52 39	3 52 39
Irex, C. Meyer	42.90	4 01 40	3 59 25

Sloops—Class M—Start, 11:45—16¾ Miles.

Possum, H. W. Maxwell	35.00	3 52 25	3 52 28
O Shima San, J. T. Pratt	34.81	3 50 30	3 50 30
Acushla I., C. T. Wills	34.00	4 39 20	. .. ..

Knockabouts—20ft. Class—Start, 11:50—16½ Miles.

Oiseau, J. R. Maxwell	25.00	Disabled.	
Momo, C. H. Crane	25.00	2 05 11	2 05 11

Knockabouts—21ft. Class—Start, 11:50—10½ Miles.

Indianola, L. B. Alberger	21.00	Disabled.	
Mongoose, S. Ford	21.00	2 20 05	2 20 05
Spindrift, S. C. Pirie	21.00	2 15 49	2 15 49
Kantaka, G. J. Bradish	21.00	2 22 40	2 22 40
Midge, F. W. Boyer	21.00	2 29 31	2 29 31
Thelga, A. P. Thayer	21.00	2 31 47	2 31 47

Cabin Catboats—Start, 11:55.

Dosoris II., G. P. Vail	29.75	2 24 03	2 24 03
Volsung, De Forest Brothers	28.70	2 15 21	2 14 03

Oiseau finished the first round two seconds astern of Momo, but fouled the markboat and withdrew with a hole in her bow.

SIXTH DAY, FRIDAY, JULY 21.

Special Races.

Friday was a fine day for racing—clear and warm with a lively S.W. wind, the courses being sailed so that the second leg of each triangle was to windward, the other two being reaches. The three larger schooners, in spite of the disparity in size, sailed a close and exciting race, Quissetta finally saving her allowance from Colonia and Amorita. The start was made at 11:35 for the large schooners. The Boston boat, Meemer, was ready to start, but as Hussar did not start she had no class. The first round was timed:

Colonia	1 12 04	Kestrel	1 10 17
Amorita	1 19 45	Liris	1 20 06
Quissetta	1 20 27	Kiaora	1 25 34
Clorita	1 15 36	Albicore	1 38 20
Uncas	1 16 31	Sultan	1 43 15
Syce	1 08 17	Possum	1 48 43

The finish was timed:

Colonia	2 46 03	Amorita	2 59 41
Quissetta	3 02 01	Clorita	2 50 26
Uncas	2 51 47	Syce	2 35 00
Kestrel	2 36 12	Liris	2 51 42
Kiaora	3 05 34	Albicore	3 21 03
Sultan	3 29 30	Possum	3 38 24

The full times were:

Schooners in One Class—Start, 11:35—Course, 30 Miles.

	Length.	Elapsed.	Corrected.
Colonia, C. A. Postley	93.18	3 11 08	3 11 08
Amorita, W. G. Brokaw	74.86	3 24 41	3 11 46
Quissetta, H. F. & R. L. Lippitt	71.10	3 27 01	3 10 48

Schooners, 65ft. Class—Start, 11:40—Course, 22 Miles.

Clorita, Philip T. Dodge	51.46	3 10 26	3 10 26
Uncas, Chas. Buchanan	51.46	3 11 47	3 11 47

Cutters—51ft. Class—Start, 11:45—Course, 22 Miles.

Syce, F. M. Hoyt	50.86	2 48 00	2 48 00
Kestrel, J. B. Mills	48.37	2 51 12	2 51 12

Cutters (Cruising Trim)—51ft. Class—Start, 11:45—Course, 22 Miles.

Liris, T. J. McCahill, Jr.	48.00	3 16 42	3 16 42
Kiaora, M. C. Parsons	46.50	3 20 34	3 18 45

Yawls—Classes L and M—Start, 11:50—Course 22 Miles.

Albicore, S. J. Hyde	41.00	3 31 03	3 31 03
Possum, R. N. Bavier	33.11	3 48 24	3 34 04
Sultan, C. S. Somerville	37.93	3 39 50	3 34 53

The winners were Quissetta, Clorita, Syce, Liris, Albicore and Sultan. Possum wins a second prize.

As Amorita on port tack was nearing the windward mark on the second round, Quissetta came up on starboard tack. Amorita tacked to clear her, but Quissetta, luffing across Amorita's wake and then bearing away, fouled the latter's preventer backstay with her bowsprit. No harm was done, but Amorita made a protest.

SEVENTH DAY, SATURDAY, JULY 22.

Open Regatta.

The final race of the week brought out a fleet of forty-five starters, but the weather was poor. The start was begun with a S.E. wind, but it was about east before the last yacht was over. On the second round the wind was from N.E. to E., with a heavy thunder squall. The uneven conditions made the race more or less fluky. The start was begun at 12:10, the yachts all sailing to the eastward first, or to windward. The first round was timed:

Amorita	2 09 53	Mongoose	2 05 05
Colonia	2 17 40	Kittie	2 03 55
Ariel	2 26 31	Kantaka	2 10 18
Syce	2 39 30	Rel	2 24 18
Kestrel	2 44 51	Robin Hood	2 12 50
Meemer	2 47 06	Thelga	2 09 22
Katrina	3 03 56	Midge	2 06 22
Possum	3 05 04	Dipper	2 10 22
Kiaora	3 07 42	Nike	2 34 38
Wayward	3 08 50	Edwina II.	2 04 40
Sultan	3 09 34	Windora	2 02 25
Irex	3 09 50	Kit	2 00 55
Anoatok	3 10 09	Volsung	2 00 20
Hussar	3 10 30	Win or Lose	2 08 50
Oiseau	3 11 32	Qui Vive	2 08 16
Momo	3 11 53	Scat	2 13 08
Albicore	3 12 08	Kazaza	2 25 18
Tigress	3 12 32	Spunk	2 30 25
Fleetwing	3 14 15	Zelica	2 21 10
Possum	3 23 26	Bouncer	2 41 08
Indianola	2 05 38	Lobster	2 50 55

At the end of the round Oiseau had a good lead of Momo, and as the two had agreed to sail but one round she crossed the line so as to finish. The committee ordered both yachts to finish the race or no prize would be given, and Oiseau lost much of her lead in making the proper turn. On the second round she was beaten by Momo. The finish was timed:

Windora	3 12 53	Kestrel	5 06 47
Valsung	3 14 49	Amorita	6 46 02
Kit	3 11 08	Colonia	5 43 07
Spindrift	3 19 20	Possum	5 50 46
Qui Vive	3 19 28	Meemer	5 51 37
Mongoose	3 21 47	Katrina	5 52 03
Kittie	3 21 47	Momo	5 53 31
Indianola	3 22 33	Oiseau	5 53 47
Win or Lose	3 23 13	Wayward	5 54 46
Midge	3 24 03	Albicore	6 05 05
Dipper	3 28 46	Kiaori	6 06 37
Thelga	3 29 30	Irex	6 07 52
Scat	3 30 14	Sultan	6 08 33
Robin Hood	3 38 10	Anoatok	6 09 23
Zelisa	3 42 11	Fleetwing	6 11 17
Kazaza	3 51 10	Possum (yawl)	6 32 50
Spunk	3 51 48	Tigress	6 36 55
Rel	4 00 15	Hussar	6 36 58
Edwina II.	4 03 00	Ariel	6 52 58
Syce	4 54 57		

The final times were:

Schooners in One Class—Start, 12:10—Course, 31¼ Miles.

	Length.	Elapsed.	Corrected.
Colonia, C. A. Postley	93.13	5 33 07	5 33 07
Amorita, W. G. Brokaw	74.86	5 36 02	5 22 12
Ariel, F. L. Leland	83.53	6 42 58	6 36 15

Schooners—Special Handicap—Start, 12:10—Course, 31¼ Miles.

New York Y. C.

A GENERAL meeting of the New York Y. C. was held on July 20 at the Beaver street Delmonico's, Com. Morgan presiding. The following members were elected: Herbert W. Hanan, Charles Osgood, William S. Fanshawe, William G. Warden, Henry E. Howland, William Hadwin Ames, W. E. Lowe, Paymaster P. V. Mohun, U. S. N.; Naval Constructor J. J. Woodward, U. S. N.; Edward R. Bacon, W. D. Hatch, Benjamin T. Cable, George Arents, Jr.; Albert O. Brown, Gen. Samuel C. Lawrence, Robert P. Lindeman, H. R. Reed, George G. Haven, Jr., Evans R. Dick, Carl Eglinger, George Peabody Eustis, Nelson C. Thrall, William Skinner, Jr., and H. C. Graef.

The following general orders for the annual cruise were made public:

Monday, Aug. 7.—The squadron will rendezvous at New London. At 4 o'clock in the afternoon there will be a meeting of the captains on board the flagship. The programme for the cruise, weather permitting, will be:

Tuesday, Aug. 8.—New London to Gardiner's Bay.

Wednesday, Aug. 9.—Gardiner's Bay to Newport.

Thursday, Aug. 10.—Newport to Vineyard Haven.

Friday, Aug. 11.—The squadron will remain at anchor in Vineyard Haven.

Saturday, Aug. 12.—Vineyard Haven to Newport.

Sunday, Aug. 13.—The squadron will remain at anchor at Newport.

Monday, Aug. 14.—Races off Newport for the Astor cups.

Tuesday, Aug. 15.—Races off Newport.

Wednesday, Aug. 16.—There will be a meeting of the captains on board the flagship at noon.

During the cruise there will be the usual races for the Owl and Gamecock colors, and a race for naphtha launches.

The regatta committee will furnish details for the runs from port to port, and for all other racing events.

Captains are requested to provide their vessels with N. Y. Y. C. night signals; also to send the commodore a list of the names of their guests. The commodore will be pleased to receive informally the captains and their guests on board the flagship any evening while in harbor, from 9 to 11 o'clock.

The meeting adjourned to Aug. 3, at 1:30 o'clock, at the same place, to elect other gentlemen to membership whose names had not been posted the required length of time.

Winthrop Y. C.

WINTHROP Y. C.—BOSTON HARBOR.

Saturday, July 22.

THE Winthrop Y. C. sailed a postponed race on July 22 in a light and fluky breeze, the times being:

First Class—Start, 3:30.

	Finish
Harolde, A. T. Bliss	5 49 50
Alma, C. A. Heney	6 09 20
Alert, John McConnell, Jr.	6 12 40
Ideal, H. P. Whittier	Withdrew.

Second Class—Start, 3:35.

Alruna, R. W. Clark	6 14 10
Dafila, H. E. Fowle	5 54 22

Third Class—Start, 3:40.

Ray, S. A. Freeman	4 50 00
Florrie, Horace Waite	5 06 00
Hector, A. W. Hubbard	4 55 05

Fourth Class—Start, 3:45.

Flash, W. H. Mirick	Withdrew.
Bubble, W. H. Kelley	5 06 09

The judges were Messrs. Edward P. Morse and J. A. Baker.

The 30-Footers at Newport.

ON July 17 a sweepstakes was sailed over a triangular course of eight miles in a light south wind, the times being:

Start, 3:27.

	Finish.	Elapsed.
Esperanza, H. O. Havemeyer, Jr.	5 40 27	2 13 27
Vaquero III., H. B. Duryea	5 41 58	2 14 58
Hera, R. N. Ellis	5 42 16	2 15 16
Asahi, Lloyd Warren	5 42 31	2 15 31
Carolina, Pembroke Jones	5 43 47	2 16 47
Wawa, R. Brooks	5 45 26	2 18 26
Puck, E. D. Morgan	5 50 26	2 23 26

On the 18th the Jamestown course was sailed in a strong N.W. wind, the times being:

Start, 3:15.

	Finish.	Elapsed.
Wawa, Reginald Brooks	5 33 26	2 20 26
Vaquero III., H. B. Duryea	5 33 46	2 20 46
Puck, E. D. Morgan	5 36 52	2 23 52
Carolina, Pembroke Jones	5 37 12	2 24 12
Asahi, Lloyd Warren	5 37 19	2 24 19
Veda, C. Vanderbilt, Jr.	5 38 02	2 25 02
Esperanza, H. O. Havemeyer, Jr.	5 39 21	2 26 21
Pollywog, A. L. Paget	5 42 22	2 29 22

On July 19 the yachts started at 3:10 over a triangular course in a fresh N.W. wind, the times being:

	Finish.	Elapsed.
Vaquero III., H. B. Duryea	5 04 09	1 54 09
Wawa, R. Brooks	5 07 27	1 57 27
Esperanza, H. O. Havemeyer, Jr.	5 08 21	1 58 21
Carolina, P. Jones	5 09 18	1 59 18
Asahi, L. Warren	5 09 30	1 59 30
Pollywog, A. H. Paget	5 10 06	2 00 06
Hera, R. N. Ellis	5 12 20	2 02 20

On July 20 the wind was fresh from S.E., and the Beaver Tail course was sailed, the times being:

Start, 3:38.

	Finish.	Elapsed.
Carolina, Pembroke Jones	5 33 34	1 55 34
Vaquero III., H. B. Duryea	5 34 00	1 56 00
Hera, Ralph N. Ellis	5 34 32	1 56 32
Wawa, Reginald Brooks	5 35 06	1 57 06
Esperanza, H. O. Havemeyer, Jr.	5 36 24	1 58 24
Asahi, Lloyd Warren	5 37 02	1 59 02
Pollywog, A. H. Paget	5 37 39	1 59 39
Veda, Cornelius Vanderbilt, Jr.	5 37 59	1 59 59

On July 21 the wind was strong S.W., so the Dyer's Island course was sailed, the times being:

Start, 3:34.

	Finish.	Elapsed.
Asahi, Lloyd Warren	5 52 05	2 18 05
Wawa, R. Brooks	5 52 48	2 18 48
Puck, E. D. Morgan	5 53 18	2 19 18
Esperanza, H. O. Havemeyer, Jr.	5 54 39	2 20 39
Hera, R. N. Ellis	6 00 01	2 26 01
Vaquero III., H. B. Duryea	Did not finish.	

Vaquero carried away her jib and could not finish.

Beverly Y. C. 279th Regatta.

WING'S NECK—BUZZARD'S BAY.

Saturday, July 22.

THE open sweepstakes race of the Beverly Y. C. on July 22 was sailed in a strong N.E. wind, the yacht turning in one reef. The times were:

25ft. Class.

	Elapsed.
May Queen, D. L. Whittemore	2 12 44

Eaglet, P. L. Bacon	1 57 13

Corinthian Y. C.

MARBLEHEAD—MASSACHUSETTS BAY.

Saturday, July 22.

THE Corinthian Y. C. of Marblehead sailed a race on July 22, in the morning, postponed from the previous Saturday. The wind was fresh N.E. The times were:

Class A.

Rifle Range and Gallery.

New Jersey State Rifle Association.

THE programme of the New Jersey State Rifle Association and National Rifle Association's eighth annual meeting is now ready for distribution. The dates are Sept. 4 to 9, inclusive, and the place is Sea Girt, N. J. There are twenty-five events on the programme, namely, the members' match, the Kuser match, All Comers' Military match, the Schuetzen match, the Hays medal match, the Perrine Memorial match, the Gen'l E. P. Meany match, Department of Rifle Practice match, New Jersey State Rifle Association match, Winchester match, Consolation match, President's match, Harper's Weekly match. Match A, "any" outdoor revolver championship, Match B, military revolver championship, Match C, combination revolver match, revolver team match, carbine team match, pool matches (sweepstakes), A and B, prizes for individual skirmish, regimental team match (interstate), New Jersey National Guard match, the Columbia trophy match and bullseye targets. The matches of the National Rifle Association are the Wimbleton cup match, the Hilton trophy match, the Interstate Military match. The programme can be obtained of the secretary, Capt. De Lancy G. Walker, Passaic, N. J.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

July 26.—Albany, N. Y.—Second annual tournament of the Forester Gun Club. Bluerocks and magautrap; open to all. H. R. Sweny, Sec'y.

July 26-27.—New Castle, Pa.—Two days' tournament of the New Castle Gun Club. Henry P. Shaner, Sec'y.

July 27.—Bridgeport, Conn.—The fourth tournament of the Connecticut Trap Shooters' League, on the grounds of the Bridgeport Gun Club. Geo. B. Thorpe, Sec'y.

July 26-29.—Ocean City, Md.—Third annual midsummer tournament; two days at live birds; two at targets; $300 added. J. R. Malone, Manager.

July 29.—Elkwood Park.—One o'clock; Deal handicap, 10 birds, $10 entrance. Irroy prize; 5 birds, $5 entrance.

July 29.—Elkwood Park.—Twenty birds, $20; 12 o'clock.

July 29.—Pawling, N. Y.—All-day tournament of the Pawling Rod and Gun Club.

Aug. 3-4.—Wolcott, N. Y.—Tournament of the Catchpole Gun Club. E. A. Wadsworth, Sec'y.

Aug. 5.—Dunellen, N. J.—Contest of Central New Jersey Trap-Shooters' League.

Aug. 5.—Mount Kisco, N. Y.—All-day target tournament of the Mount Kisco Gun Club. Ralph W. Gorham, Sec'y.

Aug. 8.—Haverhill, Mass.—All-day shoot of the Haverhill Gun Club; added money. C. F. Lambert, Sec'y.

Aug. 9-10.—Portland, Me.—Interstate Association's tournament, under auspices of the Portland Gun Club. S. B. Adams, Sec'y.

Aug. 10-11.—Duluth, Minn.—Seventh annual tournament of the Central Gun Club; $250 in cash added. E. C. Mayfield, Sec'y.

Aug. 15-17.—Little Rock, Ark.—Arkansas State Sportsmen's Association's ninth annual tournament; $375 added; two-cent targets; Rose system. Paul R. Litzke, Sec'y.

Aug. 18.—Hackensack, N. J.—Hackensack River Gun Club's live-bird shoot at Heflich's grounds, Hackensack River Bridge, Paterson Plank Road. John L. Chartrand, Sec'y.

Aug. 30-31.—Auburn Me.—State tournament on the grounds of the Auburn Gun Club. L. A. Barker, Sec'y.

Sept. 4.—Schenectady, N. Y.—Schenectady Gun Club's Labor Day shoot. H. D. Strong, Sec'y.

Sept. 5-7.—Omaha, Neb.—Du Pont Gun Club's fourth annual tournament. G. H. Moore, Sec'y.

Sept. 6-7.—Portsmouth, Va.—Tournament of the Interstate Association, under auspices of the Portsmouth Gun Club. W. N. White, Sec'y.

Sept. 13-14.—Cherokee, Ia.—Cherokee Gun Club's third annual tournament. J. D. Anderson, Sec'y.

Sept. 19-22.—Detroit, Mich.—Jack Parker's eighth international tournament; live birds and targets; $500 cash added.

Oct. 6-7.—Pawling, N. Y.—Tournament of Pawling Rod and Gun Club; targets and live birds.

Oct. 23-28.—Nashville, Tenn.—Belle Meade Gun Club's tournament; targets and live birds; $500 added. W. R. Elliston, Sec'y.

First and third Fridays of each month.—Watson's Park, Burnsine, Ill.—Semi-monthly contest for Montgomery Ward & Co.'s diamond badges.

Brooklyn Gun Club.—Third Saturday of each month, Francotte gun contest. Fourth Saturday of each month, Grand American Handicap free-entry contest.

1900.

April 2.—New York Vicinity.—Interstate Association's Grand American Handicap. Edward Banks, Sec'y.

June 11.—New York Vicinity.—Interstate Associations Grand American Handicap tournament. Edward Banks, Sec'y.

June —.—Tournament of Ohio Trap-Shooters' League, first week in June. J. C. Porterfield, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The waves of fame of the great shooter, Hon. Thos. A. Marshall, in its spread East and West, have met in the antipodes. The Referee, of Sydney, Australia, publishes a portrait, which for fidelty to truthfulness far excels many similar attempts of the American dailies. Of him it says: "Tom Marshall, whose picture appears in this day's [June 7] issue, is one of the best shots America has produced. He won the American championship in 1897, and was top score again this year—a truly marvelous performance, considering the field of competitors numbered over 260, among whom were the picked men of the land of the Star-Spangled Banner. He shot 58 birds straight, and every one fell to the first barrel."

It would seem that in shooting matters there is a close similarity between those of America and the antipodes. In the Referee, of Sydney, is the following, which, though a little out of date for our home shooters to attend, may not be too late for some of our contemporaries to copy. It is as follows: "The New Zealand Gun Club Association has announced a pigeon match for the championship of New Zealand at Petone (Wellington) on Tuesday, July 11. The conditions are 21 birds, 28yds. rise. Competitors must be resident in N. Z. for two years. The prizes are: First, championship medal and 60 per cent. of the sweepstake; second, 25 per cent. of sweepstake; third, 15 per cent. of sweepstake. Entrance fee, £3. Mr. C. H. Gorrick is referee."

On Friday afternoon of last week Admiral Courtney's wife and daughter were taking the air on the front porch of their house in Syracuse, N. Y. The sky was clear and the sun was shining brightly; likewise was the Admiral, though away from home. No one expected anything to happen just then, but the unexpected happened, as it always does; a sneak thief entered the house by the back window and annexed all the silverware he could find, likewise Mrs. Courtney's jewelry, as well as cups and trophies won by the Admiral, too many to mention. The Admiral expressed no regret for the loss of his trophies. "I can win lots more," said he, "but Mrs. Courtney's jewelry and the silverware are the source of much regret." He left New York for Syracuse on Monday of this week, and is now still-hunting that sneak thief, whom we pray he will capture.

Jim Elliott has buckled his shawl-strap around all the trophies in sight. First he won the Du Pont trophy from Mr. Daniels by the score of 98 to 97. Next he captured the Republic cup from Charlie Young by the score of 93 to 92. Thirdly, he won the cast-iron medal from Rolla Heikes last Friday, defeating him by the score of 95 to 94. Lastly, he takes the E. C. cup and the world's championship at targets from Billy Crosby by defeating him on Monday of this week by the score of 136 to 132. Both great scores, but Elliott's was the best by 4 targets.

From a member of the Haverhill Gun Club we have the following communication: "The Haverhill, Mass., Gun Club's tournament, which is to occur Aug. 8, promises to be a good thing. The programmes are out, and will be ready for distribution this week, same calling for 200 targets. One of the events calls for 100 targets, and to this the club adds $25. Shooters from southern New England, New York and other points south of Boston who propose attending the Portland Interstate can make this shoot very handily by starting one day sooner. Those wishing to stop in Boston over night can leave there at 8 A. M., arriving in Haverhill 45 minutes later, and after the shoot can leave for Portland at 6:55, arriving at the latter place at 9:30 P. M."

The Pawling Rod and Gun Club, Pawling, N. Y., has arranged a most attractive programme for Saturday of this week. There are fifteen events, with a total of 220 targets. Shooting commences at 9 o'clock sharp. Lunch will be served free to guests. Special rates at the Dutcher House to visiting sportsmen. Experts will be handicapped. The proceeds go toward propagating the game birds and fish, so that the public is a beneficiary and each shooter is benefiting the public. There will be a delegation from New York city. Pawling has no superior as a place wherein there is pleasant competition at the traps and good, sportsmanlike companionship.

The programme of the midsummer tournament of the Catchpole Gun Club, Wolcott, N. Y., can be obtained of the secretary, Mr. E. A. Wadsworth. Aug. 3 and 4 are the dates fixed upon. Professionals can shoot for targets only. Targets 1½ cents each. There are eight events on the first day, alternately 10 and 15 targets, 75 cents and $1 entrance. Twelve events are on the programme of the second day, of which No. 6, at 20 targets, is the Gold Dust powder event. All moneys divided 40, 30, 20 and 10 per cent. Shooting on the first day commences at 1 o'clock; on the second day at 9:30.

Mr. Ralph W. Gorham, secretary of the Mount Kisco Gun Club, Mount Kisco, N. Y., under date of July 24 writes as follows: "The Mount Kisco Rod and Gun Club has reorganized and laid out new grounds—both live and clay-bird grounds; also built a nice new club house. Our electric wires are all under ground; also the traps. We use the Sergeant system. We expect to shoot every Saturday. We will hold an all-day tournament on Aug. 5."

Mr. John F. Schmelzer, Omaha, Neb., under date of July 21 writes us as follows: "The Winchester Gun Club was organized in this city on July 20, and the following officers were elected: President, Olof Johnson; Vice-President, John F. Schmelzer; Secretary, Ed Doll; Treasurer, Dan Gerlus; Field Captain, J. C. Johnson; Lieutenant, John Bowman. The object of the club is to promote the sport of target and live-bird shooting."

On Saturday of this week the Pawling Rod and Gun Club will hold an all-day tournament. There will be fifteen events, at 10, 15, 20 and 25 targets, entry fee based on 10 cents per target. The club will deduct 2 cents for targets. There will be three handicaps, at 20 targets, for gun case, silver cup and cash prizes, and in these events the club deducts 50 per cent. of entrance; the remainder is divided. Mr. Horatio Nelson is captain.

The Boston Gun Club's shooting season ended with that of July 20. The true principle of competition in which shooters of varying degrees of skill engage was observed in the Boston Gun Club series; that is to say, the principle of the handicap. The reports of these shoots are models in their way, pleasing and instructive.

There was a strong team competition on the grounds of the Keystone Shooting League last Saturday. Fifteen teams participated. Pressure on our space prevents us from giving the scores this week. The team of the Keystone Shooting League, Messrs. Wolstencroft, Landis, Ridge, Stevenson and Longnecker, won with a score of 125 out of a possible 150.

Under date of July 18 Mr. H. H. McCumber writes us as follows: "At a meeting of the Lewistown Gun Club, Lewistown, Ill., July 17, the following officers were elected: President, J. R. Maguire; Secretary-Treasurer, F. M. Love; Captains, L. Gray and C. V. Groat."

The next contest of the Central New Jersey Trap-Shooters' League will take place on the grounds of the Dunellen Gun Club, Aug. 5. In the contest of five teams Saturday last on the grounds of the Reservoir Gun Club, New Brunswick, the Dunellen Gun Club was victor.

The Hunter Arms Co., of Fulton, N. Y., have issued a new and improved edition of their catalogue, containing artistic illustrations of their different grades of guns and much useful descriptive matter concerning them. It will be sent to those who apply for it.

Mr. W. R. Crosby has challenged Mr. J. A. R. Elliott to contest for the E. C. cup, emblematic of the target championship, which they officially passed upon in respect to who could make the best score on Monday of this week.

In the contest for the cast-iron medal at Kent, O., July 21, Elliott defeated Heikes by the score of 95 to 94. While these scores are very good, the birds are reported as being an inferior lot.

In the match between J. A. R. Elliott and Chas. A. Young, at Springfield, O., July 18, 100 live birds each for the Republic cup, the former won by the score of 93 to 92. A Winchester gun and Hazard powder and Leader shells were what Elliott used.

The Central Gun Club, of Duluth, Minn., will hold its seventh annual tournament on Aug. 10 and 11; $250 in cash added. For programmes address E. C. Maxfield, secretary, Duluth, Minn

This week Mr. Noel Money, after a few days' stopover, devoted to visiting his relatives, sailed for England. He has been in the far West attending to important business matters.

We are informed that Mr. C. A. Young has challenged Mr. J. A. R. Elliott to contest for the cast iron medal which the latter annexed at Kent, O., on July 21.

The return match between the Fitchburg Rifle and Gun Club, of Massachusetts, and the Leominster Gun Club will be shot some time in August.

BERNARD WATERS.

Reed-Hurst Gun Club.

ERIE, Pa., July 22.—Find herewith scores of shoot of July 21. The boys are all feeling good. They made good scores and the day was fine.

Nos. 1 and 3 were at live birds; the rest at targets. Scores:

YAKE

Calhoun Park Gun Club.

PITTSBURG, July 24.—The Calhoun Park Gun Club shooters' outing and one-day tournament at inanimate targets, optional programme, for the benefit of the Tenth Regiment, Pennsylvania Volunteer Infantry Reception Fund, Wednesday, Aug. 23, is appended. Following is the shooting committee: Sandy McPherson, chairman; Old Hoss, W. S. King, W. S. Brown, A. H. King, Scott, Holmes, F. Wilbert, Chas. G. Grubb, Skilman, J. O'H. Denny, Carnay, Jacques, Porter, Hypo, Dr. E. J. Stilley, Hamilton and J. MacNeil.

In the optional programme there are seven events at 15 targets, $1 entrance; the first of these is the club introductory, four high guns. No. 4 is the Sandy's mug trophy, $1.50 entrance. The seventh, at 25 targets, is the grand merchandise event, $1.50 entrance. The tenth, at 20 targets, is the Old Hoss bowl trophy, $1.50 entrance. The last is the Tenth Regiment Pennsylvania Volunteer Infantry continuous match, three high guns.

W. J. MACCRICKART.

The Interstate Association.

NEW YORK, July 25.—*Editor Forest and Stream:* The regular monthly meeting of the stockholders of the Interstate Association was held Monday afternoon, July 24.

It was decided at this meeting that the Grand American Handicap of 1900 should be held in the vicinity of New York, and the week commencing April 2, 1900, was claimed by the Association as the dates for its Grand American Handicap tournament.

It was also decided to hold during the year 1900 the first annual Grand American Handicap tournament, the dates for this tournament being the week commencing June 11.

Kindly claim these dates for us in your publication, and oblige

EDWARD BANKS,
Sec'y-Treas. the Interstate Association.

WESTERN TRAPS.

Montgomery Ward Diamond Badge.

CHICAGO, Ill., July 21.—The Montgomery Ward diamond badge series reached its eleventh event to-day, and brought out fifteen entries. The weather was clear and pleasant, a brisk wind blowing to the right from the score, and the birds ruled fast, though of course rather mixed at this season of the year. There were seven men who landed in the 15 hole—Boa, Gillespie, Amberg, White, Parker, Levi and Hollister. The first string of 5 in the ties dropped out Gillespie and Levi, and in the second string Parker and Hollister retired, the latter losing a fast twisting bird, after killing 21 straight, many of which were very hard and stopped in the deep field. This left in the tie Boa, Amberg and White, all of whom were shooting steadily and in good form. Boa killed 25 straight without needing his handicap bird. Amberg, after losing 2 out of his first 3 birds, had settled down and was shooting beautifully, and White had not yet missed at all. These three men finished their third string together and bid fair to go through the next. Boa was shooting a slap-bang style, killing most of his birds close to the trap, but on his 4th bird in this fourth string he got a high, white tailer which he undershot. He had at this stage killed 33 birds straight. Boa now sat down and Amberg and White each killed his next bird. Amberg missed his 5th bird, a fast driver, and not to be outdone, White also missed his 5th bird, a sharp right quarterer. This let Boa in again, but his previous miss seemed to have shaken him, for he missed his next bird also, which circled easily to the left. This left in only Amberg and White, who shot through the next string neck and neck. Beginning the next frame of 5, the sixth in the ties, Amberg missed his first bird, and it appeared a gift for White, who had killed his last 8 birds with the right barrel. White, however, missed his 4th bird in this string and the men had to go into the seventh frame, shooting 35 birds in the ties. Amberg killed straight and White was so unlucky as to lose his last bird, a strong right quarterer. Amberg thus won the diamond badge for the second time in the series. Sturtevant and Roll have also won the badge twice each. Boa won the high average medal to-day. In the ties on 14 Leffingwell and Barto were tied at the end of 12 birds, and Barto took the shells. Sturtevant won third alone. The following are the scores:

Geo Roll, 30, 0	220221010*10122 —10
E Sturtevant, 28, 0	222202222222022 —13

Club Team Race Abandoned.

The team race between Audubon and Garden City clubs, of this city, has been abandoned, as the respective managements could not agree upon the personnel of the teams.

Wilcox Wins Audubon Trophy.

In the Audubon Club shoot at Watson's last Wednesday, W. P. Mussey killed 20 straight and C. S. Wilcox tied him, though needing one of his handicap birds. They shot off at 20 birds, Mussey killing 15 and Wilcox 18, thus winning the trophy for the contest.

There was a good attendance at the Audubon shoot, and the birds were good for the most part, though a trifle mixed. There was a little accident at this meeting, which might have been more serious. Mr. Charles Morris, after his invariable custom, snapped the barrels of his gun sharply together when closing it preparatory to shooting. He had his left hand far out on the barrel and his right hand on the stock, the gun being held at an angle in front of him. Both barrels were discharged, the gun flying from the shooter's hands and breaking the stock short off. Mr. Morris cially in these days of nitro primers. It is quite as well always to was seriously frightened, but not injured, which is a very fortunate event. Shooters cannot use too much caution, more especially in these days of nitro primers. It is quite as well always to close the gun carefully, and certainly this little accident alone ought to show how imperative is the rule that a gun, empty or loaded, should never be pointed toward a human being.

By the way, it was just the other day that Col. Felton was telling me of the recent accidental discharge of a gun which killed one man and seriously hurt two others. We were talking at that time of the carelessness of trap-shooters, and Col. Felton spoke very critically of those numerous pictures of groups of trap-shooters, any one of which will show half a dozen men standing with their hands resting across the muzzles of their guns. This is a bad position for a shooter to take at any time. It is the empty guns that go off.

Milwaukee Club Wins.

Michael White and Edward May constituted the team representing the Milwaukee Gun Club in the contest last Monday at Diamond's track, Ravenswood, with a Chicago team representing the Sheridan Gun Club, the latter team being composed of J. E. Flannigan and W. C. Biedenweg. The race was at 50 birds per man, and the Milwaukee team won—83 to 79—the following being the scores:

Milwaukee Team.	
Michael White	01112111021022222122022122—21
	12112112220222222102222212—23

	12120012202121022200111 22—19—79

Bass Lake Shoot.

Bass Lake Gun Club will hold its annual tournament at Bass Lake, Ind., Thursday, July 27. Bluerocks, Sergeant system. This is a great trap-shooting point this summer, as the good bass fishing brings together a number who like the gun as well as the rod.

They are Pleased.

The Rowley Pad Co., of Cleveland, O., after advertising the Rowley Cheek Pad for a month in the FOREST AND STREAM, write that they are selling a number of the pads and are much pleased with the FOREST AND STREAM. This article is so useful that it commends itself naturally to the trap-shooters, all of whom read and believe in this paper.

Dick Merrill Not Shooting.

Last spring, while in the East, Dick Merrill, of Milwaukee, was injured by a fall from a shed roof, which precipitated him and others to the ground with considerable violence. He sustained an injury to the right side of the head which kept him in hospital for a couple of weeks. I regret to say that he has not yet fully recovered and is troubled with partial deafness on the right side of his head. His doctor says that he will recover from the deafness in time, but forbids his using the shotgun for some time. This must be much of a hardship to so ardent a shooter.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Garfield Gun Club.

CHICAGO, July 22.—The weather was hot and windy, especially in the early part of the afternoon. The scores are not up to our general average. Class A medal was won by Dr. Shaw on a score of only 21. Class B medal was won by A. Hellman on a score of 20. Class C medal was won by Cornelson on a score of 19.

Cast Iron Medal.

KENT, O., July 21.—Herewith are scores of the Heikes-Elliott match. The birds were a very ordinary lot. Only a few were good ones. About 1,000 people were on the grounds. Very hot weather prevailed. Heikes used a Remington gun, 3½drs. of Schultze, 1¼oz. of No. 7 in both barrels, U. M. C. shells. Elliott used a Winchester, 45grs. Hazard, 1¼oz. of No. 7 in Leader shell.

Referee, C. A. Young, Springfield, O.; trap-puller, Wm. Lee, Kent, O. C. A. Young sent telegraph challenging for cast iron medal:

The Target Championship.

NEW YORK, July 25.—*Editor Forest and Stream:* I have to-day received a letter from Mr. W. R. Crosby, in which he challenges Mr. J. A. R. Elliott for the E. C. cup, inclosing $25 as forfeit to bind same.

Mr. Elliott has been notified of Mr. Crosby's challenge, and has been asked to name date, place and time for holding the match.

EDWARD BANKS,
Sec'y The American E. C. & Schultze Gunpowder Co., Ltd.

Ferd V. Van Dyke.

THE following circular letter, which explains itself, will be of interest to the thousands of friends everywhere of the late Ferd V. Van Dyke. It is as follows:

In Memoriam.

FERDINAND V. VAN DYKE.
Died June 3, 1899.

Dear Sir: You are doubtless well aware that our mutual friend Ferdinand V. Van Dyke departed this life on Saturday, June 3, 1899, after a long and painful illness.

He was for many years a prominent and popular figure at all the chief trap-shooting tournaments throughout the country, and always made friends wherever he went.

It is now purposed to erect over his grave a monument subscribed for by his friends, as an evidence of the high esteem in which he was held by them and those with whom he came in contact. The consent of his relatives has been obtained, and we now, as a committee, ask whether you wish us to place your name on the list of subscribers to the Van Dyke Memorial Fund.

We make no special plea for donations to this fund. Mr. Van Dyke's qualities as a man and a friend, in this respect, speak for themselves.

It has been decided that no individual subscription shall exceed $2, and we would ask that all remittances be made either in cash or by postal money order, as the New York Clearing House charges 10 cents on all out-of-town checks.

It is also purposed to present to Mrs. Van Dyke, his mother, an album, consisting of letters from personal friends of her son, containing expressions of their feelings toward him. If you wish your letter to be included in the number to be bound in the album, kindly write on a sheet of paper not longer than 10in., nor wider that 8in., using a sheet of paper as nearly that size as possible. Also, be sure to leave a good margin on the right-hand side of the sheet, so as to allow for the binding of the letter without cutting out any of the writing.

Awaiting your early reply, we are, yours truly, Ed Taylor, P. O. Box 2308, New York; T. H. Keller, 80 Chambers street, New York; John S. Wright, Brooklyn Gun Club, 163 Hart street, Brooklyn, N. Y.; C. R. Wise, Passaic, N. J.; L. H. Schortemeier, 201 Pearl street, New York; Edward Banks, 318 Broadway, New York, committee.

P. S.—In making remittances by mail make the money order payable to any individual member of the committee, inclosing stamped envelope for acknowledgment of the same.

Auburn Gun Club.

AUBURN, Me., July 22.—Twenty-two shooters turned out to the Auburn Gun Club's weekly shoot on Saturday, July 22.

The wind blew a gale, making the shooting very difficult. Ashley won the gold badge on the shoot-off, six men being tied for it, with the handicaps.

The match for the Conner-Barker challenge cup was shot off Saturday, the contestants being Conner and Barker vs. Hunnewell and Ashley, Hunnewell and Ashley winning it by 15 birds.

The State tournament will be held on the grounds of the Auburn Gun Club, Auburn, Me., Aug. 30 and 31.

There will be one or two events each day; also high gun money, open to out-of-State shooters.

Inclosed are the scores for the afternoon:

Team match for cup:

	Regular.	Reverse.	Unknown.
Conner	0111110100	1011011011	1101011111—21

L. A. BARKER, Sec'y.

Minneapolis Gun Club.

MINNEAPOLIS, Minn.—The attendance at the weekly shoot of the Minneapolis Gun Club, Thursday, July 20, was not as large as usual, owing to the absence of several members who were attending the first annual tournament of the Sauk Centre Gun Club. The report of the shoot was delayed until to-day by the absence of the proper officer. The scores in the different events, as will be seen in the following, were very good. The returning members all speak in the highest terms of praise regarding the management of the Sauk Centre club and the citizens in general, who did their utmost to make the affair enjoyable during the entire shoot. On the evening of the first day the guests were entertained by drives through the beautiful little city until dark, when they were taken to the public park and given a band concert and served with refreshments by Mine Host Paris, of the Sauk Centre House. The evening of the second day was spent in a drive around the beautiful Bunker Lake, and closed with a reception given by Dr. and Mrs. Lewis at their residence on Third street. The third day the shooters were entertained by the citizens in general at Fairy Lakes in the form of a picnic, at which nothing was omitted that could be done to make a most enjoyable outing.

Event No. 1.—Val Blatz diamond badge, 15 targets, unknown angles: Parker 13, McKay 15, Gilfillan 9, Stone 12, Morrison 13, McNider 10, Jones 15, Remington 13, Hays 12.

McKay 3, Jones 1, Morrison 1, Remington 1. McKay won badge in the shoot-off.

Paegel challenge badge, 25 targets: Parker 24, McKay 18, Gilfillan 18, Stone 20, Morrison 20, Jones 23, Remington 19, Hays 16, Dr. Bill 16, McNider 9.

Parker won badge.

Schlitz diamond badge, 25 targets: Parker 19, McKay 21, Gilfillan 17, Stone 13, Morrison 19, Jones 22, Remington 13, Hays 17, Dr. Bill 12.

Jones won badge.

Club diamond badges, 10 single, 5 pairs: Parker 17, McKay 14, Gilfillan 12, Stone 14, Morrison 16, Jones 14, Remington 11, Dr. Bill 12, McNider 13.

Parker won senior; Morrison won amateur.

Soo Gun Club.

SIOUX CITY, Ia., July 21.—Here are the scores made by a few members of the Soo Gun Club at the fifth and sixth of the series of shoots being held for the Schuetzen trophy and other prizes.

Each event is at 30 targets, thrown from a magautrap, dead bird handicap allowed, as shown in parenthesis. Scores:

Postponed shoot of July 13. Trophy shoot No. 5:

WANECHA.

Arkansas and the South.

St. Louis Doings.

LITTLE ROCK, Ark., July 21.—On July 15 nearly all the best shooters of St. Louis put in an appearance at Du Pont Park to contest for the silver trophy, which was won by P. M. Kling a week ago with a straight score from almost as strong a field as to-day, Sumpter and Prendegast being the only ones who did not participate on this occasion. The contest was quite a stubborn affair, as three tied for the trophy on clean scores—Chase, Collins and Griesedick. This tie was not shot off, and will not be until Mr. Blake Collins returns from New England, where he has gone on a vacation and incidentally to get a little practice on the Interstate circuit at Providence and Portland. Corray and Dr. Smith finished with but a single loss, the former missing his first and the latter losing his 13th dead out of bounds. Kling, the previous winner, could account for but 23.

The weather was bright and clear, but the light breeze that prevailed was of no material assistance to the birds. These for the first part of the race were fair, but grew poorer toward the finish.

The conditions of this race are 25 live birds, entrance $12.50. The trophy must be won twice in open competition and defended once thereafter in an individual contest.

On July 22 the shooters will be given an opportunity to compete for a very handsome medal, which will be known as the St. Louis challenge trophy. For this elegant trophy, which cost $250, the St. Louis shooters are indebted to Mr. A. A. Busch, the well-known brewer. Mr. Busch is himself a shooter, and has done much to stimulate the shooting interest of his city. After the first open contest for this medal it will resolve itself into an individual affair. This will also be a handicap, and the entrance in the inaugurial contest will be $12.50, and each participant will shoot at 25 pigeons:

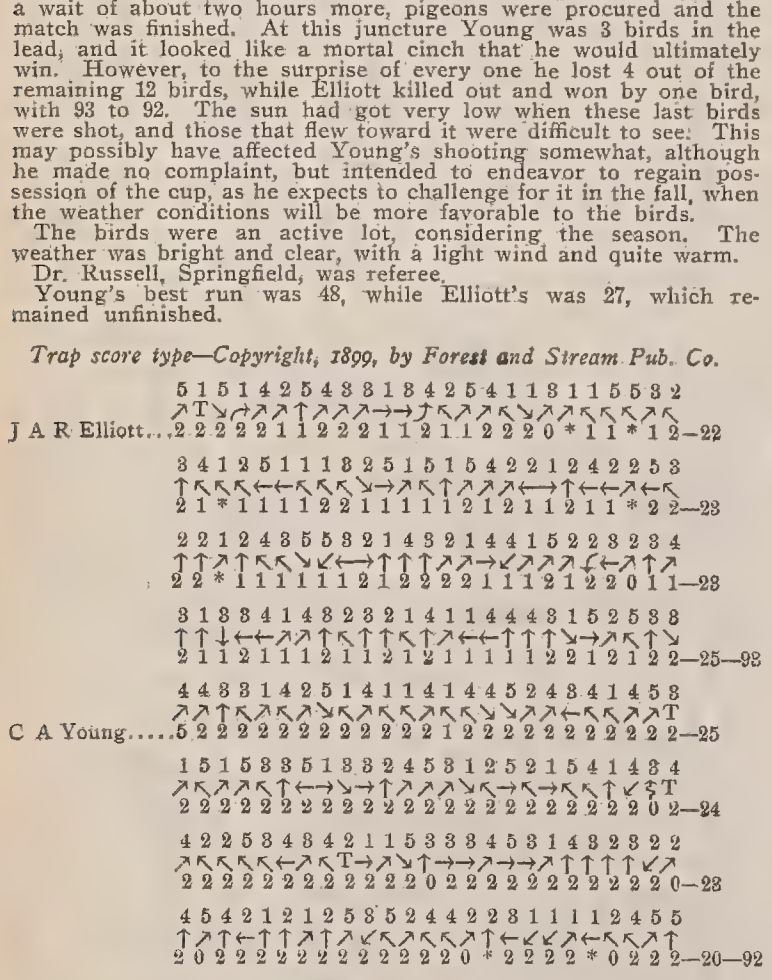
Elliott—Young.

The race between these two classic exponents of the shooting art took place at the ball park in Springfield on July 18, and with the double attraction of the match and a ball game something like 2,000 people turned out to witness the affair.



The race itself proved to be a highly interesting one, especially along toward the finish, when Elliott won out after it looked as though he was hopelessly beaten. Young started off like a winner, as he killed his first 48 straight, and when the race was half over he led Elliott by 4 birds, scoring 49 to the latter's 45. Elliott transacted business very successfully with his first 18 birds, but lost his 19th, 20th and 23d in rapid succession, the last two of these being dead out of bounds. Again in the second string he lost the 3d and 23d also dead out of bounds. At the end of the 75th round Elliott was still 4 birds behind, as he had been unable to reduce the little man's lead, each scoring 23 out of this string, Young losing his 14th and 25th of these. Elliott, as in his previous string, lost his 3d and 23d. When each had shot at 87 birds it was discovered that the supply of birds was exhausted. Young wanted the match declared finished, while Elliott insisted that the conditions required that the race must be at 100 pigeons. The argument regarding this point finally waxed so hot that a wager of $100 was laid between these two individuals. After some time the conditions were finally produced, and it was found that Young was correct, as there were no stipulations as to the number of birds that should constitute a race for the cup. The race was of course suspended and the ball players took possession of the field, but finally, after a wait of about two hours more, pigeons were procured and the match was finished. At this juncture Young was 3 birds in the lead, and it looked like a mortal cinch that he would ultimately win. However, to the surprise of every one he lost 4 out of the remaining 12 birds, while Elliott killed out and won by one bird, with 93 to 92. The sun had got very low when these last birds were shot, and those that flew toward it were difficult to see. This may possibly have affected Young's shooting somewhat, although he made no complaint, but intended to endeavor to regain possession of the cup, as he expects to challenge for it in the fall, when the weather conditions will be more favorable to the birds.

The birds were an active lot, considering the season. The weather was bright and clear, with a light wind and quite warm.

Dr. Russell, Springfield, was referee.

Young's best run was 48, while Elliott's was 27, which remained unfinished.

Trap score type—Copyright, 1899, by Forest and Stream Pub. Co.

Arkansas State Sportsmen's Association.

The Capital Gun Club is prepared to announce that it will add $375 in cash at the ninth annual tournament of the Arkansas State Sportsmen's Association, which will be held under its auspices in this city Aug. 15-17. Furthermore, it will throw targets at 2 cents at this shoot, which is virtually equal to $500 added when a charge of 3 cents is made for targets, on which basis the Association did business heretofore.

The programme will consist of ten events each day, eight at 15 targets, and two, Nos. 4 and 8, at 20 targets, which make the total number of targets for each day 160. The entrance in the 15-target events will be $1, and in the 20-target events it will be $1.50, with targets extra at 2 cents. The added money will be $100 daily, $10 to each event, while $50 will be set aside as average money, divided $10, $9, $8, $7, $6, $5 and $3. Then the club will hang up a purse of $25 for averages in the professional class, as the trade representatives will be permitted to shoot for targets only. The above purse will go to the two high guns in this class—$15 to first and $15 to second. The Rose system of division will prevail at this shoot. Programmes will be out Aug. 1. The above is assured, and it may be possible that the added money will exceed this.

PAUL R. LITZKE.

Fitchburg Rifle and Gun Club.

FITCHBURG, Mass., July 21.—A series of shoots has been arranged between the Fitchburg Rifle and Gun Club and the Leominster Gun Club. The first match was shot on the grounds of the Fitchburg Club Wednesday afternoon, July 19. It was a 50-bird race, consisting of 20 regulars, 15 unknown and 15 reverse. There were six men in each team, and I believe they were very closely matched if all should shoot up to their averages. It was a fine day, with just enough wind to make some of the birds erratic, though a good day for high scores. The Leominster men shot in good form, and held up well all through the race, all doing their average work, while some of the Fitchburg team fell somewhat below their average, and the result was a defeat for the Fitchburg team by 25 targets.

It was a very pretty race up to the end of the 20 regulars, and looked as if it would be very close, the Leominsters being only one bird ahead at that time. But the Fitchburgs dropped 9 birds to them in the 15 unknown angles and went to pieces in the 15 reverse, giving them thereby 15 more.

Mr. Bell, of the Leominster Club, judged the birds, and gave perfect satisfaction to both clubs. A better man would be hard to find.

Mr. Estabrook, of the Fitchburg Club, and Mr. Andrews, of the Leominster Club, had no trouble in making their scores agree.

The next match will be shot on the Leominster grounds the first week in August, though the day has not been settled as yet, when we are in hopes to hold them down a little closer. There is the kindest of feelings between the two clubs, and though they proved themselves too much for us in this series, we shall be glad to meet them at any future time, or other clubs in the adjoining towns, as we believe it to be the best of practice. The scores:

M. A. CUTLER, Treas.

IN NEW JERSEY.

Hudson Gun Club.

JERSEY CITY, July 20.—The first shoot for July of the Hudson Gun Club was held to-day. There was a good attendance of members, and some good scores were made. This club has about finished their new house, which is two stories high and 16 by 32ft. This club is the offspring of the old Kings Smokeless Club, which was composed of ten members. The club now numbers about fifty, and is in a prosperous condition. The opening shoot in the new house will be held on Aug. 20, and everybody is invited. Scores:

C. C. SNYDER.

Hackensack River Gun Club.

Hoboken, N. J., July 22.—The Hackensack River Gun Club held the first of its six-month prize shoot yesterday. Five tied with 9 kills. A 5-bird sweep was also shot, Hexamer, Bergkamp and Chartrand killing straight. In the shoot-off, miss and out, Hexamer won, killing 4 to Chartrand's 3 and Bergkamp's 0.

Our next shoot takes place on Aug. 18. There will be plenty of birds for sweeps. Scores:

Club shoot:

H Heflich	2022222220—8	J Clark	1*22122221—9

JOHNNY JONES.

Trap Around Reading.

READING, Pa., July 22.—Arrangements are being made to hold the annual target tournament of the Schuylkill Gun Club, of this city, at the Three-Mile House, some time in September, date to be selected at the next meeting of the committee. As target tournaments are a little scarce in this section at this time of the year the committee expect a large attendance of shooters.

The principal event of the day will be the 50-target match for the championship of Berks and adjoining counties for a handsome trophy, to be awarded the winner. The entrance fee will be $3, of which 75 cents will be deducted for targets, and the remainder goes to the shooters as a grand sweep, to be divided 50, 30 and 20 per cent. The programme will consist of 10 and 15 target events, with an entrance fee of 75 cents, $1 and $1.50. Targets will be thrown at 1½ cents each.

The committee in charge consists of Arthur A. Fink, chairman, David Early, Harry James, Frank Smith and Harry Nagle.

July 19.—The Mount Penn Gun Club, of this city, held the eighth of a series of twenty shoots for a Parker gun on its grounds on Mount Penn. Cloudiness and high winds made shooting difficult. The conditions were 25 targets per man, handicaps of added targets. Score follows:

	Broke.	H'd'c'p.	Total.
Yeager	21	4	25
Rhoads	20	2	22
Gilbert	16	9	25
Hunsberger	13	0	13
Coleman	20	5	25
Laird	19	6	25
Dietrich	15	0	15
*Shooter	19		19

*Visitor.

In general average up to date Yeager leads, with a percentage of 90, with Coleman second, with 86 per cent. Sweepstake events followed. Summary:

Brockton Gun Club.

BROCKTON, Mass., July 15.—Herewith are scores of to-day's shoot. The magautrap was set to throw a little higher than usual, and worked just as well as it did July 1. Leroy led with 92 per cent. for the afternoon; Wm. Allison, of South Weymouth, second, 87 per cent.; our reliable Worthing, third, 86 per cent. Bishop, Leonard and I. X. L., new men at the traps, did remarkably well. While Carr, of North Easton, shot the lightest load on the grounds, he kept the rest of us guessing. Scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	10	10	10	10	H	10	10	10	H	10	10	10	10

Merchandise.—First, Worthing, Wood, Woodard, Barrett and Allen, each 30; second, Grant and Leroy, 29; third, Allison and Bishop, 28.

A. A. BARRETT, Sec'y.

The Interstate at Providence.

WHEN, in the absence of FOREST AND STREAM's trap editor, I was asked to write a report of the Interstate Association's tournament, at Providence, R. I., July 19-20, I readily accepted the duty, little thinking what I was about to tackle. The Providence shoot was a corker, and cannot be passed over lightly.

IN the first place, two records were made at this tournament. Not records of so many targets straight; either we can't do that here in the East or we don't care to. The records were as follows: More shooters present at this tournament than at any target tournament ever held by or under the auspices of the Interstate Association. On the first day there were seventy-six shooters on the ground, and there was an average entry of fifty-nine and a fraction in each of the eight events decided. On the second day there were sixty-five shooters present, with an average entry in the twelve events of rather more than forty-five. The average entry for the entire two days was fifty-one and a fraction!

Target Throwing Records.

What is the largest number of targets ever thrown in one day from one set of five expert traps? Can Paul North tell us?

In the absence of any information to the contrary, I am going to make a claim for a new record in the way of target throwing for a single day, and for two days, only one set of five expert traps being used each day; no magautrap, and no Sergeant system. The record is 9,285 bluerocks thrown on the second day; 8,020 on the first day; a grand total of 17,305 for the two days.

Such work as this speaks for itself, and for the management of the shoot. Everything ran so smoothly and evenly that there was scarcely a break when one squad finished and the next took its place. The trappers—men, not boys—never seemed to tire, and the traps, which were new ones and the property of the home club, worked to perfection. The electric pull never gave any trouble, and the annunciators from each trap to the puller, telling when a trap had been refilled after a break, saved a world of time and a lot of breath in calling to the trappers. The excellent condition of the electrical apparatus is due to Mr. C. M. Staniels, a member of the club, who is a practical electrician and understands just what is required.

The Appointments of the Club.

Of course, it goes without saying that Manager Shaner could not have made the above target-throwing record had not the appointments of the club been first class in every respect. The trap house was the best I have ever seen. The house itself is the usual long, low shed one often sees where five traps are used; it does not, however, stand more than 2ft. above the ground, the trench in which the trappers do their work being dug to a depth of about 4ft. The house is weather-proof and can be closed up tightly when the traps are not in use. Behind the trappers is ample room for storing targets; in fact, before the first gun was fired on Wednesday morning forty barrels had been emptied and their contents—20,000 targets—had been stored in the trap house ready to be used by the trappers! Consequently there was no delay while barrels of targets were being opened.

The club house is a new structure, one story high, 30x25ft., including a piazza in front. It is light and airy, with ample accommodation in the way of gun racks, etc., for even the large gathering of shooters that was present on the first day. A bay window in the front is railed off to make a cashier's office, entries being made through the window. A water barrel on the outside affords a good supply of "running water," while a wash basin, soap and towels, together with the "running water," were luxuries one does not always meet with at shoots. I was prepared for something nice in the way of a club house when I met Elmer Shaner early on Wednesday morning; he was dressed in his best store clothes, and was wearing a black derby! Barring the fact that he doffed his coat at the shoot, he wore those store clothes and that derby all the first day. "You can see what sort of a club house it is," said he when I saw him that morning; "I'm going to run the shoot in my best clothes!" And he did.

The Club's Tribute to the Interstate.

Not the least pleasing feature of the whole shoot, so far as I was concerned, was the statement made to me by several of the members of the Providence Gun Club, among them Dr. Hammond and R. C. Root, that the club and everything that belonged to it, as well as much of the revival interest in trap-shooting throughout Rhode Island, are due to the missionary work done by the Interstate Association in New England: "We went to tournaments given by the Interstate Association and saw how they were run; we enjoyed ourselves and decided to get up a club and hold a tournament ourselves if the Interstate Association would help us. We have thirty active members in our club, and will undoubtedly have more in a short time. We owe it all to the Inter-State Association."

As an evidence of the hustle these New Englanders can get upon themselves when occasion demands it, I may mention that the elegant club house was started on Monday, July 10, and finished five days later! Yet it is not scamped in way, shape or form; it is all there and plenty of it; substantially built, too.

Manufacturers' Agents.

As near as I can figure it, there were fifteen manufacturers' agents present. The Parker gun was well represented, S. A. Tucker, Wilbur F. Parker, O. R. Dickey and L. J. Gaines all being on hand. J. S. Fanning was there, shooting Gold Dust from a strange gun. The Du Pont Powder Company was represented by H. B. Collins, of St. Louis, Mo., and B. Leroy Woodard. J. H. Cameron was on hand to represent the Winchester Repeating Arms Company. Admiral A. G. Courtney was there in his entirety, shooting a Remington gun well to the front on the second day. Laflin & Rand were represented by E. C. Ferriday; Hazard Powder Company by B. H. Norton; the Marlin Fire Arms Company by A. Bartlett; Peters Cartridge Company by Tom Keller, who was the life of the shoot, and the bane of the Admiral's existence! The American E. C. & Schultze Gun Powder Company was represented by Harold B. Money and—well, somebody else.

The Home Club Well Represented.

Seldom, if ever, have I seen a home club so well represented at any tournament. Among the shooters hailing from Providence were H. W. Bain, Jr., president of the club; R. C. Root, treasurer; Dr. Hammond, Smith, Senator N. F. Reiner, Powell, Vice-President of the club; Greene, Jr., Dr. Inman, Francotte, A. Arnold, E. Tinker (one of the old-timers), E. N. Cook, H. L. Remington, J. A. McNicol, W. H. Sheldon, W. Thoene and Richards; a total of seventeen shooters at the least.

From out of town came Dr. A. A. Webber, the great revolver shot, who claims Brooklyn, N. Y., as his home; L. H. Schortemeier, of New York. Springfield, Mass., was represented by Jordan and Merritt. Other towns and cities represented were: Pascoag, R. I.: E. C. Griffith, F. Inman and Slade. Marlborough, Mass.: H. G. Wheeler; Whitingsville, Mass.: F. Whiting and M. H. Coffin. Woonsocket, R. I.: Mills, Getchell and Campbell, Hingham, Mass.: Thomas Howe. Waterville, Me.: Preble, S. A. Greene and Dr. Dwinnell. New Bedford, Mass.: Eggers. Brockton, Mass.: Worthing, Wood, A. A. Barrett, Woodard and Leonard. Holyoke, Mass.: J. H. Egbert. Narragansett Pier, R. I.: J. C. Tucker, C. H. Tucker, T. McArdle, Reuben Gavitt, G. Cook, Seranson and Briggs. Sterling, Conn.: Frank Corey. Willimantic, Conn.: Conn. Carolina, R. I.: Kenyon, Metcalf and F. C. Barber. Stonington, Conn.: Post. Wickford, R. I.: H. H. Moore. Bellows Falls, Vt.: Drs. Knight and Morrison. Haverhill, Mass.: S. G. Miller, N. C. Tozier and C. A. Griggs. Westerly, R. I.: B. Bliven. Worcester, Mass.: A. W. Walls. Meriden, Conn.: S. Davis. South Weymouth, Mass.: W. Allison. South Danville, Me.: G. R. Hunnewell, etc.

It is impossible to make up a complete list of all the places represented, but the above list will show plainly how thorough is the revival of interest in trap-shooting throughout New England, and how wisely the Interstate Association decided when it offered its assistance to the trap-shooters of Providence for the tournament in question.

Before presenting the detailed scores of each day's programme mention must be made of the officials at the shoot. The cashier's office was in charge of R. C. Root, his assistant being R. H. Nisbet. J. F. Russell was the blackboard scorer, and T. J. Leonard puller. To say that all these gentlemen did their work well would be to use a hackneyed phrase that doesn't amount to much. As a matter of fact, the statement that the shoot ran smoothly and well speaks volumes for the work of Mr. Shaner's corps of assistants.

First Day, Wednesday, July 19.

A strong wind was blowing from the west, making the targets jump and dip in a lively fashion when the first event was started. Instead of dying out, the wind kept getting stronger and stronger until the sun was past the meridian. Then it gradually died out and only a gentle zephyr passed along, dispersing the smoke from the guns without bothering the targets. The sky was dotted here and there with light fleecy clouds, but they caused no change of light, the sun shining brightly all day. With the perfect background, only the strong wind can be blamed for the lost targets, for on top of the hill where the gun club's grounds are located the wind from any quarter of the globe has full sway.

Manager Shaner had hoped to start promptly with No. 1 squad at the time appointed, but some of No. 1 squad—Fanning, Parker, Money, Leroy and Bartlett—were missing when "Time" was called. So also were some of No. 2 squad. Thus Mr. Shaner began with "any old squad" to save time, as he realized he had a big contract on hand if he wanted to finish the day's programme. When the entries came rolling in as each successive street car arrived, until a total of sixty-six entries had been recorded, he gave it up for a bad job, and laid himself out to make a record for target throwing from one set of five expert traps. As stated elsewhere, he managed to throw a grand total of 8,020 targets—actually scored—before a halt was called at 6:30, in order to permit of the club and its guests arriving in time for the first course of the clambake at Crescent Park.

Forty-one shooters shot through the eight events decided during the day, the last two events having to be carried over to Thursday's programme. Of the forty-one, Leroy was high with 126 out of 135, Banks and Dickey being next with 123; after them came Parker, S. A. Greene and Money in the order named, all close up and well in the race. The scores of the eight events are given below, the last two events on the programme being carried over to the second day, and therefore given in the details of that day's scores:

First Day's Scores.

Events:	1	2	3	4	5	6	7	8

Second Day, Thursday, July 20.

This was another kind of a day in some respects. The sun shone down in all its midsummer might and made things decidedly warm in East Providence. There was no wind to temper its heat as there was on the previous day, but still it was not exactly uncomfortable, even with a shooting jacket on. In the absence of the wind, scores ruled higher, although a total of 205 targets were shot at, as against only 135 the day before.

An attempt was made at an early start, but somehow or another the shooters came straggling in by twos and threes, until it was almost a wonder that the Interstate Association's manager kept things moving at all. His executive ability, however, was equal to the occasion; likewise his apparently unbounded store of patience! The two events left over from the previous day were not disposed of until after 11 o'clock; but once they were gotten rid of everything moved along like clockwork.

Sixty-five shooters took part in to-day's events, as against seventy-seven yesterday, several of the sixty-five being newcomers. Among the latter was Rich Hunnewell, booming the Maine State shoot and smashing targets with an ease that was startling. The highest entry list was fifty, that number being reached in five out of the first six events. The average number of entries in the twelve events was 45 1-3, as against 59¾ for the previous day.

Wilbur Parker started in well and kept up his speed all day, beating out Leroy by one target on the day's shooting, and leading Fanning by 2 targets. Wheeler and Schortemeier were fourth and fifth, close up, with Admiral Courtney, Tom Howe and Allison, tied for the next three places.

Below are given the details of the day's shooting, a total of 9,285 targets being thrown from the single set of traps on this day!

Second Day's Scores.

Events:	1	2	3	4	5	6	7	8	9	10	11	12		
Targets:	15	20	15	15	20	15	20	15	15	20	15	20	Shot

Second Day's Averages.

Thirty shooters took part in all the twelve events shot on the second day. The averages made by the thirty above referred to are given below in order of merit:

	Broke.	Av.		Broke.	Av.
W F Parker	193	.941	F Whiting	170	.829
Leroy	192	.936	Dr A A Webber	165	.804
J S Fanning	191	.931	R C Root	163	.795
H G Wheeler	189	.921	Greene, Jr	163	.795
L H Schortemeier	187	.912	Jordan	160	.780
A G Courtney	183	.892	N F Reiner	160	.780
T Howe	183	.892	E Banks	159	.775
W Allison	183	.892	T H Keller	157	.765
H B Money	182	.887	A Bartlett	139	.678
O R Dickey	182	.887	Francotte	137	.668
Dr Hammond	182	.887	Smith	130	.634
E C Griffith	179	.873	B H Norton	128	.624
Preble	178	.868	E C Ferriday	125	.609
S A Greene	176	.858	Dr Dwinnell	115	.560
Merritt	172	.839	J H Egbert	100	.487

General Averages.

In the matter of general averages it will be found that twenty-nine shooters shot through the entire programme of 340 targets. Of these, Leroy is high with a total of 318 breaks out of his 340. W. F. Parker is second by virtue of his consistently good shooting on both days; his total is 315, or only three less than Leroy. Fanning and Schortemeier are tied for third and fourth places with an average of 90 per cent. Both men made a bad start, but pulled up strongly toward the finish. The order of merit is as follows, each man shooting at 340 targets:

	Broke.	Av.		Broke.	Av.
Leroy	318	.935	Greene, Jr	279	.820
Parker	315	.926	Whiting	277	.814
Fanning	306	.900	Webber	276	.811
Schortemeier	306	.900	Root	274	.805
Dickey	305	.897	Reiner	265	.779
Wheeler	303	.889	Jordan	264	.776
Money	302	.888	Keller	258	.758
Hammond	299	.879	Bartlett	226	.624
Howe	297	.873	Smith	222	.652
Greene	297	.873	Ferriday	222	.952
Griffith	296	.870	Francotte	219	.644
Preble	288	.846	Norton	212	.623
Merritt	286	.841	Dwinnell	205	.602
Courtney	284	.833	Egbert	178	.523
Banks	282	.829			

Among the others who shot well up, but who did not shoot through the programme, were S. A. Tucker and Rich Hunnewell, the latter of South Danville, Me. Hunnewell in particular shot a very hot gait, breaking 160 out of 170 shot at on the second day, making the excellent average of .941. Had he started in on the first day he would probably have made it very warm for the leaders. Tucker shot in all but the last two events on the second day, shooting at 305 targets in all and breaking 271, giving him an average of .888.

Social Amenities.

In order that its guests might be entertained in the proper way and in a manner likely to be conducive to their pleasure, the Providence Gun Club arranged for a clambake at Crescent Park on Wednesday evening, to be followed by a moonlight trip down the bay on the steamer Squantum.

As the clambake had to be reached on time, all shooting was stopped at 6:30 P. M., three special cars being in readiness to convey the club and its guests to Crescent Park. About 100 in all sat down to a regulation Rhode Island clambake, the first of the season at the above pleasure resort.

After the party had taken their seats, a delay of half an hour—more or less—occurred, owing to a fuse blowing out, leaving the dining hall in darkness. During this wait immense quantities of ice water and brown bread were consumed, but no one's appetite seemed to be dulled when the light and the clam chowder appeared together. The menu was as follows:

Clam Chowder.
Salmon and Green Peas.
Bluefish, Sweet Corn and Sweet Potatoes.

Clam Cakes and Fried Eels.	Soft Shell Crabs.
Lobsters.	Steamed Clams.
Watermelon.	Ice Cream.

When the above menu is considered, is it any wonder that some and certain scores suffered on Thursday?

The bake was followed by a trip down the bay, the Squantum, brilliantly illuminated and carrying an extra crew of white-aproned waiters, not returning to the city until just about midnight. The trip had taken in the north end of Prudence and had given a view of the gayeties at Rocky Point, etc. It was in all a most pleasant evening, notwithstanding the fact that the night air was quite chilly, and that Dickey alone had the sense to bring an overcoat along. Several chilly mortals found the vicinity of the smokestack decidedly comfortable.

Notes.

Elmer Shaner's opinion of managing the Providence Interstate: "This is a cinch."

R. C. Root, the treasurer of the Providence Gun Club, not only acted as cashier throughout the entire shoot, but shot in every event and broke lots of targets into the bargain. He appreciates, however, the truth of the trap-shooters' axiom—"No man can do both things well—work and shoot."

Dr. Hammond was here, there and everywhere during the shoot; he saw to it that things were kept moving, and yet managed to end up pretty near the top of the heap after two days of consecutive work on targets.

Rich Hunnewell blossomed forth on the second day and broke about all there was in sight. What he would have done at the clambake on Wednesday evening is only a matter of conjecture.

In all probability he would have gone "straight," as he did in the last event he shot in.

Admiral Courtney, Tom Keller and Schorty issued their usual challenge, viz.: To shoot any three men their size and weight upon the grounds. The defi was not taken up.

Wilbur Parker was a surprise to some people, but to those who know him best his position as high man on the second day was no cause for comment. Mr. Parker as a shooter is not an easy proposition for anybody to solve.

There were no frills about the lunch served on the ground, but what there was was all right. Mr. A. J. Kent, the gentleman who owns the ground rented by the gun club, had direct superintendence over the pie and sandwich department. His soft drinks were beyond reproach.

The Providence Gun Club is a live organization, and can boast of more enthusiasm to the square inch than any other gun club that I wot of. To build a 30x25 club house in five days is something to brag about indeed; but to plan and bring to a successful climax such a tournament as the one above described is more than two or three feathers in any club's cap.

The Old Guard was represented by Ned Tinker, one of the best known trap shots of Rhode Island in the days when gun-below-the-elbow and 21yds.-rise was the thing, with live pigeons for targets. Ira Paine and Mr. Tinker were giants in those days, and the latter's scores in the first two events on the first day show that Mr. Tinker's blue eyes have not forgotten how to look along a gun barrel, although the sight may not be as clear as it was when feathers flew. Mr. Tinker is well thought of by the Providence Gun Club; he is its solitary honorary member!

Senator N. F. Reiner is another of those who work for the best interests of the Providence Gun Club. With Messrs. Root, Bain, Hammond, Reiner and Staniels, no gun club can go far astray.

Another active member of the home club is Hon. Charles Bennett, Secretary of State for Rhode Island. Mr. Bennett was present on the afternoon of the second day, and took much interest in the proceedings at the score.

S. G. Miller, together with his side partners, Messrs. N. C. Tozier and C. A. Griggs, were on hand from Haverhill, Mass. Mr. Miller brought with him a supply of the programmes for his club's one day's shoot on Aug. 8, the day preceding the Interstate Association's tournament at Portland, Me. The Haverhill Gun Club, in addition to giving a good programme for the boys to try their hands at, offers a favorable opportunity for shooters to get a little practice before the battle opens at Portland on Aug. 9.

Thomas Howe, of Hingham, and W. Allison, of South Weymouth, were two old standbys, who brought off a straight or two just when they needed them. Mr. Howe was present both days, but Mr. Allison only showed up on the second day of the shoot.

Many regrets were expressed that Miskay was unable to be present. The Boston lady was confidently expected, but business undoubtedly kept her away and saved many a good shot from "being beaten by a lady." Her average of 90 per cent. on the second day of the Haverhill, Mass., tournament last year has not yet been forgotten.

The system of dividing the purses adopted by the club was the only feature of the shoot that did not meet with universal approval. It hardly seems "equitable" that a man who has just broken 20 straight alone should only get about 15 or 20 cents more than a man who has only scored 19. But such is the "equitable" system.

When Manager Shaner arrived in New York on Saturday morning his complexion was decidedly rosy. "This is not sunburn," said he; "this is due to the joy I feel at having succeeded in throwing 9,285 bluerocks from one set of five expert traps in one day. If only you hoodlums had showed up on time on Thursday morning I'd have thrown 10,000. Durn the clambake!"

And speaking of the clambake: it was great! Everybody made one straight at least; some two, Courtney and Dr. Webber among the latter.

H. B. Collins, of St. Louis, Mo., was a most unexpected visitor. His presence was none the less enjoyable, and he held up his end with the best of them, even when riding on the toboggan (or roller coaster) with Courtney, Dickey and Gil Wheeler as his fellow passengers.

H. B. Money, surnamed The Caddie, and Gil Wheeler were always on the warpath when the poor old ground hog in the field below the club house showed himself. Their methods might have bemused a red Indian, but that Rhode Island ground hog saw through their motions right away quick! He holed up.

The Providence shoot was a great one, and the best ever given under the auspices of the Interstate Association. Now for the Portland tournament, Aug. 9-10.

EDWARD BANKS.

Woonsocket Gun Club.

WOONSOCKET, R. I., July 15.—The open shoot of the Woonsocket Gun Club, held this afternoon, was fairly well attended, and although the conditions seemed to be all that could be desired, high averages were not in order. Leon W. Campbell made the highest average, breaking 115 in the programme of 130 targets.

The Woonsocket team successfully defended the State Pennant, representing the championship of the State of Rhode Island for five-men teams, against the Burrillville Gun Club by a score of 188 to 177. A challenge has been received from the Providence Gun Club. The date for this match has not been fixed, but it will take place the first part of August. The Providence team will consist of the best men from the Pawtuxet, Centerdale and Burrillville Gun Clubs, and the Woonsocketers will have to make a high score to keep the pennant.

After the programme there were two extra events—a miss-and-out and five pair doubles. F. H. Mills was high man in the miss-and-out, Campbell was second and Griffith third, Campbell dropping his fourteenth and Griffith going out on his thirteenth target. A. W. Walls won first in the doubles by a score of 9, Gethcell being second with 8.

The score by events was as follows:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	15	10	15	20	15	10	20	15
Mills	9	13	9	11	9	10	9	13	10

Sweepstake: Geo. W. Loomis 16, J. P. Smead 18, W. Kenyon 16, A. A. Kimball 14, W. D. Townsend 19, G. F. Brucker 15, F. S. Parmelee 19, Wm. Brewer 20, W. Roberts 18, Plumber 18, F. Fogg 17, A. Bersheim 18.

St. Paul Rod and Gun Club.

ST. PAUL, Minn., July 17.—St. Paul Rod and Gun Club held a very successful tournament July 14-15. Entries first day ran up to 90 and second to 86, with 50 through entries the first day and 42 the second. Shooting was fast and furious from two sets of expert traps. The cup event is a State affair, and was hotly contested to the finish, Morrison winning it for the second time. There was a hot contest with the 24s—Mrs. Shattuck, J. C., Trent, Murray, Ed Novotny and Shattuck. Mrs. Shattuck, J. C., Trent, shot straight to 21, when Mrs. S. missed. J. C. won second prize.

Morrison shot in tournament under name of Donaldson.

Averages for first fifteen high guns: Donaldson .338, Trent .331, Robbins .319, Peterson .318, Dayton .318, Steege .317, Dr. Glazier .317, Tom Marshall .317, Burt .316, Kabo .315, Dr. Kibbe .312, McKay .311, Reihl .309, Parker .307, Fulton .307.

State amateur championship cup, presented by Minnesota Game and Fish Protective Association, unknown angles, 25 targets, winner to take purse next year:

Boston Gun Club.

WELLINGTON, Mass., July 20.—The Boston Gun Club closed its season's practice at the traps yesterday afternoon at Wellington. Mr. Thos. Howe, of Hingham, turned out to be the fortunate winner of the gold charm, with Mr. Woodruff and Miskay close competitors. The series has but added one more to the popular list now to the credit of the club, fifty different shooters competing, all under harmonious conditions of distance handicap and moneyless events. The positions of prize winners are given in full below, the many good scores included being more than counterbalanced by most enjoyable days used in making them. Yesterday's gathering was but slightly composed of the regular devotees, four from South Framingham, two from Lynn, also an odd one or two completely outnumbering the home squad. This was hardly hospitable, but with Mr. Gordon at Blue Hill, Me.; Mr. Woodruff at Henniker, N. H.; Mr. Sheffield at the Rangeleys, and Messrs. Howe and Leroy at Providence, not to mention others who have departed without leaving their addresses, the club made the best showing possible under the circumstances.

The squad who yesterday put in an appearance on the later train rendered a good account of themselves and thoroughly enjoyed the different events. The scores in the match were good, for a very persistent wind bothered the angles, or rather the shooters. Mr. Isham's 25 for a first trial over the magautrap requires no excuses; likewise the scores complete of the Framingham quartette, which were accomplished under the same conditions.

Scores complete:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	10	10	3p	3p	10	5	10	10	10	10	10	10	15

Ayer, 16	..	..	..	..	..	..	..	..	5	6	7	5	3	..

All events unknown angles; event 12, infielders.

Final contest, individual prize series, 30 targets, unknown angles:

Isham, 16.....0111111111011111101111101111011—25
Hastings, 16.....1111111011011111111110110110110—24
Spencer, 18.....1010111111001111011111010111—23
Lyman, 16.....1011110110110111110111011110111—23
Staples, 16.....1111101101010111011111101011—22
Horace, 18.....1001110111011110110111111010—22
Samuels, 18.....1011111011010101110111111100—21
Ayer, 16.....0100110111101111110000101110 10—18

Winning totals in prize series just concluded, possible 180, six best scores of 30 targets, unknown angles, made during series of fifteen shoots constituting prize total:

Howe, first	27	27	27	26	26	25—158
Miskay, second	29	28	26	25	25	24—157
Woodruff, third	28	27	26	26	25	25—157
Spencer, fourth	27	27	27	24	23	23—151
Horace, Fifth	28	27	26	24	23	22—150
Leroy, sixth	25	25	25	24	24	23—146
Allison, seventh	28	26	24	23	20	18—139
Gordon, eighth	25	25	24	23	22	19—138

Tie for second and third prizes decided according to rules—shooter having attended most number of shoots gaining precedence.

Special average prize won by Leroy, 21yds., with 80 per cent.; Howe, 17yds., with 82, ineligible because winning first prize.

John F. Weiler Gun Club.

ZIONSVILLE, Pa., July 15.—The conditions were 10 birds, $10:

C. F. KRAMLICH, Fin. Sec'y.

PUBLISHERS' DEPARTMENT.

Kennel Transactions.

BECAUSE of his failure to straighten out a certain dog-selling transaction we have discontinued from our Kennel Special columns the advertisement of C. L. B. Landis, of Bowers Station, Pa.

Yacht Chandlery.

MESSRS. L. W. FERDINAND & Co. have just issued a new illustrated catalogue of ship and yacht chandlery, hardware, paints, varnishes, marine glue, etc. The list of articles is very complete, and the house is one of the oldest and most widely known in the business.

For the Lawn.

IN another column will be found the advertisement of Chas. D. Smith's Canada unbleached wood ashes for lawns and grasslands. The advantages of these ashes as a fertilizer are well established.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1899, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, AUGUST 5, 1899.

VOL. LIII.—No. 6. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

He who hath no jovissance but in enjoying, who shootes not but to hit the marke, who loves hunting but for the prey, it belongs not to him to entermedle with our schoole.

Montaigne (1580).

ON THE HEIGHTS.

WITH this number is given a full page supplement illustration of the mountain sheep, forming one of our series of portraits of American game animals.

THE ERA OF THE PRESERVE.

IN the mutations of all the institutions and the evolution of new ones incident to civilization, there are many people who deplore the passing away of all that is old and the adoption of whatever is new. In the realm of sport, the spirit of conservatism is specially persistent. However readily men may accept innovations which have a significance of commercial progress, they are slow to give up the beliefs, usages and freedom of action which governed their pleasurable sport afield and afloat in the years of not so long ago. Then there was an "open door" policy in sport which added a charm to it. The hills and valleys and plains, with the waters which rested in or coursed through them, were open to the sportsman in every direction as he chose to select. Those days are gone forever. The needs of man had not then required more than a relatively small portion of the land for his sustenance. For every acre in cultivation there were many more but partially in use or left entirely wild. But, with the wonderful increase in population, the good old days and ways have necessarily been abandoned by him who hunts and fishes.

For the future there will be greater restrictions. No more will there be square miles unused in every section as in the years agone. The demands of a teeming population have changed all that. The necessities of the people must dominate the sport of the few who seek sport. Population has increased, wealth has increased, shooters and anglers have increased correspondingly, yet the area which affords sport has steadily decreased and will continue to decrease under the same conditions which have caused the changes.

In the old days there was more than sport enough for all. No man then needed to invoke his property rights and prerogatives to secure his share. But the times have changed. It is useless now to make the standards of the good old days of sport the standards of the present. There was in the old days a surplus of hunting territory and game in the good old days, which was not impaired in the least by the "open door" policy; instead of a surplus, there is hardly enough of game now, with all the restrictive measures in force, to meet the restricted desires of shooters and anglers. It is useless, in the face of the needs of the hour, and the recognition of them by practical men, to invoke the usages and beliefs of the past as the correct limitations of the present. They were appropriate to the conditions of that time; but the conditions then and now are as wide apart as are the years. Game laws have multiplied, the rights of land owners have been asserted, the available area for sport has constantly diminished, and from those conditions have evolved the fish and game preserve, east and west, north and south, securing to the individual what was once free to all.

The sportsman who dwells on the past is prone to think that the freedom which he had then in shooting or fishing where he listed was his right. In this he was wrong, for the same property rights existed then as now; what was conceded in a spirit of tolerance or indifference should not be misunderstood as a recognition of right.

The transitions from the old to the new are sweeping and radical. The game preserve is coming into being everywhere. The laws guard against excessive and indiscriminate killing. The rights of the land owner are more and more effectually safeguarded. The national Government is rescuing land for parks for public use while there is still something left to rescue, and public sentiment throughout the land is upholding all this action of the new formative era as it is proper it should. It is wise, therefore, to recognize and support the needs of the present instead of the memories of the past. What was good and pleasurable then may be now out of place under the radically changed conditions. The property right of the individual, or an aggregate of individuals, is no greater now than it was in the good old days, but it is more assertive. Once asserted it should be respected accordingly. Let each one who loves sport secure for the future such property rights as he best can, for sport on land and water some time in the future will be a matter of property throughout the land as it is now a matter of property in part.

SNAP SHOTS.

Some years ago a correspondent of an esteemed contemporary expressed himself as much troubled in his mind because of the waywardness of FOREST AND STREAM contributors. These people, he pointed out, were of the sort of folks who are forever wandering around through all outdoors and seeing things and writing about them, but never killing any game, at least it did not appear from their writings that they got any game, and as for him he was quite assured that they could not be classed as sportsmen. This was the conclusion of an outsider, an alien; and it was accepted for what it was worth, and no hard feelings ensued. But now comes one Ransacker, of the household, sheltered beneath the home rooftree, kith and kin of the family, who proclaims that after diligent and prolonged study of these same FOREST AND STREAM folk he too has come to the conclusion that they are not sportsmen.

It is a delightfully simple proposition, as they say out on the mountains where Ransacker makes his habitat; define "sportsman" to fit your case, and then show that the so-called "sportsmen" under consideration do not fit the definition. But on the other hand, if our definition of the title "sportsman," or our conception of it, be somewhat loose and vague, will it not then be found to fit the thousand and one variations and diversities of taste and practice which are characteristic of the followers of rod and gun? The term sportsman is useful in default of a better one. It means many things; but accepting the definition submitted by Ransacker may we not still apply it with perfect propriety to these very folk to whom he would deny it? Frankly conceding that sport is a vague expression, that what is sport for one is not what is sport for another, is it yet not the best word we have to express the idea?

We question if any word ever could be hit upon or invented that would answer the purpose any more satisfactorily than sportsman. There are so many diversities of sentiment and practice that it would be impossible to class them together under one designation. Of the many men of many minds who now constitute the ranks of sportsmen, each is a sportsman in his own understanding or interpretation or acceptation of the term and not necessarily less a sportsman because his sportsmanship is not that of another.

The Itaska preserve reservation scheme has now fairly been launched by the formation of an association to put the matter before Congress, as reported in our news columns. The far-reaching effects of the beneficent scheme challenge imagination and admiration. It is doing on a magnificent scale, and at a time while yet it may be done, a service of incalculable benefit to those who are to come after us. It is improving an opportunity to provide a priceless heritage for a whole people. The region the Itasca reserve projectors are asking the Government to set aside, to be kept forever intact, is the great watershed of the sources of the Mississippi River; and in the preservation of that watershed not only are the people of the Mississippi River Valley concerned, but in a larger sense the people of the entire continent. The national park will be national in effect as well as national in name. It will reserve for and preserve to the people of the United States what of right belongs to them and should of right belong to their descendants. If Congress shall set apart this great preserve it will be simply to keep for the people, the whole people, what belongs to them.

The character of the individuals whose public spirit has prompted them to take the initiative in this doing, and the character of the support they are meeting, afford abundant testimony that the Itasca Park project will be presented to Congress in a way which must command respectful attention.

Now perhaps you do not believe in luck, the luck of an hour, of a day, of a series of years. Then are you no angler. A fisherman is one of the last persons to scoff at luck, to deny its part and place in bestowing or withholding the prizes. Here is an example: Among the cottagers of the Thousand Islands is a certain well-known angler who has for twenty years past been fishing in the St. Lawrance waters for muscalonge, and for all the twenty years of patient endeavor has had not a fin to show. Neither he nor his man-servant nor his maid-servant nor the stranger within his gates has ever succeeded in taking a muscalonge, though in the same waters and at the same time others have been rewarded. It is one of the most extraordinary runs of luck on record in the annals of fishing.

The Harriman Alaska expedition's return to Seattle was reported on July 30. The party had left that city on May 31, and in the intervening time made a trip of more than 9,000 miles. Calling at Victoria, Wrangel and Juneau, they reached Skaguay on June 6, and some of the members of the party crossed the White Pass to the Yukon. From Skaguay the route was to Glacier Bay, Sitka, Yakutat Bay, Prince William Sound, Cook Inlet, Kadiak, Wood Island and as far as Plover Bay in Siberia. Side trips were made by different members to explore little known or new districts, and valuable collections were made in zoology, botany, geology and ethnology. In all these respects the expedition is reported to have been most successful, and admirably to have fulfilled its purposes.

Tennessee is one of this latest among States which have adopted our Platform Plank that the sale of game should be forbidden at all times. The last Legislature enacted a law forbidding the sale of quail in the open season in Shelby county, which includes Memphis. This city has long been one of the chief game markets in the South; it has been glutted with quail year after year, the game coming largely from Arkansas and Mississippi, two of the best quail States in the Union. The new statute, if the authorities will enforce it, will thus have a salutary influence not only for the Tennessee quail supply but for those of the adjoining States as well.

The Prince of Wales has just presented to the Natural History branch of the British Museum a specimen of the Florida tarpon, which Mr. O. H. Mygatt, of this city, who captured it, pronounces to be the finest fish he has seen in his ten years of tarpon fishing. It is seven feet in length; weighed one hundred and seventy pounds; and needless to say the British Museum does not contain a handsomer fish than this silver king from Florida.

By courtesy of Dr. R. W. Raymond, Secretary of the American Institute of Mining Engineers, we are enabled to reprint from the Transactions of the Society Prof. Snow's excellent paper on the "Equipment of Camps and Expeditions." In it will be found many valuable hints which are particularly pertinent to pleasure outings. The paper will be continued in our next issue.

We are advised that the Canadian Parliament has made material modification of the game export regulations, giving the non-resident sportsmen more liberal privileges than those formerly enjoyed. At this writing the details of the new law have not come to hand; we expect to have them for our next issue.

It was reported that Baltimore will have an inclosed shooting park. This is a form of sport which has now secured lodgment in the East, although numerous enterprises of the sort have been launched; and we shall be surprised if it finds an acceptable place in Baltimore.

The Sportsman Tourist.

A Grave by the River.

On the north shore of the Gulf of St. Lawrence a little river pours its flood into the greater waters of the gulf. Black rocks seamed with white marble protect it on either side. At low tide breakers moan at the bar, but at high tide shallops can enter and anchor within the bay. The stream is known by many names, but chiefly is called La Rivière de la Truite.

We anchored there one day in June for the fishing, and camped. Looking up the river a half-mile one could see the falls, which formed the only salmon pool on the stream, and we could hear at all times the ceaseless voice of its waters. The woods were dreary with dead trees of a recent fire, but back of the burnt limit the interminable forest of spruce and birch extended to the Arctic Sea.

A seal sunned itself on the rocks, but there was no sound of bird save the flying gulls. No house or human being in sight. Scarred nature dwelt alone, facing the great waters, visited only at rare times by wandering fishermen.

The camp being pitched we strolled to the hill and found a palisade fence inclosing a grave. The fence was strongly built, and at its four corners some semblance of taste was evinced in carved posts. No name was attached. The square inclosure had been built some years, yet was solid and in good repair. The interior was a mass of the white blossoms of the dwarf cornel, shining bright in the four-fold leaves of the plant. They seemed as if they had been carefully planted in the inclosure, for all outside was covered by the charred remains of the former forest.

"Whose grave is this?" we inquired of our boatman.

"We don't know—been there a long time."

"Who built this inclosure?"

"Don't know—say it was an English woman who came here once."

"Don't you know her name?"

"No; it was none of us."

This was all the information gleaned.

We sailed away at daybreak, leaving the sleeper to his forest bed. He needed no fitter monument. He was not forgotten. In some distant English home his name doubtless is still spoken, and on some hearts the palisade inclosure is engraved. Love endures when tombs are broken and graves obliterated.

"Rose leaves, when the rose is dead,
Are heaped for the beloved's bed;
And so thy thoughts, when thou art gone,
Love itself shall slumber on."

C. E. W.

By the Beaver Dam.

"A year has gone, as the tortoise goes,
Heavy and slow;
And the same rose blooms and the same sun glows,
And the same brook sings of a year ago."

Where the pines and aspens meet the rolling stretches of velvety upland lawn, where the mountain torrent pauses in its mad career and commences to widen in graceful curves and run placidly down toward the Snake River, the beavers had built their dam. The beavers have long since traveled the way of redman and buffalo, but the chiseled trunks remain half-buried in moss and clematis, nature's delicate monuments to a forgotten past, rising scarcely above the azure beds of columbine, pointing to the deeper azure of the firmament. But the stream flows on as it did when its banks were first trodden by Captain Bonneville and the hardy bands of explorers and pioneers who now build camp-fires on the "happy hunting grounds" beyond the sunset. The willow grouse still brings out her brood in the dense shaded thickets, and where devastating fires have been kindled by the hand of the intruder, blushing roses veil the ashes and the desolation. Aye, and the old dam remains, deepening the water above into a crystal pool where lurk the largest, wariest trout, and where the patriarchal otter rehearses to his progeny the traditions of long ago.

Along the central Wasatch snows were deep and waters high when the season opened. The Idaho boundary was not far away. There the rivulets were clear, and Mac and I longed to revisit the streams on which we had camped almost a score of years before, when life was before us and we had come West to see what fate had in store. Ah, that fate is an inexorable mistress! She will not show us the "weird" that lies ahead; but sometimes amid such scenes as these she permits us to forget and we lie on emerald banks and dream that things are not what they seem, while the castles in the clouds are as fair, as elusive as those pictured in the halcyon days of a lost youth. Time, the great effacer, treads lightly on these uplands, and with him we turn back the pages of the book of life.

The landscape was familiar, but the wonted faces of cattlemen and sheep herders were no longer in evidence, and the little log cabin across the creek had smoke coming from the log chimney—a thing I had never noticed before. The corral behind it was fallen, the poles rotting. We set our tent early in the afternoon, and before casting a fly made two drags of dry quaking asp and went half a mile for pitch pine for a camp-fire. Everything was made snug, and then to obtain supper was the order of the day. While we were soaking our leaders there came from the cabin opposite an old, old man. We did not notice his age until he commenced a chase for grasshoppers, which suddenly ceased their chirping and jumping with the lengthening shadows. The man put his bait into a tobacco sack and strolled down to the brook, carrying just such a birch pole as we had cut in boyhood days from hills 2,000 miles away. We watched him fish as we were wont to fish before we heard of 4oz. rods, silk lines, flies and featherweight reels. Evidently he knew the stream intimately, for he wasted no time in exploration. Boy-fashion, he strung his catch on a willow twig, and on his countenance with each successful yank showed that, in one respect at least, his youth had not left him. So he approached within a couple of rods of where we stood. Noticing us for the first time, he shouted:

"Be you uns camping for fish, or be you huntin' cattle?"

"After fish," replied Mac. "Thought we'd put in a week on Raft River."

"Well, you uns had better come over after supper. Thar's a foot log jest above yer tent, an' I'm powerful lonesome."

The invitation was accepted, and at the appointed time we called on the hermit. He was braiding a silk line and gave us to understand that he made his livelihood by supplying the wants of summer campers like ourselves. In winter he furnished the nearest settlements with venison. Concerning his past he was reticent, and when he became duly satisfied that we had peaceful intent, he became taciturn. This was especially manifest when he learned that we carried none of the aqua vitæ which is imagined to be indispensable in all well-equipped outfits. From subsequent glimpses into his life we sized his place up as a "fence" for one of the numerous gangs of outlaws that infest the borders of the adjacent States. However this may be, he proved a good neighbor, and as such we give him full credit.

The waning stars looked on a radiant picture as the dew-decked grass and flowers hailed another day. The chill of the outer air, after its first cool caress, becomes the breath of life, and the sparkling, snow-fed waters give inspiration such as flows from no other morning tonic. Evening camp-fires, with their cheerful circle of incense-bearing pipes, with their merry round of anecdote and song, have from time immemorial had their bards and chroniclers, but the poetic beauty of the morning who dare portray?

The Great Bear majestically commences to pace his last quarter. We lie half dreaming, perfectly contented, awaiting the advent of the dawn. The trickle of the brook is so distant, so silvery, that we wonder if we do not catch the singing of the stars. Into our reverie comes a soft chirp from the bough o'erhead—not a carol, not even a note, but a low, faint sigh, as though from the lips of a happily resting child. There is no answering call. Five, ten minutes pass; we keep no reckoning of the lapse of time. By and by the chirp changes into a strain of liquid sweetness. This time it is heard all through the grove and glade, and glad responses swell, echoing loud and clear from mountain side and from the vale below. The Hunter, Pleiads and their starry host take this as token that their nightly duty has been well performed. One by one, as the birds awake, they sink to sleep. The snowy crest to north and west begins to glow, though it is still night under the trees. Quivering with the exultant thrill of youth, we step forth. The birds are not affrighted. Rejoicing with their audience, they pour forth yet stronger, more harmonious carols. From the ashes of the night before rises a feeble, flickering flame. Then a white cloud of smoke climbs toward the deep blue of the zenith, in strong contrast at first, but gradually, as day breaks upon us and the skies grow violet, becoming more thin and gauzy until it blends with the paling lines of heaven. The plain is now veiled in melting mists, and anon a splash from the pool, a gleam from the brook, gives evidence that all creatures have commenced again their daily meed of toil and pleasure. Mingling with the fragrance of the forest comes the aroma of the coffee, and ere sunlight falls upon us our feathered lures are lightly dropped across the laughing waters.

It was a cardinal principle with us to catch no more than we needed for immediate use. In the early morning we could have filled and refilled our creels. For what purpose? Simply that we might paralyze our incredulous friends with tales of unsportsmanlike achievement. When I had caught my stipulated dozen I sat down to enjoy my existence. Some men hunt and fish as though their very lives depend upon making a big score. Deservedly they return to the desk more weary than when they left it. From my meditation I was aroused by: "Come, old man, let's clean our trout and then wander up the cañon.

"'There will we sit upon the rocks
And see the shepherds feed their flocks,
By shallow rivers to whose falls
Melodious birds sing madrigals.'"

"I don't know about it, Mac. When a fellow of forty and more summers is sentimental enough to quote Marlowe I shall have to pass the deal."

But I went, nevertheless, and carried neither gun nor rifle, though both lay in the tent. Sometimes it is advisable to leave temptations at home, and this is always the case during the season of fawns and half-fledged broods. That sensible portion of the animal kingdom which naturalists are wont to term the "brute creation" has a wonderful faculty for distinguishing between friend and foe; also a no less wonderful aptitude for encouraging a close acquaintance with those whom it trusts. Were it not for terror, inherited through generations of abused confidence and malicious cruelty, the timid thrush would proudly lead us to the sylvan paradise where she has hidden her birdlings, and the coy doe would bring to us her trembling offspring, that we might stroke its spotted side.

At the pool our attention was attracted by a comical picture made by an old muskrat trying to teach her babes to swim. It struck us as strange that she should go to such trouble; the little rats should have known instinctively how to navigate, but they clung to the bank and to shallow water, above which arose their fluffy backs, bright eyes and sharp noses. The mother set them the example by swimming across and back. She endeavored to coax, and finally she pushed them over their depth and let them make their own way to the shore, though, you may be sure, she stayed close by. When we were seen the old lady shrieked, "Tramps!" in characteristic muskrat language and fled to her sub-aquatic vestibule, I suppose to call the police. The little ones did not attempt to escape. Ostrich-like, they hid their heads among the roots, and left their naked tails waving above the water like a new species of juncos waiting to be examined. The madam could not quite ignore the maternal instinct, as she returned and conducted her happy family to the nursery, where they received their first lesson in misanthropy.

Further on, a pair of humming birds were of interest. Of all the birds of the woodland these show the least fear of man. For a few moments we amused ourselves with "skittering" twigs through the air near them. They seemed to realize that we were merely inviting them to play, and they would pursue each missile and swoop down upon it as does the kingbird upon the over-inquisitive hawk that loiters too near the nest. On we rambled, leaving the stream for moss-grown terraces, where each step brought some new delight to our senses. We saw the blacktailed deer leave its breakfast ground and seek the arbor where it passed the heat of the day. We saw a little black bear take her twin cubs to the service-berry bush, and, because the berries were far from ripe, pull down the tender branches, the growth of scarce a month, within the reach of her ungainly infants. We imagined that she was trying to wean them. It is strange how men try to exterminate this diminutive species of the genus *Ursus* with a rifle that would bring down an elephant. Killing hogs and branding mavericks is attended with far more excitement and danger.

It was in such walks we communed with nature, and each day she would

"Sing us another verse
Or tell a more wonderful tale."

We lived on trout with the exception of one meal of young mountain hare. We killed two full-grown hares, but as they had not taken the proper doses of santonica, pink-root and senna and other reliable vermifuges we could not bring ourselves to eat them and killed no more.

One afternoon we enjoyed a shower. From the shelter of a snug tent a summer shower is one of the most pleasurable episodes of camp life. Dinner was always followed by a brief siesta, and on this particular occasion we noticed as we lay down the fleecy, golden clouds were beginning to marshal themselves in leaden ranks upon the western hills. We were awaked by a muttering of thunder and a strident wailing from the treetops. Once in a while a bird in some dense thicket, mistaking the gathering gloom for early twilight, would attempt to sing. Then the wind died down. The entire heavens were overcast, save for a belt of blue low on the eastern horizon. Everything was made secure and shipshape. A few drops patter on the roof. An instant later the wind swoops down; lightning flashes; thunder peals; the mighty branches groan, and the tent staggers under the attack. But the roots are held by granite anchorages and the guy ropes are stout. The onset is for naught. It is not repeated. Steadily, gently, the rain is falling. We throw back the flap and look forth. Let it keep on. It is a rain of music, of rest, of perfect peace. To the west, where showers have their birth, there is a rift in the clouds. The drops are fewer now and larger. The leaden pall brightens and the storm has gone as quickly as it came. And now the sun peers out, not upon the parched field that was hidden from his sight two hours before, but upon a plain sprinkled with the very stars of heaven washed down in liquid pearls, sparkling, ravishing and reappearing beneath his rays. To the east, from hill to hill, is spanned the glittering bow of promise, and through this celestial portal the dark clouds recede, only to be softened and tinted by distance and the divine hues of sunset. After the shower the songs of the birds were redoubled, and among other sounds I caught the note of a finch, whose species I was unable to determine. It was the most heavenly strain that I have heard on this side of the Continental Divide. Intuitively we both recalled the "Ode to a Skylark":

"Sound of vernal showers
On the twinkling grass;
Rain-awakened flowers,
All that ever was,
Joyous and clear and fresh,
Thy music doth surpass."

At noon the next day a caravan of white-topped wagons came up the valley and halted near the dam. The travelers claimed to be a party of college students spending their vacation in quest of health, pleasure and scientific research and collecting. They were armed with every conceivable device for the destruction of life in the heavens above, the earth beneath, and the waters under the earth; also with a document signed by some fish and game warden giving them full permission "to catch, kill and have in possession for scientific purposes." "For scientific purposes" covers a multitude of sins, from which "Good Lord deliver us."

No sooner were the tents pitched than the sound of firearms and shouts of triumph reminded one of Coney Island on the glorious Fourth. Songsters and humming birds—the few that survived the onslaught—fled for their lives. It was not sufficient to catch trout galore with hook and line. About 5 o'clock the brook commenced to decrease in size, and soon a ruthless horde in wading boots and carrying butterfly nets were pitching the fish by the dozen from the shallow pools and riffles where they had been stranded. The creek had been turned. When morning came there was no song to awaken us. The water that had flowed so peacefully by our tent was yellow and thick with mud and rubbish. Our time was not up, but this place was no longer our mountain home. With maledictions on mankind in general, we struck camp and bade good-by forever to the old beaver dam.

Shoshone.

Friedland boasts the most singular mutual protective society in the civilized world. In Assen recently a union was organized by seventeen game poachers, a comprehensive set of rules being adopted. None but a recognized game thief is eligible to membership. The convention decided that in the future the members of the union shall sell only to regular game dealers, and then only at current market prices. The dealers will be required to contribute a certain amount of money each year to the union's treasury. The principal object of the union is to support the families of such poachers as may be arrested and sent to prison. A cast-iron resolution forbids all members from killing game in the closed seasons, the argument being that the game laws must be enforced. The Netherlands code provides a fine of 100 florins and a term of imprisonment for killing game out of season.—Patent inside exchange.

Mule Skinners.

Editor Forest and Stream:

It is a long time since I have had leisure to air myself in your columns, so here goes. The other day I went a-fishing, and the yarn I am about to spin arose out of that fact and is another story entirely. Later on I may tell about my trip; but this has nothing to with either fishing or hunting, but is just a reminiscence of early California days, and has no just and reasonable excuse for appearing in your columns save that it is a good story—if I can tell it properly. On my trip I met with an old pioneer who was as full of good stories of early days in this State as a boy's pockets are full of all kinds of odds and ends, and his stories were just as oddly mixed. Among the rest came the following:

I.

In the early sixties I drove an eight-mule team from Marysville to Grass Valley and Nevada City with loads of farm produce for the use of the mines. It consisted chiefly of barley, wheat and hay. When at the Marysville end of the route I made my home at a ranch just outside of the town—because I could make up my loads from its stacks and granaries—for six months in the year. The owner of the ranch had a son of about my own age, and we were great friends. His name was Polk, and he was a mule skinner like myself for six months in the year.

We had just completed a trip to Nevada City, and I was laying out to have some fun for three or four days, when Polk came to me and said: "Joe, I can't go to town with you to-night, as the old man has made me promise to go to camp-meeting with the rest of the family. You know he is a great Methodist, and is keen for me to get religion with the rest of the family." Well, this cut me out of my companion, and I thought I might as well go to the meeting also and try and put in my time there sparking some of the girls. The family got Polk up front on the mourners' benches. Now, the fact was that Polk needed religion, if anyone ever did. I am no slouch at swearing myself, but he could give me cards and spades at the game and then beat me so badly that I was ashamed to play.

Three nights passed with Polk still on the "anxious seat," and I was getting weary of the fun, although I was making things lively for some of the girls on the outskirts of the meeting, and when we were going to bed that night I said, "For the good Lord's sake, Polk, let up on this foolishness and let us have a night in town together, as we have to start again the day after to-morrow!" "No, Joe," said he; "I've promised the old man to stick to him through this meeting, but to-morrow night lets me out."

But the last night was a "hot one," and they got Polk excited, and soon he was jumping up and down with the rest, and shouting "Glory" with the arms of the weeping family around his neck, all yelling in sympathy.

The next morning we struck out on the road, and we had not gone but a few miles till Polk's mules found out that there was something wrong. Polk was ahead, and was full of his new religious fervor, to which he was giving vent by singing some of the camp-meeting songs which had lodged in his head from their frequent repetition during the past four days. He had informed me that he fully intended to live up to his profession of faith, and that he had given up swearing, with many of his other sins. As he was a straightforward fellow, and no hypocrite, I knew he intended to do just what he said he was going to do. We got along all right until we struck the foothills, and then the mules began to soldier on him. I knew they would do it, and was anxious to see how he would manage them without swearing. Every time he would stop, the team got slower and slower about starting, and would get down and "squeeze" for a while, without pulling. Polk was getting furiously angry, but still controlled himself from swearing; using the lash pretty freely, though.

By the time we had finished that day's journey he could hardly get them along at all. The mules had found out that they had a "balky" driver to deal with, and they were ready to balk themselves. The next morning we started out again, and got up as far as the bad hill just below Rough and Ready, when his team stopped in the middle of the pull. This is an unpardonable sin in a good mule team, and called for rigorous treatment. Polk argued the case with them for a while, but they would only "squeeze" or "swing," both unforgivable offenses in the team of a good driver. After about fifteen minutes of this, Polk was in a white rage; he threw his hat down in the dust and jumped on it with both feet, wound the lash of his "blacksnake" around his hand, and turned himself loose. At every stroke on their ribs, he gave vent to the most offensive oaths in his unlimited vocabulary, and in less than five minutes had the mules pulling their eyes out. On our return to the ranch it was our custom to swing our wagons up by the side of the granary, and as that was situated beyond the stables the mules would want to sidle up toward the latter in passing. This would call for a vigorous use of the jerk line and some more swearing. Polk's father was standing near as his team passed, and heard the red-hot language, and called out in horror, "Oh, Polk, my son, what's this, what's this?" "Blankety blank it, father, if you want me to keep religion you've got to get a new driver, that's all!"

II.

In those days [continued my acquaintance] the driver of the twelve-mule team was the autocrat of the road, and was even a greater man than the stage driver; and the latter was supposed by the traveling public to own the State.

In those ante-railroad days the roads to the mines were lined with these teams, and the roadside hostleries were dependent upon the good will of the kings of the road for their existence. If they passed the word along the line that such a house was "no good," the poor devil of a hotel keeper could stand in his door all day long and watch the procession passing by, without ever a man stopping. In consequence, the driver always had the best the market afforded, and his haughty airs were not only tolerated but cheerfully and smilingly accepted as a matter of course. The tables were spread with the most tempting fare that it was possible to procure, and the waiters were the prettiest girls that could be hired. A fine twelve-mule team, with a good driver, was really a fine sight. The mules would be as perfectly matched as possible, the housings of the harness were of the finest bear skin, an arch of bells crossed the back of each mule and one of the wheelers carried the haughty autocrat of the road—the driver.

Tom Black was the best driver on that grade, and it was his boast that he could haul a hundred pounds more freight to the mule than any other man in that part of the State. He had a fine lot of animals, of which he took the best of care, and which he handled with the skill of an old expert. He once won a gold medal in Marysville by controlling his team with his voice and making each individual mule get down into his collar and pull for all that was in him, on being addressed by name, the others standing quietly in their tracks.

The chief wayside inn in the little mining town of Rough and Ready had just got a new waitress, freshly arrived from the East, and new to the ways of the Golden State. Her name was Annie, and she was good to look upon, being a fine, healthy girl, with snapping black eyes; and the first time Black saw her he surrendered without a struggle, a victim to her bow and spear. The fellow was as justly celebrated for his picturesque profanity as for his skill as a driver, and being promptly rebuked for his first oath in her presence, he meekly accepted it, and henceforth, when in her vicinity, was as "meachin as a hound pup."

Black's open and confessed admiration and his reputation as a first-class driver and good fellow had caused Annie to "take notice" a little; and one evil day she asked her employer's wife if she would not accompany her down the grade for a mile or two, as Black was expected that night, and she had heard so much about his fine driving that she wanted to see him bring his team up to town over the last mile of the way, which was very steep, and called for as good work as any part of the road. Her mistress agreed, and said they would take a horse and buggy and drive down, and when they were tired of the sport they could hurry back. The early rains had laid the dust, and they drove gaily down the cañon till they met Tom, when they pulled out and let him pass. He doffed his hat, as a gentlemen should, and stopped his team to inquire where they were going, and on learning their errand became a proud and honored man. But, alas! pride goes before a fall!

He helped the ladies turn their buggy around, and started his team by word, when all was ready, and walked along on Annie's side of the carriage in a dream of bliss, utterly oblivious as to whether there was a mule team in the same county. The team at once found out that their driver had "balked," and at once began to look for a chance to balk themselves. They made two or three stops on their own account, without being told, which is directly contrary to the ethics of good driving, and started slowly, with much "squeezing" and "swinging." And still poor Tom was unheeding of his approaching downfall!

In the middle of the steepest part of the grade a dyke of trap rock cut diagonally across the soft slate bedrock, and the teams had made a gouge on each side of it, where the wheels would pitch off from the hard to the softer rock. Tom's mules reached this point, and slowly pulled wheel after wheel over the obstruction, till the last one. This one settled slowly into the gouge, the chock-block dropped snugly in behind it—and the team stopped.

Tom took in the situation at a glance, and was rudely awakened from his dream of bliss. He walked forward and argued quietly with his team and explained the matter to them in forcible tones, and at the end of his whiplash, but without effect. There was still something wanting, and the mules knew it, and refused to pull with all their force. Other teams began to come up behind, and were forced to stop. The matter was getting serious, for he felt that his reputation was at stake, and that he was becoming a laughing stock to the other teamsters. He finally came back to the carriage, with his hat in one hand, and scratching his head with the other, and after a hesitating pause, said:

"Ladies, won't you please turn out and drive on home?"

"Why, Mr. Black, we came down to see you drive up the grade, and we are enjoying ourselves ever so much."

"That's all right, but haven't you seen enough? I'd like to have you drive on."

"But we don't want to go yet; we want to see you take them to the top of the hill. Why do you want us to go?"

"Well, the fact is, the team is stuck, and they won't pull unless I swear at them, and I don't want to do that in your hearing."

"Oh, go right ahead, Mr. Black, and swear all you want to. We won't mind it for once."

"But it'll be mighty rough swearing, and I'd rather you did not hear it."

Annie spoke up and said: "Never mind us, Tom; we want to hear a driver swear at his team once, and I do so want to see you make them pull the load out of that bad place."

Tom, thinking that everything was now satisfactory, swung his hat on his head with the confidence of an experienced general, wound the lash of his blacksnake around his hand and sailed in with tongue and hand.

"Ha, there, Suze, you misbehaved daughter of an unchaste mother—whack—I'll teach you—whack—to stop in the middle—whack—of this blankenty blank hill—whack!"

You see, he began mild and easy, but soon warmed up to his work, and in a moment had forgotten that there was a woman within a thousand miles of the place. The air became sultry with the most horrible and blood-curdling oaths and vulgar objurgations. Taking each mule in turn, he cursed it up one side and down the other; he traduced the memory of their parents, and reviled themselves in language too vulgar to be heard at a cock fight. And all this time he was applying the butt of his whip to their ribs with such force that his blows resounded from the cañon's walls. After he had conscientiously and impartially cursed and beaten every mule in the team, he bade them get down and pull, and presto! away they walked with the load, as if they were on level ground.

When the team started off the ladies, with flaming cheeks, were busy viewing the landscape down the cañon and never saw it.

And alas, black-eyed Annie never again looked on poor Tom but with averted face!

About a month afterward he remarked to me, "Say, Joe, I wonder what ails Annie? She won't speak to me any more, or even look at me. I don't know any reason for her acting so; I've always treated her white!"

AREFAR.

AUBURN, Cal.

Pioneer Days.—X.

Dalrymple, the Scout.

BY ROWLAND E. ROBINSON.

In those summer days Ticonderoga's ceaseless chime of rapids and waterfall was overborne by the sounds of saw, axe and hammer, and the shouts of teamsters. Every energy was strained for the completion of vessels to oppose the British naval force, concerning whose coming continual alarming rumors came from the northward. Gondola and galley were finished while the wood yet exhaled the breath of the forest and mingled their sweating sap with the waters of the lake, and the lopped bough was scarcely withered before its place was taken by tapering yard and swelling sail.

Seamen then came drifting inland—rough old seadogs who had been burned by the tropical suns and salted in all the seas, profanely contemptuous of such craft and the tame water that floated them, and looking upon this service as a sort of paid holiday. Arnold's masterful personality dominated and held in check these half-mutinous crews, as it directed all the operations of construction and preparation.

One day as Josiah was idly watching the vessels getting guns and ammunition on board and making ready for speedy departure, a hand was laid familiarly on his shoulder, and turning at the touch, he was surprised by the weather-beaten face of his old comrade, Kenelm Dalrymple, smiling up at him with more than the gladness of friendship at the meeting.

"Wal, boy, you're jest the one I was a-wantin', an' yet not expectin' tu find, for I didn't know you was in these parts. They're a-sendin' me off as a scaout tu see what them Britishers is up tu, an' haow many water craft they muster. I telled aour General, or Commodore Arnil, I do' know which he is, 'at Josier Hill was the man I wanted for my comrade, an' Colonel Warner cal'lated you was somewheres 'raound, though he hedn't see'd ye sen your 'listment run aout. Come along where they be, an' they'll give us marchin' orders tu rights."

Kenelm's anticipations were at once realized, and the afternoon was not spent before he and his comrade were embarked in a birch canoe and briskly plying their paddles down the lake. At dark they encamped awhile for supper and rest at the mouth of Otter Creek, a much-used halting place for warriors and hunters from time immemorial.

The night being clear and moonlit, they soon resumed their voyage, as it was important that they should get the desired information as early as possible.

As they were about to step into the canoe, Josiah's quick ear caught the sound of a suppressed human voice, and stealing across to the rocky cedar-grown shore, and peering cautiously through the branches, he saw a canoe approaching, occupied by two men. He crept back to his comrade, communicated his discovery, and the two secreted themselves at a point where the canoe would probably land, or certainly pass very near. This it did in a moment, and the two arising into full view, with rifles cocked and covering the canoemen with deadly aim, Kenelm called, "Come ashore and surrender!"

There was a moment of silent surprise and suspended paddling, then a sullen grunt, and the prow was turned shoreward, and with one sweep of the paddles the canoe lightly touched the shore. The two Indians stepped out under cover of Kenelm's rifle, and Josiah bound their hands behind them.

"Waubanakee?" Kenelm asked.

"Euhhonh," one answered, laconically, and Kenelm, knowing something of the language, asked how many English vessels there were. "Fifty," was the answer. "And more men than I can count."

"That's a lie, tu begin with," Kenelm commented in English. "We sha'n't get nothin' aout o' these chaps, an' might as well knock 'em in the head an' go 'long." But Josiah was not yet educated up to this summary method of disposing of prisoners, and they compromised on binding them and leaving them here until their own return, which, if all was well, would not be long delayed.

The prisoners followed them with sullen eyes until they disappeared in the dim light.

At daybreak the scouts were far down the lake. Landing on a rocky point, Josiah climbed a tall tree, from which he discovered the sails of the advancing British fleet—the white sails slowly rising like clouds above the blue line of the horizon, then the black hulls like islands suddenly born of the lake. He could make out the great leviathan of a rideau, or floating battery, creeping nearer with sweep and sail.

"Sir Guy Carlton's the head o' the hul consarn, so they say," Kenelm remarked, as they watched the advancing fleet, "an' I da' say the' 's a dozen Sir Somebodies aboard o' them vessels. They're thicker 'n mosquitoes in a swamp over in the ol' country. Say, Josi, did ye know 't I jest missed a-bein' one on 'em?" he asked suddenly, breaking a silence of abstracted musing.

"You!" Josiah ejaculated incredulously, staring at the roughly clad, weather-beaten little man, but the brown face was quite serious, except for a twinkle of amusement in the eyes.

"Odd, hain't it? But true as nigh as I can cal'late."

"I sh'd think you'd orter know for sartin' whether 'r no it is or hain't," Josiah remarked.

"But I don't—not sartin," the old ranger answered. "I'll tell ye all I du know when we get afloat." And when they had resumed their paddles he began his story.

"The fust thing I remember was a-bein' tossed in a ship, I s'pose it was, a'most forever on no end o' water, an' comin' at last tu haousen an' folks on land; an' then o' goin' ag'in on smoother water a long ways wi woods, woods on ary side, till bimeby I waked up one mornin' 'mongst odd-lookin' men, feathered an' painted, an' as odd-lookin' red women in blankets o' blue an' red. I was mighty feared on 'em all at fust, but got used tu 'em arter a spell, an' tu not seein' sca'cely a white face, but one

tall, sober, quiet man' at I come tu know was my father.

"Naow an' ag'in he'd be gone for days an' days, an' me left in a big log haouse wi' a good-lookin' red woman takin' keer o' me, an' me a-playin' wi' little red boys an' gals, an' l'arnin' tu talk their lingo, an' all their ways in the woods—sneakin' ontu squirrels an' pa'tridges an' ducks sly as foxes, an' shootin' 'em wi' bow arrers. That's all I remember o' my start in life, an' I come to know it was in a Mohawk taown my father an' me was livin'. So it run along till I was six year ol' mebby, an' a reg'lar leetle Injin as any on 'em, an' one day a party o' painted Injins come bringin' my father tu his haouse on a litter, sore wounded an' at the p'int o' death, an' my squaw mammy a-cryin' an' takin' on over him. He lay mighty still, mostly, an' kep' me clus' tu him, an' one day he says, 'My poor lad, I must go an' leave thee, I'm afeerd,' an he gi' me a package o' papers sewed up in a buckskin bag, an' a leetle pictur' of a woman 'at he tol' me was my mother, an' tol 'me tu keep 'em all safe whatever come. The papers I lost or was stole; the pictur' I'll show ye fust place we land.

"Wal, my father he died pooty soon, an' left me a lone, lorn leetle chap as ever you see. Arter a spell the' was a lawyer man come up from Albany an' took me back along wi' him, an' I was livin' comf'table as I could ask, 'cept goin' tu school, which I didn't like. Next I knowed I was nabbed one evenin' by some o' my ol' Mohawk friends an' carried off tu their taown; an' then I was hustled raoun', hither an' yon, naow huntin', naow fightin'.

"Then I drifted intu Conne't'cut an' the Bay Colony, an' tried tu stiddy daown tu white folkses life, but it wa'n't no use. It was huntin' or trappin' or scaoutin', till at last I was in Rogers' Rangers an' 'long wi' Nabby Crumbie's big army tu Lake George. The' was lots happened betwixt, but nothin' tu du wi' this story. The' was no eend o' sirs an' lords in thet army, an' the best on 'em all was Lord Howe, who was the raal head an' heart o' the army. He hedn't none o' the high an' mighty airs o' most o' the British, 'at was allers a-stickin' up their damned red noses at us Provincials. He knowed we knowed more about bush fightin' 'an they did, an' he sot tu tu l'arn all he could o' ary on' us, officer or private. He wa'n't above takin' lessons o' me in rifle shootin', an' one day he says tu me, 'Where 'd ye git your high-duc' name, Dalrymple?' an' I says, 'From my father, I s'pose.' 'An' who was he?' says he, an' I tol' him all I knowed, it interestin' on him mightily, an' when I showed him the pictur' he looked a long spell at it an' at a sort o' pictur' on the back, an' then he up an' says, 'You've got noble blood in your veins, an' if you had your rights you'd be a Scottish peer. Haow 'd ye like tu be a lord?' 'I do' know, your lordship,' says I. 'I hain't never had no experience in 't. What du they hafter du, my lord?'

"He kinder laughed, an' says he, 'You'd haftu ride over your estate an' see haow things was goin', an' you'd live in a big fine haouse wi' lots o' sarvants, an' entertain lots o' fine ladies an' gentlemen, an' you'd have a seat in Parliament, an' I can't tell ye what all.' 'An' wear fine clothes an' have my hair iled an' powdered?' says I. 'Of course,' says he, 'an' have lots o' money an' hunt an' shoot in the proper seasons.' 'That's suthin' like,' says I, 'but the clo's an' the com'ny, an' the paowdered hair an' the big haouse, I do' want none on 'em, thank ye, my lord, an' then he laughed fit tu split, an' then sobered daown an' says, 'Wal, when this campaign is over I shall look the matter up, for I believe if you had your rights you'd be Sir Kenelm Dalrymple of that ilk, instead of a poor private in the Rangers.' 'But this is a tol'able free life,' says I, 'an' my clo's is easy an' my hair short, an' I don't haftu ride no horse,' an' then he laughed again.

"But he was killed in the fust skirmish, more's the pity for us all, an' there wa'n't never no more o' my bein' Sir Kenelm—not as I care the primin' of a rifle for that, though. Haow'd you enj'y bein' one on 'em, Josi?"

"I hain't never be'n in the lordin' business. Not so much as seen one on 'em, an' I can't say," Josiah answered after some consideration. "But I cal'late a tew hundred acre pitch an' a hired man 'ld gi' me abaout all the lordin' I want to tackle.

"The freedom o' the woods is better 'n the hul on't," said the lordless heir of a princely manor, as he turned the canoe's prow to an inviting beach, and, there as they rested from paddling and stretched their cramped legs, he drew forth from his breast a miniature of a beautiful woman clad in the costume and with her hair in the elaborate dressing of the first decade of the century. In the back of the locket were the armorial bearings of the Dalrymples of Dalrymple, in gold and enamel, with the legend *"Suum cuique."*

"And this is all you ever seen o' your mother is't?" Josiah asked, after studying the fair face awhile.

"All 'at I remember," the old man answered, with a sigh, as he carefully replaced the miniature in an inner pocket. "An I tell ye what it is, boy, a man 'at hain't never had a chance to know his mother has got the odds ag'in him. Wal, there's aour fleets, an' we must let 'em know what they're comin' tu," said Kenelm, as the van of the American flotilla appeared beyond a distant headland.

They made all haste now to return and soon met the flagship in advance. This they boarded and Kenelm made his report to Arnold, while Josiah held on at the side in the canoe, the salt-sea sailors looking down in contempt and wonder at him and his frail craft.

"Say, cabbagehead!" one of them called, "did ye sight the fleet? How many sail, did ye make 'em, an' where away be they?"

"As many as you'll want, an' they'll soon be nigher 'an you want," said Josiah.

Orders that were issued by the German West African officials that all firearms in the hands of the natives should be stamped and registered aroused much discontent. Lieutenant Eggers, in Damaraland, however, got along with no trouble. He had inoculated cattle for the rinderpest three years before, as the Damaras saw, with good results. He therefore announced that he was ready to vaccinate their rifles so as to insure their shooting straight and doing no hurt to their owners, and the Damaras crowded to him to get their guns stamped.

George A. Boardman, Naturalist.

BY CHARLES HALLOCK.

THE honored subject of this sketch seems to be one of those elect whose lives have been graciously prolonged because of their usefulness to men. Recognized for three-quarters of a century as a keen, discriminating naturalist, and possessing the most complete private museum of natural history extant, he is now, in his eighty-second year, as painstaking as ever in his investigations, devoting himself with energy almost unimpaired by time to his favorite pursuit and study. Statedly, every week he contributes to the Calais Times an article on such natural history subjects as engage the interest of household readers and inform them of the peculiar places which our familiar creatures of the fields and swamps and woods occupy in the animal kingdom. In this manner he does much to remove prejudices against insects, birds and reptiles deemed noxious, and this helps to preserve the biological balance among associated fauna.

Now it happens that students and scientists who have become eminent in their profession are usually so segregated and intent on their transcendental pursuits that they often fail to become conspicuous among the world's honor men; and hundreds of such are enrolled on the unpublished book of the immortals whom the general public have never heard of, simply because they occupy a superlatively higher plane. These have no time to exploit their achievements. Such a man, I may be permitted to say, is George A. Boardman, of Calais, Maine, an ornithologist of highest repute among scientists, a contemporary and whilom associate and co-wôrker with Audubon, Agassiz, Downs, Todd, Baird and Bethune, those studious ob-

GEORGE A. BOARDMAN.

servers of natural objects whose renown lingers after their departure like the afterglow of a midsummer sunset. Scores of his rarest specimens have gone into the Government collections at Washington, not without a transient pang, yet with heroic recognition begotten of a keen sense of Uncle Sam's priority and inherent right of possession. For example, he had in his museum at Calais (which is installed in a spacious two-story building devoted exclusively to the purpose) an incomparable lot of Indian stone implements of most every kind, including some fine spear heads found at the Grand Lake Stream while digging for the first dam in 1860, not far from Dr. Bethune's old camp. Prof. Baird, he remarks, ingenuously enough, "thought the Government Museum had the best right to them, and took them away."

"When Prof. Baird used to visit me," he writes, "we used to go among the elderly people and pick up lots of trumpery (*sic*) such as spinning wheels, flax wheels, old canoes and Indian things. I had a queer old wooden anchor which was dragged up in the lake, such as Indians used to hold their canoes while fishing. Baird thought this a good find. There was a shell heap about twelve miles below here that we used frequently to visit and dig over. He was a very happy man when on the hunt for relics. Even after he was taken sick he used to write me that he wanted to come up and finish that shell heap."

The chief feature of Mr. Boardman's zoological collection is a complete presentation of the local fauna of Maine, including 278 species or varieties of birds found in the eastern section. The museum in its entirety comprises some 2,500 specimens, mounted and in skins, with the young and eggs of the most of them; also a good collection of horns—thirty-five different kinds. Among his rarer miscellaneous specimens are the skins of a black wolf and of a bay lynx (*Lynx rufus*), both obtained in Florida, where he passed no less than twenty winters.

Mr. Boardman has always been an enthusiastic angler, and his adjacent lakes, streams and salt-water estuaries have constantly furnished him with the best fish that ever graced a hook; not only the pelagic roamers of the ocean, but the landlocked salmon, togue, trout and salmon of the waters inland. Prof. P. W. Glover, for many years in the United States Agricultural Department at Washington, was a comrade of his in the days when landlocked salmon bore the name of *Salmo gloveri;* and the two were the first to determine the species, and class it accordingly. An old letter from Mr. Boardman, indited in 1885, enumerates some of his earlier angling friends in the days when he went gipseying; and to a person who remembers them all, by name at least, it seems like roll call to go over them again. There were Dr. Bethune, Rev. James Smith, a Baptist minister of Philadelphia; Geo. P. Trott, of Philadelphia; George Dyer, a lawyer of Washington, D. C.; G. P. Whitney, of Boston, with Ben French, Stephen Pines, John Pollice and Frank Waite as river men and guides. "Senator Edmunds," the letter runs, "was up once or twice with one of my sons, and had great sport. Henry Ward Beecher and his father were up, and also Walter Brackett, the fish painter of Boston; my brother, Wm. H. Boardman, and Geo. M. Porter, of St. Stephen. Mr. Babcock, of Boston, died from snake bite in Florida at Pine Island two years ago. Frank Kennedy, also a fisherman, was with him. Stimpson H. Dennison, Boston; Geo. H. Richards, Boston; his father, Francis Richards, and Uncle Henry Richards used to come up years ago; Judge Ritchie, of New Brunswick; Dr. Leith Adams, Prof. Bailey, of Fredericton, N. B., and many others whom I do not now recall to mind. It is over fifty years ago since I began to go to the lakes, and I can see great changes. Fish then very abundant, have now been killed by tanneries, pickerel, etc. Our St. Croix River used to be a great breeding place for water birds, but since pickerel were put in about thirty years ago they have most all left. Pickerel destroy the chicks, so that very few ducks or grebe now breed with us. Year before last there was very good salmon fishing with fly just above the toll bridge between Calais and Milltown. Some were taken last year, but not so many." [This year, 1899, they were fairly abundant, affording good sport.—Editor.]

Mr. Boardman has been prominent all his life in important business interests, and now is in banks, in steamboats, vessels, lumber and mills. In 1870 he retired with a competency, but his time is quite fully occupied in a variety of ways, the public for the most part being beneficiary. His museum, I understand, is to go to Bowdoin College at his death. He was one of the first half-dozen subscribers to FOREST AND STREAM in 1873, and has continued it ever since. He was born Feb. 5, 1816, and is the father of ten sons and one daughter. His wife's death was recent. The portrait herewith shown was taken in July, and indicates a long continuance of life, for which all men pray.

Wanted, a Sportsman or So.

MANY things have been written for these columns upon the subject of sportsmanship. In our day there are so many diversions which people call sport that I have never admired the word sportsman, but until a better word is found, or becomes idiomatic, it must cover a multitude of very widely differing individuals.

As the word is used, in some of its many applications it is at some time applicable to all mankind, and it seems that it should be relieved, of a portion at least, of its tremendous strain. After having perused FOREST AND STREAM for twenty years, I am of the opinion that it is not a sportsman's nor a sporting journal, and that sportsmen are not especially predominant in its constituency.

In support of my opinion, which I hold with the knowledge of the fact that this journal characterizes itself as "a medium of entertainment, instruction and information between American sportsmen," I submit that it has fulfilled, and is fulfilling, a broader, higher and nobler mission, and that it has attained beyond the status implied by its own modest characterization of itself. We may as well call Cæsar a soldier, or Shakespeare a poet, without some qualifying or distinguishing addition.

The word sport as defined by Webster is an abbreviation of the word disport, and its import or definition, as generally interpreted, implies play, diversion, wantonness, mockery and trifling. Webster's definition of sportsman is "one who pursues the sports of the field; one who hunts, fishes and fowls."

With thus much for complaint, I desire to submit as argument, logic, or what you will, that the constituency most notably represented by FOREST AND STREAM is not made up of sports, triflers, hunters, fishers nor fowlers. To clinch this assertion I will be content to offer the pages of the journal for a quarter of a century as evidence, and rest my side of the case. I freely admit that mere triflers, fishers, fowlers and hunters are comprehended and in evidence, but I affirm they are in the vast minority and decreasing most beautifully.

Admitting the distinction that, to the minds of most readers, there is between sports, sporters, sporting men and sportsmen, I do not think either the editors, the chief contributors to nor the body of readers of FOREST AND STREAM can be fairly called or distinguished properly by any sportive appellation. You will scarcely find a more serious class, and if they resort to the forests and streams they are not often in quest of sport so much as of recreation, rest, exercise or contemplation.

I object to the word sportsman for more than one reason, but, for the sake of brevity, I enter my first complaint on the ground of its being misleading and morally pernicious as applied to the class of persons comprehended in the phrase "American sportsmen." Let us confine the meaning of the word sportsman to Webster's definitions—"One who pursues the sports of the field; one who hunts, fishes and fowls"; or "One skilled in the sports of the field." According to the first a sportsman must pursue sports, hunt, fish and fowl; according to the second he must be skilled in the sports.

I will make the assertion that the great majority of the readers of FOREST AND STREAM, its editors and its most entertaining and appreciated contributors are not sportsmen in any specific sense of the word. If this assertion is denied I will not consider it refuted until twelve good men and true, its most popular contributors, admit over their signatures that they are sportsmen. Even if they deny the title through modesty or diffidence they are not to have it conferred or thrust upon them without a chance to defend themselves.

I have tossed my glove into the very center of the arena. Let the champion of the other side have at him. I have some fresh spear heads up my sleeve.

The arrogant assertions foregoing have not been made without considerable experience, observation and reflection. Twenty years ago I aspired to be a sportsman; ten years ago I was content to think I was a sportsman;

since then I have successively retrograded, doubted, denied, and finally repudiated the title. Recent contributions to this journal have frequently confirmed my opinion, especially many allusions and much logic relating to what constitutes true sportsmanship.

Among the latest articles in FOREST AND STREAM that have expressed my sentiments, more forcibly than I can express them myself, have been some from Coahoma, Didymus and Podgers. In the issue of July 8 the observations of Podgers are particularly honest, candid and humane. Neither of the three mentioned can be truly called a representative sportsman, but they have my vote as being most representative of the best sentiments in the nature of mankind.

When Podgers says, "I find that this aversion to killing is growing as I get older, and the sportsman's interest assumes a milder form. I go out less, and when I do I avoid the risk of wounding my game. If I am not sure of it I do not shoot," and when he further quotes a friend, who, asked about shooting, replies, "No; the fact is I am beginning to think as I grow older that shooting after all is a cruel thing, and I am conscious of a growing repugnance to taking life"—I say when a man writes thus he is no longer a sportsman, and in all probability he never was one at heart. There is, furthermore, plenty of evidence that Podgers is not alone in his views.

In my "exterminatory peregrinations" I have from time to time met many Western hunters, frontiersmen and pioneers—men who have spent their lives with rifle, axe and camping outfit, and who have hunted, fished and fowled in many forests and by many streams. It is not among such men, probably as experienced as any in the world, that ardent sportsmen are found. Old hunters and backwoodsmen, almost without exception, although they may haunt the frontiers, forests and streams out of pure fondness for the wilderness, or confirmed habits of seclusion, it is not for the purpose of sport in taking the lives of other creatures. They are always the most careful of men in the selection of seasonable game, and kill only such as they have urgent need of. If they by force of circumstances become trappers or market-hunters they may exterminate—but that is "business" instinct and is not sport in any sense.

To speak from my own experience, after hunting and prowling about Western mountains more or less for twenty-five years, I think I was more of a sportsman to begin with, when a boy, than I have been since. I certainly pursued field sports, hunting, fishing and fowling; and if I did not enjoy killing fish and game I was much elated when successful sometimes. I do not think I ever found pleasure in killing game, but the pleasure was in its acquisition and possession, or a certain pride in the achievement. But over and above it all, even as far back as I can recall, I believe the greatest pleasure was in the preparation, sneaking off from home or school to the woods, monkeying with an uncertain gun or fishing tackle, tearing my best pair of pants, stubbing out my boots, getting full of briars and stings, and empty of about everything else, and then going home in about as meek and apologetic a kind of way as such a combination of circumstances alone can produce. There was, unquestionably, fun in it, even if I didn't kill a chipmunk or catch a shiner. I usually caught a whale at home. My own experience in youth, and subsequent observation, confirms my belief that only a very youthful or an immature or vicious mind finds sport in the destruction of animal life.

I think a sort of instinctive fondness for nature and sequestered scenes is the chief attraction that lures, or rather persuades, man to seek secluded woods and fields and explore the unfrequented wildernesses and waters. This instinct is something entirely distinct from and superior in every way to the other inclinations that prompt the "count fisherman," the "game hog" or the pot or market-hunter. If the former nature is induced to practice destructive arts upon the creatures of the forests, fields and waters it is always to supply comforts or necessities, or because he is trained by the teaching and custom of others by whom he models his character. If a youth is made to believe by the legends, precepts and practices of his elders, and "approved good masters," that true sportsmanship implies merely the pursuit of the sports of the field, which results in skillful hunting, fishing and fowling, he is more than likely to become a sportsman, pure and simple, than he is to become a man capable of contributing the sentiments of a Podgers, a Didymus or a Coahoma to the intellectual and humane ethics that sustain and maintain civilization in its sway over inhuman and barbarous instincts. The wanton "civilized" butcher of game is, in reality, an inferior animal to most, if not to all, savages. There is no excuse for him.

I advance my opinions upon this subject with about as much assurance as a man can speak of anything because, favored by circumstances and opportunities, I have formed my conclusions after twenty-five years of practical experience and observation. I have fished, fowled and hunted until I think I find no pleasure in the pursuit to kill any creature. I can support Podgers to the extent that I not only find this aversion to killing growing as I get older, but it is keenly painful to me to kill anything unless necessity, or apparent necessity, demands it.

I write these lines from the backwoods and under conditions that frequently induce me to hunt and fish, but I find myself watching deer walk away into the thickets, with my rifle on my shoulder and no meat in the house; I have aimed at a squirrel a dozen times, to finally reconsider and let him alone in his old tree; the scatter gun rusts in its rack and has not been fired for a year, although there are quail and grouse within its easiest range. There is a small trout stream at my door, and twice this season I "piked" along it for a mile and back again and took several fish, but they looked so much better in the water than out of it that there was anything but sport in the raid.

Your ardent and lively sportsman may smile or possibly sneer at such confessions as these, and allude to their expression as sentimental twaddle. He is welcome to his fling, but I will enlist to maintain this twaddle against much of the "sentiment" expressed by sportsmen who have even grown gray in making big counts of kills and long strings of gills.

It is a singular thing that is coming (or rather, can it not be said, that has come?) to pass; instead of sportsmen "who pursue the sports of the field," skillful at fishing, fowling and hunting, a class of men is taking the place of the sportsmen who rather protect the fields from the sports, and believe in the propagation of fish, fowl and game, not in the annihilation of them.

Therefore, in the consideration of these things, it doth seem that, hitherto, in the extermination of other creatures the true sportsmen hath been obliterating himself; and whereas an entirely different estimate is being applied to practices called sportsmanship, insomuch that it appeareth that there is something incompatible betwixt the name and the true constituency represented by this journal; and so, directing the attention of those in authority to the matter, your petitioner ceaseth this screed.

RANSACKER.

SHASTA MOUNTAINS, California, July.

Natural History.

Chases in the Air.

EAST WAREHAM, Mass.—*Editor Forest and Stream:* Many times, when shooting wild ducks, I have seen birds of prey after the same game, and while my sympathy was always with the weaker bird, I could but admire the chase. Hawking was royal sport in the Middle Ages, and it still survives in nature. The peregrine and lanier falcons were used in olden times, and they may be seen nowadays in full chase over the great wild meadows of the Puget Sound country.

We read how fast some ducks fly, the canvasback well in front; who shall tell us how fast the falcon flies when he pitches after the fleeing bird? Anyone who has shot greenwing teal as they come in from the broad water to feed on the marshes in the dusk will concede that their flight is more like that of a baseball thrown with snipe-like variations than anything else.

The Puyallup meadows opposite Tacoma were once a fine place for teal shooting; facing the west one has the benefit of the twilight, and can see his birds in time to make calculations for a shot. The principal marshes of the Sound do face the sunset, while those of Hood's Canal do not. In estimating rates of speed, size of body and uncertain light have something to do with apparent velocity, the sudden appearance and disappearance of a small bird giving the impression of going like lightning. However, fast as he flies, the falcon must be able to double his speed when he makes his closing effort. In one case I was watching for teal and one passed me at about 40ft. As many yards behind came a peregrine, which caught its game in the next 70yds. This bird fairly whizzed as it went by, and appeared very round-breasted, like a pouter pigeon. The birds flew so quickly that I had no time to bring my gun to bear on either.

Another time, as I was sitting on the bank of Wapato Creek, three teal were coming my way and I was just pulling myself together for a shot when a falcon struck one. They were hardly near enough for my shot, but I fired and the peregrine dropped his game and flew off. On picking the duck up I could find no marks of either talons or shot; still, it could not fly.

Greenwings seem to be a favorite game, probably on account of their convenient size. It never seemed to me that they were aware an enemy was after them, and I never saw one try to dodge. I recollect once seeing a pintail that knew something was after him, and he had a full head of steam up for the race, which was nip and tuck for 300yds. and was won by the duck, the falcon giving up the chase. Unfortunately I did not see the beginning, but I suppose that he did not get near enough to make his dash reach, and, having made it, he could not sustain the speed long enough.

A hard-shot bird will often fall a victim to a falcon. My brother Phil had one so taken at Deer Lagoon, on Whidby Island. It was a buffle-head, which species often escapes by precipitately taking to water. Guillemots do the same.

I have never seen a mallard pursued by a hawk of any kind. Widgeons immediately take to water if one appears. On the Nisqually Flats I have seen an acre or so of wideons dive with such regularity as a hawk sailed over them that they produced a wave, which began at one edge of the flock and ran across to the other, as though one single sea had rolled through the pack.

Plover and sandpipers have but slender chance of escape when once singled out. They, however, are mostly pursued by the smaller falcons, the peregrine or lanier seldom seeking them.

At certain seasons the Sound marshes are frequented by a small sandpiper that goes in immense flocks. We called them "pip." They were very gentle, and could be approached near enough for terrible slaughter if one were disposed that way. One incident will illustrate: Mr. Edwards, the father of the taxidermists of that name in Tacoma, told me that needing some specimens, he and one of his boys rowed up to a log on which a flock were resting; they took a raking shot with, I think, four barrels, resulting in enough for their requirements and, incidentally, thirteen dozen for Isaac Chilberg. The first were stuffed with Edwards Brothers' acknowledged skill, and the last by the patrons of Chilberg's restaurant. However cooked, "pip" are not much to brag of, but hawks like them, and the appearance of a hawk will make all the "pip" on the marsh restless; they fly and scream incessantly until the hawk singles one out, when the chase is short. The very abundant, small, red-backed falcon of Washington is their foe. I have seen this hawk chase a Brewer's blackbird for some distance, the undulating flight of the blackbird preventing its capture. I was once called out of my house by the squalling of a chicken. Right in the dooryard lay a small pullet with one of these little falcons sitting on her. The hawk would bear down as though trying to dig his heels in, each effort eliciting a squall from the chick. I took two shots at him with a pistol and he cleared out; the chicken ran under a pile of lumber.

Snipe are not often chased by hawks, and the only instance I recall took place over the Puyallup meadows. A Wilson's snipe was flying about, as they often do, at an elevation of perhaps 200ft.; a small hawk closed in with him, and he towered, going up 50ft. perpendicularly. This was repeated each time the hawk attained the same level, until the snipe was so high I could no longer see him. The hawk came down without succeeding and began beating up the meadows afresh.

Meadow larks are often caught, their abundance and regular flights making them an easy target for the small falcons. I use the word hawk sometimes in speaking of this bird, which is a sparrow hawk and nests in an old stub like the mottled owl. I saw such a nest, with young in it, on the road to the Deschutes River.

In thirty years with a gun I have never seen a bald eagle chase a duck, but have several times seen them pursue the silver gull, probably for something the gull had rather than for the bird itself. The eagle has the reputation of killing ducks, and as careful a writer as Capt. Mayne Reid describes the killing of a swan by a pair. While in Maryland, on the Little Choptank River, I met a gentleman who assured me that eagles were very destructive to wildfowl, and he systematically hunted them with a rifle. In this part of Massachusetts, along the Agawam River, they are quite plenty during the herring run.

One man in our village has a record of fifteen or sixteen shot in one season. I trust this statement will pass uncensured, as the killing was done years ago, and there is a great diversity of opinion about eagles, their prominence on our coat-of-arms and coinage making them popular. I know of one instance where an eagle struck a wooden decoy. This happened with an uncle of mine some fifty or more years ago. He was "coying" for shelldrakes at the time, and having no especial veneration for eagles, shot this one. Within a few years this same uncle had a flock of Pekin ducks attacked by an eagle.

The crepuscular habits of ducks and owls often bring them together, but I have never seen an owl chase anything, although they will beat up the ground quite briskly and drop on to their prey.

One evening I was waiting after a very dull flight for just one more duck, when a great horned owl dropped on one of my wooden decoys. His advent was so silent and unexpected that I was unprepared to shoot, and he disappeared. Directly one of my live decoys set up a terrified quacking. She was sitting under a bank, and over her was poised the owl. I gave him a charge of shot and he took himself off into the darkness.

This owl no doubt picks up a good many wounded birds and can catch ducks sitting on the water. I have seen very dark specimens of this bird in Washington, where they are quite plenty.

There is another owl, much smaller, that hunts those meadows a great deal. He comes out before sunset, and even in midday I have seen one beating about for mice. They have the most spread of wing for their weight of any bird I ever handled, and are very mopey and weak. It was no uncommon thing to see three or four quartering the marsh at one time. I never determined the species to which this owl belonged, but I know that its body was scarcely larger than a robin's and that it certainly spread 2ft. of wing.

My impression is that game birds are decreasing faster than birds of prey, especially in the West; in this part of Massachusetts predaceous birds are very scarce. I am led to believe that the disappearance of all kinds of game has something to do with this. Thirty years ago the Cooper's and sharpshinned hawks were quite common; I could find their nests every spring. This year I have seen but two Cooper's and one sharpshinned, and one pair of red-tailed. The marsh harrier is now our most abundant species, and he, of all hawks of my acquaintance, catches the most cottontail rabbits. If those countries where this little fellow, or his relative, is a pest had lots of harriers they would catch the bunnies. Then I suppose it would be, Who shall catch the harriers?

Man seems to disturb the balance of nature when introducing exotic species, many of which, put out with the best of intentions, have become as pestiferous as some plants that were brought here for medicinal or other properties and are now among our most troublesome weeds.

WALTER B. SAVARY.

Why the Kissing Bug Kisses.

Editor Forest and Stream:

It is as difficult to get an authentic description of the sensational kissing bug as it has been of the sea serpent, although both put in a frequent appearance at summer resorts. No two accounts agree. The real fact is, the kissing bug is a myth, and non-existent, although the recorded cases of hospital patients being victims of insect bites are too substantial facts. Flies in particular, as is well known, communicate fatal poison after feeding on carrion or other blood-poisoning material. There are various insects of other orders which are attracted by sweets, and the reason why they so often attack the human lips is that those persons' lips bear traces of food or other attractive substances which have been eaten; and in repelling the attack they enrage the bug, that bites; or the insect, while feeding, may leave poison matter on the delicate tissues of the lips, to be absorbed into the circulatory system. Moral to everybody: Wipe your mouth clean.

CHARLES HALLOCK.

Deer on Martha's Vineyard.

NAVIGATOR BARTHOLOMEW GOSNOLD mentions in the diary of his voyage of 1602 having found deer on the Island of Martha's Vineyard, Mass., to which it is supposed they swam from the mainland when pursued by hunters. Being an isolated spot they would remain undisturbed and readily multiply. The author of "Belknap's Biographies," printed in 1798, learned from Benjamin Bassett, of Chilmark, that the last deer seen there and shot at was in 1720. The horns of deer, he stated, had been ploughed up several times on the westward or landward side of the island; a fact interesting in itself, as well as indicating an absence of rodents and other vermin which quickly destroy them when cast.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

The Last of the Lincolns.

THE bobolink's song rises faintly over the rich meadow lands of New York and New England—from solitary throats. From fields where once flocks of the blythe warblers nested and caroled, to-day but a pair of these birds can be found. Roadsides skirting broad, green pastures may be traversed and not one bobolink seen nor heard in the stretch of a mile; whereas, within the last ten years it was a delight to go awheel adown these roads and listen to the brilliant singers as they rose above the grass tops. The people of these country sides cannot be accused of responsibility for the decrease, though, it is true, a few birds are captured for cage pets. North of the lower Hudson River and Long Island the bobolink is not considered a game bird nor protected as such. It is protected and classes as a song bird. It is when the bird has changed his identity and well started on his Southern migration that his numbers begin to diminish—when his handsome coat of black and silver has been cast aside for the smudgy, brown suit of travel and the glad warble of June days changed to a monotonous, sparrow-like chirp.

The reeds of the Susquehanna and Delaware rivers and bays of Pennsylvania furnish the bobolink his first alias—the reed bird—delicious eating for the most fastidious appetite, an epicurean tid-bit.

In this region the bagging of our one-time songster is carried on in slaughter-house fashion—pot-hunting is the style which pays. The bird is small and powder is costly.

A man who understands netting will sell you 100 birds daily, and such an amount is a minimum quantity.

The birds go further South as winter approaches; to the rice fields, still meeting the same destructive fate, but under the name of rice bird. Further yet he travels: to the Gulf and Antilles—the butter bird, and still a rarebit.

It is stated in New York city and Philadelphia that sparrows are masquerading at several eating houses under the name of reed birds (product of window-ledge trapping, etc.), and let us hope their flavor matches that possessed by Robert of Lincoln. CAPT. KIDDE.

The Robin as a Mock Bird.

Editor Forest and Stream:

There is a resemblance to the cry of Whip-poor-will! whip-poor-will! whip-poor-will! in the obligato of all robins (*M. migratorius*) that have sung in my hearing, though I am sure the resemblance is a fancy on my rather than a deliberate imitation on the part of the bird. Your correspondent who writes of the robin as a mock bird will find by observation that individuality plays a most important part in bird music, as in bird life.

The rendering of any well-known musical composition is never twice alike, save when the hand organ or other mechanical device "grinds it out." Personal expression varies among us humans, and so it is with the birds. This time-worn obligato of our robin is rendered differently hundreds of times each spring by robins who, though they adhere closely to the original *motif,* express their own individuality in often a marked manner when voicing it.

Practically all our songsters have this peculiarity. I have in mind a Baltimore oriole who possessed the true ringing note of his family, but whose Tu-e! tu-e! tu-e! had a most peculiar nasal twang, followed by a bad break on the final note. This bird (easily identified by his voice as above) nested for three seasons in my immediate neighborhood. Anyone who will listen to our feathered orchestras and who is at all familiar with our birds, will be quickly impressed by the "personal equation" they voice.

I do not presume to say that such a "curio" as a mocking robin in the wildwoods does not exist. They are certainly capable of being taught, for I have known a caged robin to learn a few simple notes, but I still incline to the idea that further investigation will show a fancied rather than a premeditated resemblance in the song of friend K.'s robin.

By the way, we are honored by the summer sojourn of two fine wild mockingbirds here. They have made the sunny days brighter and the moonlight nights more lovely with wonderful melody these many weeks.

WILMOT TOWNSEND.

BAY RIDGE, N. Y.

A Curious Nesting Place.

ON June 29 the nest of an Arkansas fly-catcher (*T. verticalis*) was taken from the hood of an electric light mast at this place. It contained four moderately fresh eggs and had been abandoned by the parent birds. The nest had been placed on the cross-bar about midway between the hanger and the hood, and within a few inches of a 1,200 candle power arc lamp. The cause of its abandonment was undoubtedly due to the intense heat generated by the iron hood. The past spring was an unusually late one, and the weather, for this section of country, quite cold till well along in June, when Old Sol came out and announced his readiness for regular summer business. In the shade the thermometer registered 108 to 115 degrees, and under the sheet iron hood at the top of the arc mast it was too much for even the parental affections of the birds. They would fly to the edge of the hood, hold themselves momentarily in the air while they took a peep at their nest, then slowly fly away. Finally they left it for good, and although still about, do not appear to have done further nesting. This was, however, their second attempt at nest-making in such position. The first one, built in May, was destroyed by the electrician, as it interfered with the working of the lamp, but the other being out of the way, although the lamp was in nightly use, was allowed to remain till the birds themselves abandoned it. OCCASIONAL.

YUMA, Ariz., July 21.

Self.

BALTIMORE, July 20.—*Editor Forest and Stream:* Reading "Self" in issue of the 22d inst., the following couplet came to my mind from an old book long ago out of print.

Great is the worth of self where none remains
And loyalty to self alone obtains.

E. S. Y.

Game Bag and Gun.

The July number of the Game Laws in Brief and Woodcraft Magazine is now ready. See advertisement of it.

Getting There First.

Editor Forest and Stream:

Many people wonder why the game laws have been and are being so heedlessly violated, when they ought not express wonder at all. People who pose as the best law-abiding citizens frequently go for grouse and woodcock a month or six weeks before the open season. They go because they feel that they must if they expect to get any game; for, as has been demonstrated on former occasions, if they wait until the open season they, as a rule, find that early market-hunters have invaded their haunts and left nothing for the legal-time hunter but disappointment and a few of the wildest kind of birds, mostly old ones, at that. Men who abhor the violation of law when they know that poachers are relentlessly depriving them of the tart of their fall holidays, will naturally have a nervous feeling, which, to put it as I now think it, is the ovary of an illegal bird hunt which rapidly develops into a misdemeanor. Such men are not wanton violators at heart; they simply want their rights, and in getting them they do not feel that they are playing against the law, but against the market-hunters and poachers who want a great big, glorious (?) day's hunt to tell about some time in the future.

These men whom I mention are the hinges on which swing the poachers. Generally they are of the type that have no enemies worthy of mention—just the kind that a protector would be prone to close his eyes upon. As a rule they are good-natured, whole-souled, sympathetic fellows, who win the esteem of all who have dealings with them. What, then, is the manifest remedy? With the ravenous poachers doctored up as they should be, our good "sports" would hail with delight the advent of an epoch in gamedom for which they have thus far vainly hoped; a time when they can calmly await the open season with assurance that game will not be illegally molested, at least to any great extent.

I have heard it remarked time and again that if a man wanted to get any game he must get there before this one or that one or some other one (mentioning several well-known local market-hunters) gets in his early work, or get "left."

If the game protectors would just start in and "bag," for the first, those whom they know have derived financial benefit from illegal shooting they would not be constrained by their regard for the hinge men to shirk their duty in the least; for, as I intimated before, "douse" the extensive illegal shooter and the smaller ones will gladly disappear of their own accord.

I do not mean to uphold law-breakers of any description, but I simply present my ideas of the quickest, surest and least troublesome way of doing the right thing.

CHAS. H. SMODELL.

STILLWATER, N. Y.

Guides and Employers.

IN late issues some of my American cousin sportsmen have been giving expression to their woes in experiences of guides.

With due modesty, might I presume to think that, as an old stager, I could offer some suggestions? Guides (as they are unhappily, to their own and their employer's detriment, designated) are, like all the rest of us, a few very good, many indifferent, a few bad. Good ones you may call archbishops, if you like—it won't hurt them or you. The balance, through their naming, get a wrong impression of whom they and you are in the respective relations. Instead of recognition of the fact that you are giving them employment to earn their living, and thus stand in exactly the same relation to them that the employer does to the employed in any other business in life, they feel as if they owned you for the time.

My suggestions, addressed particularly to novices, are these: When you have determined in what wilds you are going to rove, shoot or fish, get the very best obtainable maps and on largest scale of the region. They will be more or less defective, probably more. Having fitted yourself out according to your individual tastes with what you are going to eat, drink, wear and live under—and in this don't be "guided," but take your own advice—the next thing is to find and engage the services of some healthy, sturdy, sober woodsman. Tell him you are not hiring a guide, that you are looking for a man to chop and carry and row or paddle you about, and make himself useful, day or night, in any way you may call for that is within his ability. Pay him accordingly. Get another similar man who, as woodsman, or on log drives in lumber camps, has been accustomed to cook in open air in all weathers; as a test question, ask him if he can guarantee to make, from his sack of flour, fair, digestible bread in steady rain, with no shelter—over him or fire—other than what nature and his own wits may at the moment afford. If his experiences have included this he'll do as cook anywhere—forest or prairie.

Thus equipped, start into your unknown territory, go to no hotel or camp, ask no one's advice or direction. Take wrong routes, make blunders in your stalk, find that particular contrivance of your own that you fondly imagined the pearl of your outfit, an infernal useless nuisance—all these amount to nothing compared with the advantage of finding out your country for yourself, of learning, of yourself, what is best, and enjoying the keen pleasure of the explorer, a pleasure greater far than that of "killing something," take the word of an old hand at both.

The next time you will start in with a fund of knowledge of woodcraft and a feeling of happy independence of any dry nursing guidance, that will enhance manifold the enjoyment of your holiday in the wilds. When inculcating so much independence in choice and action, I would not undervalue the counsel of experienced friends, nor the study, before going, of good books on outdoor life, such as many published by this paper's company. My suggestions mean that once started you are to do your own thinking and make your own decision. You may at first often blunder, but as a result, knowledge and proficiency will rapidly come, and of quality rarely attainable when every move is under so-called guidance.

Don't be taught by those who as a matter of contract are there to do what you tell them; you would not in business or politics do it. Whether it be with a so-called guide, or with a Scotch gardener, there is much in the philosophy of the retired admiral, ignorant of horticulture, who, having ordered his hyacinth bulbs to be planted in rows, the bulbs upward, replied to a friend's laughter-choked pointing out of the absurdity, and question of why he had not consulted his gardener, "Never mind, they are going to stay that way. It's wholesome discipline for him, as he is a little inclined to presume on his knowledge and forget that I am in command, not he. I'll have him water them all extra carefully to-night."

I hope that the term "guide" may not be imported into our Canadian woods. We are satisfied to employ, on our sporting excursions, canoemen, axemen, cooks, as we do for more serious pursuits therein.

Treating of names—a digression—I am reminded of that of "muscalonge" which I see printed under an excellent illustration of the fish in a recent number. We have rather loosely anglicized this word. Its etymology begins with the Indian root "kino" or "kinwa," meaning "long," as in "kinosi," he is tall, "kinogami," long lake and the terminal root "je," which I may call a "fishy" one which make for the common pike the name "kinonje," i.e. "the long fish." The prefixed root "mus" or "mas" is that which appears at the beginning of the word "Mississippi," and means great, hence "The Great River (sipi, river)." The whole Indian name for the fish delineated becomes "maskinonje" or "greater pike," a fairly correctly definitive name. COUREUR DES BOIS.

CHICAGO AND THE WEST.

Minnesota Reserve Movement Organizes.

CHICAGO, Ill., July 26.—The meeting for preliminary organization of the Minnesota forest reserve movement was held yesterday evening at the rooms of the Chicago Athletic Association, and was an enthusiastic and workmanlike success in all particulars. The following gentlemen were present. Col. John S. Cooper, of Chicago; Dr. H. M. Bracken, of the State Board of Health, St. Paul, Minn.; Mr. Chas. Cristadoro, St. Paul, Minn. From Chicago were others as below: John A. Henry, Jas. B. Clow, C. D. Peacock, Geo. W. Cass, John E. Williams, H. E. W. Blatchford, H. Blatchford, L. J. Osborn, L. W. Pitcher, Henry S. Fitch, O. R. Glover, Howard F. Chappell, Geo. W. Davis, Frank A. Johnson, F. S. Baird, M. R. Bortree, G. W. Strell, Fred Gardner, H. R. S. Williams, Chas. M. Osborn, John F. Eberhart, Dr. J. N. Crouse, H. G. McCartney, J. D. Adams, J. H. Whitbeck, John A. Campbell and Geo. O. Shields, of New York. On motion of Col. Cooper Mr. E. W. Blatchford was called to the chair and briefly and ably stated the reasons for the meeting and his personal approbation of the motives of same. The chairman then called upon Col. Cooper who, in a characteristic speech, described the general purposes of the meeting and the resources of the region in question. Col. Cooper used a large wall map to illustrate his talk. He said it was only two years ago that he first saw this beautiful country and he was charmed with it and then resolved to save it if that were possible. On the map he pointed out a vast slice of the State of Minnesota 140 by 118 miles in extent, which he said he would like to see set apart for this reserve, and also smaller sections which would be acceptable if we could not get so large a tract as we might like. He said he had long ago written to the President of the United States, who had replied referring the communication to the Secretary of the Interior. He wanted a Congressional committee and did not get it, and then at a lucky moment a friend, a member of Congress, had suggested the idea that a visit by some or all of the members of Congress to that region would be better than any lobby, or any committee, better than any writing, better than anything else. So he had tried what he could do. The Great Northern and the C., B. & Q. railways had turned in to help him, a prominent official of the Great Northern saying to him: "Well, it won't, perhaps help us, and it won't, perhaps, break us, but it won't kill us, and it's right!" So that was the way the matter had shaped itself up to the present time. There were difficulties, but not insuperable ones. There were in the tract 1,000,000 acres of land belonging to lumbermen, nearly 5,000,000 belonging to Government, nearly 4,000,000 acres belonging to the Indians. All this could be arranged for without prejudice to any rights and by the use of funds not overwhelmingly large. This was a great health region, as Dr. Bracken, here present, could testify. He was gratified to see that the Commercial Club of St. Paul had cordially indorsed this movement and chosen a committee to send to this meeting after fuller organization. Col. Cooper said he thought a formal organization, to be but of a tentative sort, the beginning of the body itself, was something which was now imperative.

Dr. Bracken was now called to serve as recording secretary, and was seated amid applause for the Minnesota man who has done so much to aid this enterprise. Mr. Henry S. Fitch, of Chicago, was called upon to speak of the sporting possibilities and general beauty of this big Minnesota tract, which he did from his personal experience in that region. He was enthusiastic in his praise.

Dr. Bracken, when called upon, spoke at some length and cordially of this enterprise, saying it seemed providential. The Minnesota Medical Society had long ago sent out a committee to hunt out sanitary lands for patients afflicted with pulmonary complaints. They had selected this very tract. "We were about to memorialize Congress when we heard of this very movement," he said. The original intention was to ask Congress to withhold these lands, and with the co-operation of the Federation of Women's Clubs this had been asked of Congress, and these lands were so withheld, and were lying there waiting for this very project to set them aside forever from such sale. The State Game Warden was delighted with this idea. The State Fire Warden was delighted quite as much. It was a movement which was attracting much attention and approbation in Minnesota.

Mr. Chas. Cristadoro said that we were here to ask Congress to do no one a favor, but to do only its duty—to pro-

tect the headwaters of our greatest river, to save that region from the devastating axe of the lumberman. Wisconsin and Michigan were devastated now, and part of Minnesota. All that was left of the great virgin pine forest was this little region in Minnesota, a speck upon the map. To cut it would leave no timber like it in the entire West. It would mean that there would be here, as in Wisconsin and Michigan, a series of decayed and desolated towns, the wreckage of the lumber regions, with no hope and no future. To save this region meant to give it a future, and a great one.

Col. Cooper now offered the following well-considered resolution, which was really the main business of the evening:

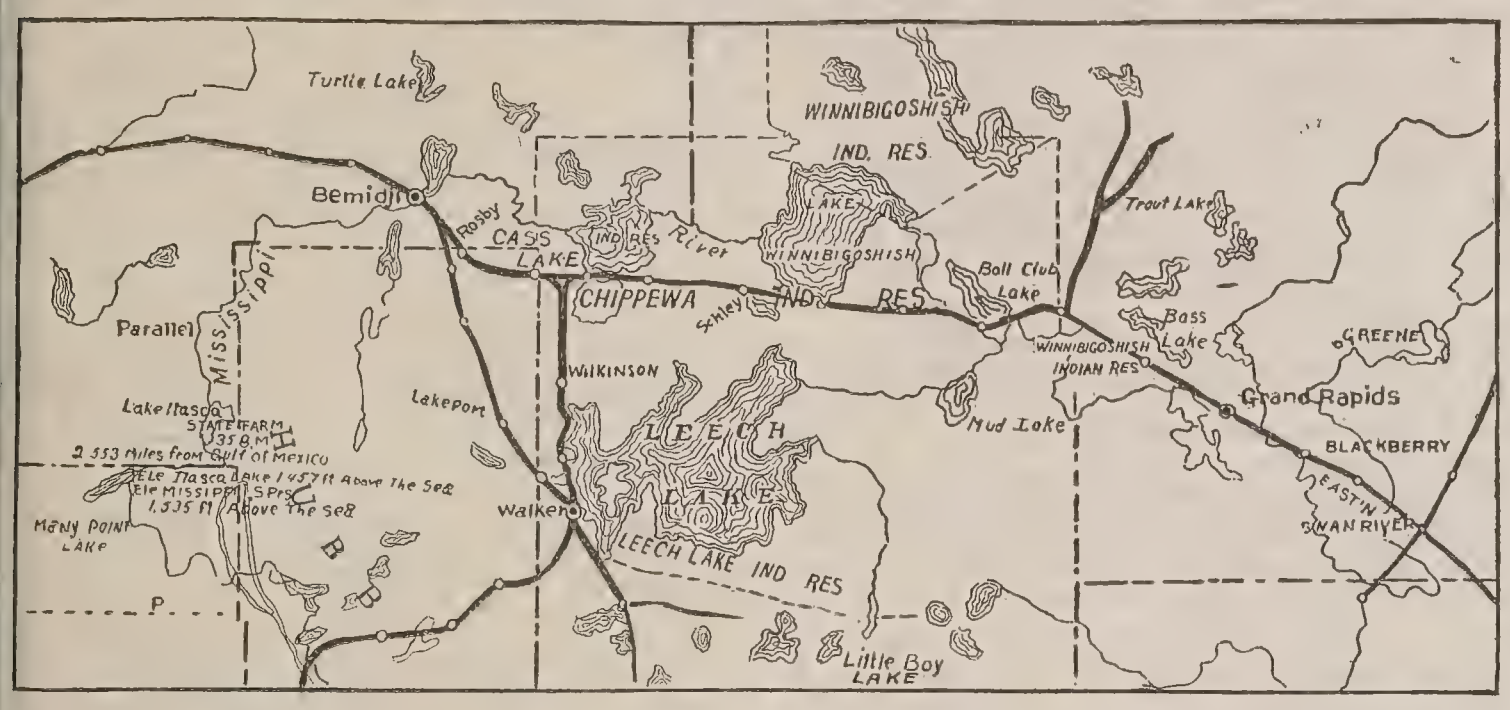
"Whereas, This meeting has been called solely for the purpose of counseling togethering over our common purpose of saving to the present and future generations the native forests at the headwaters of the Mississippi in the State of Minnesota;

"And, whereas, We desire to make the proposed organization national rather than local in its constituent membership, and especially to act in harmony and co-operation with the friends of this movement in Minnesota:

"Therefore be it resolved, That the action of this meeting shall be confined to the appointment of a committee on organization as follows:

"The committee shall consist of fifty gentlemen, of whom thirty shall be from Minnesota and shall be elected by the joint action of the Commercial Club of St. Paul and the Commercial Club of Minneapolis; and the other twenty members of said committee shall be from gentlemen present, or who have indorsed this movement; and such committee shall report a plan of permanent organization at the next meeing, to be held on Friday, Aug. 11, 1899, in the Chicago Athletic Association, at 8 o'clock P. M. They shall also have full power by correspondence and otherwise to enlist other gentlemen from Minnesota and elsewhere, in this movement, and add their names to the membership of the organization; and they shall also report to such meeting the different offices of the organization, together with the names of the respective gentlemen whom they shall recommend for election thereto. They shall also recommend the name for the permanent organization. Said committee shall appoint an executive committee of a smaller number, who shall have full power to act for the whole committee."

The foregoing was carried unanimously. On motion of Mr. Fitch a sub-committee on membership was appointed by the chair, consisting of Col. J. S. Cooper, H. S. Fitch and Jas. B. Clow. These retired and later reported the following list of names: Hon. Theodore Roosevelt, of New York; Dr. O. W. Nixon, Dr. Frank Billings, Hon. C. C. Kohlsaat, Gen. John McNulta, Hon. H. S. Fitch, Capt. J. B. Clow, Col. J. S. Cooper, Messrs. E. Hough, Otis R. Glover, Arthur Orr, C. D. Peacock, H. G. McCartney, J. H. Whitbeck, Joseph Leiter, Joseph Winterbotham, L. W. Pitcher, E. W. Blatchford, J. A. Kelsey and E. F. Daniels, of Chicago.



The list was adopted without dissent.

Meantime general discussion went on. Mr. Bortree rose to ask what would be the effect upon the game of that country if this reservation were established. The chairman explained to him that it had been the history of the country that when game was protected it was not exterminated, no matter how old the region. This reservation would be under the absolute protection of the United States Government and United States troops. Meantime letters of regret for obligatory absence were read from many gentlemen to whom invitations had been sent; and without exception these were of most cordial indorsement of the enterprise. Such communications were from Judge C. C. Kohlsaat, Dr. Frank Billings, Marshall Field, E. W. Blatchford, Arthur Orr, F. T. Bentley, Edwin F. Daniels, W. P. Mussey, J. B. Knight, J. B. Sanborn, Joseph Winterbotham, Dr. O. W. Nixon, Jas. T. Beeks, J. M. Oliver, Gen. J. M. McNulta, Sidney T. Eastman, J. A. Kelsey, W. P. Tuttle, Wm. Annan Taylor, all of Chicago, who pleaded absence from city or other pressing reasons for not being on hand. Among similar letters from gentlemen outside of Chicago were those from Messrs. W. E. Moses, of Denver; Leo. M. Crafts, of Minneapolis; Burdett Loomis, of Hartford, Conn., and letters of great interest were also read from Governor Theodore Roosevelt, of New York; officials of importance in railway circles of the West, from W. B. Chamberlain, editor of the Minneapolis Journal, etc. The reading of these communications, from men who were either well acquainted with the country in question or who expressed the warmest and most intelligent interest in the project, was met with frequent applause. It was easily apparent that the forest reserve proposal awakens enthusiasm and approval wherever it is presented.

Mr. Cristadoro called attention to the fine collection of photographs displayed about the room, all views taken in the region under consideration of the forest reserve. These pictures showed the wild nature of that country very fully, and were artistic of themselves. He thought but very few white men had ever been so close to that region as they might now be by looking at these pictures.

Mr. F. S. Baird moved the amendment of the resolution on organization so that five more names might be added to the committee to be selected by this meeting. He suggested that the names of Geo. O. Shields, M. R. Bortree and Geo. W. Strell should be added. These were added, with the names of Mr. John E. Williams and Geo. E. Adams. Adjournment was had till Aug. 11. Col. Cooper said that at that meeting he hoped to have many distinguished guests, possibly the Secretary of the Interior, among others. Mr. Cristadoro, of St. Paul, said he thought his State would perhaps send down a special car party. The best of feeling seems to prevail in the State of Minnesota in regard to this movement, and it is already clear, what all the Chicago men have anxiously hoped would be clear, that this is not to be considered a Chicago movement in any sense of the word.

The following are names of Minnesota gentlemen who are naturally expected to feel a keen interest in this matter: Of St. Paul, Governor John Lind, Jas. J. Hill, President Great Northern Railroad; D. R. Noyes, Bishop M. N. Gilbert, Gen. C. C. Andrews, State Fire Warden; Geo. R. Finch, Conde Hamlin, Geo. Thompson, G. S. Gifford, A. S. Talmage, R. C. Jefferson, Moses E. Clapp, Milton Griggs, Thos. Lowry, C. A. Pillsbury, Dr. Parks Ritchie, Dr. Henry Hutchinson, Burnside Foster, A. McLaren, C. L. Greene, E. J. Abbott, Dr. H. M. Bracken, State Health Board; Harris Richardson. Of Minneapolis, Messrs. E. J. Phelps, J. B. Gilfillan, F. H. Peavey, S. A. Harris, R. G. Evans, F. G. Winston, W. C. Edgar, John F. Calderwood, W. E. Haskell, J. B. Murphy, John S. McLain, Dr. J. W. Bell, W. A. Jones, R. O. Beard, F. F. Westbrook, A. P. Williamson, W. E. Leonard, F. B. Walker. Of Duluth, C. A. Stewart, S. M. Stocker. Of St. Cloud, W. L. Beebee.

MAP OF THE PROPOSED RESERVE.

This map gives the area of the proposed forest reserve in northern Minnesota which the Government is to be asked to set aside for the preservation of the historic headwaters of the Mississippi. It is probable that the tract when eventually reserved by the Government will be much larger than the district shown here, but this is to be determined in the future. The area shown contains the gem lakes of the northern region, is traversed by the lines of the Great Northern system, is replete with all kinds of game, and easily accessible. Geographically it is located northwest of Duluth and northeast of Fargo. A considerable portion of it is in the famous Itasca county. The distance from Chicago is about 500 miles via Duluth, or 600 via St. Paul. It is the most extensive hunting and fishing region in the middle West.

Acreage on the Proposed Reserve.

Of public lands in the region concerned in the Minnesota forest reserve movement the acreage is as follows:

County.	Acres.	Reserved.	Total in County.
Beltrami	1,405,000	594,000	2,710,000
Itasca	1,528,942	618,014	3,676,000
Cass	1,273,940	421,240	1,768,000
Ashland	515,680	2,520	607,000
Total	4,723,562	1,635,774	8,758,000

Illinois Game Commissioner's Work.

CHICAGO, Ill., July 29.—State Game Commissioner Harry W. Loveday, writes me to-day regarding the workings of the new Illinois game law, whose somewhat radical features received mention at the time of the passing of the law. Mr. Loveday thinks that the new law will be all right, but naturally deplores the county license feature with the multiplicity of details which that means. It must be a little odd for the shooters of Missouri and Iowa to have to put up money for a license when they want to shoot in an Illinois county, but this lisence idea has obtained too strong a hold in this section of the West to be denied. Whether it will stand the test of years is something which remains to be seen, but it is certainly a step forward over the old loose methods under which the Western game was practically destroyed. The license idea may not be fully right, but if it teaches the doctrine of protection and advertises the fact that there are game laws, it cannot help doing good in a way. Warden Loveday has always believed in this license law, and I hope that it will give him the machinery to still further carry on the good work he has always done in protection in this State. He has made more arrests and seized more illegal game than any warden we have ever had in Illinois. Non-resident shooters will do well to note the last clause of his communication, which is as below:

"Ninety-three new deputies have been carefully selected and appointed by me throughout the State. Over 100 more applications are in, many of whom will be appointed as soon as they qualify. Hundreds of very encouraging letters have been received at this office, declaring that now that we have at last got a law for the protection of game, they will do everything in their power to assist me. A few arrests have already been made. One man had killed an old hen and five chicks; the old hen did not have a feather on her breast—chicks the size of quail. While in Springfield yesterday I was informed in the Secretary of State's office that fifty applications for licenses had come in from a single club in St. Louis. The real sportsmen of that city are perfectly satisfied with the new law; the only kick is that one license for the State would have been the proper thing, instead of each and every county. I agree with them; had it been so we would have more money and more protection. It might be well for you to inform the non-resident shooters in our State to send to State Secretary Rose for blank application to avoid delay at the time they want to go shooting in Illinois."

Gov. Tanner's Deer.

In regard to the killing of the deer in Colorado by Governor John R. Tanner, of Illinois, there is no doubt at all, and the matter is not a mere newspaper rumor. The act was done deliberately, and it was done by a man who knew the law, or who ought to know the law. Interviewed at San Francisco on this matter this week, Governor Tanner made the very lame explanation that he killed the deer on club grounds, and that the law did not apply on such club grounds. I do not know what club there is owning a game preserve near Debeque, Colo., and I do not know what Glen Beulah Park is, this being the place where he is stated to have killed the deer. If Glen Beulah Park is really a private preserve, with domestic deer, it is difficult to attribute any sportsmanship to the act of killing a deer under such circumstancs. Of course Governor Tanner must know that the owning of a piece of land does not give any one the privelege of breaking the laws of the State upon that land. It used to be said that a farmer might kill game on his own land at any time, but a great many farmers have learned to their cost that it is as illegal to break State game laws on their own land as it would be to commit murder or larceny there. A warranty deed to a piece of real estate does not warrant that such real estate is a place of refuge or exemption from the laws. The State Game Warden of Colorado at once started out after Governor Tanner's party on hearing of the offense, but the latter had left the State and gone to California. I fear it will be difficult for Governor Tanner to set himself in a sportsmanlike light before the public in this matter.

E. HOUGH.

The Equipment of Camps and Expeditions.

BY PROF. CHARLES H. SNOW, NEW YORK UNIVERSITY, NEW YORK CITY.

(A paper presented before the American Institute of Mining Engineers at the New York meeting in February, 1899.)

THE engineer has often to penetrate difficult or unknown regions. Mineral, irrigation, boundary and railway problems frequently necessitate journeys through, or long residence in, localities whence sustenance cannot be drawn. The selection and conveyance of provisions, outfit and implements thus become a matter of the first importance. Scientific skill, even of the highest order, is powerless unless supported by the proper appliances and foods. The advance of civilization favors the engineer, in that it is constantly enlarging his facilities and thus reducing his difficulties. Notwithstanding this fact, many are yet brought face to face with the problems considered in this paper.

Distinction must be made between parties which are to be in constant or even occasional touch with a base of supplies, and those which will be for a long time dependent on their original outfit. Again, the requirements of a party on the march are different from those of a fixed camp. The district, season, climate, size and personnel of party also influence the character of the outfit. A party that is to be detached from its base of supplies for some time requires a greater variety of food than if it is to be gone for a short time. Much less in proportion need be taken where the journey is not long, so that privation is confined to a limited period. The ability to establish a fixed camp permits a larger outfit than would be possible if the camp were to be moved from day to day. Transportation, climatic and other conditions are thus so varied that lists prepared for one work could hardly be applied to any other without some modification. Lists that have proved successful in some instances may, however, serve as bases to be added to, or otherwise altered, for the case in hand. The mistake usually made is in providing too large an outfit. Every emergency cannot be provided for; so that it is well to take, not what may be needed, but what cannot be spared.

The present subject has been exhaustively studied by the military authorities of all great nations. The requirements of the civilian engineer seem to differ, however, from those of the soldier, the sailor and others exposed to extreme privation. The soldier is disciplined to hardship, and forms a part of a large, well-supported national system, with facilities differing from those controlling private enterprises. The sailor does not have to take into account the question of transportation, which is usually the all-important factor in the work to be specially considered here. Arctic exploration, on the other hand, subjects its small following to such an abnormal maximum of privation that preparation for physical requirements assumes the position of first importance. The engineer, who is as pronounced in his needs as the soldier or the sailor, may be subjected to privations so severe as to suggest, at least, those of the explorer, and is often responsible for the health of others. Notwithstanding these facts, the writer has failed to find that any attempt has yet been made to collate and compare the experiences of engineers in this important particular.

The organization of any camp or expedition necessitates attention to one or more of the following departments: Transportation, food, shelter, clothing, miscellaneous implements, instruments, personnel and medicines. These will be considered in the order given.

Transportation.

The difficulties of camp and field life increase in direct

proportion to the difficulties of transportation. Where a district is open, so that horses can be employed, or where streams or other waterways permit the use of boats, or when the work can be done in winter, so that provisions can be packed upon sleds, the problem is much simplified. When, however, a camp is to be established, or a party is to travel in some forest or mountain district where neither animals, boats nor other means of conveyance can be utilized, and provisions must be packed upon the backs of men, the most careful forethought must be given to its preparation.

The problem of transportation cannot be intelligently treated without some knowledge of the difficulties to be surmounted. While each geographical section is usually distinguished by local peculiarities (such as those due to climate), topographical difficulties, as a whole, may be conveniently divided, as they are connected with prairies and table lands, mountains, waterways, swamps, forests, ice and snow.

Prairies, table lands, ice, or other flat, open surfaces usually offer, as principal difficulties, those dependent upon temperature and climate alone. The table lands of northern Mexico, for example, are swept during rainy seasons by storms so severe that gullies, cañons or *arroyos*, such as do not normally obstruct travel, are rendered well nigh impassable. Similar surfaces in the North are visited during the winter months by high winds and storms, which often interrupt or entirely suspend outdoor operations. Supplies can usually be transported over flat, open country by stout, covered wagons; and sleds can be used during the winters in the colder regions.

Mountain districts are characterized either by such abrupt rocky surfaces as exist in the Andes or the Alps, or by gentler inclines covered with forests and traversed by streams, such as may be seen in Arkansas or in the State of Washington. The difficulties of transportation presented by the former class are commonly local, and although severe, not widespread in their application. The difficulties presented by the more normal type of mountain lands more frequently encountered by the engineer are often very considerable, because of the forests with which they are covered or of the streams likely to be encountered. Advantage is sometimes taken of the beds of shallow streams by employing them as roads. The climatic differences between the North and the South should also be noted. The immediate concentration of storm water into streams is often very formidable in the South; while the North is characterized by snow and ice accumulating on the sides of the mountains, to be precipitated later into the valleys below.

Waterways may extend toward the objective point, so as to facilitate transportation, or they may be unexpectedly encountered as obstructions in overland journeys. A waterway extending toward the objective point is an advantage from the standpoint of transportation in direct proportion to the absence of rapids or of shoals. The danger of such travel is much simplified by prior knowledge of the peculiarities of the stream; but in a journey upon a watercourse of which no description is available, constant watchfulness is necessary to avoid rapids, the presence of which is sometimes not evident until it is too late to avoid them. Even with the aid of pilots, failures to pass rapids safely are numerous. Several wrecks occurred daily, during the past season, along the famous White Horse Rapids, leading into the Klondike gold fields, although local pilots were in many instances employed. Shoals are to be feared, as are likewise ponds or bogs, over which a small river sometimes spreads. The latter are sometimes obstructed by grasses or other vegetation to such an extent as to be well nigh impassable. Rivers, lakes or ponds unexpectedly encountered in overland journeys must be crossed by fording, by felling trees so as to form natural bridges, or on improvised rafts. Solid ice is never to be feared; but solid ice is not apt to form on rapid streams, although the snow by which the ice is covered frequently conceals this fact. A foundation of good ice permits the use of sleds, drawn by horses, dogs or men. The presence of animals, however, is not always wholly desirable under such circumstances, since provision for them, as well as for the party, must be transported.

Swamps may occur in open country or in forests. They are not apt to be large in the former case; in the latter they may be divided according as the water is deep and navigable or as it is shallow. No difficulties are to be anticipated either from the deep-water or open-country swamps. In the Southern States the former are navigable, and the latter, being generally confined to the borders of lakes and ponds, are consequently limited in extent. The shallow-water timbered swamp is, however, very formidable, and can generally be penetrated by pedestrians only. The cedar swamp of the Lake Superior region, for example, is covered by a growth of white cedar or *arbor vitæ*. The light foliage which characterizes these trees permits them to sustain vigorous branches close to the ground. These meet and cross one another, so that a passage through them greatly resembles a progress through a cultivated hedge. The roots of the trees lie partially out of the mud, and form the most desirable places on which to step. While apparently sound, they are usually slippery and sometimes decayed, so that the traveler, in stepping or springing from one to the other, encumbered by a heavy burden and obstructed by the small, wiry branches, is apt to slip or fall. The constant use of arms and limbs required, together with the strain or shock produced by the shifting of the heavy burden upon the shoulders whenever the traveler slips, combine with the abundance of annoying insects to delay and obstruct progress through a territory of such a nature. One of the difficulties to be surmounted in such a district consists in the location of a camp at nightfall. The termination of the normal working day may find the party where encampment is well nigh impossible. Under such circumstances it is usually best to go forward so long as there is a prospect of finding a dry or otherwise suitable camping ground—a discovery which may not be made for many hours. The day's work cannot therefore be confined within the ordinary limits. It is usually best to permit the party to remain for some extra time in camp after such an unusual strain. The so-called tamarack swamp of the northern Central States differs from the cedar swamp just described in that there is an absence of the dense underfoliage. The cypress is the characteristic swamp land tree of the Southern States. The open bog or "muskeg" of the extreme Northwest is thus described by Prof. Russell:[1]

"The muskeg is a characteristic feature of northern topography. From the international boundary to the Arctic Sea the term is applied to alluvial areas with insufficient drainage, over which moss has accumulated to a considerable depth. These swamps are usually covered with tamarack and fir trees. The typical muskeg is traversed by meandering streams, having deep channels, but a scarcely perceptible current. Stagnant pools become coated over with a moss of sufficient strength to temporarily sustain the weight of a man. In places the surface is broken by tall hummocks, the *tetes des femmes* of the *voyageur*, which turn under the foot, and sooner or later precipitate the passing pedestrian into the mud or water below."

Forests are to be considered principally as they aggravate or affect the difficulties due to the presence of mountains, waterways or swamps. They are of themselves difficult in direct proportion to the presence of undergrowth. Surfaces covered by large trees, the lower limbs of which have fallen away, present no obstacles to foot passengers or pack animals, while surfaces covered by younger growth are difficult because of thick underfoliage, and because their plants stand so much closer together. "Windfalls" must be considered. They are the results of tornadoes or of natural decay, and present a spectacle of trees piled upon one another in utter confusion, the trunks and limbs intermingling, and usually penetrated by wiry second-growth saplings. A passage is made over such a district by walking cautiously back and forth, up and down over the trunks and limbs.[2] It is ordinarily impossible to proceed in a day's march more than two or three miles, as measured in a straight line, over such a district.

A considerable range of experiences may thus be encountered upon surfaces coming under the head of forest lands. The passage may be over clear ground, between widely separated trunks of large trees; or through the thick, wiry growth of a young forest; or over windfall, or it may be over swamps or mountains, difficult of themselves, but now doubly so through the presence of the foliage. Many contingencies are thus likely to be encountered in forests, and all are frequently encountered within short spaces.

Considerable trouble may be experienced from mosquitoes and similar insects. This is frequently so great as to pass the limit of simple annoyance. Tents hastily erected at nightfall by men fatigued with a long day's march are often invaded by these pests to such an extent as to interfere with rest.

Unless waterways or other openings traverse a forest in the direction of the objective point, or a party is large enough to construct its own trails or roads, burdens usually have to be borne upon the backs of men whenever a forest is to be traversed.

Snow and ice are to be considered, because, like trees, they distort or change normal topographical conditions. Ordinarily impassable regions may be penetrated, or passable regions rendered impassable, by the presence or absence of ice and snow. Deep, dry snow, such as is encountered in the Northern forests, is very difficult to traverse. Such deposits are sometimes covered by a crust of sufficient strength, improving the conditions of travel. Should the crust be too weak to bear the full weight of the traveler, yet so strong that it cannot be broken or forced aside by the limbs, the passage becomes exceptionally exhausting. The foot must be lifted so as to be placed upon the top of the crust, which gives way suddenly when the full weight of the body is brought upon it. Not infrequently the early morning hours offer a hard crush, which softens later under the influence of the sun, so as to make treading difficult even upon snowshoes; and parties often stop and wait for the night to restore the practicable surface. Deep snow or ordinary crust should never be attempted by heavy draft animals. When the snow is hard, or the ice solid, a surface is presented, the desirability of which cannot be excelled. Long journeys are sometimes undertaken in the wilder portions of Manitoba and other Hudson Bay Provinces in winter, in preference to summer, for these reasons. Heavy vehicles make journeys over the ice bounding the shores of Lake Superior that would not be normally possible through the dense foliage of the adjoining land. Northern swamp lands, commonly presenting great difficulties, may usually be penetrated with ease during the winter season. Waterways too shallow for boats during the summer become available for sleds during the winter. Heavy loads can sometimes be transported over a limited extent of deep snow by sprinkling it with water, which, freezing and compacting the snow, often affords a good footing. This method is employed on an extensive scale in some of the lumber districts of the Northwest.

Supplies are transported either by boats, wagons, sleds, animals, or upon the backs of men.

Boats intended to traverse rapids are sometimes supplied with life saving appliances, so as to resemble ordinary life boats. This was the case in the late survey of the cañon of the Colorado by Mr. Robert B. Stanton.[3] Weight is usually a matter of much importance. A boat that can be lifted from one waterway to another, or be conveyed around rapids or other points of difficulty, is generally desirable. Draft should also be considered. Rafts and scows are often improvised for crossing unexpected bodies of water; and no supply list is complete unless, in view of such necessities, it is provided with long wire nails and ropes. A small raft 6 by 9ft. in size was once constructed by the writer, of dry cedar logs, fastened with wire nails and the bark of the "moose tree." This raft, built in a few hours, carried himself and one companion for five consecutive days down a series of small lakes and rivers. Whenever rapids are to be passed, the provisions should be divided among several boats; or, if there be but one boat, they should be, in part at least, landed and carried around the rapids, to be restored to the boat below.

Wagons may generally be best selected by assuming that they will have to be driven over boulders, stumps, or similarly rough surfaces. They should be provided with tops, wherever storms are liable to be encountered. Tools for making repairs should be placed in every wagon. In each district the selection of vehicles to be thus used as transports is controlled by local customs, which, being founded upon experience, should not be disregarded.

[1] "Explorations in the Far North," by Frank Russell, 1898, page 4. Published by the University of Iowa.

[2] The origin of windfalls is well treated in Chapter VI. of the Third Annual Report of the Pennsylvania Department of Agriculture.

[3] Trans. Am. Soc. C. E., Vol. XXVI., April, 1892.

Sleds are sometimes provided with adjustable runners for passing along narrow trails or between boulders. Last season's trail over the White Pass, leading into the Alaskan gold fields, was of such a nature as to restrict traffic to within a gauge of about 26in. Some sleds had to be abandoned, and many delays were occasioned by the necessary alterations of others to meet this condition. Hand sleds are useful, since they may be drawn by either men or dogs. The Duluth, South Shore & Atlantic Railway employed toboggans during the construction of its road throughout the season of 1887.
